The Roman Republic started its development about 509 B. C. and grew strong over a period of several centuries. During the early years of the Republic there was a fierce struggle between the Plebeians and the Patricians. This struggle gradually resulted in greater power for the Plebeians, eventually culminating in the Hortensian law passed in 287 B. C. In the Hortensian law the sovereignty of the people in elections of Roman officials and in legislation was made secure. The Hortensian law was the Magna Carta of the Roman Republic and at the enactment of the Hortensian law the Roman Republic seemed destined to develop its strength beyond the strength of any nation known to history up to that time. But the people, having once acquired their rights, became apathetic. By the time Julius Caesar became Consul in 59 B. C. the decline of the Roman Empire had become quite evident. The people had permitted political parties and individuals to assume the authority of government. The people also gradually had become susceptible to the promises of the politicians to use their power, if elected, in support of government-financed projects. Politicians had proceeded to use extensively the funds in the Roman government treasury for the furtherance of their political ambitions. They competed so vigorously with one another in their promises to the people through the sale of food at a loss to the government and through the extension of the dole that the Roman treasury could no longer stand the strain. By 50 B. C. Rome had become a Socialist state. Its finances were so depleted that the overburdened taxpayers could no longer meet the burden of government-financed projects made necessary to fulfill the promises of office-seeking politicians.

Julius Caesar realized that the Roman Republic was at an end at the time he first became Consul. Something had to be done, but Caesar knew he could not rely upon the votes of the people against the military power that had been built up in the machinery of civil government. In fact, military control threatened the very existence of Rome. In order to develop his own position, Caesar demanded appointment as Governor

of Elyria and Gaul and was so appointed in 58 B. C. His military successes added greatly to the glory of Rome and to his own reputation.

In order to win the political support of the people at home, Caesar wrote his Commentaries on the Gallic War. His commentaries comprise one of the greatest works of Latin prose and they constitute the greatest political propaganda effort known to history up to modern times. Caesar's fame and great popularity and recognized honesty in his conduct of government affairs made him the idol of the people. By senatorial action he was made dictator.

Caesar realized that the politicians had gotten out of hand, especially in the use of government funds to carry out their campaign promises. He soon discontinued the right of the people to vote for elected officials and he removed nearly 100,000 persons from Rome who were then living on the dole. He gradually put the government back in fairly solid financial condition.

Following the Battle of the Actium in 31 B. C., the Roman Senate conferred the title of "Augustus" on Augustus Octavius, nephew and adopted son of Julius Caesar. That date is generally conceded to be the end of the Republic and the establishment of the Roman Empire. The Roman Senate invested Augustus with imperial powers in 27 B. C., and the name of his office was "Princeps," meaning "the first of citizens." Another title was "Imperator" from which we get emperor.

Rome's decline began and a great panic occurred in Rome in A. D. 33, having grown out of Augustus' unwitting easy-money policy. The Roman Empire gradually became impotent and subject to enemy attacks. The Roman Government had taken its greatness, its security, and its stability for granted while actually traveling the road to bankruptcy and destruction. Paternalistic projects and officials irresponsible to the people speeded Rome's decline. Internal disorders brought unguarded frontiers that led almost to the abyss of anarchy in the century following the end of the reign of Commodus in 193 A. D. Barbarians from the north, who grew stronger as Rome grew weaker, became a serious menace. From 212 to 284 A. D., heavy spending continued on the army, on bureaucracy, and on the extension of the dole. Military anarchy combined with ruinous taxes and inflation demoralized business and brought about a breakdown of the middle class. When Diocletian became head of the Roman state in 284 A. D., he believed the time had come for society to be remodeled by the fiat of despotic authority. The will of the Emperor in whatever form expressed was considered to be the sole fountainhead of law. Diocletian soon undertook a planned economy. Lactantius wrote that Diocletian was an inveterate organizer of governmental bodies and that he established many administrations and appointed a multitude of inferior officers in each territory and in almost every city. He established a public-works program as a part of his planned economy and demonstrated such a passion for building that endless tax exactions inevitably resulted. The collection of taxes and the increased roles of public officials required larger military forces to collect the larger revenues needed to support his economy.

Diocletian debased the Roman currency but his currency manipulation failed to produce the result desired. He then resorted to limiting the prices for commodities. Diocletian's edicts might almost have been written today. One of them, unearthed at Stratonicea by Colonel Leake, describes with great vehemence the greed and inhumanity of merchants and money changers and then proceeds to fix prices throughout the Empire for all necessities and commodities and to regulate the wages of laborers, artisans, and school teachers.

Diocletian's master code resulted in disaster. His restrictions upon commercial freedom brought about a serious disturbance of the food supply and ruined many traders. Diocletian followed precedent and restricted the overproduction of grapes by decreeing the plowing up of one-third of the vineyards of Italy.

The apathy of the people, the lack of courage and statesmanship by the members of the Senate, and the usurpation of power by Diocletian brought about the loss of the Senate's power. Diocletian then completely stripped it of its power and the Roman Senate disappeared from the pages of history. The people were again subjected to totalitarian rule.

Diocletian appointed such a large number of local officials that the burden of government became enormous. Taxation grew steadily higher and nothing possessed by the citizen was free from ruinous overtaxation. The citizen had little access to Diocletian. Various scholars of domestic officials, as they were called, made difficult all approaches to Diocletian and his administrators. The impact of controls and the planned economy, together with the burden of overtaxation deprived the Roman citizen of his independence and incentive to produce. The middle class disappeared and were permanently lost to the Roman Empire. The citizens could only toil for the state and they were barely able to survive on what was left after taxes. The loss of power of the Roman Senate, excessive taxation, and governmental controls of daily living literally crushed Rome's great civilization. The mighty Roman Empire had stumbled and bungled its way into impotency and oblivion. Diocletian abdicated in A. D. 305 and civil war followed. Rome never again rose to power.

There are many interesting treatises that describe the history of the rise and fall of Rome, but I am indebted primarily to H. Ralph Burton, former investigator for the Committee on Military Affairs of the United States House of Representatives for much of the foregoing material concerning the Republic of Rome and the Roman Empire.

The foregoing description of the experience of the Roman Empire is enough to apprise us of the disaster that lurks in the type of political doctoring of economic and fiscal problems practiced by the New Deal and the Fair Deal over the past 20 years. The experience of the Roman Empire should cause us to condemn and denounce President Truman's attempt to continue and to expand the paternalism of our Federal Government and his continued efforts to embrace socialized medicine and the Brannan plan along with Federal aid to education and the development of many regional authorities similar to TVA. In President Truman's midyear economic report issued in July of this year he, perhaps unwittingly, again attempted to subvert the defense emergency to the advancement of paternalism of government.

Because President Truman has shown no inclination to curtail nondefense Federal spending and because of his determination to increase Federal taxation, even in wartime, to raise additional revenue for his use in the expansion of socialism and paternalistic measures, America can suffer the fate of ancient Rome and plunge headlong into fiscal chaos and collapse.

This threat of impending chaos and collapse reminds me of a recent experience of mine in Washington. I have examined many documents in the Library of Congress, but occasionally I find it necessary to go to the Archives Building to examine original documents. Recently, on one such occasion, I struck up a conversation with my cab driver and as his taxi pulled up in front of the Archives Building I asked him to wait for me as my mission to the Archives Building was brief and I desired to take the same taxi back to my office on Capitol Hill. As I stepped out of the taxi I glanced up above

the pillars and read over the door the inscription, "What is past is prologue." Turning to the taxi driver, I said, "What do you suppose that means?" The taxi driver was completely puzzled. "I just don't know," was his only reply. A few minutes later, on my return to the taxi, the driver was highly elated and eagerly awaited my return. "I've got it, boss," he called to me. "That motto up there means 'We ain't seen nothin' yet.'"

America must rise to the challenge and defeat the Truman administration and their horde of bureaucratic spenders in 1952.

Our Constitutional Rights May Be Nullified by Foreign Treaties—Adoption of House Joint Resolution 325 Will Protect Us From Losing These Rights

REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 9, 1951

Mr. McDONOUGH. Mr. Speaker, the Constitution of the United States, including the Bill of Rights, is the only guaranty of individual freedom and liberty that protects the rights of our citizens against any usurpation of these rights. As long as the Constitution stands as the undisputed supreme law of the land, unchallenged from any foreign or domestic authority, the rights of Americans to enjoy the full blessings of liberty and to hand these liberties to posterity will be unabridged.

But in our time, in fact since the formation of the Union, a question has been raised in the courts of our land as to whether another law, outside of the Constitution, may not in fact be considered as the supreme law of the United States, namely, the provisions set forth in any treaty negotiated by the President and duly ratified by the Senate.

This is a matter not to be lightly brushed aside. There are those, of course, who are experts on international law who would declare without reservation that no treaty entered into by the United States could be valid if it conflicts with any provision within the Constitution and its amendments. But court decisions have challenged this interpretation of international law from 1796.

The United States of America emerged as a Nation dedicated to the freedom and independence of the individual only after the bloody and terrible struggle of the Revolutionary War. Upon winning independence the American colonists zealously labored to insure that the blessings of liberty would be preserved in our land for endless generations of the future; and before the necessary number of States would ratify the new Constitution, a solemn promise was made that the first Congress would amend the Constitution to include a bill of rights which would specifically guarantee to every citizen certain inalienable rights which would forever secure the individual liberty of Americans and

would serve as a shield to protect them against any threat of tyranny and oppression.

Later when each of our 48 States drafted individual constitutions, the civil rights of United States citizens were considered so important that the bulk of the provisions guaranteeing these rights within the Federal Constitution were incorporated in some form into the constitutions of the new States.

Only the United States of America, among all the nations of the world, gave such freedom to each and every one of its citizens, and under these freedoms men from all walks of life, born in poverty and wealth but with equal opportunity, have chosen their own destiny and watched their dreams become reality as they built our mighty Nation.

Each generation of American manhood has recognized that liberty is indeed the jewel beyond price which other powers in a jealous world would envy, and that the wealth of the United States would be coveted by others. But whenever our land has been endangered and our liberty placed in jeopardy, our young men have rallied round freedom's banner, and thousands have bled and died that you and I and all other Americans, native born and naturalized citizens alike, can today enjoy life in this land as free men.

There can never be too much protection of our freedom. No measure that will strengthen the guaranty of fundamental civil rights to our citizens should be neglected. Wherever a weak spot is found in the bulwark of our liberty, steps should and must be taken to shore it up without delay.

And today the danger signals have been raised by men of national reputation and standing in the legal profession of the United States, members of the bar, who foresee in view of United States court decisions and the present trend in international relations, that our civil rights are conceivably threatened by possible ratification of any treaty which though apparently right in intent and desirable upon a surface examination of its contents, may after ratification be found to lend itself to legal interpretation which will shackle our freedom and limit even our most cherished rights, freedom of religion, freedom of speech, and freedom of the press.

In article VI, paragraph 2, of the United States Constitution, we have the provision relating to the making of treaties which reads as follows:

This Constitution, and the laws of the United States which shall be made in pursuance thereof, and all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land; and the judges in every State shall be bound thereby, any thing in the constitution or laws of any State to the contrary notwithstanding.

The language of this provision in the Constitution has been subject to controversy among experts on international law and in the courts, and it is apparent today that this provision should be clarified by adequate constitutional amendment to reaffirm those principles of the

rights of the individual upon which our Government is established. I have, therefore, introduced the following proposed amendment to the Federal Constitution which would end all controversy as to the effect of any treaty upon the civil rights of Americans as guaranteed in the Constitution and the Bill of Rights, and will clearly state that no treaty shall ever abrogate those rights:

House Joint Resolution 325

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following article is proposed as an amendment to the Constitution of the United States, which shall be valid to all intents and purposes as part of the Constitution when ratified by the legislatures of three-fourths of the several States:

"Article —

"SECTION 1. Treaties made under the authority of the United States and international agreements entered into by the Department of State or by the President shall be void to the extent that they abrogate or interfere with any of the rights guaranteed to citizens of the United States by the Constitution.

"SEC 2 This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of three-fourths of the several States within 7 years from the date of its submission."

Far too many of us have come to accept our constitutional rights as individual American citizens for granted. We do not realize that many peoples in other parts of the world do not enjoy such privileges of liberty. And it has been largely to enjoy these rights that so many hundreds of thousands have immigrated to our land to share our heritage and raise their families as Americans under the protection of the United States Constitution.

Here in our land, in addition to freedom of religion, speech, and the press, we are guaranteed the right of free assembly, the right to petition the Government for a redress of grievances, the right of the people to keep and bear arms, protection from illegal search and seizure, the right to public trial by jury, protection against unlawful imprisonment without a legal hearing, and the protection of private property which cannot be taken away from us even by the Federal Government without due process of law.

These rights must never be nullified. It is not enough to assume we are adequately protected as stated in the Constitution. It is imperative that any question as to interpretation of any act which might abridge these rights be removed by adequate constitutional amendment, as I have proposed.

A study of the history of court decisions relating to treaties in the United States clearly establishes the fact that the provision in the Constitution relative to treaties has been subject to continuous examination and controversy.

As early as 1796 Associate Justice of the Supreme Court Samuel Chase stated:

It is the declared will of the people of the United States that any treaty made by the

authority of the United States shall be superior to the constitution and laws of any individual State.

At a later date Secretary of State Edward Livingston, serving in the Cabinet of President Andrew Jackson, stated:

The Government of the United States presumes that whenever a treaty has been duly concluded and ratified by the acknowledged authorities competent for that purpose, an obligation is thereby imposed upon each and every department of the Government, to carry it into complete effect, according to its terms, and that on the performance of this obligation consists the due observance of good faith among nations.

In another early decision by our Supreme Court regarding the effect of treaties, Associate Justice James Iredell said:

The present Constitution of the United States affords the first instance of any government which, by saying treaties should be the supreme law of the land, made it indispensable that they should be published for the information of all. At the same time I admit that a treaty, when executed pursuant to full power, is valid and obligatory, in point of moral obligation, on all, as well on the legislative, executive, and judicial departments (so far as the authority of either extends, which in regard to the last, must, in this respect, be very limited) as on every individual of the Nation . . . because it is a promise in effect by the whole Nation to another nation.

In 1920, when the famous *Migratory Bird* case was finally decided by the Supreme Court, Associate Justice Oliver Wendell Holmes handed down a decision which in substance proclaimed that an otherwise unconstitutional law may become constitutional when, as, and if the President negotiates a treaty on the subject and obtains approval of the Senate, which may legally ratify a treaty by two-thirds of the Members present at the time, not two-thirds of the whole Senate. Since 1920, when the *Migratory Bird* case was decided, the United States Supreme Court has consistently followed this doctrine, both in the matter of the superiority of the provisions of a treaty over all State law and as to the scope of the treaty-making power being broad enough to make matters otherwise unconstitutional constitutional.

These are but a few of the examples that could be cited of court decisions and judicial opinions since the adoption of the Constitution establishing treaties as the supreme law of our land. And the question of whether or not a treaty under the present provision in our Constitution can supersede the Constitution itself is an open question.

It is important to recognize the fact that in every nation in the world with the exception of the United States—and to some extent France—a treaty, though an international agreement between the signatory nations, requires implementation before it becomes law, that is, subsequent legislation adopted and approved by the governing body.

In 1944 a prominent English lawyer, Professor Lauterpacht, pointed out to America the danger inherent in the treaty-making provision of our Constitution when he warned that there was in America a third body of law, the rati-

fied treaty, of at least equal dignity with our Constitution, and which superseded all State constitutions, decisions, and laws covering the same subject, and was superior to all prior enacted laws of Congress on the same subject, and which dangerously approached the status of an amendment to our Federal Constitution.

If there is a trend toward using the treaty-making power to enact new local laws or nullify existing local laws and to change the relationship between the States and the Federal Government and to change even our Constitution and our form of Government, this constitutes a most serious threat to our American rights and liberties.

It is our duty as representatives of the people to guard against any threat to the basic individual rights and freedoms of Americans, and to be ever alert to the need for legislative action to strengthen the laws which guarantee these basic individual rights and freedoms.

As Alfred E. Smith once said:

I say . . . that the Bill of Rights is the soul of the Constitution, and I hope that it will forever be related to the people, to the end that if it is ever threatened, the American people will rise—as a united body—and defend the Constitution and the Bill of Rights against whoever threatens them . . . with the last drop of their blood.

My proposed amendment to the Constitution, House Joint Resolution 325, would not in any way limit or deter the powers or authority of the President or the Secretary of State to negotiate treaties with foreign nations, but it would protect and guarantee citizens of the United States against the abrogation or nullification of any constitutional rights guaranteed to them in the Constitution of the United States.

Adoption of the constitutional amendment which I have proposed will clearly establish forever the rights of United States citizens under the Constitution and the Bill of Rights, and there could be no further question as to any expressed or implied power of a treaty entered into by the United States to have any effect under any circumstances upon these basic rights.

For this reason I have introduced House Joint Resolution 325 which should have the early attention of the Congress.

Broadcast by Hon. Edward Martin to the
People of Pennsylvania

EXTENSION OF REMARKS
OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, October 9, 1951

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record program No. 51 in the series entitled "Happenings in Washington," broadcast by me to the people of Pennsylvania on October 8, 1951.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

HAPPENINGS IN WASHINGTON, PROGRAM NO. 51
(By United States Senator EDWARD MARTIN,
of Pennsylvania)

This is Ed MARTIN, speaking to you from the Nation's Capitol and bringing you another discussion of happenings in Washington.

Since I last talked with you Congress has reached the crowded days of the final rush toward a recess.

In these closing sessions, when the tax bill and the big appropriation bills were enacted, the outlines of the Government's financial picture began to take on definite form. And I regret to tell you that from all present indications there are dark days ahead.

At the present rate of spending demanded by the Truman administration we will have a Federal deficit estimated at between twenty and thirty billion dollars in the next fiscal year.

That means that even though every one of us pays higher taxes, the Government will spend twenty or thirty billion dollars beyond its income.

It means that the Government will pile up new billions of debt upon the present staggering national debt of nearly \$260,000,000,000.

It means another decline in the value of the dollar, which already has been cut in purchasing power to 40 or 50 cents.

It means that we will pay higher prices for everything we buy.

And furthermore it will mean more inflation and more severe hardship on the many thousands of people who depend upon small fixed incomes for their livelihood.

Every savings account, every life insurance policy, every annuity, pension, and retirement fund will depreciate in value.

That, my fellow Pennsylvanians, is what we must expect because there is no will or spirit in the present administration to cut the size or the cost of Government so that the budget can be balanced.

Of course there is another way to balance the Federal budget—the method advocated, yes, demanded, by the Truman administration.

And that way is to tax and tax and tax—to take more and more from the pockets of the taxpayers—without regard for the limit beyond which taxation cannot go without destroying the stability and the solvency of our Nation.

When the new tax bill was before the Senate Finance Committee, of which I am a member, Republicans and Democrats gave up all thought of party politics.

We worked together as a team, trying to arrive at the proper answer to each of the problems and issues that confronted us. We particularly wanted to be fair to those in the low-income brackets. We wanted to be fair to business and industry so as not to destroy the economy of our country. We did not want to destroy initiative. We did not want to destroy the productive power of American industry.

We were not unmindful of the great burden that had been placed upon the American taxpayer since the beginning of the war in Korea in June 1950. We remembered that this was not the first tax increase that we were called upon to make since that date.

We knew that it was the third call for increased taxes on the part of the administration. The Revenue Act of 1950, which became law on September 23, a few months following the outbreak of the Korean conflict, increased taxes \$6,100,000,000.

Then on January 8, 1951, we passed another tax measure, the excess-profits tax law, and this bill imposed additional taxes of \$3,900,000,000.

The Senate has now passed a bill which will add another \$5,500,000,000 dollars to the tax burden of the American people.

When you add up the new and increased taxes levied by these three bills, you will find they will produce \$15,500,000,000 more revenue than the tax laws that existed at the time the Korean war began.

Never before has so much additional revenue been raised in so short a period of time. Moreover, these three revenue measures have brought the income-tax burden of most individuals and corporate taxpayers near the World War II peak. For many such taxpayers the rates imposed under this bill are above the maximum rates imposed during World War II.

In view of these facts, the committee, generally speaking, was of the opinion that we had reached the saturation point.

We felt we had reached a tax level which could go no higher without destroying initiative, productivity, and the entire economy of this great Republic.

We felt that we had reached the point of diminishing returns—that higher taxes, instead of producing more revenue, would destroy all incentive to create new income, and would, in fact, cut down the return to the Government.

As many of you know, I have consistently advocated a balanced budget. I believe that a balanced budget is the first essential of a sound fiscal policy. But I do not agree that the only way to balance the budget is by increasing taxes. That is the administration's philosophy. It is not the philosophy I believe in.

When we consider our huge national debt, and the burdensome taxes we are called upon to pay, the sane, sensible, practical way to balance the budget is to reduce expenditures.

Mr. Truman has said many times that he, too, advocates a balanced budget. But not once during the days when appropriation bills were being considered did he ever send a message asking Congress to reduce any proposed appropriation or to curtail any item of Government spending.

On the contrary, the administration leaders in the House and the Senate insisted upon higher and higher appropriations. Every fiscal message from the White House demanded bigger spending and higher taxes.

When the 1951 tax bill was debated on the Senate floor, the administration argued that income tax rates on individuals and corporations had not been raised high enough. They sought to abolish the split income provision which is of benefit to married couples. They offered a long list of amendments which would push increased taxes far beyond the figures proposed by the Finance Committee.

Their demands for higher taxes were based principally on two contentions.

First, that the Government must take away a larger portion of the taxpayer's earnings in order to check inflation.

Second, that our Nation is now at the peak of its prosperity, that the rate of investment and savings are at an all-time high and therefore we can afford to pay more taxes.

Let me point out that it was a distinguished Democrat, the able chairman of the Finance Committee, Senator GEORGE, of Georgia, who replied to the first argument.

Senator GEORGE said, and I quote:

"Go back home and ask the poor man who is earning \$2,000, \$3,000 or \$4,000 a year under present prevailing high prices how much he's adding to inflation.

"How much do we want to take out of his pocketbook to stop inflation. He is not adding to inflation.

"Go and ask the teachers, the policemen; go and ask the merchants in the small towns; ask anyone who is working for a very moderate salary.

"How much have you got that you are using to push up the inflationary spiral?" and see what sort of an answer is made.

"Such a worker will say frankly that he does not need any government nor any agency of government to tell him that he must be taxed more in order to keep him from destroying himself through inflation."

Senator GEORGE continued, and again I quote:

"What is causing inflation is the disposition of the administration to spend more than the American people ought to be called upon to bear as taxes. Unless we face that issue we shall never come out of this thing."

At another point in the debate, the ranking Republican member of the Finance Committee, Senator MILLIKIN, of Colorado, demolished the contention that all of us are just rolling in money. Replying to remarks made by Senator HUMPHREY, of Minnesota, Senator MILLIKIN said, and I quote:

"We have been listening to a speech, the theme of which is that everything is O. K. We have a debt of \$260,000,000,000, which means a debt on every family in the country of between \$5,000 and \$6,000. We are adding new burdens this year of about \$1,800 on every family.

"Everything is fine. Everything is wonderful.

"We have a 40-cent dollar. Everything is fine. Everything is just wonderful.

"We have a war in Korea. Everything is fine. Everything is wonderful."

Then, Senator MILLIKIN continued:

"Nothing would please me more than to see a balanced budget. I would say that during the Eightieth Congress we had a balanced budget. We produced a sizable surplus and we reduced taxes. That is the way to run the country."

My fellow Pennsylvanians, please bear in mind that the statements I have quoted had no political purpose whatsoever. They represented the thinking of men on both sides of the aisle, as we say in Congress.

They were based on the firm conviction that if we continue to follow the spending policies of the Truman administration we are working toward the end of freedom of the individual in the United States. We are rushing into national bankruptcy and the inevitable result will be destruction, not by Communist Russia, but destruction from within, because we followed unsound fiscal policies.

As a Member of the Senate, I have consistently voted in favor of reducing appropriations. I want to tell you about one instance in which I voted to increase Government spending.

That vote was to override the President's veto of a bill to increase the pensions of permanently and totally disabled veterans from \$60 a month to \$120 a month. The increase applies only to those veterans who, because of age, physical, or mental disability, helplessness or blindness, require the regular aid and attendance of another person.

The bill was specifically designed to help those veterans to obtain the constant attention they need in their daily lives.

The President's veto was overridden by tremendous majorities in the House and in the Senate. I'm proud of that vote. I have said over and over again that there are only two items in the budget that are sacred. One is to pay the interest on the national debt. The other is to care for our disabled veterans and the dependents of those who made the supreme sacrifice.

If we can pour billions of dollars into the building of a giant, spendthrift bureaucracy, and if we can pour more billions into foreign give-away programs, I think we can take care of our disabled veterans who are so helpless that they cannot take care of themselves.

To me it is shocking that the only economy in Government spending suggested by

President Truman was at the expense of veterans who must face life with the terrible handicap of total and permanent disability.

This is Ed MARTIN, speaking to you from the Nation's Capitol. I will be with you again in 2 weeks. Thank you for your attention.

Inflation

EXTENSION OF REMARKS

OF

HON. WILLIAM F. KNOWLAND

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Tuesday, October 9, 1951

Mr. KNOWLAND. Mr. President, I ask unanimous consent that there be printed in the RECORD an address on inflation delivered by Walter P. Casey before the Brawley, Calif., Kiwanis Club.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow Kiwanians, when I was asked to make a 5 minute talk before you today, I was told I could take any topic I wanted except my own business. I chose the topic of inflation, and since then have decided that it is something that is very much my own business.

There is only one way to stop inflation, and that is to stop doing the things that cause it. Sounds simple, and it is.

Nothing you may do like restricting sales, or limiting production, or fixing prices will do any good. They only complicate and confuse the issue.

I have listened to round table discussions by college professors, and radio quizzes of Congressmen and Senators and other Government employees; and I have read and listened to direct appeals by Government employees urging Americans to curb and control everything from goods and babies to clothing and steel and crops and rent, but not one of these has said anything about ceasing to do the things that cause inflation.

And so you say what is the cause of inflation?

Well you know just as well or better than I do, but you have been afraid to face the issue, afraid to express your honest knowledge and opinion. Just why I don't know unless it may be the fear of reprisal if you go against our present constituted authority. Or, maybe you find it easier to let someone else think for you. If that is the case will you listen to me while I tell you what is causing inflation.

One of the principal things is taxation—high taxes. You know, taxes are an expense. And there is no place you can put expense except on the cost of production. Doing that inevitably increases the cost of the article. That makes the purchaser pay more, and the higher cost of things calls for higher wages, and thus the vicious circle continues to grow.

Now I know some of you will say that President Truman has asked for higher taxes to curb inflation. But you know and I know that such a request is wrong, and there has been nothing in our constantly increasing taxation that has in any way tended to evidence that it is right, or to control inflation. Higher taxes are more expense, which reduces profits, which calls for higher prices to pay higher wages and results in cheaper money until today you are trying to live on a 50-cent dollar.

Do you realize that your total taxes, Federal, State, and county and municipal amount to about 42½ percent of your income? And that your social security, and

unemployment, and U. C. D. and workmen's compensation bring the total up to over 50 percent, so all you have left to spend out of every dollar you earn is 50 cents. Or let's put it this way, your direct taxation for income taxes, old-age security, unemployment, compensation and the like, takes more than 30 percent of your actual earnings, so the remainder (70 percent) is being used to buy your living and other necessities on things that are twice or more as high as normal. Thus your actual earning is worth about 85 percent of what it used to be worth, before inflation. And yet Mr. Truman says he wants higher taxes to control inflation.

And so you stumble along and hope against hope that something will happen to change the situation, instead of facing the condition and realizing you are being governed by a false philosophy. You know Mr. Truman is telling you an untruth when he says higher taxes will curb inflation. You know if you were not paying the taxes you now pay that the things you buy would of necessity cost that much less, and yet you say nothing and do nothing to refute such false, even malicious perversion of the truth.

You know and I know that inflation is actually caused by the thing Mr. Truman says will cure it.

To be sure inflation is also caused by deficit spending, and because we are off the gold standard and because the Federal Reserve Bank can issue currency without control. And too, you won't begin to curb inflation until you balance the budget. And I'm telling you, you will never begin to stop inflation until you elect men to office whose philosophy is sane and honest, and whose thinking is straight, and who place the welfare of their country above the temporary monetary advantage of their party members.

Lenin said before he died, "We will make the United States spend itself into destruction." And these men who continue to advocate higher and higher taxes are doing just that. These are the same men who told you that industry could increase wages without increasing the cost of production. These are the men who are spending money all over the world without regard for where it is coming from or how it is to be repaid.

Unless you elect men to Congress who will return the powers and controls to Congress that are granted them in the Constitution. Unless you elect men to office who believe a man should stay home, mind his own business and keep his mouth shut, you will continue to increase inflation.

Perhaps you don't believe me. Perhaps you say I am prejudiced.

Well, gentlemen, the law of cause and effect is inviolable. We only have what we have because we have produced it. Other peoples could have the same things if they had produced them. No one has given us what we have, and from a psychological standpoint we cannot give something to someone who is not worthy of receiving it, who does not appreciate it.

And now, if we cease to do those things that have made us what we are, if we cease to conserve, and cease to create and produce—and instead, if we spend and destroy, we will inevitably have the things those actions create. I tell you the law of cause and effect is inviolable. If you put dirt in clear water you make muddy water. You no longer have clear water. If you want to continue to have the things you love and enjoy, then you must do the things that have produced them—otherwise if you continue the way you have been going the last few years you will not have the things you are wasting and spending.

I have told you in brief how to stop inflation.

Balance your budget.

Take away the power of Government to print currency unless backed by gold or something tangible.

Reduce taxes and stop increasing cost of production.

But you say, "How can we do these things?" We are fighting a war and we must make our defense impregnable.

Well, gentlemen, first you must have the desire, then the intent, then the will, and then you must make the effort to accomplish what you want.

Until you elect men to office who have such objectives, you can kiss your former way of life good-by.

If you cease to do the things that produced what you have you will cease to have those things.

As long as you temporize with untruths you will have untruth. As long as you spend more than you make, you will continue to cheapen money. As long as you increase taxes you will increase the cost of production, and further inflation.

Have you the fortitude to stop this new way of life? I hope so.

Adoption of James A. Farley Into the Iroquois Nation

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, October 9, 1951

Mr. ROBERTSON. Mr. President, on behalf of my colleague the senior Senator from Virginia [Mr. BYRD], who is detained from the Senate by the illness of his wife, I ask unanimous consent that there be printed in the Appendix an editorial entitled "Jim Farley's Visit," which appeared in the Syracuse Herald-Journal of September 8, 1951.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JIM FARLEY'S VISIT

Former Postmaster General James A. (Big Jim) Farley is now "Chief Straightforward" of the Iroquois Nation. He was adopted into the tribe and given his Indian name at the State fairground yesterday.

The Iroquois, famous for their prowess, valor, and brains, now have a very able American to sit with them around the campfire.

But if they happen to have a stalwart brave with a resonant voice they ought to hang on to him very tightly, otherwise Chief Straightforward might pick him up and make him President.

Of course, it is always a pleasure to welcome Jim Farley to Syracuse, whether he comes for the purpose of joining an Indian tribe, running a political convention, or just delivering a speech.

Here is a patriotic American of great ability—a man whose sound integrity, broad experience, shrewd judgment, and vigorous ideas make him a very exceptional guest.

Whether there is anything to the reports that influential Democrats in certain States want to put his name before the Democratic National Convention next year, we do not know.

All we do know is that they could do much worse.

Maybe the delegates to that convention could learn from the Iroquois.

Korean Goal Still Undefined Despite Bitter Cost

EXTENSION OF REMARKS

OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Tuesday, October 9, 1951

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Korean Goal Still Undefined Despite Bitter Cost," published in the Chicago Daily News of October 6, 1951.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

KOREAN GOAL STILL UNDEFINED DESPITE BITTER COST

While Gen. Matthew Ridgway and the Red commanders continue to bicker over possible truce sites in Korea, the casualty lists have grown to more than 2,000 a week.

Press reports say that U. N. forces are conducting a limited offensive. Correspondent Fred Sparks writes that these limited offensives have been bloody, ghastly affairs.

Day after day, the Air Force tells us how many Russian-made MIG's were shot down, but the story always ends with the statement that all of our jets returned safely.

Gen. James Van Fleet, the U. N. field commander, says that we can clobber the Reds whenever he gets the signal to go.

According to Keyes Beech, of the Chicago Daily News foreign service, the recent visit of Gen. Omar Bradley to Tokyo and Korea gave rise to cautious optimism regarding Korean armistice prospects.

General Ridgway has given the Reds what the Associated Press describes as the surprising privilege of selecting the site of future peace talks, with the proviso that the U. N. will not meet again at Kaesong.

Washington officialdom talks about incredible weapons far more terrible than the A-bomb.

Yet, U. N. commanders are not expected to undertake any major offensive, but will continue limited attacks to keep the enemy off balance and our troops in fighting trim.

This last paragraph, taken from a war dispatch, sounds like pointing for a championship football game, until one realizes that the price of keeping our men in fighting trim ran to 2,200 casualties in a recent week.

RIDGWAY IMPATIENT AT RESTRICTED WAR

It is reported that General Bradley's trip to the Korean front apparently presaged no major developments but served to solidify thinking and planning between Tokyo and Washington.

What planning, may we ask?

General Ridgway is said to be impatient over orders from Washington which prevent him from "MacArthurizing" the Communist forces that are killing our young men at a frightful rate.

What kind of a war is this?

The United States News and World Report calls it a Russian pet, a war that the United States doesn't want and has told the world it does not intend to win.

The magazine suggests that the price for a deal remains high, a clean-cut appearance of victory for the Communists, or no deal.

Ostensibly, our diplomats are now considering if the United States should pay the price.

Still some people scoff at the timid British for leaving Iran without firing a shot.

Jack Kofoed, writing in the Miami Herald, says "they are talking now about a winter

offensive in Korea War is always bitter, but worse in savage cold. . . . What happens, even after the winter campaign has become a success? Will Russia take a physical part in the war? What do we plan to do if there is no truce when spring comes over the horizon again?

"Men fight better when they know the score, and our men in Korea know no more than we do at home."

CASUALTIES OUTRAN THOSE OF WORLD WAR II

In 15 months of Korean fighting, United States casualties are higher than in the first 15 months of World War II, with 14,280 killed, 10,600 missing and another 60,000 wounded.

Under present rules, we are prevented from hitting the Red sources of supply. General Ridgway is under orders not to bomb north of the Yalu River. From the Reds' standpoint, this arrangement must be eminently satisfactory.

But what about our boys in Korea? How do they like the ground rules under which this diplomatic game is being played?

To be sure, we have halted Red aggression, but where lies the ultimate victory?

Washington claims we have a big stockpile of atomic bombs. Why are we saving them?

Atom bombs are no more barbaric than flame throwers or fire bombs and some of our four-star generals believe that a few of them dropped on the right targets would keep a lot of American boys from being buried on Korean soil.

But then you see, we have no firm, realistic, clearly defined policy in Korea.

Poor Ridgway is told he can't be beastly to the Reds and the grave marker business is thriving.

All this while the little man in the White House is devising new ways to protect his political pal, Bill Boyle, and getting ready to tell the people how the peace was preserved in our time.

Could anything be more revolting?

GABRIELSON'S OUSTER WOULD IMPROVE PARTY

Random notes: All honor to the 12 Republican congressmen, including Representative WILLIAM AYRES, of Akron, who told RFC's Republican National Chairman Guy Gabrielson that he should resign. Men of this type should replace some of the stone-age thinkers on the national committee.

Word comes from a trusted correspondent in Paris that "General Eisenhower will not lift a finger to get the Republican nomination but will most certainly accept it if it is offered to him. If the Republicans really want him as President, it is consequently imperative that they should find means of nominating him without forcing him to declare himself too openly in advance."

If this is a true reflection of Ike's attitude, the odds against his being nominated will rise sharply. Eisenhower backers are cheered, however, by the prediction of Ralph McGill, editor of the Atlanta Constitution, that with Ike as the candidate, the Republicans would carry at least five Southern States.

Ambassador John Foster Dulles did a stand-out job on the Japanese Peace Treaty but his statement that President Truman and his advisers "risked war with Russia and Red China" in pressing for its adoption at San Francisco sounds a bit too dramatic for an old hand like Dulles. What are we doing with Red China now, playing ping-pong?

The Decatur (Ill.) Herald applauds Senator BILL BENTON's courage in trying to expel JOE MCCARTHY from the United States Senate. Why not let the people of Wisconsin decide that question in 1952? Could be that BILL might get licked in Connecticut.

Harold Stassen is back in the news with charges that Secretary of State Acheson and Ambassador-at-Large Philip C. Jessup proposed cutting off aid to Nationalist China

back in 1949. Stassen's presidential lightning rod is still up.

TRUMAN CONTRIBUTES TO FANTASTIC HUMOR

From the report of a recent Presidential press conference:

Question: Mr. President, could you tell us the purpose of Mr. Potofsky's visit today?

Answer: He comes to see me whenever he feels like it. I think he is one of the ablest of the labor leaders. He came to see me about the unemployment that exists among Government workers.

The latest Gallup poll shows the British Conservatives holding a 5-to-4 lead over the Labor Party. Dr. Gallup claims that his British Institute of Public Opinion has called the last two British elections within 1 percentage point.

President Truman is said to favor the re-election of Attlee's Socialists because a Churchill victory might "start a trend." A good many people over here think that kind of a trend would be in the right direction.

Dr. Alberto Galinza Paz, late of La Prensa, says there is no truth to the rumor that his difficulties in Argentina might have been averted if his wife had invited Evita Peron to tea. "We don't even know her," exclaimed the publisher.

Arthur Vandenberg, Jr., son of the late Senator, will probably make a bid for his father's Senate seat now held by BLAIR MOORE. Contrary to rumor, Gen. Hoyt Vandenberg is not thinking of entering politics when he retires as Air Force Chief of Staff next year.

Another big newspaper merger is jelling in the Pacific Northwest. The Hearst heirs are no longer worried over the possibility of a suit by Marion Davies claiming control of the Hearst properties.

Six-color newspaper printing presses are now in the development stage. Sir Eric Bowater, who owns large newsprint interests in Newfoundland, is preparing to build a \$50,000,000 mill in eastern Tennessee if he can get a certificate of necessity from Washington.

Since the Government is now requisitioning newsprint from American mills for use abroad, it will be interesting to see how promptly the Government acts upon Sir Eric's application, if at all.

JOHN S. KNIGHT.

Sorry Political Plan

EXTENSION OF REMARKS

OF

HON. WILLIAM K. VAN PELT

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 9, 1951

Mr. VAN PELT. Mr. Speaker, why does the President continue to confuse the issue of the lack of morality in his administration? Does he really believe the American people can be so easily duped and misled when he intimates that all elected representatives have sinister motives?

The following editorial in the Fond du Lac Commonwealth Reporter of October 1, 1951, expresses very well the fact that he cannot shrug off the charges of corruption in his present national administration. Mr. and Mrs. Citizen will not accept this sugar-coated pill to alleviate the maladministration in the RFC, the tax scandals in the Internal Revenue Department, the job selling in Mississippi, as well as the fur coats and deep freezers.

SORRY POLITICAL PLAN

A vein of strong irony runs through President Truman's proposal that all top Government officials, including judges, Members of Congress, and national party officers, be required to declare annually all their income—whether from salary, loans, or gifts.

Mr. Truman told Congress he was offering the plan because "attempts have been made through implication and innuendo and by exaggeration and distortion of the facts in a few cases to create the impression that graft and corruption are running rampant through the whole Government."

It is nice to know, anyway, that the President acknowledges a few cases where everything was not done exactly according to proper moral standard. It is the first real concession to the truth he has made on this score.

But the whole tone of his message suggests that Congress and other critics have vastly overplayed the moral missteps of Government officials. And to this extent the President is still persisting in bland denial of the facts.

Read in this light, his proposal for annual income disclosure can only be taken as a cynical diversionary tactic designed to confuse the public and discredit honest investigation of Government immorality.

How unfortunate it is that the President of the United States conceives it his duty in this situation to shrug off charges of corruption merely as efforts to get him politically. How sad that he continues to condone moral wrongdoing in top officials and lesser figures alike.

His plan for coping with the problem is no antidote at all, so long as he fails to act forthrightly in cleaning his administration house when the evidence so plainly warrants it.

Mr. Truman's cavalier attitude toward the mounting testimony of corruption reveals one of his weakest traits as an executive. All he achieves by it is a redoubling of the attacks against him.

He exhibited the same failing in his stand on Communists in Government. Had he not lightly dismissed some of those charges as a red herring, he might not have precipitated the deluge which later descended on him and has done so much harm to innocent men in Government.

The President's message seeks to fasten on Congress the blame for putting in jeopardy the reputation of Government as a whole. The blunt reality is that his behavior is really responsible. Had he acted at all times to enforce a sensible moral code, Government would not today be at its evident low estate in the public mind.

Mr. Truman's new plan merits nothing but a dusty corner on a committee shelf. It is his way of saying that he is more interested in tribal political loyalty to the Democratic Party than in morality in Government.

Tom Whelan, North Dakotan and New Ambassador to Nicaragua, Will Be Good Will Messenger

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 9, 1951

Mr. BURDICK. Mr. Speaker, Tom Whelan, the newly appointed Ambassador to Nicaragua, received a great re-

ception in Washington. Through dinners given by the North Dakota Society in Washington, and by Senators Langer and Young, Whelan came in contact with much of official Washington.

The naming of Whelan to this position created a lot of favorable comment, especially from North Dakotans, for it is the first time that any of our North Dakotans has been recognized in an official way to represent us in any foreign nation.

Whelan is not only a well-educated man, but has had long experience in legislation. In business he came up the hard way to well-earned success. He is a fair example of what a young man can do in a Government like ours. He never asked for or received any special privilege—he took things that were common to all. He is imbued with the value and need of free institutions and grounded deep in the conviction that the strength of our democracy is anchored by our Constitution and its amendments. Here we have no revolutions—we have substituted elections for that activity. We have so framed our Government that the most powerful body in the Government—the House of Representatives—can be changed every 2 years if the voters so will. It is so easy to control this Government that a revolution is needless.

Nicaragua will meet an upstanding American in Tom Whelan and in contact with him they will come to understand that this democracy does not seek any nation's territory; that we believe in peace; that the great hope of all Americans is that wars may be outlawed and differences among nations settled by intelligent deliberations.

War the Last Resort of Any Nation

EXTENSION OF REMARKS OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 9, 1951

Mr. BURDICK. Mr. Speaker, Hal Boyle's statement on war as the last resort of any nation deserved to be circulated. Here is an item from the Bismarck (N. Dak.) Tribune:

New York.—War is for people who don't know any better—or who can't help themselves.

It interrupts or destroys the chief pleasure of this world—which is to live happily.

War is the last resort of a nation that tells another nation it must have its way, by force if necessary.

The fact it also says its goal is peace is confusing. By peace it means, "I want my own way and my own system."

Wars, birthed by ambition or principle, have tended to end in the same way: They renew chaos instead of achieving order.

All leaders, dictatorial or democratic, throughout history have sent millions of men to bloody death on strange battlefields to win a victory by force of arms that can only be temporary.

How can war achieve permanency when it is most often merely hate against the foreigner?

Rome finally killed Carthage, and then Rome sickened and died. Why? She couldn't police her own great system.

The Romans spread a colossal net of awe for order that still afflicts us, their conquerors, after the barbarian outbreaks of these many centuries. The passion for a pattern that the Romans set still endures.

And one who has a hopeful eye about the march of history cannot feel that the passage of 20 centuries has been less than a step toward a unified world. Hope is better than a timetable.

Napoleon and Hitler tried to achieve world unity by the direct assault of power. So had Alexander the Great. The British, a small people with a great mind, worked by the twin channels of prestige and strategic strength toward the same goal.

The muscle of America rules the world today except for the untested might of Russia. Not only the muscle of America but its dreams. Dreams can win, too.

What happens to the world in our time depends on whether America and Russia bump hearts and heads in battle.

Will they?

They sometime and somehow may probably have to do so, but I am optimist enough to believe it won't be tomorrow.

As the world has shrunk great nations have tended to fight each other just as small nations in Europe once could afford the luxury of enmity expressed in combat. But this irresponsibility is dying.

Sometime some nation in the long story of mankind must pledge its money and men and minerals underground to something finer than either future profit or boyish restlessness—the goal of eternal peace.

Men and nations often reach for power because they are neurotic. To control something else becomes their obsession because they cannot control themselves.

The third world war—if it does come, and it will be an unnecessary war if it does happen—probably will express the internal frustration of some ruling clique that will start a war rather than lose the grab it has.

But scientifically war today is about as needful to the happiness of mankind as yellow fever.

What Price Air Power—Are We Getting Our Money's Worth?

EXTENSION OF REMARKS

OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 9, 1951

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address entitled "What Price Air Power—Are We Getting Our Money's Worth?" by Robert E. Gross, president, Lockheed Aircraft Corp., before the American Bankers Association, Stevens Hotel, Chicago, October 2, 1951:

In considering what I would say to you gentlemen this morning, I decided to divide my remarks into two principal subjects—both closely related but nevertheless quite different.

In the first part of my talk I want to make some observations on the current aircraft production program. It seemed to me that you would expect me to say something on this subject, and because I am quite close to it and because I doubt that there is real public understanding of the topic, it does seem appropriate to dwell on it.

In the second part of my remarks I want to say something of what I think the future in the air holds for us—if we want it. You might call it the philosophy of the air age, since I think of the future in the air as very much more than just airplanes and engines. But more important than either I want to put my finger on the bridge we have to build to get from this current stage over into the new age.

I honestly believe that, considering the amount of money we are spending on it, there is little understanding of what the air program really is. I believe the man on the street thinks the program is bigger than it really is. I believe he thinks we are going to get it quicker than we are, and I don't think he knows why it has to cost so much.

On that historic morning in June of last year when the Asian hordes swarmed over the thirty-eighth parallel, the American air industry was plodding along at a fairly steady rate of production—indifferent though the totals were. The monthly production of the entire industry for both Air Force and Navy was only 200 or 300 airplanes per month. Suddenly the President called for an immediate increase in the number of planes to be delivered and also asked that the air industry be given make-ready contracts which could ultimately produce 50,000 planes per year. It was strongly reminiscent of that same clarion call that went out from President Roosevelt in the spring of 1940 when he, too, called for 50,000 planes and the industry then responded, "We can do it."

This time industry was older and wiser and it knew the pitfalls. Notwithstanding these, it took the Government at its word and with the same determination it showed before, we started in all over again. Soon industry leaders were traveling to Washington for direction. Internally we started to change our tempo and overhaul our whole plan of building. We engaged in a constant series of studies as to how production could be increased, having in mind all the new and different types of planes. A few orders were placed by the Government, but, after some weeks, one thing became patently clear. It was this: Industry could move faster and more positively than Government.

Immediately after the call of Korea, industry responded with pent up enthusiasm and desire to do something. But as the weeks drifted by without the fast action the public expected, gradually the realization came over us that the program was not, and probably could not be, what people had originally thought when the first flush of North Korea was over. I know from my own experience that soon after the call, I was confronted on all sides by members of the public and businessmen with questions as to how hard we were working. The assumption on their part always was that we were going wide-out. When I told them that no, we were working only a 40-hour week—no third shift—and that our planned acceleration would, by agreement with the Government, not yield any substantial additional production for between a year and a year and a half, they were horrified. One thing finally shone through like a light: The call of 1940 was one thing, issued under clear straightforward circumstances; the call of Korea—the call of 1950—was something very different.

Both of these great periods have had a different program. How do these programs differ? This is really asking: How do world conditions differ now, in 1951, from then, in 1940?

Well, in the first place, in 1940 the lines were clearly cut; we knew who our enemy was; there was no doubt about it. Germany was on the march in Europe, and Japan soon attacked us from the east. The lines were formed quickly; everybody was friend or foe.

There was no question of arguing whether beef and gasoline had to be rationed. We were at war.

Today all this is different. We are neither at war, full-out, nor at peace, full-out. We have some stout and declared allies who are ready to stand and be counted. But the real enemy does not show. And, ironically enough this time, the very people who were lined up against us then are now, at least sympathetically, on our side and the nation that was on our side last time is pushing trouble for us all over the world.

It was against this insane background that our Government had to plan. How could we buy enough of the right weapons to protect us without bankrupting the country and destroying the very forms we are fighting to preserve? How could we get enough arms to protect us soon enough without invoking controls? And if we had controls, how could we avoid a life of scarcity? And if we had a life of scarcity, where would it all end? Finally and most important of all, should we work out a national defense plan along the lines of Fortress America or Troops for Europe or Asia First.

For if we were to go the route of Fortress America and accept the thesis that we must be prepared to defend ourselves from our own shores without the help of foreign nations or their bases, then we would need a certain kind of Air Force. It would consist almost entirely of long-range bombers to strike abroad and interceptors to protect our shores. If, on the other hand, we were to take the plan of sending our forces to Europe and, with the help of our continental allies, try to contain it there and fight from Europe, then we should have a very different Air Force. This one would contain many medium bombers, many ground support and attack planes and assault transports. If we were to take the third route and say that Asia is the center of gravity, then a combination of the two types of Air Force would be needed. Each of these would be different, each would have a different cost, and we couldn't afford to have all three at the same time. These were the real reasons our program couldn't be touched off overnight. Before it could be jelled for keeps, the elements that went to determine that program had themselves first to be determined.

(1) Not willing to act too quickly and not able to wait indefinitely, from our planners, there emerged back in the autumn of 1950 the pattern of our air program today. A middle ground prevailed. The architects of the plan proposed the authorization of the 70-group Air Force patterned largely after the troops-for-Europe plan, but with certain diversifying elements. The acceleration was to be modest but unmistakably potent. It was generally to treble the rate of output in a little over 2 years. It was to be done on a 40-hour week. And, above all, it was to be laid on top of the output of civilian goods rather than taking precedence and cutting into it. The decisions were taken, the die was cast.

With the make-ready phase not quite over, we are already steepening the acceleration to equip a 95-group Air Force with mostly new planes in 1952. Our Air Force has already activated 87 groups, but this has been done only by using many old planes. This is a long way from the 243 groups we had in World War II or the 96,000 planes the aircraft industry built in the 1 year 1944.

Now I think we're going to have a very good Air Force. I think it's going to be respectable in size. But I doubt if our Air Force is as big as the average man thinks it is, and I have reservations as to whether we'll get this Air Force as soon as he thinks we will. The one great compensation is that our Air Force will be one of high quality and the 95 groups will do very much more than 95 groups of World War II planes could have done.

The next questions are obvious: What is this new Air Force costing and why does it cost so much? Why all these billions for an Air Force less than half as big as that which we had in the last war? Well, as for cost, the currently proposed national budget calls for defense expenditures of around \$56,000,000,000. About \$20,000,000,000 of that will go to the Air Force. The Air Force, in turn, will spend more than \$11,000,000,000 of its money on air equipment. The Navy will spend over four billion on aviation. Altogether, a total of \$15,250,000,000 on military procurement for air. Out of every defense dollar earmarked for military procurement, 48 cents—almost half—is going to the aircraft industry. You gentlemen, therefore, and all Americans, certain have an interest in the airplane and in the industry that produces it.

Now the reasons airplanes cost so much more today than ever before are three: First, all of our normal elements of cost are up; second, today's airplane is different and is two to three times the airplane that World War II's airplane was; third, because we practically stopped building any airplanes in 1945, 1946 and 1947.

I'm not going to spend any time talking about the way our labor, materials, manpower and equipment are problems to us—because you know that anybody in America who is making anything big is having to face them. In short, we are competing with civilian industries for manpower, materials, parts and equipment.

This shouldn't mystify anyone. It's our national policy. Now I'm not attempting to refute the national policy, which is to keep civilian production going and to keep defense production going, too. I happen to be one of those who believe that, all things considered, it would be wrong to completely subjugate our civilian industry to the demands of our defense program. I am saying, however, that in my opinion it is not possible to superimpose our defense program on the civilian production—and still get both at the same time. I do not say that we should change the policy. I simply say that, the policy being what it is, we cannot expect our civilian products and our defense products at one and the same time. And we must expect to be late as long as we try to do both.

I do, however, want to talk to you about the other two elements which account for the high cost of airplanes, but which are not so obvious. One of these is the very nature of today's airplane. By comparison with today's version, yesterday's military airplane was little more than a power-driven kite, a flimsy of metal, and often operated by a swashbuckling pilot. Today's combat aircraft are virtual labyrinths of the most sophisticated automatic devices requiring pilots and crews who are practically scientists.

Ten or fifteen years ago the accent in design of a military airplane was placed on the airframe, the engine, and the propeller. They were the big three items and they represented close to 85-90 percent of the airplane. They also represented 85-90 percent of the cost of the finished fighting weapon. Less than 10-15 percent of the money and effort was spent on the rest of the plane.

Today it's all different. Again looking at the whole weapon as the end product, those percentages have shifted considerably. It's probably fair to say that nearer 50 percent of the design and the cost is expended on airframe and engine. They're still important. But the real point is that today's planes have devices and installations that the old airplanes just didn't have: Automatic fire-control systems, tracking systems, radar systems, air refueling systems. And these new and different elements now amount to at least half of the cost and the work in a modern airplane. In the old days the plane itself was the thing; today, the plane is merely a carrier.

A patrol bomber built early in World War II was loaded with 103 pounds of instrumentation. But today's counterpart has 582 pounds. I remember a particular plane produced in 1944 which carried almost 1,000 pounds of electronic items. The comparable plane of today has well over 5,000 pounds. The nerve center for the flight deck of a new Navy plane contains 12 miles of wiring.

But I should point out that the performance of these new planes is worth it. Take a typical fighter of World War II and a typical fighter of today. The old plane had a fighting altitude of 25,000 feet. The new one is right at home at 50,000. The old one did 400 miles per hour; the new one 650-plus. Normally this World War II fighter could fly war missions only during clear daylight weather. But the new fighter, with radar and other special equipment, is available round-the-clock, day or night, any kind of weather.

Performance is wonderful stuff—but performance costs money. You may be able to get a bargain out of buying a second-rate airplane or a second-rate air force, but just try to get a bargain out of using one.

Furthermore, to attain these performances, the modern airplane has to be heavily built of tougher materials. Its construction is different—completely different—than that of the old ones. World War II planes, generally speaking, were made of very thin outer skins. They had a great deal of internal bracing which carried most of the primary structural loads. The outside skin was just that—a skin, a covering. Today the situation is just reversed. The outside skin is much tougher and thicker and actually does a lot of the load bearing. The internal bracing is much simpler. In other words, the World War II airplane carried its load from the inside out—while the modern plane, to a much larger degree, carries its load from the outside in.

But this means a whole new manufacturing procedure. Many people wonder why the great aircraft industry with all its wartime plants suddenly needs new plants, new machine tools, and new equipment. On the surface they have a point. At the peak of the last war, America's aviation industry had a covered floor space of 175,000,000 square feet. So it must seem appalling that that same plant and equipment which turned out 96,000 airplanes in 1 year is now hard put to get up to ten or fifteen thousand a year.

Well, part of it goes back to the fact that we're building completely different airplanes. Quantity has nothing to do with it. Processing is the problem—and these new ones take very heavy equipment, such as skin mills, spar mills, and stretch presses that we didn't even have in World War II. And all that equipment takes money. The largest hydropress in our aircraft industry, unless the Russians have one—an 8,000-ton machine to form tougher metals—is being bedded down in our plant now. It cost \$750,000 and it's just one of hundreds upon hundreds of items we've had to buy to build these new airplanes.

To emphasize that today's airplane is more complicated and therefore more costly to build, I'll say it this way: In 1943, we figured that for a very specialized radar and electronic job, we could get along with one such technician for every thousand employees. Today, we need 1 out of 24 to be such a technician. In 1943, 1 out of 22 was an engineering employee. Today, 1 out of 8. That's how complicated and technical aircraft manufacture has become—and a major reason why it's more costly.

Aside from the present-day elements such as labor and materials, no small part of the high cost of air power is traceable to the sins of the past. Our cost of aviation today is not high just because of the high cost of the things we are doing today, but, instead, because of the things we didn't do in 1945, 1946, and 1947. That's the trouble with our air

program today—and it's the only absolutely basic thing that is the matter with it.

When you see a beautiful new airplane standing on the runway gleaming in its glory and just off a production line, you see an article that, I think, epitomizes the longest, the most complicated, and the most far-flung production effort of all time. I'm speaking now about articles that we make in some respectable quantity production. A battleship is complicated and takes a long time—but we only make one or two. And the airplane is no longer just a frame, an engine, and a propeller. The end product that we call the airplane is really an assemblage of thousands of individual products, each of which has to be invented, developed, manufactured, and then housed in the mother structure that itself has to be invented, developed, adapted, tooled, and manufactured. This long and costly process represents a time cycle of 5 to 7 years for the mother structure itself, to say nothing of the years of development of the various systems, accessories, and installations that make the whole an integrated thing. All these thousands of manufactured products have to be seasonably fed into the master plane production process. Everything has to be there at the right time. The parts and pieces come from every State in America and some from foreign countries.

This is no small-time, single-process show that can be stopped and started by the snap of a finger. This is the longest manufacturing river in the world. It's the Mississippi of manufacturing, and you can't get the big water out of the mouth of the Mississippi if you once shut it off at the source. And once you shut it off at the source, you can't suddenly turn it on and get the water out of the mouth of the river. It's got to flow just so fast and just so far and pick up its feeders along the line, and in the end you've got the big water flowing out at the mouth of the river.

But with the military victory in Europe, we shut off our airplane river, right at the source. In the month of March 1944, we produced over 9,100 military planes. Within a period of 1 month, from August to September 1945, we dropped from 2,800 to less than 800. By the following summer (1946), America's powerful aviation industry was producing less than 100 military airplanes a month. To be exact: 66.

Several dry years went by. Then suddenly someone discovered that Russia had an air force. "Where did they get it?" everyone asked. This is how they got it—they just didn't ever stop building the one they had, as we did. We let our stream run so dry, however, that back in 1946 and 1947 it looked as though America wouldn't even have a small Air Force. But a group of far-sighted men took note of the worsening world conditions in 1947 and began to urge immediate rebuilding of our Air Force. The President's Temporary Air Policy Commission, headed by Thomas Finletter—and the Hinshaw-Brewster congressional board came up with virtually the same recommendation: namely, rebuild aircraft production on a gradually intensified scale.

So, in 1948, we began to turn the water back into the stream. But that shut-off in 1945 is now costing us the time and the big money. We, as manufacturers, have been trying to stress this fact for years. Yet, there's still a general and widespread lack of appreciation for the time lag in aircraft production. Stopping and starting this complicated process of aircraft manufacturing is not as simple as merely telling the plane maker to stop and start. It means letting these hundreds of contributing organizations go out of the air business and making them find other lines to keep busy with—only to find that years later when we do try to get them back feeding us again, they aren't so keen to come back, or able to. Why should they be? By that time they can't

just drop whatever they're doing and serve us all over again.

Here is the hard core of it: In 20 years between World War I and World War II we spent an average of less than \$28,000,000 a year for air—only to find that, to dig us out of World War II, we had to spend \$28,000,000 a day, and for more than 4 years. We spent an average of about one and one-half billion a year in the years 1946, 1947, and 1948. Now we're having to spend fifteen and one-fourth billions in just 1 year. And if conditions get worse—and they can—and if Senator Lodge's proposal for a 150-group air force were to be adopted—and it may have to be—it would call for thirty-two billion in fiscal 1952, twenty-seven billion in fiscal 1953, and thirty-seven billion in fiscal 1954. That's what the feast-or-famine, turkey one day and feathers the next, costs us.

When will the American people learn that steadiness in moderation—rather than enormity in a crisis—is better and cheaper?

Air power is expensive enough in itself, but when we add to it this insane cost of stopping and starting, we do two things: First, we run the cost up into the stratosphere; second, when we stop building we lay ourselves open to world attack—and the money we think we save in so-called fair weather, we have to quadruple to dig us out of foul. Steadiness rather than size in the pinches is the thing. It will cost less and keep us out of trouble, while the all-out and all-in route will cost us more and get us into trouble. These \$30,000,000,000-a-year crises would never come up if we kept our guard up all the time, and it need cost only a fraction of the way we've been doing it for the last 30 years.

In addition, a modest but steady long-range air program would have given us a running start in emergencies such as this one today. It would have permitted the industry to hold together some of its highly skilled work team in the lean years. It would keep both the industry which builds the planes and the Air Force which uses them stripped down, clean, up to date, and ready to go. It's a lot easier to get to 60 miles an hour if you're already going 15 or 20 than if you're standing still.

Finally, a long-range air program would support the constant research and development necessary to produce airplanes of the future. For by its very nature the development of aviation requires continual improvement and betterment—and that means continual experimentation, continual searching for newer and better ideas to produce newer and better airplanes.

Enact and support this long-range air program, and I can bring you great promise of wondrous things that can and will be done. Even right today I can allude to three or four definite projects all within our grasp in the foreseeable future and all stimulating to the imagination. I will just mention them in the order in which I think they can be developed.

The first and most obvious is the ultra-modern airliner that must come. Volumes have been written as to what the next completely new great airliner will be. Several types are promising, but one that I feel sure must be built would be something like this: It would carry around 60 passengers in luxurious comfort and have a cruising speed of around 600 miles per hour. It must have range and operating characteristics that will make it a magnificent airplane for the runs from Chicago to Los Angeles and New York. It must also have enough range to make it able to maintain dependable regularity of service in all weather, both ways across the Atlantic with only one stop, and be able to make it nonstop except under certain conditions. Above all, it must demonstrate an improvement over present operating costs and maintain, if not improve, the excellent safety factors built into present-day airliners.

Much has been said about the fact that Great Britain bids fair to seize the supremacy of airline air from our United States industry because she is first in the field with a pure jet airliner.

Having in mind what I have said about steadiness in air research and production, it would be well for all thinking Americans to see what the British Government was doing in the years 1945, 1946, and 1947 when we in America were doing little or nothing. In those significant years the British Government encouraged the starting of several—not one—several forward designs, and the 5 to 7 years time span for the development having about matured, at least 2 of those brand new types will be carrying passengers this year or early next. How will you Americans like the prospect of seeing these planes digging into the business of your own airlines and air companies with the fruits of engineering manhours and money that could just as well have gone in here at home?

Actually this does not have to happen. With all credit to our British friends, whose courage and enterprise I am the first to salute, I say it is still not too late to keep the supremacy of the airline air as we always have. Again with all due credit to them, I do not honestly believe that the British liners have the range to make them practical for operation over ocean routes and I do not think they have low enough operating costs to make them profitable over land routes. So the race is not yet over—or won.

An American design could easily be done that would accomplish the following times for typical runs, and do it all at equal if not better profit margins than are now in style:

Los Angeles to New York: 4 hours, 2 minutes

Los Angeles to Chicago: 2 hours, 56 minutes

Chicago to New York: 1 hour, 17 minutes.

And just to show you the capability and reliability of such an airplane, how's this: Flying 8 hours out of every 24 (this is less utilization, mind you, than present airplanes will do), one lone jet airliner could carry in 1 year across the Atlantic 26,600 first-class passengers. The *Queen Mary* is estimated to carry 39,000. Now if the jet could operate 10 hours a day (Eddie Rickenbacker does this with the *Constellation*) it could haul 33,300 in 1 year against 39,000 for the *Queen*.

Everywhere I go, people say to me, "What about the guided missile? When do we get that?" This is such a vast subject that I will only pick off one little corner of it as one of these wonderful things we can do within a very few years.

There are literally hundreds of different missile designs and types and they can be broken down many ways—by one measuring stick or another. To date, the effectiveness of all kinds of missiles as far as we know all over the world is limited because they are of relatively short range. And the reason they are short range is because the guidance systems are limited in their effectiveness. It is not hard to build just a missile of any range, long or short, it is not too hard to build short-range guided missiles, but up to now it has been awfully hard, if not impossible, to build a long-range guided missile. The long-range guidance system, not the missile—that's the key. And that's the prize—what the race all over the world is for—and we must and we can win it.

In plain language, we must have a guidance system that can guide beyond the horizon. How do you bend a beam around the curve of the earth's surface? The German flying bombs—the V-1's and V-2's—were guided by clock-type steering apparatus which was pre-set so many seconds this way, so many that. But that apparatus could not be used for long range and could not be accurate.

I cannot speak of it here, but we have a fine start on this problem. And when we get it, it will be possible to put this guidance

system on something that resembles a fighter plane, power it with the same kind of engines we now use in fighters, and shoot it off for its target.

Think what that will save us all. Not only will it be accurate, it will cost only a fraction of a big bomber. And, most sacred saving of all, it will not carry the precious irreplaceable complement of 10 to 20 young American men. This can well prove to be the intercontinental guided missile.

People often ask me why we don't have more individual flying—you know, with every man owning and flying his own plane. Well, the real reason is because we don't have the plane. The ordinary type airplane takes too much space to land in and can't hover or stand still in the air. And the helicopter that can stand still pays too big a price for being able to. The thing that keeps an airplane or a helicopter up in the air is to force the wing or the rotor blades through the air.

I'll just make you another of my expensive predictions. Given the development encouragement of a permanent program and a little leisure, we can come up with an entirely new concept of flight. Instead of dragging the wing or rotors through the air, by creating a pressure differential between the inside and the outside of the wing, we could drag the air through the wing—not the wing through the air. Wouldn't that be something? Then the wing could stand still, rise vertically, fly at high or slow speed in any direction. Just the ticket for the everyman's airplane. It probably would have to embody the principles of boundary layer control and have a ducted fan engine which in itself would take 10 to 15 million to work up. If any of you men have your checkbooks on you, the line for that one forms on the right. When we get this plane, we'll call it the little dipper.

Finally, those of you who have regarded the predictions of the space ship as the aberrations of the mildly insane, I must ask you in all seriousness to be a little more charitable toward those who are working on this problem.

Of all the things I have mentioned, the practical space ship is certainly the farthest away. But I will tell you this, here and now—within the present state of the art, and with developments we know positively will be here shortly, we already know that a space ship can be constructed and could achieve the miracle of space flight.

It would embrace the principle of probably three stages of propulsion which would arrive it in the space regime. At this area in the universe its minimum speed for an indefinite period would be 24,000 miles per hour.

The next step, as yet beyond our knowledge, is the problem of how to get it back safely to a landing on this earth, or, if to the moon, how to carry enough energy to climb back out. To those who may say that not having solved the second, third, and fourth phases of space flight, the solving of the first is meaningless, I will respond that 20 years ago those same people would have said we never could have knowledge of the first stage. But we do have that knowledge, and the rest will come.

So I say all these things can come, and I believe that they will. These are all things that we know we can do now, or rather soon. But they are only the beginning, not the end. As each one of these and other imminent questions are solved, science, her tempting finger constantly beckoning us forward, will show us new fields in which to work. The solution of one will but lead to the challenge and solution of another, until at last will come the answer, to mysteries that have kept mankind in ignorance and restriction for centuries.

In my heart I know there is a whole new world waiting for us in the mysteries of the air. Within and beyond this immensity of air and space there lies a new way of life, and we can be rewarded with her fruits and powers—if we will. New airplanes and

power systems are but on the threshold of this long corridor of searching, which at the other end may well hold the very secret of eternal life.

The land on this earth is limited, we know its dimension and we have worked well this land. So also we know the sea; we know its size, and for generations it has transported us, and given us food and other products. But each of these in itself is limited, limited until we augment it with the secrets of the age of air—the third and perhaps the greatest element in this philosophical trinity of land, sea, of air.

This is the great medium—the most vast of all. And yet about it the least is known. From its trackless expanse can come more energy from other planets than mathematicians can compute. And through its limitless space we can someday move—earth-bound no longer.

It can even make us realize how small our own world is and make the peoples of this weary world stop beleaguering one another and spend their strength and resources on constructive measures for mankind rather than on war among themselves.

We must be practical. We must arm. We must at frightful cost have these things—many of them actually in being. We must be ready to fight, if we must, to protect our homes and families—and we will.

But down the long corridor of time there must be another way. Surely there is power that is stronger than anything on this earth. When our men of science solved the mystery of the atom, we may have thought—and it may well be—that the atom heralds a new way of life. But I propound that there is still a greater source of power and energy, and we must reverently and patiently devote ourselves to finding it.

If it does exist—and I believe it does—then, mortals though we are, our help must come in the future as it has in the past by lifting up our eyes, because, truly, our help will come from the skies, for this—this is the age of air.

Pulaski Memorial Day

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, October 9, 1951

Mr. LEHMAN. Mr. President, October 11 has been designated as Pulaski Memorial day in honor of the great Polish soldier and hero of our revolution, Gen. Casimir Pulaski. I ask unanimous consent to have printed in the Record some remarks I have prepared in observance of this memorial day.

There being no objection, the statement was ordered to be printed in the Record, as follows:

REMARKS BY HON. HERBERT H. LEHMAN, OF NEW YORK, IN OBSERVANCE OF PULASKI MEMORIAL DAY

It is fitting that Americans of Polish descent and all Americans, for that matter, should reverse the memory of Gen. Casimir Pulaski, that great Polish symbol of liberty. It is well on this occasion to recall how much this hero contributed to our freedom when he rushed to these shores in answer to the thrilling call sounded by the American Revolution.

What were the circumstances which led him across the seas to participate in our struggle for liberty?

From 1768 to 1772, General Pulaski had engaged in the heroic but vain efforts of the

Polish nation to maintain its freedom against the Russian and Prussian tyrants. The Polish nation was unable to hold back the cruel tide of aggression of that day and General Pulaski was forced to flee the country. In France, he met that great American philosopher of freedom, Benjamin Franklin, who had said, "They that can give up essential liberty to obtain a little temporary safety deserve neither liberty nor safety." General Pulaski was an example of one who knew that freedom was, in fact, total and indivisible, and that safety was a poor exchange for loss of liberty.

In 1777, inspired by a profound belief in the cause of freedom, General Pulaski, a renowned military figure in Europe, offered his services to General Washington. This gallant Polish-American soldier invested his efforts, his treasure and blood in building that nation to whom millions of people in Europe and Asia now look for help and deliverance. We have not forgotten, and we must not forget, the fact that 150 years ago Europeans like General Pulaski helped deliver us from tyranny.

It was a dark hour in the history of the American Nation when General Pulaski offered his services to our country. Pulaski and those other gallant heroes from Europe—Kosciusko, Lafayette, Von Steuben, and many others—did not come here because it was apparent that victory was sure. In the winter of 1777-78, following Pulaski's arrival here, the forces of General Washington endured the terrible ordeal of Valley Forge. The prospects of our Revolution were dim, indeed. We can take inspiration from this fact of history, in evaluating our prospects, and the prospects of freedom all over the world.

This is an especially dark day for the cause of freedom in Poland. The Polish people are once again crushed beneath the heel of Russian tyrants. But the inherent love for freedom still flourishes in that land. Though the fire of freedom no longer burns openly in the land of the Vistula, the remaining embers will, I am sure, successfully nourish liberty's sacred fire.

Never in history has human liberty been more seriously threatened. Never has man's readiness to sacrifice in defense of liberty been more urgently needed than today. Today the same forces of tyranny and aggression, which in Pulaski's time crushed Poland as a free nation, are controlling one-third of the globe.

Today, when the free nations of the world are uniting their resources and their efforts in a common defense against the spread of the insidious force of communism, Pulaski Day should be an occasion for a rededication of all freedom-loving peoples, to the principle that liberty under God is a birthright which cannot be denied any people anywhere.

I hope the day will soon come when Poland, a country that has sacrificed so much because it has loved freedom so dearly, can share in the victory of the cause of freedom. The determination of the Polish people to regain their liberty will not be diminished and must ultimately prevail.

Toward Higher Standards

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 27, 1951

Mr. DOYLE. Mr. Speaker, by virtue of the unanimous consent granted me by the Members of the House to do so, I

present for your attention, and for the attention of every Member of Congress, an editorial printed in the *Christian Science Monitor* on Friday, September 28, 1951, which follows:

TOWARD HIGHER STANDARDS

The American conscience is being dusted off. There is good hope that current disclosures of moral laxity and worse will produce definite reforms. A first step is the admission that something is wrong. At last President Truman has recognized this with his proposal that Federal officials should file reports showing their total income.

Publicity can be a wonderful aid to conscience. Several witnesses have recently testified that they had seen nothing wrong in taking gifts of money from firms with which their Government jobs brought them in contact. But since these practices have been exposed some have had the grace to concede that they don't look just right now. The new light of publicity which today enables them to perceive the unethical aspects of these practices might have been supplied earlier. Many would have refused gifts and fees if required to report them.

Mr. Truman's proposal could be very useful. We hope Congress will give it earnest consideration. But it would be a mistake to think that any regulation is going to meet the whole danger of public servants being also the servants of private greed. There must also be higher standards of ethics. Possibly something can be done with the proposal for a code defining proper conduct. Probably some practical advances in drawing the line between right and wrong will be achieved in the present investigations.

For instance, clearer concepts of improper influence should come out of the Hoyer committee hearings. William M. Boyle, Jr., chairman of the Democratic National Committee, declares that it was not only right but his duty to make appointments with officials when requested by businessmen visiting Washington. He insists that this was all he did when American Lithofold Corp was renewing a thrice-rejected application for a loan from the Reconstruction Finance Corporation, that he did not discuss the loan with any RFC official.

Aside from any questions as to the ethics of Mr. Boyle's other activities, this episode raises the question of what is improper influence. Just the making of an appointment could carry a good deal of weight under certain circumstances. Yet this is something that every Congressman is continually plagued to do by his constituents. Indeed, he is often requested to build a fire under this bureau or that to obtain action favorable to people back home. There is a law against Congressmen taking fees for appearing before a Government agency. But there is no law against taking campaign contributions or political help.

It is going to be difficult to state in a law or a code where proper aid to friends and political supporters ends and improper influence begins. Possibly congressional dissatisfaction with the operations both of Mr. Boyle and of Guy G. Gabrielson, chairman of the Republican National Committee, will set higher standards for political workers. And the exposure of abuses in the Internal Revenue Bureau is pointing clearly to the dangers of double employment. But in all these matters Congress and the public should make sure that they demand no less of themselves than they do of others.

Senator Horry has said that the only way to obtain dedicated service by Government employees is to see that they avoid outside employment. Will Congress apply this rule to itself? If the plan Mr. Truman proposes is adopted it will show many Congressmen with outside income and employment—many entirely proper. But why has the RFC inquiry shied off every time it has ap-

proached the subject of influence exerted by Congressmen to obtain loans?

We need higher standards. We trust every measure for obtaining them will be pressed. These measures will be most successful if they are themselves ethical enough to play no favorites.

Fooing the Taxpayers?—Not All of Them

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. HOFFMAN of Michigan. Mr. Speaker, the October 4 issue of the *South Bend Tribune* carries an editorial which calls the attention of the "little fellows" to the fact that Congress is not quite as friendly as it might be.

That editorial reads:

FRIENDLY TAXATION

Congress intends to levy the heaviest corporation earnings taxes on the "big fellows." This does not mean, however, that the incorporated "little fellows" will not be carrying a heavier tax load. House and Senate conferees have agreed that the first \$25,000 of each corporation's earnings shall be taxed at 30 percent and that the new tax shall be retroactive to last April 1. This justifies emphasis on the fact that many politicians in the Federal area proclaim affection for and determination to protect "little business."

Yet in the impending tax law the Federal Government is to be empowered to take almost one-third of the earnings of the smaller corporations. And that tax is to be retroactive to last April 1, a contingency that probably did not enter into the calculations of any of the "little fellows" exposed to this new impost. If this is "friendliness" and "protection" what would avowed enemies of "little business" undertake in the form of taxation? Incidentally, a similar dose is coming for "little fellows" subject to personal income taxation.

Mr. Speaker, we should not fall into the error of thinking we can pretend to be friendly to and considerate of the interests of the average American. After the "big fellows"—the rich—have paid their taxes the "little fellows" are called upon to carry the real burden.

Time was when I thought the Federal Government would go broke when it spent more than its yearly income.

In my ignorance I overlooked the fact that the Federal Government, unlike the businessman, had the power to tax. The man with something to sell can only charge a price which the purchaser is willing to pay. The Government can tax not only to the extent that the citizen is willing to pay, but can take the last cent he is able to pay.

In my humble judgment, it is now taking from the average taxpayer dollars and pennies which impair his working capital, his ability to increase production, and, shortly, when the taxpayer is unable to dig up tax dollars and is broke, the Federal Government will not only be broke but busted—and wide open. Previous depressions may prove to have been just little valleys into which the Nation's prosperity slumped, while the next one may seem like the Grand Canyon.

Our New Deal wasteful spending and taxing, friends, are responsible for what is on the way. My hope is that it comes while they are still in power. It will be a little—yes, just a little—satisfaction and extremely interesting to hear them explain a situation which I hope they will not be able to characterize as a Hoover depression.

Trade Treaties Violations

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. PHILBIN. Mr. Speaker, under unanimous consent to extend and revise my remarks in the *Record*, I include a recent article from the *Boston Daily Globe* entitled "A Breach of Faith."

This article refers to recent legislation which allegedly violates the spirit, as well as the letter, of the Reciprocal Trade Treaty Act. It is feared that retaliatory action may be taken by other nations.

It is interesting to note in this connection that the distinguished Senator from South Carolina, chairman of the United States Senate Committee on Banking and Currency, Mr. MAYBANK, recently introduced a bill, S. 2104, to repeal section 104 of the Defense Production Act of 1950. This would presumably eliminate the reasons for present dissatisfaction voiced by several nations regarding our alleged violation of reciprocal-trade treaties. I understand that the measure has been reported favorably to the Senate and that it is expected to come up for action on the Senate floor in the near future.

It is apparent to me that the present situation definitely invites retaliation against our policy by other nations having trade treaties with us and I hope that the Congress will act speedily and effectively to relieve the concern of those who view our previous action as violation of the trade treaties.

There are some Members of Congress who fear that the passage of the Maybank bill will result in a sizable increase in imports and lead to increases in purchases of milk under Department of Agriculture price-support programs.

It should be pointed out in this regard that exports of United States dairy products greatly exceed the import of dairy products by the United States by two and one-half times. I have never believed that the trade treaties present a completely satisfactory way of regulating our trade with other nations of the world. This legislation does not contain proper safeguards against the influx of cheaply produced goods and commodities from foreign lands. It does not afford that degree of flexibility necessary to protect our own economy against dumping and low-paid labor. But on the other hand, once we have entered into these agreements, under current laws, we should abide by them and not change the rules

after the game has begun as we have sought to do by recent legislation. We should extend to other nations the same kind of faith and credit and respect for contractual obligations that we expect them to display toward us.

The article above referred to follows:

A BREACH OF FAITH

"The United States," declared President Truman last June, as he signed into law an act of Congress extending our system of reciprocal trade agreements, "will continue its efforts, with other countries, to expand trade by reduction or elimination of barriers, and thus build up strength for the free world."

This week at Geneva, Switzerland, bitter and blistering attacks upon the United States for violation of a whole series of its own pledges and professed policies in the realm of trade were delivered by official spokesmen for a number of governments long numbered among our friends. The criticism came from Switzerland and Belgium, from the Netherlands and Denmark, from Norway and from our own next door neighbor in this hemisphere, Canada.

What is the matter? Perhaps the best answer is given in a dispatch by an American correspondent covering the National Trade Conference now in progress at the Swiss city "Stone by stone," he writes, "the edifice erected by the western powers, largely under United States inspiration, to house the community of nations devoted to the establishment of a stable, nondiscriminatory international trade, is being dismantled."

Ever since the close of the recent great war, it has been the avowed policy of the United States to press for agreements designed to restore economic strength to the free nations. Two goals have been sought under this policy. The first has been to get our friends back upon their feet, economically, so that the financial burden of supporting them might be taken off this country's shoulders, and they could pay their own way. That was, and is, the essence of the Marshall plan.

The second objective behind this American policy has been to fortify the international community by building up international trade. To that end we have championed reciprocal trade agreements. To that end we have, as a nation, entered into a number of solemn engagements drawn up for the purpose of removing from the world's commerce the shackles of tariff quotas, restrictions, licensing limitations, import hurdles, and other impediments. At Torguay, at Geneva, at Washington, in a succession of agencies and pacts ranging from the International Monetary Fund down to our recent extension of the Reciprocal Trade Act, the United States has preached greater freedom of trade, war on commerce-strangling cartels, greater production, and freer movement of commerce which would enable other nations to earn dollars through their own efforts instead of receiving them as gifts.

This policy, obviously, is not one of altruism, but one of common sense. It derives from sober appraisal of problems in a world still wracked by recent disaster. More important it embodies the lesson taught by insane trade wars of the twenties and thirties, which led directly to catastrophe.

The explosion at Geneva this week results from a direct about-face on the part of the United States—thanks to the power of the farm lobby in Congress. These insatiable interests, faced with prospect of having about 5 percent of the American market supplied by largely noncompetitive dairy products from half a dozen countries abroad (about the prewar level of such

trade), forced into the Defense Production Act a rider placing quantitative restrictive quotas on all such imports.

As a result, our Government is now knocking the props from under 4 years of effort by Belgium to stand on her own feet, Norway, Denmark, Holland, and Switzerland find their trade status wobbling, as this trade barrier begins to undo the benefits of the Marshall plan. In addition, this violation of pledges and stultification of our professed policy has landed us in a nasty row with our Canadian neighbor. All the injured states are preparing today to retaliate with restrictions on our exports.

Here, then, are the makings of trade war at a time when survival of the west depends upon cooperation and scrupulous observance of pledges. Unless Congress undoes this blunder and puts our policy back on the rails, here may well be the beginning of a repetition of what happened following World War I. We face today a tide of evils spawned by the dishonoring of pledges by powerful states. Can America afford to jeopardize her honor, interest, and integrity by damaging what the world has left of international good faith?

UNCLE DUDLEY.

Representation

EXTENSION OF REMARKS

OF

HON. A. S. J. CARNAHAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 9, 1951

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks in the record, I include the following article entitled "Representation," by George S. Reuter, Jr., executive board member, Johnson County (Mo.) Baptist Association:

REPRESENTATION

(By George S. Reuter, Jr., executive board member, Johnson County (Mo.) Baptist Association)

Central Missouri has a noble history. Such outstanding leaders as David Albaugh De Armond, Clement Cabell Dickinson, Reuben Terrell Wood, and George H. Christopher have gone to Congress to represent this section. John Lamar, Jr., was an elector for President Woodrow Wilson, and Wallace Crossley was Lieutenant Governor of Missouri. Prior to these great men, central Missouri had the outstanding service of Cockrell, Crittenden, and Vest. Educators point with pride to W. B. Starke.

Of the great men who are now history, the memory of Wallace Crossley remains most vivid. Perhaps the reason is the short time since he died, or maybe he just appealed to the people more generally.

He was born October 8, 1874, in Bell Air, Cooper County, Mo. He was educated at William Jewell College and the University of Missouri. Eventually he became professor of literature at Central Missouri State College, but he left professional education in 1903 to be editor of the Star-Journal at Warrensburg, Mo. He was for years the pride and joy of central Missouri, giving out wonderful advice and outstanding leadership.

He found time to serve 8 years in the State house of representatives and 4 years as State senator. The year he left the State senate, he was elected lieutenant governor of Missouri. President Wilson named him Fuel Ad-

ministrator during the First World War. Governor Park appointed him to head the State relief committee, and he went from that to direct the Federal Civil Works Administration. His final service was on the State social security commission. He was also past president of the Missouri Press Association. He died December 13, 1943.

While Senator J. F. Patterson is busy in Jefferson City doing a fine job planning new districts, central Missouri can look forward remembering a noble past. Many of her wonderful citizens will never sit in Congress, but will serve the people regardless.

There is the Reverend George Calvin Monroe, who celebrated 50 years as a Baptist minister on July 22. This grand old man of religion has trained two sons for the ministry since he graduated from William Jewell College. One of them died in action in World War II as an Army chaplain.

Dr. Earl Harding is another noted preacher. He is moderator of the Johnson Baptist Association, State recording and statistical secretary of the Missouri Baptist Association, board member of Central Baptist Theological Seminary (where he received his Th. M. and Th. D.), and pastor of the First Baptist Church of Warrensburg.

Probably the present favorite is Rolla F. Wood, professor of history of Central Missouri State College. After completing his graduate work, he returned home to the college and is a great benefactor of humanity. He has found time to be a member of the city government of his home town, as well as represent his district at the recent State constitutional convention. Yes, he has the governmental ability of Crossley, the understanding of Prof. C. F. Martin, the spiritual wisdom of Monroe and Harding, and the love of people of Miss Edith Howard and Mrs. Fred Miller.

With all this fine representation, past and present, how can central Missouri lose its place in the sun?

Nonstoppage Strikes

EXTENSION OF REMARKS

OF

HON. WILLIAM L. SPRINGER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 9, 1951

Mr. SPRINGER. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the Peoria Journal of September 25, 1951, titled "Nonstoppage Strikes." This represents some new thinking along these lines by the gentleman from Illinois, Mr. VELDE, and an old law school professor and constituent of mine, Prof. George W. Goble, of the University of Illinois.

The editorial follows:

NONSTOPPAGE STRIKES

Representative HAROLD VELDE's plan for what he calls "nonstoppage strikes," introduced in the House of Representatives yesterday, certainly is worth careful consideration by the Members of Congress.

The plan, which is the brainchild of George W. Goble, a law professor at the University of Illinois, would keep production continuing during the settlement of labor disputes, such as the costly one now going on at the Caterpillar Tractor Co. Its sponsors assert that it would do this without weakening the

bargaining power of either side to the dispute.

Under the present method of conducting strikes, both company and workers suffer the consequences of the cessation of production. The bargaining power of the company is enhanced by the cutting off of income of the idle workers. The bargaining power of the employees is strengthened by the cutting off of company profits through cessation of work. Both gain and both lose by this stoppage of production.

The Goble plan calls for work to go on as usual when a strike is called because of disagreement between company and bargaining agent. The company, however, would be required to deposit in a designated bank one-fifth of its previous year's net earnings each week of the strike, and halt payment of dividends and accumulation of surplus. All wages and salaries of all employees, from the president on down, would be reduced 10 percent or more and also deposited in a bank.

If an agreement was reached in 90 days all the impounded funds would be returned, but if no agreement was reached the funds would be forfeited to the Government, both sides thus being penalized.

We can imagine there will be many objections to the plan, both from labor and management. Companies may object to sacrificing any part of their profit and workers may balk at giving up 10 percent of the wages earned. The plan also appears to have numerous advantages, especially from the viewpoint of the public. If it would reduce losses to production and at the same time give proper guarantees to workers and employers that their rights would not be violated, it would be highly advantageous to the country. It should be given careful study by all parties concerned with industrial relations.

Education Defined by James A. Moss

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 9, 1951

Mr. BURDICK. Mr. Speaker, here is a definition of education written by James A. Moss:

I bear the torch that enlightens the world, fires the ambition of man, feeds the flame of genius. I give wings to dreams and might to hand and brain.

From out the deep shadows of the past I come, wearing the scars of struggle and the stripes of toil, but bearing in triumph the wisdom of all ages. Man, because of me, too, holds dominion of earth, air, and sea; it is for him to leash the lightning, plumb the deep, and shackle the ether.

I am the parent of progress, creator of culture, molder of destiny. Philosophy, science, and art are the works of my hand. I banish ignorance, discourage vice, disarm anarchy.

Thus, have I become freedom's citadel, the arm of democracy, the hope of youth, the pride of adolescence, the joy of age. Fortunate the nations and happy the homes that welcome me.

The school is my work shop; here I stir ambition, stimulate ideals, forge the keys that open the door to opportunity. I am the source of inspiration; the aid of aspiration. I am irresistible power.

The Cotton Situation

EXTENSION OF REMARKS

OF

HON. ROBERT E. JONES, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 9, 1951

Mr. JONES of Alabama. Mr. Speaker, it is apparent that the cotton situation as it presently exists requires the attention of every Member, since it is a matter of national concern. The present price the farmer is receiving for his cotton, as compared with the cost of production and the cost of living, makes it imperative that we see that his income is increased. The following letter is a practical approach to the problem and offers a solution to the entire matter. I sincerely hope other Members will join me in this appeal to the Secretary.

CONGRESS OF THE UNITED STATES,

HOUSE OF REPRESENTATIVES,

Washington, D. C., October 5, 1951.

The Honorable CHARLES F. BRANNAN,

Secretary of Agriculture,

Washington, D. C.

DEAR MR. SECRETARY: Before the 1951 cotton crop was planted the cotton farmers were requested by our Government to increase acreage and yields in order to provide the fiber necessary to meet the demands during this present period of national emergency. The patriotic cotton farmers of this country responded to this request and have produced—or will have produced when crop gathering is completed—17,290,000 bales this crop year, according to the last report from the Department of Agriculture.

Since the picking of the crop commenced, we have seen a sharp decrease in the price of cotton. Due to the high cost of production, inclement weather, and the use of insecticide, the producers are receiving for their cotton a price that does not represent a fair return on their investments. This is particularly true with the nonmechanized farmer and the small family operator who has enthusiastically gone into the production of cotton at the beckoning of our Government.

Pursuant to section 402 of Public Law 439, Eighty-first Congress, you are given authority to establish a price on any agricultural commodity in excess of the minimum level of price support, after public hearings; and to establish an increased level, if found necessary, to prevent or alleviate a shortage in the supply of an agricultural commodity essential to national welfare, or in order to increase or maintain the production of any agricultural commodity in the interest of national security. It is apparent at this moment that we must continue to have an excess of cotton on hand at all times to meet the national exigencies that the international situation has brought about. If the parity price of cotton were to be established at 105 percent of parity, it would insure to this year's producer a reasonable return for his cotton, and would also insure to the producer next year a warranty that would justify him to continue to produce cotton. An announcement at this moment that you will hold hearings for this purpose will have the added advantage of increasing the value of the present crop to the farmers, as well as assuring the required acreage for the next year.

The consensus of opinion seems to be that we will have a carry-over this year of approximately three or three and one-half

million bales. If this estimate is correct, the margin of surplus will be entirely too low for security purposes. The best minds on the subject feel that we must have at least 4,000,000 bales of surplus on hand at all times for national-defense requirements. Therefore, from these figures we must conclude that it will be necessary for us to produce 16,000,000 bales in the 1952 crop year. This accentuates the need for immediate action. For, unless the present price and the future price hold forth some opportunity for our farmers to have a reasonable return for their labors, investments, and efforts, they will not plant the acreage in 1952 that will be needed to attain a 16,000,000-bale crop.

Unquestionably the cotton producers of this country comprise the lowest-income group of our entire economy, and it is my honest and firm conviction that if the procedure I have suggested is followed, it will meet with universal satisfaction to our farmers and will not in anywise destroy or injure the economic stability of our Nation. This would afford our farmers no greater consideration than is presently being afforded industry and other segments of our national economy.

It will be greatly appreciated if you would give sympathetic consideration to this request and initiate whatever action is necessary for a determination of this problem along the lines that I have suggested.

Sincerely yours,

ROBERT E. JONES, JR.

One Feature of the Crosser Bill on Railroad Retirement Is Unconstitutional

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 9, 1951

Mr. BURDICK. Mr. Speaker, I would naturally be inclined to favor a measure advocated by Chairman CROSSER, as I regard him one of the best friends of labor in the House of Representatives. There is one feature of his bill, however, that I am sure has not had sufficient consideration. I can find no law, or provision of any law, or any place in the Constitution, that gives the power to anyone to penalize a man—for making over \$50 per month—by taking away from him a part of his retirement fund that belongs to him. To take away a part of this fund is taking property from him without due process of law. It is further an annulment of a contract which has existed for years contrary to law.

Under the Railway Retirement Act, each retired worker has an interest in a fund which he himself has helped to create during his years of service. From this fund, under the law, he is entitled to draw monthly payments.

Who created this fund, and what was the contract on which his retirement assessments were made?

The workers created this fund themselves through the years of contributions which they have made to that fund.

Upon what conditions was this fund created?

The conditions were that at a certain age, if the contributions are kept up, the worker could retire and then draw out his own money.

Now, in the Crosser bill it provides that if a retired worker draws more than \$50 a month on outside work he loses his benefit payments. We will say that these benefits are \$70 per month. He loses that because of this law passed 30 years after he entered into this contract of retirement. The money which he loses is his own money, created by himself and others acting similarly.

Does anyone here, with only a limited knowledge of the Constitution of the United States, contend that we here in this Congress can take away a man's property without due process of law?—fifth amendment to the Constitution. Does anyone here contend that we can violate a contract that has existed for 30 years by merely passing an act of Congress?—see Dartmouth College case on contracts.

That is precisely what this bill does. It takes away private property without due process of law and it violates a long-existing contract, upon which the workers have relied for 30 years.

This cannot be done, as it is clearly unconstitutional.

It is none of our business at this time what the retired worker draws for outside work. It is his own money, and if he has enterprise and energy to go out and earn more, this Congress cannot impose a penalty which was not in his original contract.

To put a limit on a man's earnings, when his payments from retirement were created by himself, is saying to a retired worker, "You retired and you are supposed to be dead. And if you show any life, any energy and activity—no matter how beneficial to humanity—you cannot have the savings you have laid up during your 30 years of employment."

Such a doctrine is not only unconstitutional but it violates all the cardinal principles of common sense. The Constitution of the United States prevents such action, as the framers must have had in mind that some Congress, sometime, would attempt to show more wisdom than the framers, and destroy the protection to a citizen's right to property.

I will not vote for a provision which I know to be unconstitutional, nor would I vote for a provision which to my mind carries grave doubts of its constitutionality.

Truman's Latest Absurdity

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. HOFFMAN of Michigan. Mr. Speaker, Mr. Truman told us that newspapers and magazines were publishing information which aids our potential enemies; might enable them the better to destroy us. He issued an order which

directed executive departments and agencies to classify and stamp as secret or confidential, and to refuse to release to the press or to anyone, any and all information which, in the judgment of the agency head, might, said the President, assist our enemies.

Perhaps the recent and repeated disclosure by the press and congressional investigations of corruption, not only in the President's political family, but of officials prominent in executive agencies, was the real reason for this order. The President is not only irked, but greatly exasperated, because light has been thrown on the appalling lack of honesty and public morality of so many of those whose conduct he deprecates, but for whom he is responsible. That publicity the President would like to suppress.

But Mr. Truman is responsible for the press leakage of information to the enemy. Through Acheson, he stood by Hiss, high in the State Department, who was convicted of perjury when he denied he was a Communist. He personally characterized the efforts of congressional committees and Republicans to expose Communists as a "red herring." Members of his administration tried to discredit the efforts of Chambers, Elizabeth Bentley and others who tried to expose Hiss, Judy Coplon, Dr. Fuchs, Gubitchev. He backed Dawson and Vaughan, and he still insists that Chairman Boyle of the Democratic National Committee is a truthful man, of unimpeachable integrity.

Perhaps the President is sincere in standing behind some of his political cronies and appointees, for experience has demonstrated that his standard of what constitutes good conduct in a public official is a little peculiar.

But the President reaches the height of absurdity when he charges that the press has been supplying our enemies, that is, the Communists and Stalin's agents, with information which should, for our own protection, be suppressed. That information comes from him or his agencies. It was the President who gave out the story on the "guided missiles." It was the President who has been talking publicly about the atomic bombs of the Russians and those we possess.

Top officials in the armed services, without any expression of disapproval from the President, have been releasing information to the press about our production and the efficiency of this, that, or the other weapon of offense and defense. Stalin's representatives sit in the press galleries of the House and Senate and have access to propaganda releases put out by the armed services. The Kremlin has long had friends in Mr. Truman's administration.

Only last Thursday, October 4, Ambassador Philip C. Jessup, appearing before a Senate committee, seeking confirmation of his nomination as a delegate to the United Nations, after an hour's prodding, admitted "that he continued to endorse the activities of Frederick V. Field for many years after he discovered Field's communistic party leanings."

Jessup admitted that, as late as August 1, 1944, he had written a letter endorsing Field, Alger Hiss, Lauchlin Cur-

rie, Owen Lattimore, Harry Dexter White, and John Carter Vincent as delegates to the Institute of Pacific Relations of which he was chairman, trustee, and executive committee member from 1939 to 1945, of which he is a member, and which has been known as a Communist-front organization.

The President is still backing Jessup, who was unable last Thursday to find an answer to the question put to him "Why were you recommending Field years after you discovered his Communist Party leanings?"

All too long—yes, far too long—the President has given his support to men high in administrative positions who, like those named above, have conceived and implemented policies which worked out to the benefit of the Communists and those who are now fighting and killing our men in Korea.

The security of the Republic has been threatened, not by press releases, but by the administration's support of individuals like those named and others of like views, whose policies, however sincere and patriotic they may have been, have resulted in the establishment of Russia as a world power.

Mr. Truman reaches the height of absurdity when he charges that a free press is a dangerous instrumentality in a Republic.

Landlords and Merchants Liquidated by Chinese Communists

EXTENSION OF REMARKS

OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 9, 1951

Mr. KERSTEN of Wisconsin. Mr. Speaker, the Chinese Communists aim to dominate every phase of everyone's life in China. The landlords and merchants are being systematically liquidated in their efforts to secure complete domination.

I include herewith the third of a series of articles by Everett S. Allen, which appeared in the New Bedford (Mass.) Standard-Times, of June 28, 1951:

DEATH TO CHINESE LANDLORDS, MERCHANTS
DECEED BY COMMUNISTS IN PURGE

(By Everett S. Allen)

This is the story of how two Chinese landlords were introduced to death by the Communists. At this moment, with the Nationalist forces under wraps on Formosa, one of the deadliest weapons of the Mao-Chiang war is propaganda. These two landlords, Hu Pa and Uncle Chen, were selected—one by communism, the other by nationalism—as symbols of agrarian reform in action.

Relatively insignificant in themselves they assume historic importance because, like villains and heroes in storybooks, their lives and deaths have been recorded for the edification of the Chinese people.

The Communists did not come into power on a wave of public enthusiasm. Ninety percent of the Chinese people, hamstrung by illiteracy and insularity, are not interested in government and wish only to be left alone in peace. But to many of the remaining 10

percent, the major hope in the Communist regime was the promise of agrarian reform. Mao's basic plank in the party platform was that he would take the land from the landlords and distribute it among the peasants.

The landlords, called "tigers" by the Communists, were described by Mao's propaganda spokesmen as persons who owned the bulk of the forest land and tea and bamboo plantations. They had estates the size of counties. Behind the landlords stood the Chiang Kai-shek government. They were all-powerful. Their word was law. Local administration was in their hands, and they could do as they wished with—and even kill—an peasant.

LIKE SLAVE HOLDERS

In defense of the landlord system, a well-informed Chinese liberal in this country describes them as "the many being persecuted for the few, in the same manner as were the slave holders of American Southern States." Some were evil, most were indifferent toward their peasants. A few were barbarous, but most were tolerable, even though unprogressive. They represented an archaic system, but nevertheless a system which would, at least, have prevented chaos in a transitory period which already was under way before World War II.

Immediately after the Communist "liberation," it was necessary to determine immediately the party's friends and enemies. People's committees were set up, including land-reform work teams. Peasant meetings were held, at which the workers were acquainted with the party's policy. Finally, came the general meeting at which all villagers whose social status was questionable were evaluated.

In Laohu village, Hunan, about 1,000 persons gathered in the open square before the gray brick building of a former ancestral shrine that now is the office of the Peasants' Association. Audience participation is recognized as highly valuable by the Communist Party.

The party chairman said, "We must be careful not to let any wolves slip in among the sheep. We must not take friend for enemy or the other way."

An elderly man in rags said he was a poor peasant. "Liar!" shouted an irate worker, and went on to detail the land he owned in other villages. One who claimed to be a middle peasant was formerly a Kuomintang official and many peasants accused him of extortion and various other crimes.

TWENTY-SIX CALLED LANDLORDS

At last, 26 families were declared to be landlords. "If you do not agree with this classification," they were told, "you can appeal to the people's tribunal. Meanwhile, you must obey the law. You can work on the land but no sabotage, killing of livestock, or other tricks will be tolerated." Rich peasants were told that so long as they did not side with the landlords and try to sabotage the land reform, they would be protected by the other peasants.

Hu Pa was declared to be a landlord. A flood of accusations came against him each day at the office of the New Peasants Association. On a sunny morning, the peasants hurried to Laohu to discuss his crimes and accuse him at a public meeting. A makeshift stage had been erected on a piece of fallow land, with a portrait of Chairman Mao in the center and the five-star flags of the Republic floating overhead.

Some hundreds of children gathered in the front row, singing the favorite popular song, "Who feeds whom? Let us consider. Will rice grow without labor? Without toil, landlords, there are no mountains of grain * * *." Young men and women militia with red armbands and carrying spears patrolled the meeting place; Hu Pa was marched to the platform and the peasants

began to shout, "Down with the tyrant Hu Pa."

Lao Mao, head of the land reform work team, spoke for the government. "Do not be afraid of your feudal oppressors," he said, "for the people's government will back you to the hilt."

A laborer said Hu Pa killed his brother in 1927 and denied him a coffin. An old woman, weeping with rage and sorrow, said Hu Pa killed her son and beat her. A man in the uniform of the people's liberation army bared his back and said Hu Pa had him beaten and left those scars, and moreover buried his grandfather alive for failure to pay full rent.

SIXTY ACCUSERS

More than 60 accusers appeared and there were more who could not be heard because darkness was near. The Peasants' Association decided to send Hu Pa to the people's tribunal. This brought stormy applause and the chanting of people's government slogans. Said Peiping, "The peasants knew that their heaviest burden was gone and they could soon begin the great land distribution."

On the following day, the official Communist news bureau announced, "The trial and execution of Hu Pa, tyrant and murderer, gave a great impetus to the land reform movement in Laohu. The membership of the Peasants' Association shot up. Obviously, the government meant what it said."

The Communists thought highly enough of Hu Pa's case to broadcast it on their official radio network in English Morse code for North American consumption.

The second landlord was Uncle Chen, father of Chen Chih-lung, who attended Kwangsi State University. The youth, Chih, was very happy at that time because he was a member of the Communist underground unit. He led a group called the First Underground Team of Nanning and he spent hours telling the lao paisheng (common people) to welcome the liberation army when it entered Nanning. He spent more hours writing numerous propaganda leaflets for welcoming the liberation army.

Chih came from an ordinary farming family. His father's wealth, amassed by years of toiling and saving, consisted of two draft cows and a small amount of land. And yet, the father was accused by the Communist cadres of being a local despot and an exploiter of the poor.

Comrade Chih-lung, who had worked hard and long for the liberation army, was infuriated and shocked with surprise when he heard the news that his father was arrested.

EXPELLED FOR DEFENDING FATHER

In a symposium of Nanning youth, Brother Chih-lung stood up and defended his father. He said the wealth his family had was less than that of a poor peasant and it was wrong to arrest his father. At the meeting, the political director jumped up and assailed Chih-lung as having "incompatible thoughts" and "obstinate mind." Furthermore, he was expelled as a member of the youth corps.

After this blow, Brother Chih-lung became mentally confused. When he received the report that his father was sentenced to death, he lost his mind. He cried, sighed, and mumbled repeatedly to himself, saying, "Chairman Mao is not a man, but a beast. Is this the reward of 'liberation'? Is this the emancipation of the poor?" And by and by, he disappeared.

Uncle Chen's case was selected by the Nationalists at Taipei as symbolic of the Communists' ever-broadening purge. Both his and Hu Pa's case were used as propaganda. Undoubtedly, there were many Hu Pa's and Uncle Chen's, some evil, some persecuted grievously, but none ever got a trial by jury, none ever had the right of appeal and none ever was convicted on other than the most unobjective word-of-mouth evidence.

The Communist purge, including the slaughter of the landlords, followed a definite pattern. At first, those landlords selected for trial and death were those whose wrongdoings already were widely known and deeply resented. Immediately, the people felt, "Here then, is real justice, come to us at last."

Those persons next marked for death by the party were those whose crimes were unknown or minor or perhaps even nonexistent. Opportunists, shills, and stooges, or disgruntled employees of the victim were induced by coercion or bribery to testify in public against the accused. Usually the defendants in this second group were persons who were not popular, and of whom, therefore, the public was willing to believe evil.

But there came the day when a defendant stood on the banner-draped platform and there were those in the crowd who knew he was neither unpopular nor evil. There were those who were there by compulsion, who knew the witnesses were lying.

NO LIMITS TO PURGE

Then came the chill of realization. From being grateful at being relieved of tyrants, they became terror-stricken when they saw the purge had no limits. As a man in danger turns his back to the wall, the Chinese turned only to his family, daring to trust no one else.

And even the unity of family, heart of China's philosophy for centuries, was denied him as the Communist Party deftly aimed at undermining all loyalties to units other than the State.

The Hangchow working committee of the youth league commended Kuo Cheng-fang, a 14-year-old youth cub, for reporting a relative, Ho Shu-Wen, as a "despot and special agent" to the public security organization. The act reflected, the committee said, "the quality of gallant intelligence."

Kwantung regional news service in Dairen commented on May 4, "The people's eyes are bright as snow." The people's strength is great. If everyone increases his vigilance, assists the public security authorities in collecting data and boldly exposes the criminals, the counterrevolutionaries will be completely isolated and will have no place to hide before the millions of eyes of the people.

"Everyone yells and tries to kill the rat which crosses a street. If the people demonstrate their strength, it is easy to wipe out all counterrevolutionaries."

Soil Conservation Progress—Part I

EXTENSION OF REMARKS OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 9, 1951

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by H. H. Bennett, Chief, United States Soil Conservation Service, at the Pennsylvania Teachers' Laboratory, State College, Pa., July 15, 1950:

SOIL CONSERVATION PROGRESS

It always gives me great satisfaction to have the opportunity of talking about soil and water conservation with people who are sincerely interested in helping to solve the problem, as you so obviously are.

Being engaged in the educational side of the matter, you are naturally concerned with the solid facts and figures relating to the conservation of our natural resources and the job of making the wisest possible use of

them. As a practical soil conservationist, I likewise am concerned with the facts—not with theories, guesswork, halfway jobs, or the representations of those who howl about duplication and forget about cooperation.

One of the things needed at this crucial stage of our national life, it seems to me, is more of what you are doing here in this Teachers' Laboratory—cooperating with one another and preparing people to help with the solution of our national problems.

There are some, perhaps, who feel that only farmers need be interested in the problem of soil conservation—the biggest of all our problems, in my opinion. It's my conviction we should all be very deeply interested in this stupendous job of soil defense, whatever our occupation or wherever we live. Soil defense is an indispensable part of our first line of national defense. Stout soldiers with guns and shells, and ships and planes, are an indispensable part of that first line of defense, too. The two are mutually sustaining, as everyone knows.

And farming according to modern soil conservation methods is not limited in its effects and benefits just to the farms on which such methods are practiced. It is closely related to the profitability of industry, the well-being of municipalities, and the health and welfare of all the people.

I believe I can say that our national policy and public thinking, with few exceptions, are agreed on the utter necessity of conserving and making productive use of our interlocking resources of land, water, forest, grass, cultivated crops, and wildlife. Research, education, land inventories, and the successful use and profitable results of soil conservation have brought us to this new concept of the importance of land and, also, of the need for keeping the land permanently productive. The practical application of this concept is being demonstrated on a progressively wider scale from year to year all over the country by farmers in soil conservation districts. These farmers, in the finest spirit of cooperation, are striking effectively at the root of the evil. Those of us in the Soil Conservation Service are proud to have been asked to help the districts with technical assistance. By enlisting the cooperative efforts of landholders, Government and the public, working together, are demonstrating their special adaptability for getting conservation accomplished.

PRODUCTIVE LAND'S IMPORTANCE IN OUR ECONOMY

It would be most convenient for the rest of us if we could pass all the responsibility for soil conservation back to the farmer—the Pennsylvania tobacco grower, the Iowa corn farmer, the Kansas wheat producer, the Texas cattlemen, or the Alabama cotton planter—and let the matter rest there. But our economy isn't built that way. The land is still the source of a very large share of our original wealth. Manufacturers, bankers, merchants, doctors, teachers, ministers, writers, and all the rest of us, in Philadelphia, Atlanta, Dallas, San Francisco, are directly affected by what happens to our productive land, which is the base of our national vigor and welfare.

We are affected, basically, as consumers of the things that are produced from the land; and we are affected, too, with respect to our income. Some of us are doubtless affected through the effect of poor land on the nutritional value of food.

The importance of productive land in our economy hardly can be overemphasized. A suit of clothes or a pair of shoes is manufactured in Pittsburgh or St. Louis, but the wool or leather which goes into the finished product may have been produced on a western ranch, more than a thousand miles away. And many people, beginning with the rancher himself, are dependent wholly or partly for their income—their living—on the

processes involved in getting that suit of clothes or pair of shoes into your clothes closet or mine. There are railroad men and truckers, weavers, leather workers, advertising men, stenographers, bankers, package manufacturers, salesmen, wholesalers, retailers, and many more. I hardly need to go into further detail because the same situation is true of every package of bacon, piece of furniture, or the many other soil-produced items processed or manufactured by the great industrial plants of the Nation. These producers, processors, and distributors are, in turn, buyers of goods and services on their own account. They patronize doctors, dentists, lawyers, garden-supply shops, and nurseries, barber shops and beauty parlors. They go to the movies and ball games. They buy houses, automobiles, radios, television sets, newspapers, electric irons, and light bulbs. They ride in Pullman cars. They hunt and fish, play golf, and take pictures. Their taxes help build roads and bridges, schools and hospitals, ships and airplanes.

AMOUNT OF PRODUCTIVE LAND IS LIMITED

So it is that every interest in the country has a stake in getting the quickest possible solution to this problem of safeguarding our remaining limited supply of productive land, which is the source of all but a small fraction of our food, as well as of all our wood products.

Although we in this country are not in danger of going hungry any time soon because of our land's running out, the amount of productive land we have left is much more limited than is commonly supposed, and the supply is still shrinking. We have left in the United States as a whole only about 460,000,000 acres of good, first-class land, counting all the good land that is in cultivation now and all that can be brought into profitable cultivation by presently feasible means. In recent years, we have been using for crop production and rotational pasture around 350,000,000 to 400,000,000 acres annually. Something like 70,000,000 acres of this farmed area, however, is unfavorable for use as cropland and should be diverted permanently to grass or trees. All but about 100,000,000 acres of the 460,000,000 acres of good, productive land, in use or available, is or would be without protection, susceptible to severe damage by erosion, waterlogging, floods, accumulation of alkali.

Our land capability survey indicates that more than 47 percent of Pennsylvania's land falls in classes I, II, and III—land which is suitable for continuous cultivation, with careful conservation treatment of classes II and III lands. Nine percent consists of class IV, a borderline type which can be cultivated safely only occasionally, and about 29 percent consists of land of classes V, VI, and VII, suited only for growing trees or grass. Class VIII land, the only other class, is useful for wildlife and recreation.

Erosion, according to our soil conservation surveys, has been severe on about 430,000 acres of Pennsylvania's farmland and serious on some 14,275,000 acres. Altogether, 51 percent of all the land in the State has been seriously or severely damaged (and this is more than half of the State's farmland). Pennsylvania is not as bad off in this respect as some of the other States, but the problem, nevertheless, is quite serious enough.

DOING SOMETHING ABOUT LAND WASTAGE

Because eroded land is scattered around the country in many thousands of parcels—a gullied field here, a sheet-eroded slope there—many people are inclined to overlook what is happening to our productive land, and to discount its importance because they can't visualize the enormity of the damage. There are too many details for summarization through "picture windows."

But with good land, like some of yours, worth \$125 an acre or more, 14,700,000 acres seriously or severely damaged brings the cost

of erosion, if we assume only \$65 per acre damage to the land, to nearly a billion dollars worth of Pennsylvania farmland wastefully depreciated. And, of course, the cost, in the absence of effective soil conservation, goes on in some measure year after year.

What would happen, I wonder, if anything like that kind of preventable damage and depreciation were eating away at your industrial plants and stores, your machinery, buildings, railways, and so on? You would do something about it—that's what would happen most certainly, especially if the damage should get worse and spread more and more, like erosion damage does with every rain, where the land is not protected.

And for precisely the same reason—because it's good business to protect and prolong the productive life of the productive land on which our biggest and most basic business, our agriculture, depends—we are doing something to halt the dissipation of our irreplaceable soil. We are doing it—State-wide, Nation-wide, community by community, farm by farm, acre by acre (of entire farms)—through modern soil conservation farming.

Today you will find this relatively new but already tried and proved kind of farming in constantly wider use as far as United States land extends in any direction. I have reference to the soil and water conservation farming which landholders of the Nation are carrying on themselves through their farmer-organized and farmer-managed soil conservation districts, with the technical help of the Soil Conservation Service and the support and assistance they draw from various other sources, governmental and private. And now some other countries also are adopting this conservation pattern in their agriculture, with soil conservation districts to help—as in the Union of South Africa, Mexico, and some of the countries of Australia.

WHAT MODERN SOIL CONSERVATION IS

Before we discuss the subject any further, I think we should stop a moment to examine the meaning of modern soil conservation.

Modern soil conservation consists of the kind of sound land use and protection needed to keep the land permanently productive while in use.

It means contouring and terracing land that needs such treatment, and strip cropping and stubble mulching the land as needed, along with supporting practices of crop rotations, cover crops, green-manuring crops, etc., wherever needed. It means gully control, stabilizing water outlets, building farm ponds, locating farm roads and fences as nearly on the contour as practicable, planting steep, erodible land to grass or trees, development of good pastures and devoting good management to them after they have been developed.

Where land is too wet, modern soil conservation calls, moreover, for drainage, with full consideration given to wildlife needs. If it is too dry it calls for irrigation; if subject to wind erosion, it calls for wind strip-ping, tree planting, growing cover crops, and stubble-mulch farming. If plant nutrients, lime, and the humus supply of the soil have been depleted, it calls for fertilization and addition of lime and organic matter. If water-soluble salts have accumulated in toxic quantities (alkali), as in parts of the West, it calls for both drainage and leaching out of the salts by flooding. And modern soil conservation calls also for the use of the best of the most adaptable varieties of crops as well as the most efficient of available adaptable tools.

Modern soil conservation likewise calls for flood control and reservoir protection (municipal and other kinds) by treatment of whole watersheds with the right combinations of practices, land use, and small structures in the smaller, upper watersheds where floodwaters start. Applied at the

right time and place, such watershed treatment saves soil and reduces flood and sedimentation damage, stores water in the soil for plant use, and, where conditions are favorable, in the underground strata for pumping. As a part of the modern soil-conservation job, city sewage should be kept out of the streams and treated for use on the land, as some cities are now doing.

And of course, an indispensable part of modern soil conservation is a supporting program of research, such as will provide for the welfare of the land at all times, and give farmers all the advantages that progressive science can contribute. Also, a continuing, vigorous program of soil conservation education should be made a part of our teaching from kindergarten on through college. And, modern soil conservation calls for the maintenance of all effective work, that has a chance for permanency. Such measures are not intended to be used for just a single year or cropping season. They are the basis of land permanency and that is necessary if we are to have a permanent agriculture.

ONLY ONE CORRECT CONSERVATION FORMULA

There is only one correct formula for doing the soil- and water-conservation job right—regardless of what anybody may try to tell you. That formula consists of treating the different kinds of land on a farm according to their individual needs as determined by condition, and using each kind according to its capability for continued safe and economical production—whether that be for field crops, pasture, timber, or wildlife.

If there is any activity of mankind that requires the most scrupulous use of all that land science and hydraulics and agronomy can provide, it is the work of keeping our land permanently productive and making the best possible use of our water supply. There are in the neighborhood of a hundred soil- and water-conservation measures now being used in the program of the Soil Conservation Service to halt erosion, conserve rainfall, and improve the land. Each measure is used, as the situation demands, to meet a definite land need or to produce a specifically desired result. Usually, combinations of several measures are essential.

A hundred years of farming experience in this country has proved definitely that no single practice, applied arbitrarily on a whole field or a farm, will control erosion and maintain soil productivity permanently, except perhaps the planting of an entire field or farm to grass or trees. And we can't live by grass and trees alone. Except where the land is used for grass or forest, single-practice soil conservation can't be successful, in the great majority of cases because it almost always is inadequate to cope with the diverse land conditions and complicated requirements of sound land use and protection, imposed by nature. Some single practices, such as contouring, stubble-mulching, rotation, or manuring will bring some temporary benefits to entire fields or farms, but they cannot get the job done on anything approximating a permanent basis, except on the relatively small areas of the very best quality land (land of capability class I).

NO SHORT-CUTS TO LASTING SOIL CONSERVATION

So I want to emphasize as strongly as I can that there is no substitute for quality and completeness in the protection, development, improvement, and proper use and management of our land and water resources—in Pennsylvania or anywhere else. Each acre of land, as already pointed out, must be used according to its individual capabilities and treated according to its needs, because each acre of land, like each human being, is different from any other acre.

Likewise, each watershed, whether large or small, must be used and treated according to its specific physical peculiarities, if

we are properly to conserve, develop, and use the water and land resources of that particular watershed—or any watershed.

If there were some simple remedy for our land and water problems that could be applied everywhere, according to a standardized treatment or formula, the job would be relatively easy. But there is no cure-all, no short-cut to the solution of these problems. Nothing less will suffice than a painstaking study of each acre, each field, and each watershed, and the appropriate application of all needed conservation measures that the study indicates as necessary to get the job done right. To ignore these facts is to invite further damage to our diminishing supply of productive land, as well as to waste time, opportunity, and money for the landholder, the community, the Nation—for everybody.

Some will say, "Soil conservation must be profitable." Well, sure, it must be profitable. And it is profitable, practically without exception under normal conditions and where it is done properly and in time. Looking ahead, we cannot keep our sloping land—and the great majority of it is sloping—unless we effectively protect it. And, looking beyond that, land means food and food means strength and life.

That this method is the only possible way to ever provide adequate safeguards for our land is a physical fact devised by nature. It is one of the things we know, there is no guessing about it. It is a fact of precisely the same order as the physical fact that water will not run uphill on its own power.

Soil Conservation Progress—Part II

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 9, 1951

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the Record, I include the following address by H. H. Bennett, Chief, United States Soil Conservation Service, at the Pennsylvania Teachers' Laboratory, State College, Pa., July 15, 1950:

As a matter of fact, we took our Soil Conservation Service program out of nature's pattern for developing and safeguarding productive land. Nature's laws were so contrived that land, water, plants, and animals (with the exception of civilized man) should—and under natural conditions do—exist in harmony and interdependence for perpetual productiveness of our basic resources.

So, it likewise is a mandate of nature of precisely the same order that the land, and the water which makes land productive, must be treated and used according to need and capability. I am repeating this because it needs all the emphasis we can give it.

PROGRESS IN PENNSYLVANIA

In the spring of 1932, I was invited to give a talk at Pennsylvania State College on the subject: Is There an Erosion Problem in Pennsylvania?

Not only was there a very serious erosion problem in Pennsylvania, affecting some 15,000,000 acres of land, but there was the very serious additional problem of few people being aware of the fact and nobody doing anything about it. I don't mind confessing that some of us in Washington, including myself, and a handful of people in the State, had to do the educational work needed

to arouse Pennsylvania both to a realization of the problem and to action. About all that was being done was that an occasional farmer undertook to stop his gully erosion by dumping trash into the washes. In some localities an occasional farmer was field strip-cropping; but at the time strip-cropping was only in process of development on the regional erosion research station. And most cultivation everywhere was up-and-down-hill. You could pretty nearly put down the amount of effort being devoted to soil conservation in Pennsylvania as close to zero.

Now there is a going soil-conservation program in the State. This is improving all the time and gaining momentum. True, the district movement has not gone ahead fast enough in Pennsylvania, but in the 27 active districts work is progressing very nicely. From year to year the rate of progress is picking up, as it is throughout the Nation. Nationally, in 1942, the Soil Conservation Service finished the job of treating farms according to the need and capability of the land on approximately 5,000,000 acres. In 1949 the amount of work of the same type and quality completed was 22,000,000 acres. This was a gain of 340 percent, and it was accomplished with an increase in facilities amounting to only 43 percent. (I am still talking about what even the bureaucrats can do when they cooperate wholeheartedly with farmers in soil-conservation districts.)

In 1942 the Service completed only 1 percent of the unfinished part of the Nation-wide soil conservation job; but last year the annual rate of progress went up to 34 percent of the unfinished job. This year we are hoping it will go up to something above 4 percent. In 1941 only six-tenths of 1 percent of the remaining job was completed and for the 7-year period from September 19, 1933, to December 31, 1940, we completed altogether only 1.1 percent of the unfinished total.

Some of the accomplishments in Pennsylvania, as of January 1, 1950, were 172,480 acres of contour farming, 156,607 acres of strip cropping, 88,055 acres of tree planting, 347 miles (about 5,000 acres) of terraces and diversions, 6,938 acres of farm drainage, 149,574 acres of crop rotations, and 530 farm ponds.

Now, we are moving ahead better and better, partly because the cooperation we are getting in the State is steadily improving. In a period of a little over 4 years, our cooperation has extended from working with 12,000 farmers in 6 soil conservation districts, to 80,000, or 46 percent of the farmers of the State, in the 27 soil conservation districts. That is good; but I wish we could have the whole State covered by districts by tomorrow night, so we could move still faster with the total job.

One reason why we have been able to move ahead so much faster in this State—and all the other States, too—is because of soil conservation districts. In my opinion, the soil conservation district is the most effective instrument for getting conservation on the land that man has yet devised, especially under the plan of local operation of the districts by local farmers who get technical assistance from the Soil Conservation Service and other types of assistance from other Federal, State, and local agencies.

NATION-WIDE PROGRESS

In soil conservation districts alone 800,000 complete soil conservation plans had been prepared Nation-wide by the beginning of 1950. These plans covered some 220,000,000 acres and the area treated amounted to 112,000,000 acres—that is, for the Nation.

Counting work done by the Soil Conservation Service in other programs (not including some of that in small irrigation and flood control programs), we have completed altogether over a million farm plans. Detailed soil conservation surveys adequate for

farm planning had been completed on 322,000,000 acres, and reconnaissance soil conservation surveys helpful in farm planning had been completed on 180,000,000 acres.

And still the big job stands ahead of us and we are still losing in the neighborhood of 500,000 acres of farmland annually as the result of unnecessary erosion. This much land is being annually damaged to the extent that it has little or no value for further immediate cultivation.

Certainly the soil conservation district movement is the greatest land movement of history. Since the first district was established in my home county of Anson County, N. C., on August 4, 1937, 2,246 other districts are in operation today (as of June 1, 1950) and they include 1,237,141,000 acres, or 81 percent of the farms in the United States.

In these soil conservation districts farmers are working together as they never have done before, and that is an asset which makes me feel confident that we are going to get the job of applying the basic conservation measures to the land, according to kind and need, done before it is too late. I am so sure of this that I can say to you today with much confidence that the job is going to be finished up to the stage of maintenance some time during the 1970's. I wish it could be done before that time, but this would be an accomplishment vastly greater than I ever expected to live long enough to see. As a matter of fact, what has been done already is vastly greater than I ever expected to see as late as 15 years ago.

COOPERATION IN PENNSYLVANIA

I think I should say something more about the fine cooperation we are getting in Pennsylvania with such agencies as the department of agriculture, the department of forests and waters, the Pennsylvania Game Commission, the Pennsylvania Department of Highways, the Pennsylvania Fish Commission, and the State soil conservation commission. All of these agencies have a memorandum of understanding with the State soil conservation commission.

Vocational agriculture has admirably supported the movement in the formation of soil conservation districts in Pennsylvania, and is now being considered by the State commission for a memorandum of understanding to assist districts with the educational phase of the program.

I think we are over the hump and are winning the battle of soil conservation in the State of Pennsylvania. A little while ago the situation was much less favorable. Cooperation was the touchstone in this instance.

LET'S GET THE JOB COMPLETED

The main thing now is to go even faster. There are many things people like yourselves can do to help. I doubt if there is any instrument aside from soil conservation districts that can help more to get along with the job than the public schools of this State and the Nation. I think you have a wonderful opportunity to help out with the task, and I am hoping arrangements can be made so that you can do in this connection the highly effective kind of work that you are so capable of doing. I have in mind a matter which I believe we very much need in this country to make the conservation work that is put on the land stay on the land permanently. First, of course, farmers must work together as they are doing more and more in the soil conservation districts, and, secondly, we must get soil conservation into the bloodstream of our youth so that it will become a national habit. We may have to do some arguing to get soil conservation adequately placed in the schools; but let's go ahead with the argument and keep at it until we get the job done. There

will be criticisms surely, but it will all be overcome in time. That interval will be how long it requires to educate the people properly, starting in the lower schools.

Some misinformed people will be pulling back with statements about duplication. I can assure you there is no duplication on our part of anything that went before in the program I am talking about today. If there is duplication, it has been brought about by other agencies undertaking to duplicate the work that the Soil Conservation Service was set up to do in Public No. 46, Seventy-fourth Congress, approved April 27, 1935—the first Soil Conservation Act for our farmlands passed by Congress—whose preamble reads as follows:

"That it is hereby recognized that the wastage of soil and moisture resources on farm, grazing, and forest lands of the Nation, resulting from soil erosion, is a menace to the national welfare and that it is hereby declared to be the policy of Congress to provide permanently for the control and prevention of soil erosion and thereby to preserve natural resources, control floods, prevent impairment of reservoirs."

We are absolutely carrying out the mandates of the Congress of the United States in our work, and if you want to read this 1935 law passed by Congress, I can get it for you. If you want to know the details of how the law was passed, who worked on it, etc., I can give you that, too. I know what we are doing and how we have been doing it, because I had a hand in setting the scene and taking part in the act for getting the job done properly and promptly. And I am very proud of the fact.

SOME MISCONCEPTIONS TO AVOID

Some will say, "This is the farmers' job; let the farmers do it." Sure it is the farmers' job, and the farmers are very busy at it. Soil-conservation district supervisors are directing the job, and that means that the farmers themselves are the managers. The farmers in the districts and the supervisors of the districts are grass-root farmers. The supervisors are on nobody's payroll and don't act at the behest of anyone but themselves and the farmers cooperating with the districts.

But still we must be cautious about calling it just the farmers' job. It is not just the farmers' job; it's everybody's job. Up until now one farm family has been supporting four city families. Suppose a farm family lets its soil erode to a level of productivity where it can support only three city families, then two, then one, and finally none, what happens? Probably the farmer can go ahead and make something for himself, but what happens to the four city families that he used to support?

I won't try to answer that question, except by asking another.

Assuming that conservation is the farmer's job, what happens if the farmer doesn't carry out the job? Suppose he doesn't know how or doesn't do it quick enough? Who gets hurt? Everybody gets hurt, of course—city people first, and probably more so than farm people.

Somebody said recently that you have to pay for soil conservation. What is it that you don't have to pay for; I mean, of course, what worth-while earthly things? But this matter of saying that you have to pay for soil conservation doesn't tell the whole story. You don't really have to pay for the lasting type of soil conservation properly applied to the land. This kind pays its way, and more.

In 1945, at the request of the Appropriations Committee of Congress, the Soil Conservation Service made a study throughout the country of the profitability of conservation farming. This was done by ex-

amining the books of farmers who had carried out a good job of soil conservation and comparing the results with those obtained on comparable farms where little or no conservation had been done. The farmers of the former group took in, on the average, \$4.90 per acre more than the nonconservation farmers.

With this figure and other farmer results serving as the basis of computation, the indications are that soil conservation is putting back into the Federal Treasury much more than the money that is being taken out of the Treasury to do the job. The Treasury funds are used to pay the salaries of our technicians and other personnel, but the entire amount was returned as increased income taxes, during a recent year, plus a dividend of 78 percent. In other words, we spent \$39,000,000 that year on the soil and water conservation job, but our study indicated that this \$39,000,000 later on went back into the Federal Treasury in increased income taxes, plus thirty million more as profit.

Soil conservation increases per-acre yields (from around 30 to 100 percent, probably); and per-acre yield is the basis of farm profitability, whether prices are up or down.

SOME MISCONCEPTIONS TO AVOID

There are certain misconceptions about soil conservation that still seem to confuse the thinking of a few people. We need to be on guard against such misinformation, as the following.

1. That soil conservation is of secondary importance, has already been taken care of, or can be postponed.

2. That there are short-cuts to conservation, or that farmers can or should do all the necessary conservation work without technical assistance.

3. That soil conservation costs more than it is worth, and that dollars-and-cents considerations are all that are at stake.

4. That we have all the good land we need, and that soil erosion is an inevitable part of nature's scheme.

All that one needs to do to clear one's thinking with respect to these notions is to look about the country or to visit some of the other countries of the world. In various parts of the world one can see the refutation of such specious reasoning written on the eroded and unproductive countryside, and etched in the worried faces of people struggling to produce their food and other bare necessities on erosion-worn land.

I spent some time last fall studying erosion conditions and soil and water conservation methods in southern France, Italy, and North Africa. Over there, I observed the lengths that people go in order to get a living from some of the world's oldest lands still in agricultural use. The work required in establishing some of their steep-slope bench-type of agriculture, supported with stone walls, translated into our American labor costs probably would amount in many instances to \$15,000 or \$20,000 an acre. Such an outlay on farmland clearly is out of the question for us, in the practical sense at any rate, now or at any time we can foresee, even in the most eroded parts of the country. Nevertheless, we are using bench terraces in Puerto Rico—but with grass-supported walls rather than expensive rock-supported walls. As a matter of fact, we are not in need of the stone-wall type of conservation at this stage of our development, except in occasional very special cases. We can now produce with modern soil conservation around twice as much per acre as we were producing prior to the present era of soil conservation, which began 20 years ago.

So, we definitely are getting ahead with the soil-conservation job in this country.

Treaties With Colombia, Israel, and Greece

EXTENSION OF REMARKS

OF

HON. TOM STEED

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 9, 1951

Mr. STEED. Mr. Speaker, on August 21, 1951, the United States signed a treaty of friendship, commerce, and navigation with Israel. This is the third of a series of such treaties signed by the United States in 1951. One was signed with Greece in Athens on August 3, 1951, and one with Colombia on April 26, 1951.

Each of these treaties contains the most-favored-nation clause as well as national-treatment provisions. The Colombian treaty has been submitted to the Senate for ratification.

Article VI of the Constitution provides that all treaties made under the authority of the United States shall be the supreme law of the land.

The House of Representatives has no hand in the ratification of treaties. This is a right limited to the Senate.

Nevertheless, the overriding character of treaties may set aside statutes in the enactment of which the House did participate under its constitutional powers. The provisions or contents of proposed treaties are therefore of the utmost concern to Members of the House no less than to the public.

The treaties with Colombia and Israel each contain the following provision, in each case a part of article IX:

Nationals and companies of the Republic of Colombia (or Israel) shall be accorded, within the territory of the United States of America—

(a) National treatment with respect to leasing land, buildings, and other immovable property appropriate to the conduct of commercial, manufacturing, processing, * * * and professional activities, and for residential and mortuary purposes with respect to occupancy and using such property.

National treatment means the same treatment as is accorded citizens of the United States.

The treaty with Greece differs slightly but significantly from the foregoing. It provides in article IX that—

1. Nationals and companies of either party shall be accorded, within the territory of the other party, national treatment with respect to acquiring by purchase or otherwise and with respect to owning, leasing, occupying, and using land, buildings, and other immovable property appropriate to the conduct of commercial, manufacturing, processing * * * and professional activities, and for residential and mortuary purposes, subject to the following limitations:

(a) In the case of nationals and companies of Greece the acquisition by purchase, or otherwise, of ownership rights in land, buildings, and other immovable property, within the Territory of the United States, shall be dependent upon the applicable laws of the States, Territories, and possessions of the United States of America within which such property is located.

In other words, the treaty with Greece provides limitations that recognize the force of the applicable laws of the States, Territories, and possessions of the United States within which the property in question is located; the Colombian and Israeli treaties do not. They would override the applicable laws of the States, Territories, and possessions that might conflict with them. In this manner the local self-government of our States could be superseded by central authority wielded principally by the Executive as represented by the Department of State.

Moreover, acts of Congress could be set aside and the legislative authority as vested in two Chambers could effectively be circumvented. The House of Representatives would be bypassed and rendered impotent in such fields as the State Department elected to encompass in treaty provisions.

The treaties with Colombia and Israel would set aside restrictive covenants regulating ownership of residential real estate, for example, as well as other practices of alleged racial discrimination. To undertake to settle these controversial issues by international treaties would be to violate the slower but more effective democratic processes. The United States is engaged actively in finding solutions to problems of this character within its own borders. Progress is being made. It would be most unwise to seek by indirection to impose, through the processes of our foreign relations, final decisions in such issues when the debate is still unsettled in this country.

All three of the treaties contain the most-favored-nation clause. The rights and privileges granted to Colombia or Israel would extend automatically to the nationals of any other country which has a most-favored-nation treaty with this country. This would happen without further debate, further hearings, or further voting. To assume that this would be desirable would be to assume that the State Department in drafting these treaties took into account all the consequences of extending their provisions to virtually all other countries of the world and had found no objection to such a universal extension of privileges and rights. Are we willing to make such an assumption? If so, are we willing to assume further that if the State Department did take full account of the consequences of most-favored-nation extension of the provisions of these treaties, her judgment would be infallible with respect to the effects that might fall upon our domestic laws, practices, and policies from the outside?

Are we willing to repose in the State Department legislative powers superior to those of the House of Representatives in social and economic fields—in fields where it is customary because of the controversial and disputed character of many issues, to hold extensive public hearings before committees of Congress and subject bills to searching debate? Treaties are often abstruse in language; they do not come to public attention as readily as bills before Congress; they

may cover a wide variety of subjects. Is it not more sound to confine treaties to provisions that do not conflict with existing laws? Would it not be more wise procedure when treaties that do conflict with existing laws are contemplated by the State Department that this executive agency should make this fact known and seek prior modification of our statutes? This would be more open, more frank, and more honest. Should Congress refuse to make the necessary modification of existing statutes the State Department should then confine itself to treaty provisions that would conform to laws or constitutional provisions already in effect. Should it not be willing to be thus bound, Congress and the public would at least be altered and there would be little danger that we would wake up one day to find that a provision in some obscure treaty had bound us hand and foot in some vital matter.

Truman Income-Tax Plan Abhorrent

EXTENSION OF REMARKS

OF

HON. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 9, 1951

Mr. JOHNSON. Mr. Speaker, under leave to extend my remarks, I include an editorial from the *Stockton Record*, with which I am in full accord:

INCOME REPORT PLAN IS ABHORRENT

A distorted sense of political opportunity is shown by Harry S. Truman in his proposal for a public report of income by Government employees on salaries of \$10,000 or more. It is a desperate counterattack along the issue which is likely to play a large part in the 1952 campaign—lack of integrity in government.

Mr. Truman naturally believes that the outcries of his opposition will be muffled if that opposition kills off the income-reporting plan. For the purpose of gaining this end, the President submits an idea which is purely expedient and political, and which carries not an ounce of real statesmanship.

In asking that all incomes, loans, and gifts in excess of \$10,000 Government salaries be reported and publicized, President Truman is taking over the same line of thought which he has criticized in others. A law to require the reporting of income would presume that all Americans holding Federal jobs—Congressmen, judges, admirals, and generals as well as administrative employees—are capable of dishonesty and unethical conduct. This same presumption has been followed all too far in contriving security devices to protect the country against communism. The signing of a non-Communist affidavit as a requirement for employment now is a general practice.

What kind of government shall we have when no man is presumed to be honest and ethical, and when no man is presumed to be non-Communist?

One of the surprising aspects of the Truman plan is that it is being taken up by some of the same Members of Congress who have been most outspoken in their opposition to non-Communist tests.

It would be a grave error for the Republican leadership to fall in with the President's

idea. It would place the GOP on the defensive, where now it has the offensive. It would run Republican chances of attracting progressive support.

Mr. Truman's income-report bill is an act of deep-dyed reaction. It is an illiberal violation of traditional American concepts of justice and fair play which out-McCarthy McCarthy. And so it should be branded unmistakably.

The crooked administrator, the unethical Congressman, the indiscreet politician should and can be sought out and exposed man by man. To fasten the presumption of such conduct on all persons in Government is something very different and completely abhorrent.

Effects of Erosion Silt on Bays—Part I

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 9, 1951

Mr. WICKERSHAM Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address by H. H. Bennett, Chief, United States Soil Conservation Service, at the spring meeting of the American Shore and Beach Preservation Association with Southern States Coastal Erosion Control Association, Mobile, Ala., April 28, 1951:

EFFECTS OF EROSION SILT ON BAYS

I am especially glad as a soil conservationist to take part in the discussions of your coastal conservation groups, because the silt at the bottom of your streams, harbors, and bays comes from eroding lands on which we work up in the rolling country of the interior watersheds.

This silt makes trouble all along the way, from the place of origin to the coastal waters. Stream channels are choked and polluted, valuable bottom lands are covered with sand, ditches, reservoirs, and harbors are silted at great cost to individuals and the public. This sedimentation makes it necessary to carry on expensive dredging operations in streams and harbors. It necessitates replanting oyster beds, and develops other difficulties.

Therefore, everybody has a direct stake in what farmers, hundreds of miles upstream, do to keep their topsoil at home and out of the streams, reservoirs, and bays.

Although only a fraction of the total amount of soil washed off the sloping lands of our watersheds actually reaches coastal waters, you are doubtless familiar with the tremendous economic and other burdens imposed by that part which does come down to the coast. Everyone will benefit from a thorough understanding of the problem, and from common support of practical programs and measures for dealing with the difficulties involved.

Soil conservationists are beginning to get acquainted with some aspects of the relationship of sedimentation to marine bays, estuaries, reservoirs, and aquatic life. You, in turn—as my presence here today bears out—are directing more attention to conditions, problems, and remedial actions being taken through soil and water conservation in the watersheds, out of which flow the floodwaters that too often dump harmful silt into coastal waters.

MAN HAS SPEEDED UP SEDIMENTATION PROCESS

The silting of bays is, of course, a natural condition that was in progress for unreckoned time before there was any cul-

tivation of the land. There is much evidence, however, both historical and geological, indicating that the preagricultural rate of sedimentation of bays and estuaries was very slow in comparison with rates following extensive clearing, burning, plowing, and grazing of our uplands. Too many historians and engineers, I am afraid, have attributed the rapid sedimentation of harbors to uncontrollable forces of nature. They too often have failed to notice the rapid changes brought about through man's deforestation and agricultural operations. Certainly, in many instances, the rapid sedimentation of bays and estuaries is an abnormal condition that developed after or along with, the clearing, overgrazing, and cultivation of land in the contributing watersheds.

Sedimentation of harbors, for example, is as old as history. Sites of a number of Biblical cities, which we are told were originally seaports, are far inland today. Continuous deposition of sediment from eroding uplands gradually extended the land areas and pushed the tidewater from their wharves. Ur of the Chaldees is said to have been a thriving seaport at the head of the Persian Gulf about 3000 B. C. Today its ruins lie in a desert 150 miles from the present shores of the gulf. For centuries, the sediment brought down by the Tigris and Euphrates Rivers from the overgrazed highlands of Turkey, Syria, Iran, and Iraq has pushed the head of the tidewater out into the Persian Gulf, and the shore line today is reported to be advancing at the rate of one mile in 30 years.¹

HARBOR SEDIMENTATION FROM EARLY HISTORICAL TIMES

A number of ancient harbors that were frequented by the ships of Phoenicia, Carthage, Greece, and Rome are now many miles inland from navigable waters. Adria, Italy, was a busy seaport in the time of Caesar Augustus, but today it is 20 Italian miles inland.² Sedimentation forced the Romans from the harbor at Antium and caused abandonment of the once magnificent harbor at Ostia, built in 43 A. D. at the mouth of the Tiber River.³

In early postglacial time, the Tigris and the Euphrates flowed into the Persian Gulf near Hitt and Samarra, now some 600 miles north of the present shore line. The Karun River, flowing westward from the Persian highlands, also contributed its silt to the Persian Gulf and built up a bar which extended eastward from Basra and protected lower Mesopotamia from the inroads of the sea.

As irrigation agriculture spread to the land farther up the rivers, the problems of flooding and sedimentation became more serious. The powerful communities resorted to the only means that they knew for protecting themselves against floods and at the same time preventing accumulation of sediment in their canals. This consisted of completely shutting off the water from certain branches of the rivers by earthen dams. While protecting the areas farther upstream, the lower delta lands were subjected to increased sedimentation and higher floods.⁴

SEDIMENTATION ALSO HAS CHANGED LAND AREAS

Near Beled, north of Bagdad, the flood waters of the Tigris were turned into a large

basin with a hard bed of conglomerate underlying a thin alluvial deposit. The three heads of the famous Nahrwan Canal, whose construction is commonly attributed to Nimrod, led from the upstream side of the dam. The dam was maintained for 3,000 years and was not destroyed until about 600 or 700 years ago, during the later caliphate days. Since its destruction, the channel of the Tigris has shifted to the east; and the lands near the head canal, formerly among the most fertile of the Tigris Valley, have been so badly cut by ravines and gullies that, according to Sir William Willcocks,⁵ their restoration today is not financially practicable.

In 1949 I saw extensive land-building operations by siltation in the lower alluvial plain of the Po River in Italy, near the Adriatic Sea. Dikes were being built on low-lying, unusable portions of marshland within the alluvial plain. Silt-laden waters from the Po were directed into these diked areas, where deposits of water-borne sediment were laid down to build up new land. The surface of the finished fields was about 3 to 4 feet above the former marsh level, and the land was producing excellent yields of a great variety of vegetables, corn, alfalfa, fruits, and other crops.

SILTING RUINED SOME AMERICAN COLONIAL HARBORS

Here in our own country—young as it is by comparison—we have a number of examples of similar abandonment of early colonial ports on the Chesapeake Bay and Potomac River, because their harbors filled with sediment—soil washed down from the neighboring highlands—after the clearing and plowing of the land. When Capt. John Smith sailed up the Chesapeake in 1608, he found many deep-water estuaries which afforded excellent harbors.⁶ Most of this Maryland land was planted to tobacco, generally on newly cleared land having fertile woodland topsoil. When such fields were worn out (severely impoverished), usually after some 6 or 7 years planted to tobacco, mainly, they were often abandoned and new fields cleared. Soil erosion inevitably set in, streams became muddy, and the estuaries and bays began to silt up.

With this accelerated, or man-induced, soil erosion, early open-water ports were changed into mud flats, in some cases within 50 years. Towns that otherwise might have become thriving cities and seaports thus were destined to die in their infancy. They were choked, indirectly, by the very industry that had promoted their founding.

Recently I visited Joppa Town, in the upper Chesapeake Bay, and stood on the stone wall of a former busy port for trans-ocean shipping. The town had been abandoned many years because of silting. An ocean-going ship could come across the mud flats no nearer than 5 miles of the docks.

TODAY'S COSTLY HARBOR SILTATION

During the past 100 years, the Federal Government, which began dredging in Baltimore Harbor in 1836, alone has removed more than 111,000,000 cubic yards of silt from the harbor, at a cost of nearly \$17,000,000. And in the entire Chesapeake Bay area, the Government has spent in the past century more than \$68,000,000 for dredging; yet much still remains to be done.⁷ It is estimated that a million dollars' worth of topsoil from farms in the Brandywine watershed in Chester County, Pa., and New Castle County, Del., is carried into the channel of the Marine Terminal at Wilmington, Del.,

⁷ Gottschalk, L. C. Effects of Soil Erosion on Navigation in Upper Chesapeake Bay. The Geographical Review, April 1945.

annually, filling it at the rate of 12 inches a month. Each year, the Government pumps out 500,000 cubic yards of silt at a cost of \$300,000.⁸

Right here in Mobile Harbor, silting, I have been informed, has been a costly harbor problem for many years. From 1826, when Federal Government first undertook to improve the navigation channels into Mobile, through June 30, 1948, Federal expenditures alone for maintenance have cost more than \$8,500,000.⁹ This is in addition to large sums spent by the State and by private interests.

Recently the cost of harbor maintenance has risen rapidly. At present the authorized annual maintenance cost is reported by the Army Corps of Engineers to be \$452,000.¹⁰ In the 11-year period 1936 through 1946, an average of 4,000,000 cubic yards of silt were dredged annually from navigation channels in Mobile Harbor.¹¹ During the same period, dredging of navigable channels in the Warrior and Lower Tombigbee Rivers averaged 2,300,000 cubic yards. I understand that the yearly maintenance dredging in Mobile Harbor is now running between five and eight million cubic yards, and on the rivers above the harbor between two and four million cubic yards.¹²

From July 1, 1945, to June 30, 1946, more than 10,000,000 cubic yards of sediment were removed from Savannah Harbor and waterway, at a cost of approximately \$985,976. The bulk of the dredged material was silt material washed from eroding uplands.¹³

EXTENT AND RAPIDITY OF SILT-PRODUCING EROSION

I have given these figures in some detail, because I believe it is important to visualize the tremendous extent of silt-producing erosion and the comparative rapidity with which it can proceed. Soil erosion, to illustrate what I mean, is a serious problem throughout the vast drainage area that funnels into Mobile Bay. The Tombigbee-Alabama River system drains 44,700 square miles, an area almost as big as the State of Alabama.

Within this area, where steep land (20-percent slope) is used for cotton, erosion losses of more than 150 tons per acre have been measured in a single year.¹⁴ On the other hand, under close-growing crops such as vetch and rye, the corresponding soil loss was only 5 to 10 tons. Under a good cover of grass or trees, which in this region should be grown on slopes as steep as 20 percent, erosion losses normally are only a few hundred pounds a year.

The Soil Conservation Service estimates that at least 4,000,000,000 tons of soil are annually moved some distance downhill by man-accelerated water erosion. Of this amount, roughly 3,000,000,000 tons are deposited on lower slopes, over alluvial plains, and in reservoirs, ditches, canals, and harbors. About 1,000,000,000 tons a year are carried on down to the oceans, some being de-

posited on the lowest part of deltas and over Continental Shelf positions.

DAMAGING RESERVOIR SILTING ALSO COSTLY

We have made studies of silting in many reservoirs over the country, including about a dozen here in Alabama. The Alabama reservoirs measured have watersheds ranging in area from only a few square miles up to more than 9,000 square miles. We have found that they are losing their water-holding capacity at rates from as low as one-tenth of 1 percent annually, where the watersheds are mainly in grass and trees, to more than 3 percent annually where the watersheds are principally in cultivation and the reservoir's capacity is limited in relation to the size of the watershed.¹⁵

One study of reservoir sedimentation showed that (as of 1940) one or more water-supply reservoirs had been built by each of the 189 towns, cities, and institutional establishments in the nine southeastern States of Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, Tennessee, and Virginia, at a cost of approximately \$23,500,000.¹⁶ Sedimentation surveys of 45 of these reservoirs showed that half of them were losing more than 1 percent of their capacity annually. Based on the assumption that they will cease to give effective service before they have lost, on an average 60 percent of their capacity, it was estimated that a third of them would have a life of less than 50 years, and more than half of them a life of less than 75 years. A number of smaller reservoirs were found to have been completely silted and abandoned.

Carl Brown, of the Soil Conservation Service Sedimentation Section,¹⁷ has pointed out that "Southern communities will have to pay higher taxes or higher water rates to cover the reservoir replacement costs resulting from lack of erosion control on their watersheds."

EFFECTS OF SILTATION ON AQUATIC LIFE, ETC

We have examined some of the monetary costs and broader economic penalties imposed on the public by the physical problem of siltation. There are various other self-evident bad effects, too, including harm done to marine life and inland fish and game, navigable waterways, water-supply installations, recreational areas, and, most important, to the lands that produce the silt through land-improverishing soil erosion.

In addition to filling up navigation channels, sedimentation takes a heavy toll of aquatic life. Suspended matter in water diminishes the sunlight needed by certain organisms to grow, I am told, and thus impoverishes or eliminates the food supply on which aquatic life feeds. Silt (mixtures of clay, silt, and sand) may completely smother spawning beds.

The damaging effects of sedimentation on the oyster industry of the Chesapeake Bay area is one of the best illustrations showing the toll taken by the indirect effects of soil erosion on marine life in bay waters. Maryland's oyster production, once considered second only to agriculture among the State's industries, was 15 million bushels a year during the period of 1883 to 1885. By 1950, it had dropped to only 2,500,000 bushels. The observations of biologists and other authorities confirm the fact that the decline of the oyster industry in Chesapeake Bay waters parallels strikingly the silting up of Bay ports. Curtis L. Newcombe, well-known biologist, has brought out this fact pointedly.¹⁸

¹⁵ Unpublished data, Soil Conservation Service Water Conservation and Disposal Practices Division, Sedimentation Section.

¹⁶ Brown, Carl B. Protecting Municipal Watersheds in Southeastern States, Public Works, May 1948.

¹⁷ Newcombe, Curtis L. Treasures in Troubled Waters. The Scientific Monthly, vol. LXX, No. 2. February 1950.

"Studies have shown," he points out, "that over-fishing and siltation operate together to cause depletion. . . . Throughout the Chesapeake tributaries silt is the oyster's greatest natural enemy. . . ."

Newcombe supports that conclusion with statements from documents of Colonial days and figures on present-day silt measurements and oyster populations. For example, he reports that several hundred boats plied the oyster trade in the York River in Virginia as late as 1900, but that fewer than 50 boats can be counted there now. Meanwhile, the estimated 12,000 or more tongers who worked in Virginia alone in the 1880's has dropped to only about 2,500.

Heaps of oyster shells found on the shores of the upper tributaries of Chesapeake Bay show that the Indians took them from extreme upper bay waters, but the bottoms of these tributaries now are soft mud in which oysters cannot exist. The head of oyster propagation today is many miles down bay from those formerly good producing sites. E. V. Truitt, Director of the Chesapeake Biological Laboratory of the Maryland State Department of Research and Education, at Solomons Island, is of the opinion that, at least in the last few years, upper-bay beds have been destroyed by freshets. He thinks there is reason to believe that the increased fresh water inflow is a result of accelerated erosion and runoff in the uplands.

Effects of Erosion Silt on Bays—Part II

EXTENSION OF REMARKS OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 9, 1951

Mr. WICKERSHAM. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address by H. H. Bennett, Chief, United States Soil Conservation Service, at the spring meeting of the American Shore and Beach Preservation Association with Southern States Coastal Erosion Control Association, Mobile, Ala., April 28, 1951.

EROSION AND DECLINING OYSTER PRODUCTION

"Although there is no specific evidence," Dr. Truitt said recently, "it is my firm belief . . . that poor management of the land around the bay and lack of conservation practices is responsible in no small degree for the declining oyster production. Unless the land is properly managed, erosion will bring about a further decline in oyster yields."

The hydrographic program of the Chesapeake Bay Institute, in cooperation with Johns Hopkins University, includes a sampling of the bottom of the bay by borings. It is expected that the silt figures may be helpful in showing the effects of such depositions on marine habitat and life in the bay area. I have come across a number of significant references bearing on this particular point. One which I have in mind was a report by Allan F. Archer, of the Alabama Museum of Natural History, based on a survey made in cooperation with J. B. Engle, of the United States Fish and Wildlife Service, of oyster reefs and the effects of the 1947 hurricane on the coasts of Mobile and Baldwin Counties.¹ I was interested in their general finding of higher oyster mortality in bays with muddy bottoms as contrasted to that on oyster reefs on hard bottoms likewise subjected to storm-water disturbance.

¹³ Disker, E. G., and Yoder, R. E. Sheet Erosion Studies on Cecil Clay. Alabama Experiment Station Bulletin 245. November 1936.

If I may do so without being considered as expressing an opinion on the merits of the proposed legislation, I also would like to refer to one or two statements on the effects of silt on oysters, made during hearings in May 1947 before the House Merchant Marine and Fisheries Subcommittee on Salt-Water Fish and Shellfish Problems.¹ Representative WILLIAM M. COLMER, of Mississippi, told the subcommittee concerning the release of the fresh water at the mouth of the Mississippi: "The result was that all of this silt brought down from the Northern States and the Southern States through which that river meanders, was deposited out there on these oyster beds. This fresh water and the silting completely wiped out those oysters. * * * Other testimony and statements submitted were accompanied by similar references."

A. E. Hopkins, aquatic biologist of the United States Fish and Wildlife Service, had this to say of a survey he made of the oyster damage in the Mississippi Sound area: "I did not notice, in any of the places I went to, any severe quantity of silt, but sand certainly is very violent as far as oysters are concerned, because it is heavy. The oysters can withstand a very considerable amount of silt, because it is light, and they can still open their shells. But sand is heavy. When that washes over them the shells will not open. They cannot get the shells open, and they just lie there and starve to death or asphyxiate."

To which I might add the comment that the heavier sand material to which he refers definitely is likewise a product of soil erosion, and most certainly has to be taken into account in considering the effects of erosion silt on bays.

Although we have no way of establishing the exact percentage chargeable to sedimentation of coastal oyster waters, the fact remains that the decline in oyster production has applied to the whole east-coast reporting area, including the Gulf of Mexico. In 1880,² the first year of record, the figures show that production for this area totaled 153,405,000 pounds of shucked oyster meat. By 1945³ the production had dropped to 65,392,000 pounds. That represents a decline of approximately 57½ percent. West-coast production is not taken into account, because importation of Asiatic seed oysters spawned in Japan, particularly since the 1930's, has greatly expanded oyster production in that part of the country (from 1,050,000 pounds in 1888 to 10,074,000 in 1945).⁴

MUCH YET TO BE LEARNED

Undoubtedly there is still much to be learned about the entire matter of the effects of silting of our waters on marine and other aquatic life. That, of course, is the job of the biologists, but we soil conservationists feel that we can contribute something of practical value from the erosion control and waterflow retardation standpoints. I believe that all of us will benefit as more information is developed along some of the lines we have been discussing here today. For instance, I am told that the Fish and Wildlife Service people feel that siltation of bays and estuaries has its effect on young

shrimp, by interfering with their feeding and proper growth there before they migrate out to deeper water. But it seems that neither Federal nor State studies of this question so far have been feasible.

BAY SILT REDUCTION BEGINS WHERE RUNOFF STARTS

In all events, however, on the basis of sound and extensive research and experience, this we know: That the task of reducing floods and controlling erosion, and thereby reducing the intake of silt by our reservoirs, bays, and estuaries, is one which should begin where the rains fall and runoff starts, and end only when the runoff reaches the sea. A main objective of all the conservation work which the Soil Conservation Service does is to retard the discharge of water from upstream areas. And, while we are thus retarding runoff, the rate of silt production by erosion is reduced.

The flow and quality of water in surface streams are influenced materially by the way we use and manage our land resources; but in a great many instances individual landowners and water users have little or no control over the activities involved with stream flow and hence are unable to deal with them alone. As a result, local agencies and groups like your own, and the farmer-organized and farmer-directed soil conservation districts through which we make technical assistance directly available, are concerning themselves more and more with water-control problems. The Soil Conservation Service, in fulfilling its authorized responsibilities, is committed to doing everything possible within its resources to provide technical assistance needed in dealing with the erosion problem, siltation, floods, and water wastage.

SERVICE'S COORDINATED WATER-CONSERVATION ACTIVITIES

Thus the water-conservation activities of the Service are continuously geared to the needs of the land and water users, and are coordinated with the activities of other agencies concerned with land and water. To this end we define water conservation—which always has been part and parcel of soil conservation in our Service planning, operations, and research—this way. Water conservation is the physical control, protection, management, and prudent use of water in such a way as to maintain crop, grazing, and forest lands, vegetal cover, and wildlife for maximum sustained benefits to people, agriculture, industry, commerce, and other segments of the national economy.

If erosion in a watershed can be reduced, sedimentation in reservoirs, harbors, and estuaries can be reduced. For example, conservation treatment in the 14-square-mile watershed above Lake Issaquena, near Clemmon, S. C., between 1941 and 1949 reduced the rate of silting of that reservoir by 53 percent.⁵ Rotation strip cropping applied on some 1,400 acres was the major practice used.

ACRE-BY-ACRE CONSERVATION TREATMENT OF LAND ESSENTIAL

The only way, moreover, in which water pollution from silt, with the attendant problems of sedimentation, can be controlled or reduced effectively is by the adoption of soil and water-conservation practices applied in accordance with the needs and capabilities of the land. Contour farming, strip cropping, terracing, good pasture and range development and management, proper woodland management, land-use changes, and various other specific land-management measures

which have proved to be successful in the control of soil erosion and water runoff must be applied to the land by those who use the land.

It is not enough to treat just part of a farm, or part of a watershed, or part of any other area of land. Every acre of cropland, pasture land, farm woodland, and idle land must be treated according to its needs and each acre used according to its capabilities. That is true, whether it is in major watersheds for flood-control and silt-pollution abatement purposes, on individual farms and fields for erosion control, or through such group undertakings as conservation drainage or irrigation projects.

That is exactly what is being done by farmers in their soil-conservation districts, with which the Soil Conservation Service cooperates. In today's conservation era, conservation of land, water, forest, grass, cultivated crops, and wildlife are, for the first time in the history of man, being tied together and scientifically coordinated on the basis of land capability and need, using various mutually supporting practices in sufficient number and appropriately coordinated to get the job done effectively.

This is a basic tenet of modern soil conservation.

PUBLIC BENEFITS AND RESPONSIBILITY

Ordinary soil and water conservation measures are for the protection and improvement of the land on which they are applied, and consequently the principal benefit is received by the owner or operator of the farm on which such work is done. Therefore, it is only proper that the farmer should bear the principal cost. On the other hand, the special measures and structures used in flood control are designed to benefit downstream bottom lands and to keep sediment out of stream channels, reservoirs, bays, etc. Because these are public benefits, the public—through community groups, or county, State, and Federal Government—should bear its proportionate part of the costs so long as they are justified by the benefits to be expected.

SOIL CONSERVATION AND FLOOD CONTROL

The Soil Conservation Service is carrying on water flow retardation works of improvement on 11 major watersheds in the country at the present time. Our Service and the Forest Service are the two United States Department of Agriculture agencies authorized under the 1936 and subsequent flood-control acts to engage in this work, in cooperation with the Army Corps of Engineers. We do it through the soil-conservation districts. The 11 watersheds in which such operations are under way include the Trinity and Middle Colorado in Texas, the Yazoo and Little Tallahatchie in Mississippi, the Coosa above Rome, Ga., and the Potomac in Virginia, West Virginia, Maryland, and Pennsylvania.

Surveys which are in progress, meanwhile, in this same general area include those on the Roanoke in Virginia and North Carolina; the Savannah in North Carolina, South Carolina, and Georgia; the Altamaha-Ogeechee in Georgia; the Apalachicola in Alabama, Georgia, and Florida; and the Sabine-Neches, part of the Brazos, the Pecos, Red River, and the San Jacinto wholly or partly in Texas. The survey report has been prepared on the Pee Dee River watershed in North and South Carolina and Virginia, and the survey has been completed on the Little River and Bosques branches of the Brazos in Texas.

SOIL-CONSERVATION DISTRICT ORGANIZATION AND ACCOMPLISHMENT

It should be emphasized, however, that the soil-and-water-conservation work which concerns you and every other segment of society in the Nation is not confined to this flood-control type of operations. It is progressing at a constantly accelerated rate throughout

¹ Hearings, "Rehabilitation of oyster beds destroyed by the opening of the Bonnet Carré Spillway." Subcommittee on Salt-Water Fish and Shellfish Problems, House Committee on Merchant Marine and Fisheries, 80th Cong., 1st sess., May 6, 1947.

³ Fisheries Statistics of the United States, 1945. Statistical Digest, No. 18, U. S. Fish and Wildlife Service.

⁴ U. S. Fish and Wildlife Service records. (Statistics in pounds of oyster meat, because of varying bushel sizes and poundage records used in different States.)

⁵ Noll, John J., Roehl, John W., and Bennett, Jackson. Effects of Soil Conservation on Sedimentation in Lake Issaquena, Pickens County, S. C. U. S. Soil Conservation Service, SCS-TP-95, Spartanburg, S. C. June 1950.

the State and the whole country in the soil-conservation districts. More than four-fifths of all the farms and three-fourths of all the land in farms in the United States are now within soil-conservation districts, which number nearly 2,350 in the 48 States, Alaska, Hawaii, Puerto Rico, and the Virgin Islands. You now can travel from northern Maine through all the States bordering the Atlantic Ocean and the Gulf of Mexico, and on across Texas into New Mexico, and be outside of soil-conservation district boundaries only one time—for a very short distance in New York.

Alabama, incidentally, is one of nine States, Puerto Rico, and the Virgin Islands which are all completely covered by districts, as are South Carolina, Delaware, Rhode Island, New Hampshire, New Jersey, Vermont, Massachusetts, and Nebraska. Many others are largely covered.

District organization, of course, is not enough by itself. It is the soil and water conservation work that actually gets done on the land that counts. To January 1, this year, detailed conservation surveys had been made on 361,000,000 acres in the districts; 941,000 conservation farm plans had been worked out by district farmers and Soil Conservation Service technicians out on the land together, covering 260,000,000 acres; and 131,000,000 acres had been treated with conservation measures called for in the plans. All my figures are from the records of the Soil Conservation Service. They do not include PMA figures, or those from other Federal, State, or private agencies except as the activities of these agencies have contributed to the work done on the Service-planned farms.

SERVICE'S EMPHASIS ON BIOLOGICAL ASPECTS

I should like to mention that we give particular attention to training in biology for our farm planners and other technicians who work with farmers, out in their fields—not in offices. The farm planner considers the value of treating various types of land, not only for their primary use but also with an eye to any modification or special practice that will result in more wildlife through complete and adequate land treatment. He is expertly equipped to do this, because his understanding of the biology aspects of soil and water conservation planning and treatment is dovetailed with similar basic knowledge and adeptness in soil science, geology, forestry, range management, hydrology, agronomy, engineering, and other phases of a complete, coordinated soil and water conservation program.

SOIL AND WATER CONSERVATION IS URGENT, TAKES TEAMWORK

The problem of soil and water conservation and wise use is not a problem that can wait until farmers solve it by any trial-and-error method, for that might be too late. This is an urgent problem, which demands the best efforts of the Nation's scientists and of all who use the land for agricultural purposes. And the understanding cooperation and active participation in its solution by industrial and all other groups in our society are indispensable to getting done in time this vital job which so importantly affects all of us.

Princes of Privilege

EXTENSION OF REMARKS OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. SHAFER. Mr. Speaker, under leave to extend my remarks, I include

an editorial from the October 6, 1951, Saturday Evening Post entitled "The New Princes of Privilege Are the Bureaucrats":

One thing that makes President Truman particularly hard to take is his belief that he got elected in 1948 by making silly speeches. Because he believes that, and because he appears to be set on a third term, Mr. Truman continues to make silly speeches. His San Francisco address to the local Democrats was a whistle-stop number which topped even the 1948 record.

Actually, Truman was not elected in 1948 by defying economics and ordinary common sense from the rear platforms of trains. That would be an insult to the intelligence of the people who live in the rural areas of America. He was elected partly by indifference to the Republican candidate, but more by votes of Federal jobholders, who have grown so numerous that they, with their wives and in-laws, now hold the balance of power in any close election. For example, in 1948 Ohio went for Truman by about 7,000 votes. At that time there were 80,000 Federal jobholders in Ohio. They have been increased by almost 15,000 since then, according to the figures of Rogers C. Dunn, the election analyst, who keeps a close track on the relation of the number of jobholders to election results.

In his San Francisco address the President went to town on some imaginary characters whom he described as "the special-privilege boys." They are supposed to be rolling in luxury because the "national income" has leaped from \$40,000,000,000 in 1933 (the bottom of the depression, incidentally) to \$278,000,000,000 last year. Deduct the Government's cut through taxes, and slice down the remainder to allow for administration-sponsored inflation and high prices, and the national income looks less impressive. Perhaps people may soon begin to suspect that the evil genius who wants to cut their take-home pay down to the standards of the McKinley era isn't the boss, but Mr. Truman's tax eaters.

If there are any "special-privilege boys" extant, they are Federal officeholders, beginning with Mr. Truman himself, whose compensation includes a \$50,000 extra "expense allowance" which he can clap right into the bank without paying any tax at all. How much money would one of Mr. Truman's phantom special-privilege boys have to get to be able to do that? The scandal of privilege extends all the way down the line. The roster is sprinkled with mink coats, deep freezes, and substantial inducements for "public servants" with an eye to business. Year after year the payroll is augmented until it has become a serious question whether the party in power, supported by an ever-increasing Praetorian Guard of pliant officeholders, can ever be defeated at the polls.

These are the forces upon which Mr. Truman relies for reelection, and it must be admitted at the outset that it is a formidable array. In a recent edition of Human Events Donald Richberg thus defined the new privileged class: "The ruling class, which is always the reality behind the abstraction of government, is not a privileged class in the old sense. It is only privileged in the new sense: privileged to decide how everyone should live and work for the good of society; privileged to have all the facilities for exercising power, which incidentally always include a great deal of what would have been called luxury and pomp in previous societies."

The remnants of the privileged class which Mr. Truman uses as a prop in his class war have to look over their shoulders for the sheriff. The new privileged class of self-perpetuating job holders and functionaries is the sheriff. It makes a difference, as people are gradually coming to see. Not too gradually, we hope.

The Cost of Living

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 9, 1951

Mr. SABATH. Mr. Speaker, we are faced with a very disturbing, yes, tragic situation in the constantly increasing cost of living and the outrageous skyrocketing of prices on everything. Not only is the average workingman and his family being pinched more than ever before, but the cost of our entire defense program has increased to such an alarming extent that we may soon be faced with all-out inflation.

This dangerous situation has troubled me no end for many months. Some 15 months ago, at the time of the Korean outbreak, I urged and advocated complete controls across the board. During my long service in the Congress I have seen the effects of uncontrolled and unbridled price stampedes. I have seen the corporations and major industries run hog-wild in their lust for profit and more profit, accumulating unconscionable wealth and power out of the misery of war and great emergencies. The thought uppermost in my mind has been this: "Will this greed and avaricious quest for power, for control, for wealth ever cease?" We are now witnessing a recurrence of their ill-advised and unpatriotic actions, and I, for one, want to see it controlled; yes, eliminated completely. Until this is accomplished, the hope and struggle for peace remains but an illusion. I have always firmly believed that, once the profit motive is completely eliminated, the scourge of war will disappear.

In order to determine the true facts in the present situation, I addressed a letter to Director Michael V. DiSalle, of the Office of Price Stabilization. His very forthright and detailed explanation of the laws he is required to administer, and the program he has outlined in connection therewith, is contained in his reply which reached me recently. It is deserving of the careful attention of every Member of this House, and I urge each of you to read it carefully. My letter to Mr. DiSalle and his reply follow:

SEPTEMBER 26, 1951.

Hon. MICHAEL V. DISALLE,
Director, Office of Price Stabilization,
Washington, D. C.

DEAR MR. DISALLE: When I urged and advocated, 15 months ago, that controls be instituted across the board, and made every possible effort to bring about the enactment of fair legislation to preclude the skyrocketing of prices on foods, rents—in fact, on everything—I was in hopes that when your agency went into action, prices would be held down. Instead of that, I notice that price increases are being authorized almost daily, instead of having them lowered. This tends to inflation and makes it impossible for the white-collar worker, the rank and file of labor, and the vast number of our aged on retirement or fixed income to withstand the pressures they are subjected to. Their standard of living is continually being lowered.

Should not some effort be made to hold prices down or even lowered? Conditions are commencing to be intolerable.

Sincerely yours,

A. J. SABATH.

OFFICE OF PRICE STABILIZATION,
Washington, D. C., October 3, 1951.

Hon. A. J. SABATH,

House of Representatives,

Washington, D. C.

MY DEAR CONGRESSMAN SABATH. I sincerely appreciate your letter of September 26, 1951, regarding the efforts of this Office to stabilize prices. I had known of your endeavors to provide for strong and effective price and wage controls before I came to Washington in December 1950 as Director of Price Stabilization, and since that time I have had personal knowledge of your continued efforts to support the economic stabilization program and the legislation which would make it even more workable.

I am sure that I am as disturbed as you are by the necessity from time to time to authorize increases in ceiling prices. Some of these increases, of course, are required under the terms of the Defense Production Act. Our recent increases in pork prices, for example, or our recent regulation permitting increases in milk prices, were required in order to allow reflection of upward movements of farm products which are below parity. We have not yet completed our procedures for granting price increases under the terms of the so-called Capehart amendment, but unless this section of the act is changed, many price increases will flow from this requirement. As you know, our attempts to roll back prices that had advanced exorbitantly have likewise been severely limited by recent congressional action.

Nevertheless, one should not conclude from the frequency of the announcement of price increases that such increases have been permitted on a general or across-the-board basis. Our economy embraces millions of sellers and a vast array of products. Although we have been forced to increase prices here and there, ceilings for the bulk of the goods and services produced in the economy have not been increased and, in significant cases, decreases have been required. Actually our record as measured by the various price indexes has not been a bad one. Since price controls became effective, the BLS index of consumer prices has advanced by approximately 1 percent. An appreciable part of this increase occurred in items which are not within the control of our agency, including rents, public utilities, etc. Wholesale prices have actually declined since price controls became effective. Some of this decline has been due to reductions in ceilings which OPS has required and some has been merely the automatic correction of speculative excesses which occurred during the panic buying which followed the Korean outbreak. I am frank to concede, however, that many market prices are below ceilings and that a renewal of inflationary pressures would permit some increases in price levels before our controls would take hold. It is our intention and constant effort to reduce inflated ceilings wherever that is possible within the limits of the Defense Production Act and the limitations of our relatively small and newly assembled staff.

In all frankness, I should also explain that, even with unlimited authority to hold or reduce price ceilings, and unlimited staff to exercise it, a return to pre-Korean price levels or anything approaching them would be out of the question. Since Korea there has been a sharp and irreversible advance in basic cost levels, including both wages and prices for raw materials, many of them produced outside our shores. It would be a futile and hopeless effort to set as our goal

any substantial reduction of prices from present levels. With the limitations on our legal authority which now exists and in the face of the inescapable facts as to levels of cost, our reasonable goal should be and is to maintain, to the maximum possible extent, the general level of prices which presently exists.

Even with the aid of generous subsidies and with a substantially stronger basis of public support and enabling legislation, OPA was unable to achieve complete stability of the price level. In fact during the first year of general price controls and before institution of subsidies—from May 1942, to May 1943—the consumer price index rose by 8 percent. It is our firm intention to do substantially better than this if we can.

Thank you again for your letter, and if I can be of further service, please do not hesitate to call upon me.

Sincerely,

MICHAEL V. DISALLE.

Red China Aims To Wipe Out Christianity

EXTENSION OF REMARKS

OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 9, 1951

Mr. KERSTEN of Wisconsin. Mr. Speaker, the Chinese Communists are carrying out a bloody, unrelenting persecution in China aimed at wiping out all evidences of Christianity.

I include herewith the second of a series of articles by Everett S. Allen, which appeared in the New Bedford (Mass.) Standard-Times of June 27, 1951:

CHRISTIANITY FACES ANNIHILATION IN GREAT CHINA COMMUNIST PURGE

(By Everett S. Allen)

When the Chinese Communists arrested Father Paul Shih Kuang-chiu, a native Maryknoll priest at Chihfeng, Jehol, they tied his arms to his body and knotted a rope about his ankles. Then they dragged him over stony roads and sorghum stubble for 2 hours and finally shot him dead.

Seven Christians in Shanwantse were arrested and ordered to apostatize. When they refused, a pole was placed behind their knees and their arms were tied to the pole so the chin came between the knees. They were tied to two mules and dragged until dead.

Five armed Communists arrested Father Maurus Pai, a native priest attached to the Maryknoll Fushun mission in Manchuria. In frigid winter weather, he was stripped of his clothes and thrown into an unheated prison. He was brought to trial on charges that he spread an American religion, hid arms and plotted against the Communists. He denied all charges, was whipped and taken back to prison.

On Christmas Day, 1947, he was led to his church, where the Communists tribunal had assembled. He was beaten with whips and sticks until he was unconscious. Then he was dragged back to prison.

On January 17, 1948, he was brought again before the tribunal. Regional Prefect Chao and another Communist named Li reread the charges, during which time he was accused of being a slave of the Americans.

He was sentenced to death. Clad in bur-lap bags, he was dragged through the streets and finally shot through the head. He was 70.

THIRTY MONKS DIE

Thirty Trappist monks in Yangkiaping died on a death march to prison after Communists burned the monastery.

The Reverend Joseph Liang, 48, died of hunger and exposure in a Chihfeng jail after 10 months of torture and imprisonment; his body had been beaten to a pulp and his bones were broken and exposed.

In Yenki, Manchuria, 32 German Benedictine Fathers and Brothers and 13 Swiss Sisters were arrested and sent to a concentration camp.

Two Polish Franciscan priests, Fathers Francis Arciszewski and Gothard Krysteczko, were arrested in December 1947 at Shunteh, Hopi. Charged with political activity in behalf of their own government, they were released after 198 days in jail when this accusation became embarrassing to their accusers.

Father Maurus Bougon, a French Trappist who survived the Yangkiaping death march, was suspended from a tree with his arms tied behind his back for 24 hours. On the verge of death, he was thrown into a prison cell where his toes became frozen. He is still in jail.

More than 100 priests, brothers, and nuns died in the late forties as the Communist Chinese overran northern China. At present, of the Maryknoll group in China, there now are under arrest awaiting trial two bishops, seven priests, four Chinese priests, one American Sister and two Chinese Sisters. Under house arrest are 11 priests, 10 Sisters; evicted or mission confiscated, 16 priests and 2 Brothers; seized by the Communists and since disappeared, 1 bishop, 1 priest.

PARTY-LINE VIEW

Peiping's headquarters gave the party-line view on Christianity on April 28, although firm, it still professed much more tolerance than the Communists have any intention of showing. This pseudo-benign pose was taken, however, because they feel the time has not yet come to wipe Christianity out completely in China and because the policy statement was in a propaganda broadcast directed at North America.

It said, in part, "Our aim is to wipe out thoroughly the influence of American cultural aggression which pervaded China for more than 100 years. To carry out this struggle, there must be the unity and common effort of patriotic Christians and the government, led by the Communist Party of China."

"According to the common program, we have a common responsibility to unite and join our efforts on many things, quite apart from the question of world outlook and religious belief, with which governments cannot interfere by administrative orders."

Nevertheless, Communists deported nine European nuns and priests from China in April, took over the Baptist University of Shanghai in February and confiscated Peiping's world-famed Yenching University, a Protestant-supported institution that was the symbol of western faith, learning, and respect for China.

Peiping, sensing some advantage in the social organization previously set up by the church, is first content to cut off the China units from their mother churches abroad. Annihilation will come later, after enforced withering has set in. Nationalism is now the major argument placed before Chinese Christians.

"Leading Catholics in Tientsin and Nanchang," the Communists announced in January, "are among the latest to make statements supporting the move for an independent Catholic Church. The Methodist Church, Anglican Church, and other Christian churches and organizations, also view independent organization as the best way to

escape from the control and manipulations by the imperialists."

INSIDIOUS METHODS

Insidiously, as if to indicate that intolerance is not involved, the Communists never bring charges of a religious nature against Christian leaders. Rather it is charges that will appeal to Chinese nationalism, that will stir hatred. Nuns are accused of killing infants, priests with espionage, cheating the poor, and distributing pornographic literature. The Communists even allow the carrying of Catholic flags in anti-American demonstrations and thereby lure nationalistic Christians another step along the road toward the atheism of the iron curtain.

But the iron fist slowly is being revealed beneath the glove. At Ngwa, neophytes of the Catholic Church were told they would have no share in the agrarian reformers' distribution of land unless they repented of their Christianity. Christians in Paklau were threatened with being machine-gunned if seen talking to the pastor.

In Kansu, a compulsory meeting of Catholics and Protestants ruled the Catholic Church was anticommunistic, all foreign missionaries would be expelled, and no further conversions to Catholicism would be allowed under penalty of death. In addition to cracking down on Catholicism, by not accusing Protestantism as well, it served the dual purpose of splitting the two groups and jeopardizing a united Christian front.

In Kongmoon, middle-school students, instigated by two Communist teachers, wrote obscenities on the church wall and stoned the pastor before the church. He stood like a soldier before the firing squad, in silence, as the stones cut him on the face and legs. Grieved and humiliated, the townspeople who had been his parishioners, later expressed their apologies in secret.

TWO HUNDRED AND NINETY CHURCHES CUT TO 47

A year ago, the Church of Christ in China, reporting in the publication Protestant Missions in China, recalled that its organization had been the major church in Manchuria. Prior to the purge of Christianity by the Communists, this denomination had 290 churches throughout the Province. Last year, these had been whittled down to 47; the others were destroyed and confiscated. Those remaining were mainly in cities, the rural churches not functioning. Presumably the situation now has deteriorated further.

People's China, the bimonthly English-language magazine published by the Communists in Peiping, declared shortly before General MacArthur's removal from Tokyo, "Let no one be confused by the anti-Communist rantings of the United States. The ulterior and unmistakable aim is the economic and political subjugation of all Asian peoples to Wall Street."

"MacArthur is subsidizing reactionary churches in various eastern countries and turning them into spy centers. The American espionage ring in Hong Kong, which maintains close contact with Kuomintang agents and Catholic missionaries in China, is known to be under the direct control of MacArthur's headquarters in Tokyo."

An American priest, long experienced in the Catholic mission work in China, said sadly, "They do not understand the spiritual motive. If they cannot find an obvious materialistic motive, they are certain that there is one, and they create one."

"In actuality, religious persons in China—and I speak from experience—bend over backward to maintain neutrality in times of difficulty. Members of the American clergy even are embarrassed occasionally by military espionage agents of their country, who, eager to do the best job possible, ask questions which a priest—as with a doctor—

would consider a violation of sacred confidence.

"But the Communists do not understand that."

Lasting Conservation Through Conservation—Part I

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 9, 1951

Mr. WICKERSHAM. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address by H. H. Bennett, Chief, United States Soil Conservation Service, at summer session of State Teachers' College, Fredonia, N. Y., July 19, 1951:

LASTING CONSERVATION THROUGH EDUCATION

It is most gratifying to attend a meeting of this kind—where the entire student body of a great teachers' college has gathered to discuss better ways of educating American youth with respect to the conservation of our natural resources. Less than 20 years ago, very little thought was devoted to this vital phase of education. Even as late as 1933, with a few scattered exceptions, probably very few teachers even thought of devoting valuable class time to discussing the conservation of our vital soil resource. No teachers' college, so far as I know, and very few of our agricultural colleges, offered such a course as soil conservation. Certainly, no college thought of giving a course on how to teach conservation to the elementary and secondary pupils in our public schools.

The first strictly erosion-research station of the world was set up in 1929, near Guthrie, Okla. This was followed in rapid succession by the establishment of nine other such stations in widely separated areas where erosion was known to be a serious problem. Most of the basic erosion data was acquired at three research establishments.

But times have changed. Erosion control—soil conservation—has gained the approval of the Nation. Fredonia State Teachers' College, I am informed, requires that all undergraduates take a course on the conservation of natural resources. According to my understanding, a class in conservation education is one of the important courses given in the present summer session. I know of other teachers' colleges and some universities, in various parts of the Nation, which are doing much the same thing. That is as it should be—it is a natural outgrowth of the great conservation movement that began in America about 20 years ago.

In a democracy such as ours, most great reforms or changes in public policy are brought about, either directly or indirectly, through education. But they are seldom started in the public schools. The school system nearly always follows, rather than leads, our public in such reforms as they gain momentum and the need for them becomes obvious. It is then that our public school system takes on the burden of helping make the reforms permanent by educating the coming generations.

SO LONG TO LEARN

Our present conservation program, especially our soil conservation program, is definitely a reform, as well as a national technical program based, where done right,

on a new science (the science of soil conservation). Our present perspective in relation to the importance of our natural resources is the equivalent of a great national reformation (which, however, is still not great enough). With respect to land use and protection, it amounts to an agricultural revolution never previously approached.

During the years when the American Continent was being settled, some of our wasteful methods might have been excused in some degree. But not even then was all the waste excusable. About the only justification—if it can be justified at all—we can think of for much of the profligate waste is that it was often the easiest thing to do. It was easier in those days to cut and burn timber that interfered with cultivation than it was to save the trees that were cut. It was often easier to settle on a new farm, when the old one was worn out, than it was to take care of the soil. But scarcely an excuse in any sense, looking back from the advanced viewpoint of today.

Of course, the matter of ignorance entered into our early wasteful use of the land and other resources. During the years of settlement, we gradually built up a false sense of security by assuming that our land and other resources were inexhaustible. The vast extent of good virgin land, forests, wildlife, and clean water quite naturally affected the average viewpoint with respect to the seeming American abundance of natural resources. But it is hard to understand how most people of a great enlightened nation should continue, generation after generation, to delude themselves into thinking that our natural resources were inexhaustible and that any kind of conservation was unnecessary in the first place and too costly in the second place. It is difficult, also, to understand how a farmer could see his land literally wash out from under him without recognizing the threat to the welfare of his family.

But, with few exceptions, that is exactly the way most of the people of the Nation thought and acted for generation after generation. And a few foolish ones—not usually farmers, however seem (or pretend) to think about the land as did our forefathers a hundred and fifty years ago. Fortunately, they have no important following.

FAIRFIELD COUNTY SOIL-CONSERVATION SURVEY

In 1910 I helped make a soil survey of Fairfield County, S. C. We found that soil erosion was severe over most of the land in the county. Much too much of the land, we found, had been ruined for further cultivation. Twenty-eight percent of the land, all of it formerly cultivated, had been so damaged by erosion and by the deposition of the products of erosion over stream bottoms, it was valueless for any use except forestry and pasture. I thought, at the time, that the report on the findings of this survey, when published, would create a sensation, at least locally and nationally, too, I was hoping.

Did it?

Not in the slightest degree. Those who read the report—if any read it—apparently laid it aside saying, with some such meaningless observation as, "So what?"

Subsequently other reports of severe erosion damage from many parts of the country were made, still without arousing any interest on the part of a generally complacent public, either locally or nationally. Too many people seemed still to hold to the idea that land is permanent and indestructible, or that erosion is a natural process over which man has no control; that soil conservation would cost too much; that those who talk about it make their appraisals of the damage in exaggerated terms, and other such nonsense.

In 1928 I was coauthor of a Government pamphlet entitled "Soil Erosion, a National

Menace." I was determined that my part of the pamphlet would not be ignored. The facts were marshaled in a way which I thought would convince any fair-minded person that soil erosion is a real menace to the continued welfare of the Nation. This publication attracted more attention, it seemed to me, than any other ever written about the need for a vigorous program of soil conservation. It engendered some thoughtful editorials around the country and a number of articles in the press. It helped induce the Congress to make a small appropriation for the establishment of 10 soil-erosion experiment stations—the first erosion research stations of history, as previously mentioned. These stations—provided for by funds obtained through the Buchanan amendment—supplied much valuable data supporting the conviction that I and a few others had acquired by years of study of land conditions throughout the country. But even with this, it was not easy to arouse public interest. A few agricultural scientists still insisted, in spite of proof to the contrary, that we were overstressing the harmful effects of soil erosion. But there were a few clear-thinking men and women who put their shoulders to the task and helped with getting a national program of soil conservation underway. Finally, the Soil Erosion Service was set up with an allotment of NIRA (relief) funds. This Service devoted its efforts mainly to demonstration projects—most of them on a watershed basis—showing what conservation could accomplish. But even then the matter of soil conservation had not been declared a national policy and an essential function of government. That came in 1935, when Congress passed our first Soil Conservation Act—the act that created the Soil Conservation Service in its present form. That was the real beginning of our national reformation in the use of land.

I cite these items relating to the early history of the soil conservation movement in this country, mainly to emphasize a point: It is not easy to change people's ways of thinking, and it usually is even more difficult to change their ways of acting, their habits. Great numbers of people had acquired the attitude of thinking in terms of inexhaustible resources because, as pointed out above, of our original abundance of rich land. In settling the country, we allowed millions of acres to be seriously damaged by erosion, a great deal of it so seriously as to have little or no further value for plowing.

Even now, there are some uninformed critics who still scoff at the idea that we may some day run short of good land. They look at some of the so-called farm surpluses and assume that we will always have such surpluses. Furthermore, even some of those who see the necessity of conservation think it is not a job that concerns them. They say that soil conservation is the farmer's job, not theirs. They don't stop to consider what will happen if the farmers don't do the necessary work, or don't know how to do it. They fail to realize that city people will be the first to go hungry if our land should become so depleted that it will no longer support all of us. Farmers for a time would be able to produce a little for themselves, but not enough for their cousins in town, perhaps.

SOIL EROSION IN WORLD HISTORY

At this point, I should like to mention some of the mistakes of nations and civilizations of the past in their use of the land that supported them. Nearly all historians recognize that there has been something of a pattern to the rise, decline, and fall of various civilizations of the past. People advanced and prospered for some centuries, then decline set in and eventually their civilizations disintegrated. Historians have used various explanations for this recurring

pattern in the rise and fall of past empires and civilizations. Seldom, however, until the last few years did anyone think of attributing any part of the decline and fall to the decline in the food-producing value of the land. The evidence was there, but no one thought of looking for it. Almost without exception, the civilizations that have come and gone left behind them great areas of wasted land. They progressed and prospered as long as their land was new and fertile. They declined and fell as the land became unproductive and was no longer able to support a progressive and prosperous civilization. I am not contending that soil erosion was entirely responsible for the decline and fall of all the ancient civilizations that came to grief. I am saying, however, that the two in many instances have been closely associated. I contend that misuse of the land played a vital role in the decline and fall of some of these civilizations—taking a much more important role than most historians seem to realize.

We have found much convincing evidence of this. All across the continent of Asia, in North Africa, and in southern Europe are found here and there the homes of former leaders of world civilization in areas where there now is much barren and desolate land. Most of these seats of former great empires now support only a half, a third, or less of their former population; and they support that reduced population at a very low standard of living. You have but to examine the land, as it is today, to see why these regions are no longer capable of supporting a well-fed and prosperous people and a progressive civilization. Take a look at the area where the ancient Assyrians lived when they ruled most of the civilized world of their time. Look at Iran, the home of the ancient Medes and Persians. Look at Syria, Lebanon, and Palestine—empires that once supported prosperous and proud civilizations. Or take Crete, Greece, and Italy; these were the areas where our own western civilization actually originated. Or you can take northwestern China and the Indus valley of Pakistan as examples of severe land impoverishment.

There is not time to describe in detail what the land looks like now, in these regions. A detailed description is hardly necessary, the poverty and backwardness of the people are indicative of the poverty of the land. In general, you will find, if the countries are explored in detail, that most of the topsoil has been stripped from the uplands, although the valleys often are still covered with productive alluvium. Take the once famous city of Antioch as an example. Around 600,000 people lived there during Roman times and the city was one of the greatest export centers of the Roman Empire. A few years ago archeologists excavated some of the ruins of this old city from covering erosion-deposited silt, 28 feet deep in places.

In the highlands of interior Syria some of the stone door sills of ancient houses are now 3 to 6 feet above the bare skeleton rock around them. The land has lost that much soil during the centuries since the houses were built; it has lost practically all the soil, because only the bare rock remains in most places. It is erosion of this kind that is responsible for much of the poverty of these once-fertile lands.

LESSONS FROM THE PAST

There would be little point in reciting the history of these ancient lands, unless the examples might serve as a guide for the future. Much the same thing could happen to our land if we should continue to ignore the danger signs. It is true that we now have a vigorous national conservation program under way, especially with regard to our land, water, and forest resources. But we are not yet practicing true conservation on all our land, by any means. Only about a fifth of

our American farmers are practicing full and complete conservation farming on their land. We are still losing hundreds of thousands of acres of land every year—probably about 500,000 acres—through the process of unnecessary erosion. Millions of people in town and country are still blissfully unaware of the dangers of continued exploitation of the land. We cannot afford to be too complacent about our recent progress toward true conservation; for the main job still lies ahead. We must not slacken our efforts or cease our educational work. Some of the ancient peoples I mentioned started conservation work as they saw their land slipping away from them. They were not entirely ignorant of the fact that soil wastage was ruining them.

Returning briefly to ancient history, let me cite a few examples of people who recognized what was happening to the land and a few who tried to do something about it. As early as the fourth century, B. C., Plato recognized what was happening or had already happened, to the soils of his homeland. He said: "The surviving hills of Attica are but skeletons from which the flesh has been washed away." Plato's observations came very late, even if the people of Athens had heeded him and tried to stop the destructive erosion. The brilliant civilization, not only of Athens but of much of Greece, slowly died or was dispersed because the land of Greece would no longer support a progressive and prosperous civilization. During the first century, B. C., the Roman philosopher and poet, Lucretius, observed: "Our earth itself is dying * * * The land is becoming exhausted, rains and rivers erode it, and carry even the mountains into the sea." Yet, with this and similar observations by other farsighted citizens, the Romans did little to check the ruinous erosion process. Their empire and their civilization gradually declined and died as more and more of the farm land was abandoned and the rural areas became depopulated. The ancient Phoenicians even went so far as to construct rock-walled bench terraces, that would cost \$15,000 or more per acre, measured in terms of present labor costs in this country, on some of their steeply sloping hillsides. But they did this only after much of their better land had been severely damaged or ruined. And even after they had constructed such terraces they continued to strip the forests from other hillsides without providing protection for the land. In other words, their conservation efforts were mainly too little and too late. And that pretty well describes the efforts of most other ancient peoples. In this country we, too, started rather late with our conservation efforts; but not too late, fortunately, provided we make sure that our efforts are not too little.

Lasting Conservation Through Education—Part II

EXTENSION OF REMARKS OF

HON. VICTOR WICKERSHAM
OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 9, 1951

Mr. WICKERSHAM. Mr. Speaker, under leave granted to extend my re-

¹ "Critias," by Plato. Quoted by Will Durant in the *Life of Greece*, p. 562, Simon and Schuster, 1939.

² *De Rerum Natura* by Titus Lucretius Carus. Quoted by Will Durant in *Caesar and Christ*, p. 153. Simon and Schuster, 1944.

marks in the RECORD, I include the following address by H. H. Bennett, Chief, United States Soil Conservation Service, at summer session of State Teachers' College, Fredonia, N. Y., July 19, 1951:

THE SCIENCE OF SOIL CONSERVATION

We have two distinct advantages over the ancients with regard to this matter of conserving our soil and other vital resources. First, we have the lessons of history before us. We know, or at least we should know, that the conservation of our natural resources is absolutely essential for our survival as a progressive, prosperous, and vigorous nation. Second, we have the knowledge necessary to conserve these resources while still using them. We know how to conserve the land so that it will not only continue to produce as much as it has in the past but will produce more than ever without impairing future productivity.

Within recent years, mainly within the last 20 years, we have developed a new science of soil conservation in this country. I call it a new science in spite of the fact that soil conservation has been practiced by various people, according to the extent of their knowledge, for thousands of years. Men have been struggling with this problem ever since they learned to farm, some 8,000 years ago. But, in all the historical records, I have never been able to find where any people ever attempted to practice full and completely coordinated soil conservation, as we now know it and do it in America. At no place did they ever develop the practice of conservation to the point where it was a science in itself. Always the matter of soil conservation was considered just a phase of agronomy or a branch of agricultural engineering, or something else. Proper use of the land, according to its capabilities, was seldom given as a means of conserving the soil. Erosion control was given little consideration until the land had already been practically ruined. Irrigation and drainage were usually considered entirely apart from the matter of soil and water conservation. In other words, until about 20 years ago, the various elements that go into making up a complete and scientifically coordinated program for soil and water conservation were treated as separate sciences or practices. The agronomist concerned himself with developing better seed, better fertilizers, better cropping systems, and better tillage methods. The engineer was mainly concerned with building dams, terraces, irrigation canals, drainage ditches, and other water-control structures. The soil surveyor was mainly interested in classifying soils. No one attempted to coordinate these and other pertinent sciences into one broad science for proper use and protection of the land.

The new science of soil conservation, about which I am speaking, was developed largely through research, aided by the world's first Nation-wide soil-conservation program—the program of the Soil Conservation Service. Assembling a large corps of scientists and technicians from many fields and having them work together coordinately and cooperatively, to plan and carry out a program that would permit full use of the land while giving it complete protection, agronomists, engineers, soil scientists, foresters, range-management specialists, biologists, geologists, climatologists, hydrologists, economists, and others all made their contributions. The resulting program is what we call modern soil and water conservation. It is based on research, as stated, and has been tested now by a million farmers. It has proved so remarkably successful that some of the sciences are imitating some fundamental parts of its basic principles.

The basic principles on which this science is founded are relatively simple: They may be briefly summed up under two headings: (1) Use each acre of land according to its

capabilities; and (2) treat each acre according to its needs.

ACRE BY ACRE LAND INVENTORIES AND PLANS

The principle of using each acre of land according to its capabilities is fundamental. True and lasting conservation can be achieved in no other way. This is one of the basic principles that most of the ancients, and modern scientists as well, generally overlooked. No two acres of land are exactly alike; different kinds of land differ in what it is best suited to produce. Yet, all land has some economic value, if it is used properly. Some land is suited for cultivation; other land is suited only for growing grass or trees, while some is suited only for recreational purposes, as a home for wildlife, or other minor uses. Each acre should be used for the best purpose. Of course, if the land is underused, like using good cropland for pasture, the land may not be harmed but it may not be producing maximum income. If it is overused, however, it eventually will be ruined—thus ending its chances for producing anything profitable or otherwise. Thus, our aim is to determine exactly what the land is best suited for and then use it that way, insofar as economic and market conditions permit.

The second basic principle involved with soil conservation is that of treating each acre with all conservation practices needed to keep it permanently productive. This applies to pasture, range, and forest land as well as to cultivated land. There are many different kinds of conservation practices that may be used on the various types of land. Soil-conservation farming calls for using all of them that are needed in each field, one supporting another. Terracing, strip cropping, contour tillage, crop rotation, cover cropping, stubble mulching, and many other practices are commonly used on cultivated lands. In addition, liming, fertilizing, manuring, and other practices to help build up fertility are used. Gully control, establishing grass waterways, building farm ponds, planting trees and grass, adjusting the use of these measures to the needs of the land. Even fences, roads, and field boundaries should be adjusted, as nearly as practicable, on the contour. If the land is too wet, drainage becomes a conservation practice; if it is too dry, then irrigation should be used. All these, and many more, conservation practices are coming into common use among American farmers. They are fitted into a coordinated program, each being used to supplement the others, where needed. That is what we call treating the land according to its needs, using a coordinated tool of combined skills.

The Soil Conservation Service has a large corps of trained surveyors who make detailed soil-conservation surveys of farms and ranches to determine the best use for each acre of land. We also have a large corps of soil conservationists, that we call farm planners, who take these land surveys and help farmers work out detailed plans for better land use and soil conservation. We have found, from experience, that these detailed surveys and plans are essential to getting a complete and coordinated conservation program applied to the land. I might add that these surveyors and farm planners of the Service work in the closest possible cooperation with the local soil-conservation districts.

SOIL CONSERVATION DOES MORE THAN PROTECT THE LAND

Modern soil conservation, as we now practice it, is not directed merely toward maintaining land as it is. It is dynamic and progressive; it leads to increased and lasting productivity of the land and thereby promotes the common welfare wherever it is practiced. All regions of the world can be improved, we think, and some currently poverty-stricken areas may be advanced to a state of relative prosperity by safeguarding

and increasing their agricultural-producing capacity through sound soil and water conservation and proper land use.

Soil conservation does much more than safeguard the land. It directly or indirectly results in a wide variety of fundamental benefits. It both increases the yields per acre and lowers the cost of production on most farm land, which, in turn, start a whole chain of benefits, such as increased farmer income, increased taxes for support of government and schools, increased trade for both rural and urban communities, and increased employment for professional, skilled, and unskilled workers.

It results in large savings, such as reduced siltation of streams, ditches, harbors, and reservoirs; lessened damage to fills, cuts, and culverts of highways and railroads; decreased damage to oyster beds and breeding and feeding grounds of fish, crabs, and other valuable aquatic life; and reduced flood crests on both major and minor streams that result in lessened damage to farms, homes, manufacturing plants, livestock, highways, railroads, and other property.

It helps to alleviate drought damage to crops, pastures, and meadows. It encourages a more flexible and diversified type of agriculture. It helps create a greater pride and satisfaction in farming along with the greater material returns. It encourages the sons and daughters of farmers to stay on the farm. And, apparently, it helps to improve the nutritional quality of food.

MODERN SOIL CONSERVATION

Our experience in the Soil Conservation Service has led me to redefine soil conservation under the heading of "Modern soil conservation."

A sound and lasting agriculture depends primarily on an adequate supply of productive land, properly used and so protected from erosion that it will remain permanently productive. Without such an agriculture, there can be no assurance of continuing prosperity, happiness, or peace anywhere.

As long as people have enough good land they can continue producing their food and fiber, and many of the raw materials of industry. If sloping land is neglected or unwisely used, it will be wasted or severely damaged by erosion, and the certain consequence, where the damage is extensive, will be lowered standards of living, poverty, and national decline. Much the same is true with respect to the effects of wind erosion, although this process affects level land as well as sloping land, when conditions are right (protracted drought and land bare of protective cover).

This erosion-caused economic decline has been the tragic result in many of the world's older agricultural areas.

For these and other reasons, lasting soil conservation is mandatory everywhere. It is mandatory here in America, if we are to avoid national decline—economically, socially, and nutritionally.

Modern soil conservation practices must be scientifically fitted to the land, according to the kinds and needs of the land, and flood control must be done all the way from the crests of enclosing divides of watersheds on down to the channels of the main drainage systems.

This kind of soil conservation is based on (a) sound land use and (b) treatment of the land with all the proven appropriate measures that are needed to keep it permanently productive while in use. It means terracing land that needs terracing; and contouring, strip cropping, and stubble-mulching the land as needed, along with supporting practices of crop rotations, cover crops, outlets, building farm ponds, locating farm roads and fences as nearly on the contour as practicable, planting steep, highly erodible land and shallow soil to grass or trees, development of good pastures, and

devoting good management to them after they have been developed.

Modern soil conservation, moreover, consists of doing these and still other necessary things. Where the land is too wet, modern soil conservation calls for careful water control, with full consideration given to wildlife needs, if it is too dry, it calls for irrigation; if it is subject to wind erosion, it calls for wind strip cropping, tree planting, growing cover crops, and stubble-mulch farming. If the plant nutrients, lime, and the humus supply of the soil have been depleted, it calls for fertilization and addition of lime and organic matter; if water-soluble salts have accumulated in toxic quantities, as in parts of the West, it calls for drainage and leaching out of the salts by flooding. And modern soil conservation calls also for the use of the best of the most adaptable varieties of crops as well as the most efficient of adaptable tools available to farmers. In other words, it means using land within its capabilities—as imposed by nature—and treating it according to its needs—resulting from man's use of the land, or, perhaps, abuse of the land.

It likewise includes, for flood control and reservoir protection, treatment of whole watersheds with the right combinations of practices, land use, and small structures in the smaller watersheds where flood waters start. Applied at the right time and place, such watershed treatment saves soil and reduces flood and sedimentation damage, puts water in the soil for plant use and, where conditions are favorable, in ground-water reservoirs, and otherwise benefits general farm, industrial, and municipal water users.

A DEMOCRATIC APPROACH TO SOIL CONSERVATION

I have been telling you something about our modern science of soil conservation, what it includes and what it means. I should now like to briefly discuss the methods whereby we put this program into operation. Of course, if we had a totalitarian form of government, we might undertake to force soil conservation on farmers by decree. If such an error had been made, everybody probably would be professing to practice conservation with few actually doing anything worthwhile. Most fortunately, we live in a democracy and so our approach has followed democratic procedures. Probably the present method of furnishing technical assistance to soil conservation districts, where farmers and ranchers set up and manage the affairs of the districts is the best example of democracy in action that we can find anywhere on earth.

The first step in our program, as I explained, was research to determine what were the best methods for achieving conservation. Then, over a period of 7 or 8 years, we demonstrated these methods to farmers and ranchers in some 500 demonstration areas, scattered all over the Nation. Along with this, we started an intensive educational program to inform farmers and landowners about the need for conservation and tell them how to go about it. Progress was rapid in this demonstration and education program. In 1937 the third and most distinctive step was taken in our national soil-conservation program. That year, many of the States passed laws that permitted farmers to organize their own soil-conservation districts. All the other States and territories soon did the same. These State laws do not compel farmers or landowners to do anything. They simply permit them to organize soil-conservation districts, if they wish to do so. So far, there have been around 2,300 such districts organized in the 48 States, Alaska, Hawaii, Puerto Rico, and the Virgin Islands. These districts include about four-fifths of all the Nation's farms and ranches.

The organization of soil-conservation districts represents a distinctive step, not only in our conservation program but also in

democratic government. These districts are democratic institutions. They were organized and their governing bodies were elected by the farmers and landowners who live in them. They have programs of work that were drawn up by their governing bodies, assisted by technicians and scientists from the Soil Conservation Service and other agencies. They are doing an excellent job of getting the farmers within their boundaries to practice conservation. In short, these districts are the local government agencies on which we must depend to get this job done.

WE ARE GETTING THE JOB DONE

Even though we are not yet going fast enough with the job, or as fast as it ought to be done—and could be done with adequate facilities—this is true: The farmers in soil conservation districts, in New York and throughout the country, are working together, planning together, helping one another with tools, labor, seed, planning, etc., as they never did before. It is this kind of voluntary cooperation, initiated and carried on by the landowners and operators themselves, without any outside interference or dictation of any kind, that is getting the job done. And this kind of cooperation is probably the most effective way—if not the only way—to bring about permanency of the conservation we put on the land.

At this time, approximately a million farmers have farm plans already made of their farms, or have taken steps to have their farms planned. Thousands of others—an estimated 500,000—have delayed the filing of formal requests for planning services at the suggestion of the district supervisors. And now, with group action mounting rapidly in the districts, it appears that not less than 2,000,000 farmers and ranchers have taken some action toward carrying out completely coordinated soil conservation work on their farms. In other words, these farmers and ranchers are either active or are ready for action in the field of modern soil conservation.

And easily another million in soil conservation districts are interested in the work.

THE MAIN JOB STILL LIES AHEAD

All of this is still not yet enough. We still have the biggest part of the soil-conservation job to do. Instead of getting some 25,000,000 acres of land treated with conservation measures each year, as we are doing now, we should be completing the treatment of considerably more than that each year, in order to finish the application of the basic soil-conservation measures in time. The job can be speeded up if facilities for doing it are made available.

We can, and we should, move ahead faster toward this urgent goal of soil and water conservation treatment of every important area of land that needs such treatment. Essential to our future progress is continued teamwork of all elements of our society: People working together through the active participation and efforts of all interested segments of the public, rural and urban alike.

We know what the problem is. We have perfected the tools of practical scientific soil conservation, and we have the soil-conservation districts through which to put these tools to work most effectively. We have nobody to blame but ourselves—the citizens of the United States—if we permit our land and water resources to go on wasting away any longer. This is still the most urgent, basic, and important job confronting the people of this Nation and the rest of the world.

HOW SCHOOL TEACHERS CAN HELP

Education is still probably the most powerful force at man's disposal. I think that this is certainly true in a democracy. Conservation is done by people. Like most other things, it will not be done unless the people

understand how to do it and why they should do it.

We have many educational forces working today. We have the newspapers and periodicals, the radio, the churches, public forums, and numerous other agencies that either intentionally or unintentionally do a great deal toward forming public opinion. Many of these agencies could rightfully be called educational institutions to some extent. But we have only one institution that purports to reach practically all the people and give them systematic instruction on the fundamental arts and sciences essential for their becoming well-informed citizens. That institution is our public-school system, supplemented in some places by parochial and private schools. These so-called elementary schools, in which almost every boy and girl of the Nation spends a major part of their early formative life are the backbone of our educational system. The knowledge, thoughts, and habits of American youth are molded largely by the classroom teachers of these schools. I think it absolutely essential that these teachers not only be well informed about conservation but that they also be well trained in methods of imparting their knowledge on this subject to the pupils who attend their classes. The future welfare of our Nation—in fact, the future of our civilization—may well depend on how well these classroom teachers perform their job of instilling conservation attitudes and developing conservation habits among these boys and girls.

TRUE CONSERVATION CAN BE ACHIEVED ONLY BY AN INFORMED CITIZENRY

We who are living today, and the next few generations that immediately follow us, must learn the science of soil conservation and get the habit of practicing it as a refined technique. It will not be enough if we merely safeguard the land for the next 10 years or the next 100 years; we must safeguard it—conserve it, while still using it—for as long as we and future generations expect to use it.

We cannot achieve our goal of full and permanent conservation by merely making conservationists out of those who farm the land or manage our other resources today. We must teach conservation methods and develop conservation habits among all of those who will ever have anything to do with the management or operation of our farm, pasture, range, and forest land, or with the conservation and scientific utilization of our water, wildlife, and mineral resources. Those who farm the land today may not be here tomorrow. People move from place to place; they change occupations; and people die. But the coming generations will still depend on these resources—what we leave of them—for their food, clothing, and other necessities of life. The farmers who farm this land, the woodsmen who cut the trees, and the miners who dig ore from the ground 20 or 200 or 2,000 years from now must also be conservationists. We will but postpone the issue if we merely make conservationists of our present generation and fail to instill conservation habits into those who take over after we are gone.

We will never achieve our goal of permanent soil conservation until every citizen thoroughly understands the utter necessity for soil conservation that is scientifically applied to the land, and is well informed about current progress in the field. Not only must all people who handle or manage our basic resources be conservation-minded and know how to use such resources without wasting or destroying them; all of the people who depend on those resources must recognize the stakes involved and know what is being done about conserving them. In other words, I think that every man, woman, and child must be kept fully informed about

this matter, insofar as they are capable of absorbing such knowledge. We can achieve such true conservation only through an informed citizenry.

As I see it, one of the greatest challenges to our public-school system and the teachers in that system is to see to it that all future citizens are properly informed about this vital matter.

More of the Same

EXTENSION OF REMARKS OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. SHAFER. Mr. Speaker, no one is deceived, or even amused, by the recent whistling-past-the-cemetery assertion of President Truman that the Republicans have no issues for 1952.

The great majority of the American people, I am convinced, are well aware that they themselves face one transcendent issue—the issue of whether they want more of the same after 1952.

More of the same reckless extravagance, deficit financing, and still mounting national debt despite the fact that Federal revenues collected during the Truman administration have exceeded all Federal receipts for the 156 years of national history before Truman.

More of the same shameless spoils system which has seen the dollars-and-cents payroll for executive department civilian employees top the previous record-breaking peak of World War II.

More of the same Federal tax increases which have evoked expressions of dismay and alarm even from Democratic congressional leaders and which, on the testimony of those same leaders, foreshadow a Federal sales tax in 1952.

More of the same reckless fiscal policies which have fed the raging fires of inflation, diluted the value of the dollar, spiraled the cost of essentials for citizens and Government alike, forced persons with fixed incomes into the merciless squeeze of higher prices and taxes and lowered purchasing power, and created the phoniest and most precarious prosperity in the Nation's economic history.

More of the same malodorous administrative scandals of the RFC, the Bureau of Internal Revenue, and the Post Office Department, of mink coats and deep-freezes, of free hams and free hotel accommodations.

More of the same socialistic schemes to impose the heavy hand of government upon business, agriculture, medicine, and education.

More of the same blanketing censorship in and by the executive department; more of the same reprisals against responsible officials who dare to speak the truth as they see it, whether a MacArthur, a Denfeld, or a Wedemeyer; more of the same refusals of vital information to the Congress; more of the same impounding of loyalty files and suppression of State Department docu-

ments and records; more of the same insistence upon "yes men" in Government.

More of the same secret State Department instructions to broadcast official falsehoods to the world—and to the American people—of the Formosan policy variety.

More of the same administration resistance to exposure of the infiltration of Communist personnel and policies in the executive branch.

More of the same Truman grasping for what the late Senator Arthur Vandenberg once termed "total, world-wide, war-lord powers in the White House," including Executive usurpation of treaty-making and war-making authority bestowed upon Congress by the Constitution.

More of the same give-away to foreign countries of American resources of manpower and wealth.

More of the same no-decision, accordion-type limited wars "at the wrong place, at the wrong time, and with the wrong enemy" bringing more of the same tragic casualties to American fighting men and more of the same let-down of the United States by professed allies.

More of the same no-decision peace talks which serve only to give the enemy time to build up its forces for stiffened resistance or renewed offensives.

Yes, the Republicans have an issue for 1952—and an unparalleled opportunity.

It is the opportunity to be the agents of the American people in their own deliverance; the opportunity to be the instrument of their sovereign will and determination that there must not be more of the same.

Release of William Oatis and John Hvasta

EXTENSION OF REMARKS OF

HON. AUGUSTINE B. KELLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 9, 1951

Mr. KELLEY of Pennsylvania. Mr. Speaker, with permission to extend my remarks, I am including a letter which I received from the Monessen Slovak Home. The letter concerns Press Correspondent Oatis and John Hvasta, who is also in jail in Slovakia.

MONESSEN SLOVAK HOME,
Monessen, Pa., September 23, 1951.

Hon. AUGUSTINE B. KELLEY,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN. The members of the Monessen Slovak Home, assembled in their regular meeting this 23d day of September 1951, unanimously resolved to commend our Government on a stand taken to free the press correspondent, Oatis, from jail in Czechoslovakia.

We also ask your office to take the same drastic action on behalf of John Hvasta, our United States citizen from New Jersey and former member of the United States

Navy, who is at present jailed in Bratislava, Slovakia, since 1948.

We doubt whether the United States Ambassador Steinhart did anything for him, for he was prejudiced against the Slovaks. Mr. Steinhart did not raise his voice when the Communist-controlled government of Czechoslovakia condemned and hung Msnr. Joseph Tiso, the first president of Slovakia.

The secretary was directed to mail one copy to our President, Harry S. Truman, Secretary of State Dean Acheson, and our Congressmen and Senators and the same to be spread on record of our minutes.

Awaiting your favorable action.

Very respectfully yours,
JOHN KOTCH, Jr.,

President.

ANDREW B. BENYAH,

Secretary.

GEORGE A. ANDRISKOVICH,

Treasurer.

There Must Be No Iron Curtain To Hide the Government From the People

EXTENSION OF REMARKS OF

HON. EDWARD H. JENISON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. JENISON. Mr. Speaker, last week newspapers across the land united in observing National Newspaper Week. Appropriately, theme of the observance was "Your newspaper lights the way of freedom."

A singular coincidence brought a serious threat to the freedom of the press in this country in the very week devoted to directing public attention toward the importance of preserving that freedom.

Under permission granted me by the House, I propose to review the issues presented by the administration's newest attempt to hide the Government from the people. President Truman has issued an executive order affecting the purely civilian agencies of Government and designed to restrict the flow of information from Government agencies to the public. David Lawrence, noted reporter of the Washington scene, terms it an iron curtain, and calls the Presidential order as sweeping as any ever used in a dictatorship.

First of all, there should be general understanding that the constitutional guarantee of freedom of the press is not a guarantee of the right of the press to print the news so much as it is a guarantee of the right of the people to know. It is a protection for free people who would remain free.

For this reason, the latest executive order is a dangerous one. It constitutes, as the President admits, "for the first time, uniform standards for classifying and protecting security information throughout the executive branch of Government."

Every thinking person recognizes the importance of protecting security information in relation to national defense. That is a military problem. But in the executive departments, who is to say what is or is not "security information?"

Why, the Government officials themselves—the political appointees of a political administration.

Perhaps it is fortunate, rather than unfortunate, that this thinly-veiled attempt at censorship came during National Newspaper Week, for it resulted in immediate and wide-spread protest not alone from the Nation's newspapers, but from the radio, television and periodical fields as well. All of them are important sources of public information. All of them enjoy the constitutional guarantee of freedom. All of them must remain free if the Nation is to remain free.

Commenting on the President's directive, Editor & Publisher, trade publication of the newspaper industry, said that—

It amounts to the most drastic peacetime censorship ever attempted in this country and will make possible almost a complete black-out of important news from the Nation's Capital. Even in wartime our civilian agencies were not given such a blanket authority to suppress information.

By this order we will have sixty-odd individual censors in Washington, each pursuing his own interpretation of information vital to the national security. No Executive order could be more subject to abuse and misapplication. The public and the newspaper editors, acting in its behalf, have a fight on their hands to keep Washington from becoming the black-out capital of the country under this order.

More than 40 news executives from as many cities, meeting at Evanston, Ill., for a forum on freedom of the press adopted a declaration saying:

That the American people are in danger of losing their rights to freedom of information by default unless they demand of their public officials the right of free access to the facts about their Government.

That the integrity of freedom of information goes to the very roots of popular government in the United States. That this fundamental right of the people is being steadily undermined by the growing practice of secrecy in Government . . . the growing tendency of public officials to feel that they are not accountable to the public; that they conduct the business of their offices in secret; that they may divulge only such information that they think is good for the people to know; that they may extend military security into the areas of news which have no bearing on the Nation's security, as shown by the dangers in an Executive order issued within the week.

This is the pattern by which the Fascists in Italy, the Nazis in Germany, the Bolsheviks in Russia and the Peronistas in Argentina, began to limit the rights of their people to know, forced their newspapers into complete subjection, and were able to take from them all their other democratic rights as well.

The Associated Press Managing Editors Association, meeting in San Francisco, has called upon the President to rescind his censorship orders. The editors called the President's directive a dangerous instrument of news suppression and said that under the President's order security will be endangered, rather than safeguarded.

Here in America we have boasted properly enough to other nations that there

is a free flow of information in the United States and that the Constitution declares Congress shall make no law abridging the freedom of the press. But the President apparently feels he can make such a law by means of an executive order bottling up at the source whatever news he wishes.

In analyzing the situation confronting the people, Mr. Lawrence has these revealing observations to make:

Everybody is anxious that really secret information of a military nature be suppressed. The American press through two world wars cooperated by voluntarily withholding from print all such information, whenever requested. But the new iron-curtain order applies to every department or agency of the entire executive branch of the Government, and to every single person among the more than 2,500,000 employees, no matter in what bureau or city he or she is stationed.

Granting that certain regulations are necessary to protect really secret information of a military nature, there is no reason why the Post Office Department or the Agriculture Department or the employees of the Fish and Wildlife Service or the clerks in any other department should be restricted in their telephone conversations, their letters or their communications with persons outside the Government.

What is conspicuously lacking in the new regulations is a system of checking against abuse. Each department head and the subordinate he delegates to perform the task of classifying information is a law unto himself. An interdepartment committee on internal security is provided, but it has no real power of its own and it cannot exercise any effective check against abuses.

The "potential enemies" which the President fears might get information are not named, but it is suspected that perhaps the Republicans in Congress and the opposition press generally are now in that category, too.

For some strange reason, instructions are included in the iron-curtain order specifying how classified documents shall be destroyed. It must be by burning and not necessarily in the presence of more than one official. Just why it is necessary to give orders at this time in the new regulations as to how to destroy secret public documents is hard to explain. Since there has been no uniform system of classification in effect anyhow, the problem of destruction of documents ought to be academic, at least for some years to come. It may be that the Truman administration is getting ready to purge records of anything that an incoming administration in 1953 may find politically damaging if there is a change to a Republican President.

Mr. Speaker, one cannot gloss over the seriousness of the situation by attributing partisan motives to those who protest against this invasion of the rights of the people to know what their public servants are doing. To resort to such an answer does not alter the truth. The truth is that secrecy in government imperils freedom of the press. A threat to the freedom of the press is a threat to freedom of the people.

Mr. Speaker, it is the solemn responsibility of the Congress to preserve this freedom and to defend this principle fundamental to the survival of self-government.

Enactment of Flood-Relief Legislation

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, October 9, 1951

Mr. CARLSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a copy of resolutions adopted by the forty-third annual city convention of the Kansas League of Municipalities, held at Topeka, Kans., on September 17, 18, and 19, 1951.

Hon. Clark E. Tucker, mayor of Kansas City, Kans., is president of this organization.

John G. Stutz, executive director of the organization, has had many years of experience in problems affecting municipal governments and other governmental units. Under his guidance and direction, many worth-while studies have been suggested by this organization and have been carried into effect through legislative enactment.

At the convention one of the major topics for discussion was the recent flood disaster.

The resolutions committee for the convention was composed of the following members: Chairman H. E. McMillen, city manager, El Dorado; M. W. Maxwell, mayor, Westwood; G. A. Erickson, mayor, Coffeyville; C. L. Clinton, mayor, Dodge City; and Ray E. Lundy, city clerk, Goodland.

In many of our cities the citizens suffered serious losses, and the governing bodies of these cities were confronted with additional expenditures as a result of the damage done to power plants, sewerage systems, water works, and streets and alleys.

There being no objection, the resolutions were ordered to be printed in the Record, as follows:

To the delegates of the League of Kansas Municipalities assembled in its forty-third annual convention:

Your committee on resolutions submits the following report:

"Be it resolved by the member cities of the League of Kansas Municipalities in convention assembled in Topeka, That the State league take this means to express its appreciation to the city of Topeka, Mayor Wilke, the city commission, and other city officials and employees, for their hospitality during the convention and for their work in making this convention a success; be it further

"Resolved, That the appreciation of the State league be extended to the Topeka Daily Capital and the Topeka State Journal for the excellent press coverage and publicity given to the convention; be it further

"Resolved, That the appreciation of the State league be extended to the hotels of the city of Topeka for the excellent service given to the delegates; be it further

"Resolved, That the State league take this means of expressing to the officers and staff of the League of Kansas Municipalities, the member cities' recognition of their able and faithful performance of their duties, not only during the convention but during the past year; be it further

"Resolved, That our sincere thanks be extended to the Honorable Edward F. Arn, Governor of Kansas; to Ross C. Keeling, State highway engineer; to Carl H. Chatters, executive director of the American Municipal Association, Chicago, Ill., for their addresses, and to all the other speakers and participants on the program for their contributions to the success of the convention; be it further

"Resolved, That this convention endorse resolution No. 1 of the legislative council adopted at its meeting in September 1951, memorializing the Congress of the United States to promptly enact flood-relief legislation, and that the executive director of the State league inform the Kansas congressional delegation of this action."

"RESOLUTION MEMORIALIZING THE CONGRESS OF THE UNITED STATES TO PROMPTLY ENACT FLOOD-RELIEF LEGISLATION"

"Whereas during the month of July 1951 the State of Kansas experienced the most devastating and worst flood in its entire history; and

"Whereas approximately 70 counties and 126 cities in this State have been materially affected and have received flood damage and loss; and

"Whereas it is estimated that total damage to community facilities of some 80 Kansas cities worst hit by the ravaging floodwaters exceeds \$33,000,000, and the loss and damage suffered by the counties to highways and bridges alone amounts to approximately \$14,500,000; and

"Whereas by reason of washed-out and broken dikes and levees various drainage districts and associations organized throughout the State for the protection of both public and private property have sustained losses totaling several million dollars; and

"Whereas the State of Kansas as a separate entity of government has also suffered substantial loss to buildings and other property and also damage to State highways, the damage to the State highway system being estimated in the sum of \$6,252,000; and

"Whereas it is impossible to make an accurate estimate as to the physical damage to private property, but the damage to such property has been estimated at \$1,000,000,000, but this figure does not take into consideration the loss sustained by railroads and other transportation facilities, community facilities, and industrial plants; and

"Whereas, according to the American Red Cross, approximately 19,000 families in the State of Kansas were made homeless by the floods, and

"Whereas 20,248 farms, comprising 2,886,275 acres, were damaged by the flood; and

"Whereas other farm losses, including buildings, machinery, crops, livestock, and grain, have been estimated to total \$76,338,477; and

"Whereas the flood which caused these unprecedented and devastating losses was, as stated by the Topeka Daily Capital, 'not a Kansas flood, it was a regional flood caused by water which fell over an area extending far beyond Kansas' borders. It affected rivers which have been the recognized responsibility of the Federal Government, and whose control cannot possibly be made the responsibility of the individual States. It was the greatest flood in the history of this country, in terms of dollar damage. The State of Kansas and its subdivisions could tax every piece of property to the limit and would still be unable to raise enough money to pay the bill;' and

"Whereas there are now pending in the Congress of the United States several bills which would provide relief to the flood-stricken States and their citizens, and particularly H. R. 5259, commonly known as the Bolling bill; and

"Whereas Col. A. E. Howse, personal representative of the Director, Office of Defense Mobilization, Washington, D. C., on August 30, 1951, requested Hon. Edward F. Arn, Governor of the State of Kansas, to furnish him with an outline of how such a Federal flood-relief program should be administered, and on September 6, 1951, Governor Arn, with the advice of the Kansas Federal-State Advisory Committee on Flood Matters replied to Colonel Howse's request; and

"Whereas it is imperative that the Congress take immediate and prompt action on flood-relief legislation in order that the various States, their political subdivisions, and citizens may know just what the Federal relief is to be so that they may proceed with the rehabilitation work that should be gotten under full way at the earliest possible moment: Now, therefore, be it

"Resolved by the Legislative Council of the State of Kansas, That we respectfully urge and request the Congress of the United States to promptly enact flood-relief legislation along the lines of the bill now in the Congress; namely, H. R. 5259, commonly known as the Bolling bill, and that it provide that the same be administered and contain provisions in general accord with the recommendations made by the Governor of Kansas to Col. A. E. Howse in the Governor's letter of September 6, 1951."

Fulton Lewis Discusses North-South Political Alliance

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, October 9, 1951

Mr. MUNDT. Mr. President, is the existing political alliance, by which big city Democratic machines who play politics for profit, aided by left-wing pressure groups who play politics for personal power to compel reluctant, disillusioned southern Democrats to support their candidates for President, and their continued drive to break down all that is left of States' rights, to operate again in 1952?

Is the present alliance between those who demand an FEPC and those who deplore an FEPC going to continue to rule America and to ruin all that remains of our doctrine of home rule, individual freedom, and private enterprise? Is this "marriage of convenience"—a shot-gun political marriage if there ever was one—going to continue to worship at the shrine of patronage and plunder on the theory that victory for those who are in is more important than the preservation of the constitutional principles upon which our American way of life depends? Are city Democrats, Fair Dealers, of the North going to continue to push around Jefferson Democrats of the South to the point that the great States of Dixie completely lose their authority and their autonomy?

Mr. President, those are serious questions, and in the article by Fulton Lewis, which I am asking to have printed in the RECORD, they are discussed most seriously. Dixie can save freedom in Amer-

ica. Dixie can compel our Federal Government to turn from the paths of national socialism and the totalitarian state. Dixie can call the turn in 1952 if it will agree upon a course of action which will put an end to the bizarre pattern of the past few presidential elections by which northern Democrats write the ticket and call the tune while southern Democrats yield up the votes which give power-hungry politicians the position to push the South around.

Fulton Lewis discusses some of these possibilities in his most recent Washington Report. For additional data on the subject see the Appendix of the CONGRESSIONAL RECORD page A6240, and page A5605. Or read a little book by a great man, namely, The South's Political Plight, by Peter Molyneaux, editor of the Southern Weekly, and available at \$1.50 per copy from the Calhoun Clubs of the South, 904 Gulf States Building, Dallas, Tex.

I ask unanimous consent that the article by Fulton Lewis be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WASHINGTON REPORT

(By Fulton Lewis, Jr.)

If successful, a coalition of southern Democrats and Republicans will establish a new political party in the Nation. There are political precedents.

Senator KARL MUNDT, the South Dakota Republican, has promoted a national coalition committee to encourage southern Democrats interested in bolting the Democratic Party under its present leadership of President Truman and William Boyle. MUNDT's present goal is short of creating a new political party, but in case of such an eventuality, neither the South nor the GOP has anything to fear. Neither has the Nation.

The first great political parties in the United States were the Federalists and the Republicans. The Federalists were led by Alexander Hamilton, the Republicans by Thomas Jefferson. By the year 1824 the differences between factions within both parties were greater than the differences between the two parties. The result was political realignment, or coalitions.

Much the same situation exists today. The majority of American voters are unable to find a clear-cut difference between the two labels—Democrat and Republican.

Conservatives in the South vote with Republicans, radical Republicans vote with Fair Deal Democrats. Voters retain the right of selection but are unable to focus political wisdom on clear-cut objectives in either party.

When the liberal wing in Jefferson's Republican Party got sore enough, it broke away to form the Democratic Party. What was left became known as the National Republican Party. It soon formed a coalition with the Whigs under the leadership of Daniel Webster. The next outbreak of coalition occurred in 1854.

At that time issues between various factions within political parties were once again greater than issues between the parties. A faction of the Whigs stuck by the National Republican Party and in 1856 adopted Abraham Lincoln as a candidate, electing him in 1860. Disgruntled Whigs joined the Democrats and the political alignments continue in existence today, at least insofar as political labels are concerned.

Conservative southern Democrats refuse to be forced into accepting President Truman's

Fair Deal program. The Fair Deal minority in the Republican Party has done so. What Senator MUNDT and his southern associates want to do is create a vehicle whereby Fair Deal Republicans can admit their political acceptance of the President's program, and conservative southern politicians can candidly admit their acceptance of the GOP program adopted by conservative Republicans.

Thomas P. Wall, Jr., president of the Young Republican Club of Nashville, Tenn., has accepted the possibility of a southern-GOP coalition, and wants to call it the American party. He thinks it is an honorable way out for opposing factions within both political parties as they exist today, to say nothing of the break it would be for voters, both north and south.

This is what Senator MUNDT is proposing. MUNDT has not suggested that Democrats of the South join the Republican Party. He simply thinks that conservatives of both parties have enough sense to get together and select candidates mutually acceptable. Just how such candidates could be placed before American voters if rejected at both political conventions, is the subject of considerable political soul searching at the moment.

A year is a long time in politics. Congressional investigative committees might solve the issue. A few dozen more scandals and the grip President Truman and Democratic National Chairman William Boyle have on the party might be loosened considerably. In that event, with nominal party control restored to their hands, southern Democrats might be content to stay where they are, provided they can name the candidate for 1952.

Ahead: Biggest Boom in History

EXTENSION OF REMARKS

OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. RHODES. Mr. Speaker, under leave to extend my remarks, I include herewith another article from the conservative United States News and World Report which again indicates that the Nation is in a great period of prosperity.

Last June the United States News published a report of a special research which found that the year of 1951 is the best ever in our history.

This article now predicts the biggest boom in all our history ahead.

AHEAD: BIGGEST BOOM IN HISTORY—RECORD OUTPUT, JOBS, PAY, SPENDING IN 1952

Prosperity is moving in for an extended stay. Signs point to a boom the whole family can enjoy for a long time ahead.

There will be plenty of everything. That includes jobs, spending money, and things to buy. Prices will not change drastically.

What's ahead, barring big war, rising living standards even as United States piles a big arms program atop growing civilian business.

A boom now being refueled is to develop into the biggest in the country's history. It will be a boom in business activity and in incomes, not one in terms of sharply rising prices.

More goods will be turned out by industry than ever before. There will be more people with jobs than ever held jobs in the past. Incomes will be larger than ever. People will eat more, wear better clothes, enjoy more and better living quarters, own more

automobiles, take better and longer vacations than in any past period. This assumes big armament spending but no major war.

Retail trade that has been lagging will revive and push ahead. Prices that had eased will firm. Pockets of unemployment that have developed will disappear as the months pass by.

Prosperity is building up for an extended stay. The boom will be fed by spending for arms. It will get well under way in the final 3 months of this year, will go on growing in the first 6 months of 1952, and probably will reach its peak in the final 6 months of that year.

What happens after that will be related to what the Nation decides that it wants permanently in the form of armament, and what it intends to do in supplying its allies. But, as of now, the boom seems certain to continue well into 1953.

Armament making is to have widespread effect. Industry, to fill orders for arms and to meet civilian demand, will need to work harder than ever. The rate of output in this year's April-June quarter was 223 percent of the prewar 1935-39 average. But in 1952 production promises to approach two and a half times the prewar rate.

Production will go down sharply in some lines, up sharply in other lines. Gains in output will more than offset losses. Defense business will move in, but will not take over the economy as it did in World War II.

Fewer automobiles will be produced than in the record year 1950. But production of aircraft will more than double between now and late 1952. Industry will turn out many more tanks, many more artillery pieces.

Auto makers, shifting to war orders, will produce more, not less, in 1952 than in 1951.

Television production will be held down, but TV makers will have their hands full turning out electronic apparatus for the military.

There will be less aluminum and copper for the building industry, but much more for the armament industry. As 1952 wears on, new steel capacity will begin to come into use, providing more steel to be processed into more things by more workers earning higher wages. The same goes for aluminum.

As the output of basic materials rises, there will be a gradual increase in the volume of goods made of metal that civilians can buy. By late 1952 or early 1953, Government will start taking off some of the restraints on production of major consumer items—autos, refrigerators, radios, TV sets.

Living, even while output is under curbs, will not be badly cramped. Production of metal goods for civilian use will be reduced, but not cut off. People will not starve for goods.

The auto industry will turn out about 5,400,000 passenger cars in 1951, which will be more than in any previous year except 1950. About 4,500,000 will be produced in 1952. That still will beat any year prior to 1949.

Appliances, plentiful now, will be in short supply in a few months. But production will pick up again before the shortages become very painful.

Home building is declining. About a million homes will be started this year. In 1952, starts may drop below 850,000. At that, about as many homes will be built next year as in postwar 1947. New houses will be limited mainly by material shortages. Credit terms are being eased on cheaper houses, the kind that represents the bulk of the market.

Goods needed for day-to-day living will be in adequate supply. There is to be no shortage of food, clothing, or other essentials. Civilian services are not to be crippled.

Families, even though they spend more than ever before, will be able to save toward the time when metal goods and houses become plentiful again. Personal incomes, in total, were at an annual rate of \$217,000,000 just before Korea. They are up to \$250,-

000,000,000 now, and will rise to an estimated two hundred and sixty-six billion in 1952.

Wages, despite controls, will keep going up. Jobs will be plentiful at pay rates that will induce a lot of housewives and oldsters to go to work.

By 1952, well over 65,000,000 will be working. Not so long ago, many doubted whether this country ever could provide as many as 60,000,000 jobs in a period other than all-out war. Employment already has passed that by more than 3,000,000, and more jobs keep opening up.

Prices, here and there, will rise, but no new spiral is in sight. People are likely to find that their dollar in 1952 will go about as far as it does now. Government controls will keep most raw-material prices in check. After armament spending levels off, prices will be regulated by the marketplace. Huge capacity then will be available to take up the slack in civilian output.

Personal taxes will rise, but not enough to drain off the public's increase in buying power. Real income will grow.

Total spending—what the economists call gross national product—has increased from an annual rate of \$275,000,000,000 before Korea to \$326,000,000,000 last quarter, and will go up to an estimated \$342,000,000,000 in 1952.

What's ahead, then, is a period of relative plenty, with high business activity, big incomes, record spending.

Christmas trade in 1951 will break all records. The summer slump in consumer spending will not last long.

Buying gradually will shift to the things that remain plentiful.

Some businessmen will lose as others gain. Dealers in automobiles will have fewer cars to sell. But the supply of cars, new and used, will be enough to keep them going. Appliance dealers will be hit hard.

Billions that will be diverted away from hard goods will go into food stores, dry-goods stores, haberdasheries, drug stores, filling stations, hotels.

Restaurants will prosper as families, with more ready cash to spend, start eating out oftener. New fabrics that are coming on the market will find plenty of customers.

More money will be spent on travel, vacations, entertainment, football games. Vacation resorts, night clubs, and gambling houses will do well.

Farmers, in general, will be well off, with high incomes. There will be no farm-price collapse.

There will be annoyances. Maids, yardmen, and clerks will be hard to find. Shoppers often will have to wait to be served. Minor hardware for the household, in many instances, will be scarce.

Still, living for most people will be good. This will be a boom that the average family can enjoy. The country will build a vast military machine, but defense output will simply be piled on top of high civilian output. Living standards, in the process, will rise, not decline.

Arizona Has Enough Underground Water for Century of Supply to Farms, Geological Survey Says

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. ENGLE. Mr. Speaker, Arizona has enough water in underground stor-

age basins at the present time to supply the farms within the proposed central Arizona project for a full century.

The United States Geological Survey recently issued a report which stated that more than 60,000,000 acre-feet of water are now stored in the underground basins of central Arizona.

The supply of underground water now available to central Arizona is at least twice the capacity of Lake Meade, the reservoir behind Hoover Dam.

This enormous amount of underground water in Arizona is close enough to the surface to be pumped economically by growers. In making its estimate, the Geological Survey used the 1950 Arizona water table as the upper limit in estimating the capacity of the storage basins, and set the lower limit at 100 feet below the water table of 1950.

It is within these highly conservative boundaries that the Geological Survey estimated more than 60,000,000 acre-feet of water are stored.

The question immediately arises as to why the central Arizona project should recommend a gigantic pump lift of 985 feet to take water out of the Colorado River when water can be pumped only 100 feet out of underground reservoirs, which a Government agency reports contain more than 60,000,000 acre-feet of available water, or twice the capacity of Lake Mead.

The 100-foot depth arbitrarily assumed by the Geological Survey is not asserted by it to be the limit of economic pump lift. The economic lift is certainly greater. Hundreds of wells now operating in central Arizona are pumping water from much greater depths, and are doing it at costs considered fully economic by growers.

The Geological Survey report was sent to me in response to a series of questions I addressed to William E. Wrather, United States Geological Survey Director. In general, the answers corroborate the testimony of California witnesses, who appeared before this committee at hearings on the central Arizona project.

The testimony of these California witnesses was to the effect that the water problems of central Arizona could be largely, if not wholly, resolved by proper measures to further conserve and utilize local water resources, and by judicious operation of the available ground-water storage in conjunction with the usage of surface storage.

The Geological Survey's estimate of 60,000,000 acre-feet of underground water actually available at present, in spite of years of drought and excessive withdrawals, confirms the statement made before this committee by Clay C. Elder, hydrographic engineer of the metropolitan water district of southern California, on Friday, June 3, 1949—page 972, hearings on H. R. 934, part 2.

Mr. Elder testified that at least 45,000,000 acre-feet of underground storage water were available to central Arizona within an economic pump lift.

This estimate is far below the present estimate of the Geological Survey.

The Geological Survey report states that possibly 500,000 acre-feet of water might be salvaged in central Arizona by

the use of recommended salvage methods. This, too, substantiates the testimony of California witnesses.

The Geological Survey report estimates that about 3,000,000 acre-feet of water is recoverable in central Arizona each year from annual precipitation. By recoverable, the report means the diversions of surface water, the recharge to underground reservoirs, and the savings achieved by salvage methods not now practiced.

The estimated 3,000,000 acre-feet a year of recoverable water is sufficient to supply the requirements of more than 800,000 acres, including necessary drainage to maintain salt balance in the land.

The Geological Survey report emphasizes the validity of testimony made before this committee by Raymond Matthew, chief engineer of the Colorado River Board of California—page 802, hearings on H. R. 934, May 13, 1949—that the gigantic supplemental water supply proposed for the central Arizona project would cause water-logging of lands and require costly works for artificial disposal.

In making its estimate that more than 60,000,000 acre-feet of water are now available in underground central Arizona storage basins, the Geological Survey considered nine different storage basins in the area. The estimates were made in terms of "available water."

The Geological Survey report is dated in August 1951. I requested the information on May 4, 1951.

Georgia: An Engineer's Dream

EXTENSION OF REMARKS

OF

HON. JOHN S. WOOD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 10, 1951

Mr. WOOD of Georgia. Mr. Speaker, under leave to extend my remarks in the Record I include the following article by W. E. Taylor, tide and wave research engineer:

GEORGIA: AN ENGINEER'S DREAM

(By W. E. Taylor)

Sidney Lanier, the beloved Georgia poet, wrote two very beautiful poems about Georgia: *The Song of the Chattahoochee* and *The Marshes of Glynn*. During his short life of 39 years, he may not have seen anything more indicative of power and growth than the railroads of his day and the overshot wheels which turned the grinding rocks to make meal and flour of his corn and wheat for the table.

In the subsequent years, much improvement has been made in the transportation and communication system of Georgia. Even the educational facilities and living conditions made such marked progress that Georgia now ranks with the most modern States of the Union. Modern machinery has vitally changed the modes and methods of farming to such an extent that she now leads in many phases of the farming industry.

The commissioner of agriculture for the State recently reported that the State produced \$200,000,000 of marketed livestock in 1 year. This—added to the \$200,000,000

worth of tobacco and turpentine products and \$400,000,000 worth of cotton, peanuts, hay, and various other agricultural products taken from the bosom of mother earth within her boundaries—puts Georgia into the billion-dollar bracket of production.

Georgia pioneered in. The minting of gold, the first college for both men and for women, the introduction of anesthesia, the first farmer's markets, and other achievements in other fields too numerous to mention.

What more does Georgia need?

Paraphrasing a Biblical expression:

Behold! A greater than this is here. And has always existed in Georgia abundantly.

If Georgia dammed all the valleys of Hall in the hills of Habersham, she would catch only a small portion of the power of which Georgia is capable. Even the marshes of Glynn has unimaginable millions of horsepower locked up in them. The 1,000 miles of indented seacoast is an incalculable storehouse of untouched power.

The Georgia coast has an average daily high tide of 7½ feet, year in and year out. This has occurred regularly during the thousands of years before Columbus discovered America and the hundreds of years since, seemingly without notice. All through this long interval of time, the great Atlantic Ocean has been surging powerfully into the marshes of Glynn and into the inlets from the sea—gently bathing and then angrily slapping the face of the beaches of Georgia literally with millions of horsepower annually.

Georgia has enough water power along her coastal fringes and her tidal plain, if entrapped, to turn the wheels of industry for the whole southeastern part of the United States without a phenomenal feat of engineering. There is enough power stored in the marshes of Glynn alone to light every city, town, and hamlet south of Macon without harming a single farmer who raises cotton, tobacco, peanuts, watermelons, hay, or the one who wiregrasses his cattle for market.

The ultimate goal is to get power from the coastal and tidal plain equaling Boulder Dam's 45 cents per 1,000 kilowatt-hours. Notable research engineers would not raise the water higher than the present tidal level. If and when power companies do raise the present tidal level and cover and submerge new lands for power purposes the farmer would reap royalties similar to the oil-land payments. This would create another source of income for the State of Georgia.

Corraling this unleashed coastal power would bring many manufacturing industries to south Georgia which would make Georgia blossom as a rose in the industrial and financial world. On account of the labor opportunities, the population of south Georgia would double itself in a very short time, and the industrial output would triple itself in the meanwhile.

With this end in view, Georgia would be the first to install tidal or coastal power on her shores. At the present there is not a salt water or shore line power plant in the great United States. Here is an opportunity for Georgia to pioneer again and in a field that is most new to her.

The beauties reflected in Lanier's—

"I hurry amain to reach the plain,
Run the rapid and leap the fall,
With the lover's pain to attain the plain
Far from the hills of Habersham,
Far from the valleys of Hall!"—

Have made Georgia a poet's paradise and delight.

Capturing and putting into effective use the potential power of the Georgia tideland and coastal plain would be a research engineer's dream. Therefore, a résumé of all of Georgia's esthetic beauties and the possible power potentialities shows Georgia: A poet's delight and an engineer's dream.

New Farm Planner Starts Work at Reynolds County Soil Office

EXTENSION OF REMARKS OF

HON. A. S. J. CARNAHAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES
Wednesday, October 10, 1951

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include herewith the following article from the St. Louis Post-Dispatch of October 5, 1951:

NEW FARM PLANNER STARTS WORK AT REYNOLDS COUNTY SOIL OFFICE—ERIC PALMER ASSIGNED TO ELLINGTON DISTRICT BY SCS—NEW OUTLOOK ON LAND MANAGEMENT

ELLINGTON, Mo.—Eric Palmer has been assigned by the United States Soil Conservation Service as farm planner for the Reynolds County Soil Conservation District. He assumed his new duties here Monday.

Palmer was reared on a Current River farm in Shannon County, attended high school at Eminence and acquired the degrees bachelor of science and master of arts in education and bachelor of science in agriculture in Missouri colleges.

He taught in the State public schools for 16 years prior to going with SCS. He went directly from the superintendency of the Bloomfield (Mo.) High School to the position with the SCS in 1937.

ARCADIA FARM FORESTER TO AID

Robert Ralsch, who has been stationed at Arcadia, Mo., as farm forester for the Missouri Conservation Commission, will act as part-time farm forester for the local soil district. Ralsch's territory covers Reynolds, Iron, and Madison Counties, and he has already set up timber-management plans for a number of Reynolds County farmers.

Merritt G. Wilson, SCS scientist, has been working with Reynolds County farmers for several weeks, making soil maps of the farms. About 20 of the farm soil maps have been completed, with 10 more farm applications to be processed. Wilson has headquarters at Cape Girardeau and works with the conservation districts in the Cape Girardeau area.

Harry Anderson, chairman, and Melvin Smith, vice chairman of the Reynolds County Soil Conservation District Board of Supervisors, spent 3 days at the supervisors' training meeting in Fulton, Mo., last month and with the assignment of technical assistance, the soil district expects to begin working at top efficiency.

Planting time next spring will take on new significance in this first Missouri Ozark County to organize and put into motion a soil-conservation district. Farm land that has been depleted during several generations of cropping by old-time methods will be tilled according to soil-building procedure and some will be returned to forest. The protection of timber, which covers about 86 percent of the county's land area and which has been burned over each spring according to tradition, will be given added emphasis. Benefit will accrue to water and wildlife resources.

CLASSIFICATION OF LAND

Preparatory to next spring's work the soil scientist has been making capability maps of the soil in the district, classifying it in three categories, that best suited for rotational crops, pasture, and timber. The maps will be used as guides in putting the land to its fullest use, building up productivity while battling erosion for the present and future generations. A 5-year rotation of crops is recommended by the soil supervisors.

The applications of farmers for aid are regarded as an indication of a new Ozarkian attitude toward farm and timber management, because Reynolds County, deep in the hill country, lagged for years in acceptance of soil-conserving methods. Under the new plan, local bankers, businessmen, teachers, youth groups, and women's clubs will cooperate to put over a program for a better long-range economy. Under the soil district plan there is teamwork between the various Federal, State, and local soil agencies to offer technical advice.

A year ago, under leadership of T. R. Smith, agriculture instructor at Ellington High School, people of the county began taking stock of the county's needs. Some farmers and timber owners were barely eking out a livelihood on eroded slopes and the timber had been burned out, over-grazed, and promiscuously cut. Smith called a meeting at Ellington, petitions for the establishment of the soil district were signed, and an official hearing was held. Later a referendum vote was passed with only six dissenters, though there are 969 farms listed in the four participating townships. The board of supervisors was elected and got busy on its plans to solve soil and water problems.

TYPICAL OZARK PROBLEMS

"Reynolds County being a typical Ozark county and the first to establish a soil-conservation district, is confronted with woodland, soil, and water conservation problems typical of a great many other Ozark counties," says a spokesman for the district.

"The first settlers came to the county about 1830. Most of these came with the idea of establishing residence along the creek valleys. A later influx occurred in the early 1900's, and reached its peak about 1930. A high percentage were timber workers, who stripped the land of short-leaf pine, oak, and hickory.

"As virgin timber stands disappeared, the erosion problem became acute not only in the upland (timbered) sections, but in the valleys where creek and river channels filled with gravel and silt and floods devastated. The old custom of burning the woods at least annually further added to the erosion problem.

"A large part of the county today offers excellent possibilities for reforestation because the production of timber is the most practical land use for upland areas. The latest figures available show 242,465 acres in forest not in farms (Clark national forest and Deer Run State park), 83,548 acres of forest on farms, 13,660 acres of pasture, 38,617 acres in cropland. It is plainly seen that timber production is the biggest single crop in Reynolds County as has been the case since the county was settled. Livestock and livestock products, such as beef cattle, hogs, and dairy products, are second in economic importance."

TIMBER MANAGEMENT NEEDED

"Proper methods in timber establishment, management and selective cutting will go further toward solving the county's soil, moisture, and flood-control problems than any single group of practices that may be employed. It so happens that Reynolds County has one of the large flood-control projects of the Midwest, Clearwater Reservoir, within its boundary. But in order to prevent silting of this reservoir, constructed and operated by the United States Corps of Engineers, soil and water conservation measures should begin in the upper end of the reservoir."

Protection of the forest through a broad educational program and reforestation of slopes too rocky and steep for any crop but trees is on the Reynolds County agenda. Between the flat, narrow valleys and the steep timberland there are slopes that can be farmed effectively with the use of terraces

and diversion terraces, contour planting and fertilization. Rotational crops are recommended for the alluvial soils in the flood plains of the small streams.

According to a 1949 census, the average corn yield was 33 bushels per acre; wheat, 13; oats (for grain) 21; soybeans (for beans) 10; hay (clover, timothy, alfalfa, and other) 1 ton per acre. But an indication as to the potential yield, using soil-building methods, is found on the farm of Oren Sutterfield at Corridon. Sutterfield began his soil-conserving program 20 years ago on land cleared by his grandfather in 1854. Even in pioneer days 50 to 60 bushels of corn to the acre was considered a bumper crop, but at the time Oren took over in 1931, the soil was worn out and the harvest was scarcely enough to justify cost of seed. He limed and fertilized, planted legumes, building up from lespedeza to sweet clover, and plowed the legumes under as he rotated crops. On a 20-acre field along Logan's creek last year he harvested 100 to 121 bushels of hybrid corn per acre.

Sutterfield, now PMA chairman for the county, was elected vice chairman of the board of supervisors when the new soil conservation district was set up, and neighbors look to his cropping success as a goal to meet. They will follow a pattern of farming that is new to many when planting begins next spring and woods burning, it is hoped, will be a thing of the past.

Representative Velde's Nonstoppage Strike

EXTENSION OF REMARKS OF

HON. WILLIAM L. SPRINGER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, October 10, 1951

Mr. SPRINGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Peoria Star of September 25, 1951. Here is a new and novel way by which labor and management can contribute to the defense effort. They are given an opportunity to include the provisions of this law in contracts between labor and management. It is possible such a law would be a new landmark in labor-management relations.

The editorial follows:

REPRESENTATIVE VELDE'S NONSTOPPAGE STRIKE

We expect plenty of controversy over the nonstoppage strike plan of Prof. George W. Goble (University of Illinois) which is embodied in an amendment to the Taft-Hartley Act, introduced by Representative HAROLD H. VELDE, of Pekin. But it is the first legislation, as far as we know, that has proposed a practical method of compensating the public, in part, for the losses it suffers on account of strikes. The people of this community should be in a mood, at this particular time, to give serious consideration to any plan for settling management-labor disputes without bringing economic loss and suffering to the community.

Professor Goble's plan, adopted by Representative VELDE, is to offer management and labor a form of contract which they may accept or reject, but which, once accepted by both parties, places a penalty on work-stoppage. When a labor dispute reaches the point of a strike, either side could apply to the National Labor Relations Board for a non-stoppage-strike order which would require work and negotiations at the

same time. It would also require that both the company and employees pay certain sums weekly to the NLRB, to be returned if the dispute was adjusted satisfactorily within 90 days; but to be confiscated by the Government if the disputing parties failed to adjust their differences.

There are bound to be loud objections to this plan but it seems to us that it is about time that legal recognition be given to the rights of the public, although it is not a party to management-labor disputes.

The Treason of Selfishness

EXTENSION OF REMARKS OF

HON. DWIGHT L. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 10, 1951

Mr. ROGERS of Florida. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article from the Sunday Star written by Frederick Brown Harris, pastor, Foundry Methodist Church, and Chaplain of the United States Senate, entitled "The Treason of Selfishness."

The sentiments expressed herein are such to appeal to our citizens in these times.

The article follows:

THE TREASON OF SELFISHNESS

The scene is the always solemn opening of a session of the United States Senate. The Vice President, in calling the body to order, announces first of all that the Chaplain will offer prayer. The Senators present stand with heads bowed in reverence, as do the visitors from all parts of the world who crowd the galleries. Since the beginning of the Republic that wayside shrine with its altar of supplication has stood at the portal of each day's deliberations.

At the first October session of that which is often called the greatest deliberative body in the world, the opening prayer contained the confession that "we know ourselves for what we are, petty and proud creatures who seek their own will and whims in spite of the noble and polished professions with which we come to Thee." Then was lifted this petition: "Cleanse the inner fountains of our hearts from all defiling foulness and from the secret sin of pretense. Fit us faithfully to protect the Republic from outward aggression and from the treason of inner selfishness."

Later on, that same day, one outstanding Senator was heard to say to another, equally distinguished: "I have found myself repeating a phrase of the Chaplain's noontide prayer, 'the treason of selfishness—the treason of selfishness.'" Said the other: "I've been thinking of it, too. That is the treason most to be feared and from which our America needs to pray for deliverance."

Standing now beneath the spires of the Spirit, shall we join those nationally known legislators in thinking frankly about the enormous significance of that phrase, whose terrible possibilities need to challenge not only the Congress, but to be laid on the conscience of every American worthy of that proud name?

Now, treason is an ugly word. To betray one's cause, to shatter trust, to crucify integrity brings down upon the head of the offender the disdain and disgust of those who can forgive anything but the unpardonable sin of selling out to the enemy. Brown-

ing catches the withering scorn with which outraged virtue turns on a traitor in his Lost Leader:

"Just for a handful of silver he left us,
Just for a ribbon to stick in his coat."

That is the hateful label in scarlet letters which a loyal citizenry brands upon those who in these days of the supreme test betray the free world and espouse the contemptible cause of the slave state. Such traitors join the debased company of the Benedict Arnolds whose patron saint is Judas Iscariot. But one is also guilty of high treason who barbers the most precious thing in the world—integrity—selling it to the devil of selfishness. The supreme treason is to put one's own cupidity at the center of one's universe.

In an eastern city a recent trial sent a municipal official to State's prison for accepting graft. The testimony revealed the very day when this elected public servant, a churchman, a civic leader, a backer of all good causes, yielded to the temptation to increase his weekly income by accepting the shady propositions of the underworld. He actually reversed the unblemished record of a lifetime. He decided that honesty did not pay—in bank deposits—and that from then on he was going to join those who "get theirs." He continued to pose as a patriot. He joined in salutes to the flag on public occasions. He hurled anathemas at Communists. But all the time he himself was a traitor. He had surrendered to inner selfishness.

But one does not have to commit a prison offense to do that. As soon as one makes it the drive of his life to see how much he can get from his country, rather than how much he can give to it, he commits treason. The goal of a true patriot is to put a little more in the common pool than he takes out. That self-realization comes through self-surrender is a universal law. The penalty for disregarding that and attempting some shortcut to heart's desire is to reduce one's stature from a potential moral giant to a puny pigmy. Caring for one's self may mean coddling a mean little creature of narrow, clamorous, egoistic desires. To put that self in the saddle is to lose life utterly.

When an individual life is stretched to take in the interests of others the personality is not depleted; it is completed; it is enormously enlarged. The highest treason is to deny that in practice. One is held back from that crime against himself, not by fear of penal penalties but by the pull of inward sanctions, that holy trinity of honor, honesty, and fidelity. The most heinous offense against oneself is to commit sacrilege in that inner shrine, to blow out the candles of faith and hope and love on that altar. It is in the profanation of that holy place that self-respect is lost.

Well has it been said that a quick sense of possessing within ourselves something fine that must not be desecrated is essential to great character. In all literature there is no more searching and significant phrase than Tennyson's about being "loyal to the royal in thyself." Inner treason is the desecration of that.

And shall we add this to the Senate prayer: O God, when hot egotistical voices are resounding in my soul, telling me that unselfishness does not pay; that love is not the law; that altruism is foolishness, and that the thing to do in life's swift race is to look after No. 1, to get and grab while the getting and grabbing is good: O Thou searcher of hearts, when such voices are whispering in my own heart, tempting to the inner treason of selfishness, may I hear again the tinkle of water being poured into a basin, and as in a vision see the Son of the Most High washing His disciples' feet and going forth to change a cross into a throne, as losing His life He finds it, to the joy of the ages?

Thick, Golden Molasses Bubbles Under Shade of Sycamore Tree—Horse Still Turns Roller Mill That Squeezes Out Juice at Allen Boyer Place, Near Hunter

EXTENSION OF REMARKS OF

HON. A. S. J. CARNAHAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 10, 1951

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include herewith the following article from the St. Louis Post-Dispatch of October 8, 1951:

THICK, GOLDEN MOLASSES BUBBLES UNDER SHADE OF SYCAMORE TREE—HORSE STILL TURNS ROLLER MILL THAT SQUEEZES OUT JUICE AT ALLEN BOYER PLACE, NEAR HUNTER

(By Lucile Masnor)

HUNTER, Mo.—Molasses is being made down here in the hills of Carter County. The sweet, thick golden sirup bubbles and boils in the evaporator in the shade of the sycamore tree. And out on the level spot old Barney, the horse, patiently walks round and round moving the sweep that turns the roller mill that presses the thick, green juice from the sorghum cane.

Mr. and Mrs. Allen Boyer, who live 2 miles west of Hunter, have been making molasses for the last 25 years. With all this experience, Boyer knows just the right kind of loamy soil in which to plant his sweet sorghum seed. He avoids rich, black soil, for it makes the molasses dark and strong. The sorghums belong to the grass family, but they do not grow too well in wet seasons, for they need to be cultivated frequently.

The sorghums are tall, earless plants bearing terminal heads of seeds. The sirup-yielding plants are known as saccharin or sweet sorghums. The others are nonsaccharin or seed sorghums, such as kafircorn and broomcorn.

ONE HUNDRED GALLONS FROM ONE ACRE

Mrs. Boyer says that their crop of sweet sorghum is very poor this year because of the rainy season. They will make only about 300 gallons of molasses from their 3 acres of cane. But at \$2 a gallon, those 3 acres are still the most valuable plot of ground on any farm along Current River.

In making the molasses, labor is not too big an item since the Boyers are a family group. Burton, Floyd, and Ivory Boyer live on adjoining farms to Allen, and the four families exchange work. Whoever has crops to harvest, wood to cut, or molasses to make, gets help from his brothers, their wives, and children. No money is exchanged—just you help me and I'll help you.

Mrs. Nettie Parcell was brought in this fall to skim the green foam from the sorghum juice when it begins to boil in the lower end of the evaporator. Allen Boyer attends to the molasses end of the evaporator, for it takes an experienced hand to know when the bubbles in the heavy sirup say that the juice has turned into molasses. Mrs. Boyer says it is ready when the big round bubbles come up and burst open in a certain sort of way. That is the dangerous point in molasses making, for if it scorches, the molasses is ruined—it becomes bitter. The finished molasses runs out of the evaporator through two strainers into a lard can, which Boyer covers quickly to head off attempts of molasses-loving jackets which are ready to dive into the scalding sirup.

BELLS WELL AT MILL

These cans of molasses are set aside to cool until next morning when Mrs. Boyer gets up before the lazy yellow jackets get on the job. She skims the cold molasses, pours it into gallon buckets, and sets it on the table where customers throughout the day come and buy it. She says they sell their molasses about as fast as they can make it right there at the mill.

Ivory Boyer—with the help of the Carl and Elva Peek families—cut, strip, and top the sorghum cane in the field. Burton Boyer brings the cane stalks from the field to the mill site in a truck. Floyd Boyer and Old Barney run the roller mill. The juice runs into a barrel and through a pipe down the slope to the evaporator. Mrs. Parcell just opens a faucet to refill the pans in the evaporator. They make about 50 to 75 gallons of Ozark sorghum molasses a day.

Mrs. Boyer says that the furnace under the evaporator is built of sandstone and clay. Other stones or cement will not hold up and will not keep an even heat which is one of the secrets in the success of molasses making.

Here is a favorite Ozark recipe for molasses custard pie. One cup sorghum, one-half cup buttermilk, three eggs, one cup sugar, one-half teaspoonful of soda, two tablespoons of flour, flavor with cinnamon.

Mix the ingredients together, adding the beaten eggs last. Boil until it begins to thicken, pour into a crust, and bake slowly for about 30 minutes.

Honest American Art

EXTENSION OF REMARKS
OF

HON. CHARLES A. HALLECK

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 10, 1951

Mr. HALLECK. Mr. Speaker, although I have never laid claim to being a connoisseur of art, I am among that great class of Americans who stoutly maintain that they know what they like and what they do not like in such matters.

This attitude, of course, exposes one to the accusation that the evaluation of art by such criteria is inexcusable, stamping one as an individual lacking in the finer sensibilities which allegedly accrue from a well-rounded education.

To the ivory-tower school of thought my tastes in art would probably be characterized as provincial. I am quick to admit, in this respect, that my home county—Jasper County, Ind.—for all its worth-while contributions in many fields of human endeavor, does not boast of eminent crusaders in the cause of such salon movements as cubism, abstractionism, or impressionism. Our tastes are more down to earth.

My defense of the I-know-what-I-like attitude rests on the fact that at times I find myself admiring the works of an artist who has already gained wide recognition as a master in his field. At such times I am comfortably assured that my taste in art is not hopeless, since what I appreciate has also earned the approbation of the experts.

Such an artist is Ray Strang, illustrative painter from Tuscon, Ariz. My interest in this son of Illinois, who has adopted Arizona as his home, stems in part from a similar admiration for his work on the part of my friend and fellow Hoosier, Mr. A. K. Mayer, of Indianapolis, who, like Strang, has "discovered" Arizona.

Thanks to the thoughtful generosity of Mr. Strang, the wall of my office in the Capitol is now graced with an excellent example of the artist's talent. The gift, gratefully acknowledged, is an oil painting entitled "Arizona Cutting Horse."

Certainly in the development of a native American culture Ray Strang is making a splendid contribution, portraying for posterity these honest and sturdy scenes of the West—painting with the sincere strokes of a man who possesses undeniably great talent coupled with an obvious love for his native land.

The Economic Aspects of Death
and Taxes

EXTENSION OF REMARKS

OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 10, 1951

Mr. PATTERSON. Mr. Speaker, two eminent gentlemen in the field of economics have proposed revisions of the Federal taxing system which merits attention outside of financial circles.

Mitchell G. Meyers, distinguished attorney and jurist of Waterbury, Conn., and Ray B. Westerfield, Yale University professor of economics, wrote at length on this proposal in the *Commercial and Financial Chronicle*. A recent issue of the *New York Times* discusses the proposal in more general terms. I include the article in my remarks for the attention of Members interested in equitable tax measures:

PLAN TO SURVIVE DEATH AND TAXES IS HELD
NEEDED BY SMALL BUSINESS

(By Paul Heffernan)

The impact of death and death taxes is an ever-present threat to any family-owned business. But the many administrative and financial problems which these inevitable forces have stirred up during the last couple of decades have received but little attention outside professional banking, legal, and trust circles. And the techniques developed for dealing with such problems, little known as they are, can hardly be said to be more than tentative.

As a result, when faced suddenly with the dread visitation of the death-and-taxes specter many flourishing businesses of limited scope go into liquidation for no other reason. Or the surviving owners consent to disadvantageous dilutions of equity through ineptly arranged sales of securities or hasty mergers. These involuntary and often avoidable shifts in the ownership and control of closely owned business are related, moreover, to the over-all social problem bound up in the chances of small business surviving and growing in an economy in-

fluenced increasingly by the sway of big business.

The general problem posed by death taxes to small business may be said to be threefold. For the owner, it is a problem of tax anticipation. For his estate it is a problem of fiduciary responsibility. And for the private financial world it is largely a problem of relating investment banking techniques to the needs of limited enterprises.

Where the need for anticipating death taxes has been foreseen adequately the other problems are less acute or may be obviated altogether. It is rare, however, that a family business built up in one generation is as well prepared for death taxes and continuance of the enterprise as is family owned big business, where generation of association with the world of finance, accountancy, and law have developed satisfactory ways of bridging the ownership-management gap and financing the adjustment.

In small businesses, forged in the prime years of a single enterpriser, life insurance is a simple means for coping with the problem. But often insurance protection is not thought of as a tax hedge until late in life, when the coverage becomes too costly. It often happens in family-owned enterprises that there is no other means at hand for paying death taxes than for the survivors to sell out.

SPECIAL PLAN PROPOSED

A proposal advanced recently for preparing family-owned enterprise for the inevitable coming of the undertaker is that the Federal Government should make available to such enterprises a special investment in the form of an estate tax anticipation certificate.

This recommendation was made by Mitchell G. Meyers, Waterbury, Conn., lawyer, and Ray B. Westerfield, Yale University professor of economics, in a recent issue of the *Commercial and Financial Chronicle*. Their proposed tax anticipation note would bear income-tax-free interest related to the cost incurred by the Treasury in borrowing on 91-day discount bills, and would be surrenderable at face value at any time with interest penalty before the death of the registered holder.

When enterprises have to raise money for taxes on the death of the owner, problems of financial and business administration are often visited upon trustees of the estate and the traditional conservative approach of the fiduciary relationship may turn out to be more of a handicap than a help. This aspect of the death-and-taxes problem is stressed in the current issue of the fiduciary journal *Trust and Estates*, by Alexander E. Elsemann, president of the Elsemann Industrial Corp.

TRUSTEE IS RESPONSIBLE

The difficulty lies in the fact that while the trustee is responsible for the conservation of what is in his custody, and the trustee is answerable to the court for his stewardship, it is in the highly competitive investment banking activity of the Nation's financial centers that the most effective solutions to the problem are most likely to be worked out.

The answer in one case might be a public sale of equity securities and in another case a private sale. Or it might be the negotiation of a term loan with an insurance company. Or the furnishing of new management and the investment of new capital. Or the effectuation of a merger with an enterprise of related scope.

In any case, the job is one which calls for the conservative force—the trustee—joining hands with the dynamic force—the investment banker—if the business is to be bridged over to new life and not be liquidated or left to languish.

ECA

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 27, 1951

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the *European Review*, September edition, from London:

THE RECORD OF ECA—SURVEY BY THE
NATIONAL CITY BANK OF NEW YORK

While the ECA has been given ancillary responsibilities in other parts of the world, its main sphere of operation has been Europe, working with and through the Organization for European Economic Cooperation (OEEC). The recovery of production in participating countries has been rapid. For this achievement the ECA and the OEEC share credit with the individual participating countries, especially for activities which have added to productive facilities, aided in the restoration of confidence in money, and lowered barriers to intra-European trade. The following table shows production gains over prewar for Western Europe:

Western Europe: Recovery of production

INDUSTRIAL PRODUCTION

(1938=100)

Calendar years:	
1946-----	77
1947-----	87
1948-----	101
1949-----	115
1950-----	127
1951, first quarter-----	139

AGRICULTURAL PRODUCTION

(Prewar=100)

Crop years:	
1947-48-----	85
1948-49-----	93
1949-50-----	103
1950-51-----	109

The increase in production has directly enlarged supplies of goods for home consumption and also for export. The enlarged earnings from exports, in turn, have permitted a freer access to imported goods and relieved the necessity for outside financial and economic assistance. United States Government grants over and past 2 years have been more than enough to cover the reduced deficits in European balances of payments and thus have served to increase gold and dollar reserves. For the United Kingdom and France, among other countries, these reserves were at a very low ebb during the first years of the program. In fact, near exhaustion of reserves—dollar shortage—was the proximate cause for undertaking it.

The chart portrays the postwar changes in gold and dollar reserves, in comparison with the prewar December 1938 levels, by geographical areas of the world. Separate curves are given for countries which hold the largest reserves—the United Kingdom (partly on behalf of the sterling area), Switzerland, and Canada. When all areas are combined, the increase in gold and dollar holdings outside America since September 1949 exceeds \$5,000,000,000. United States gold reserves in this period have declined by \$2,800,000,000, and foreign short-term dollar assets have increased by more than \$1,000,000,000. Since 1949 newly produced gold has been absorbed into foreign official reserves or sold in free markets, in either case helping to restore confidence in money.

The ECA program clearly has had a substantial measure of success. Results desired have been achieved, and with less financial aid than was commonly expected at the outset.

At the same time, the ECA experience, not to mention preceding programs of aid, has also emphasized dangers. Even within the reduced appropriations allowed by Congress there has been unnecessary waste. Any political loan or grant has an uncommon amount of waste as an almost inevitable ingredient. Moreover, the United States has, by aiding foreign governments in power, taken upon itself a responsibility for their policies and for the postponement of needful changes.

One vital lesson out of the experience is how open-handed grants can distract the attention of recipients from the fundamentals of economic progress, create competition to see who can get the most, and make a virtue of improvidence as a qualification for aid. Fortunately for us, European governments have all avoided this temptation. Those who have held to the straight and narrow path of sound finance naturally have had the least need for aid.

The \$25 billion of foreign military aid proposed by Mr. Acheson may have its greatest merit as a warning to the aggressor of the extent to which at least one administration official would go in providing military equipment to friendly powers overseas. At the same time we must not reckon without the effect upon these countries. Responsible people abroad express concern over the excessive demands being made on world supplies of raw materials, the dangers of loading big military outlays onto swollen peacetime budgets, the problems of collecting more taxes, and difficulties of reeducating people to consider Government bonds a better investment than gold or other material goods. While grateful for our help, they get the uneasy feeling that we may promise too much, deprecate the dollar by giving out too many, open the floodgates of world-wide inflation, and do more harm than good by mistaken generosity.

The American people are solidly behind the policy of building the military and economic strength of this country and its allies. We should not underrate the potential of these allies—as some of the public hearings on foreign-aid legislation have seemed to do. In the past, England, France, Germany, and Italy, among others, have shown themselves capable of producing instruments of war second to none. The defensive strength that we mutually seek cannot be bought with dollar appropriations which promote attitudes of dependency or threaten to destroy the usefulness of the dollar as an anchor of monetary stability. The strength must be one built out of cooperation among self-reliant partners, and around a core of sound economic and financial policy. After all, the best thing we have to contribute to anybody is the example of what free enterprise and free individuals can accomplish.

Press Must Remain Free

EXTENSION OF REMARKS

OF

HON. GLENN R. DAVIS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 10, 1951

Mr. DAVIS of Wisconsin. Mr. Speaker, I am pleased to submit, for the en-

lightenment of my colleagues, a very well written editorial by C. W. Brown, of the *Oconomowoc (Wis.) Enterprise*:

PRESS MUST REMAIN FREE

Two events have occurred the last few days which have given more emphasis to National Newspaper Week than perhaps anything else could have done. The week is being observed October 1 to 8.

The first event is the visit to America of Alberto Gainza Paz, editor and publisher of the suppressed Argentine newspaper *La Prensa*. This great newspaper was simply taken over as a climax of incidents created to give a front to the action of the Argentine President Peron, the dictator who has silenced his political opposition. This is the way of all dictators. Freedom of men and a free press must go together. Without a free press, freedom dies. This is history. There is no free press in Russia or in the iron curtain countries. There was no free press under Hitler or Mussolini. The controlled press has now jumped the Atlantic to the Argentine.

The second event was the action of President Truman who issued an order permitting civilian Government agencies to suppress such news as the agencies consider a factor to security. Such an order has been in effect in the Defense and State Departments and the Atomic Energy Commission. These previous restrictions have not been opposed—recognizing that national security was involved. When similar restrictions were in effect during the war, the information withheld was screened by a body set up to do the job. Under the new order extending the news restriction to civilian governmental agencies, the agencies themselves become the judge of their own actions and can suppress anything and everything they so elect including their mistakes. The action could well work out the same as a city suppressing its corruption leaving the grafters and crooks in office with a free hand. It would lead to such things as city councils, police departments, and school boards to act behind doors closed to the citizens who pay the bill.

A storm of protest of the order broke loose when the President's order was announced. On the day that President Truman made the order public, the Office of Price Stabilization issued an edict forbidding its employees to make public any information that might cause embarrassment to the OPS. The order was quickly withdrawn. The vital thing is that we, in the United States, have had creep upon us progressive regulations and Government in business with its terrific cost reflected in taxes so that today the extent of controls is not realized. If the average citizen could suddenly be set back 25 years, the contrast between then and now, so far as Government regulation of the individual is concerned, would be shocking.

Two dangers are revealed in the President's order: (1) That the President can presume to ride so roughshod over a basic American right so essential to freedom itself, and (2) the public's apathy toward this and many other matters that are a part of our creeping socialism and approach to moral and financial bankruptcy as a nation, while waste is rampant in Government.

The President chose a very inopportune time to issue his order, just before National Newspaper Week. His action aided greatly to center attention on the importance of freedom of the press and its importance to the citizen. National Newspaper Week is not for newspapers, rather it is to inform the public of its great right in having a free press. Open debate on any subject is unfettered here which means that human rights will stand so long as a newspaper will argue points editorially and print all the news. This right must be preserved whether you agree with the individual newspaper or not.

Secrecy in Public Welfare Expenditures

EXTENSION OF REMARKS OF

HON. BURR P. HARRISON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 10, 1951

Mr. HARRISON of Virginia. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I insert two editorials from the Shreveport (La.) Times. The first appeared in the issue of October 7 and the second in the issue of October 9:

THE GOVERNORS ACT

The national governors conference which met at Gatlinburg, Tenn., last week, voted unanimously for removal of the Federal ban against publication of State relief and welfare rolls. Forty-six of the Nation's 48 governors were at the conference. Whether all were present when the vote was taken is not known here, but no dissenting voice was raised despite the ardent pleas of Washington socializers sent to the scene to try to block action. Governor Long, of Louisiana, was one of the two absentees from the conference—he was the only Southern governor not attending.

Representative BURR HARRISON, Virginia Democrat, recently filled nearly 10 pages of small-type print in the CONGRESSIONAL RECORD (equivalent to about 15 columns in the Times) with discussion of graft, corruption, waste, cheating, chiseling, et cetera, of public tax money used for various relief rolls in various States which he cited. He cited cases ranging from a championship squirrel shooter in Tennessee collecting \$214 a month from "aid to the blind" to a woman operating a big numbers racket who had her welfare checks brought to her gambling establishment although she had a liveried chauffeur and an expensive car.

All welfare and relief money is tax money—half of it paid in State taxes and half in Federal taxes, but all from the same pocket-books. The secrecy law not only helps chiselers and crooks graft this tax money, but it thus lessens the amounts that could be available for worthy cases not given enough aid to meet actual need.

At the governors' conference the chief executives of more than a dozen States revealed legislative steps taken or under way to try to end the secrecy provision which the Federal Security Administration uses as a political blackjack over State governments. Indiana has gone all the way, the legislature passing a law compelling publication. FSA Director Oscar Ewing promptly cut off its Federal aid for welfare. The United States Senate recently passed an amendment to an appropriation bill to end the Federal provision for secrecy. In Senate-House conference on the bill the House succeeded in eliminating the amendment.

It's time for the public to call to account its Senators and its Representatives, not only in Washington but in State legislatures. It's time for an overwhelming demand that these people wake up and get busy in service of the public which elected them. There never has been any logical reason for secrecy on welfare rolls.

THE CAUSE OF THE EVIL

In every State in the United States where real investigation of welfare rolls has been made, cheating, chiseling, stealing, thieving, fraud, corruption—all contributing to wholesale waste of the public's tax money—have been revealed. Illinois, Indiana, Michigan, Washington, Oklahoma are a few States

where wholesale welfare crookedness has been revealed publicly.

These malpractices do not necessarily in every case run back to individual administrators of welfare—State, county, parish or city. The fault lies in the system itself as established by the Federal Congress in Washington. That fault is the Federal provision that names of recipients of welfare payments must be kept secret from the public.

The only way to end the welfare stealing is to end the secrecy provision. So long as there is secrecy there is not only opportunity but blanket invitation to stealing.

The House Ways and Means Committee now is holding hearings on a bill by Representative BURR HARRISON, Virginia Democrat, to end the Federal provision for secrecy and leave the matter of publication of relief rolls to the individual States. It would be better in actual practice if the Federal law made publication mandatory, but in the ultimate philosophy of free government the preservation of the right of States to decide the issue figures strongly.

The principle of the Harrison bill—the principle of removal of the Federal ban against publication—should have the full support of citizens, civil groups, and organizations, and of all legislators who have welfare itself truly at heart. States violating the secrecy provisions are deprived of the Federal share in relief funds. In all probability, most States could get along without the Federal aid and handle their welfare problems alone if welfare was trimmed of the chiselers, cheaters, political hangers-on, and also of those who seek to gain politically through it.

Representative HARRISON, in a recent speech in the House concerning his bill, emphasized that the present welfare secrecy violates the spirit and possibly the letter of the Federal Constitution. Framers of the Constitution delegated, through it, certain powers to Congress. But at the same time they specifically listed 10 things which Congress cannot do constitutionally, 1 of them reading as follows (sec. 9, art. 1):

"No money shall be drawn from the Treasury but in consequence of appropriations made by law; and a regular statement and account of the receipts and expenditures of all public money shall be published from time to time."

The present secrecy on welfare spending disregards or violates that provision—that accounts of the receipts and expenditures of all public money shall be published from time to time. Only the political administrators doling out the money now know where or to whom it goes. The Constitution clearly means for the people who put up the money—the taxpayers—to know.

The Washington Star—almost paraphrasing past editorials in the Times, though not, of course, by intent—says:

"There is another principle at stake which is more important than any of these suppositions. That is the right of the people to know how relief money is being spent and to whom it is being paid. For it is the people who put up this money. It is their own money. It should be contrary to sound public policy to clothe in secrecy the expenditure of huge sums in public funds, paid out to support citizens."

Representative HARRISON put the same thoughts this way:

"Secret and concealed expenditure of public money desecrates a basic principle of democratic government. The principle of government by the people is in fundamental conflict with a policy that permits officeholders to levy huge taxes and spend the money in secrecy and concealment."

The Chicago Daily News, commenting on the thin argument that people receiving charity would be made ashamed by publication, points out that only those "receiving charity without need" would be ashamed,

and that "a return to the days when every man valued his independence and was reluctant to accept help except in dire need, is not to be feared, but welcomed."

Since when is it any disgrace unavoidably to be poor?

Since when need an aged person feel shame that age has conquered past ability to earn a living?

Decent citizens are proud to help those who cannot help themselves. Decent recipients need lose no pride in having to accept help from others willing to give it—under honest conditions.

The State senate of the Deep South State of Georgia recently passed a resolution demanding an end to the secrecy provision in the Federal welfare. The resolution declared that secrecy "proves a hindrance to just administration of the social-security laws," is "conducive to fraud," and "costs the State of Georgia thousands of dollars every year."

A recent Fulton County, Ga., grand jury, finding itself tangled into cases involving relief, took time out from its crime inquiries to adopt a resolution denouncing welfare secrecy and to send copies to each Georgia Member of Congress. The grand jury of another Georgia county, De Kalb, adopted a similar resolution. The Atlanta Constitution had this to say:

"As matters stand now, not even a grand jury or a legislative committee can examine relief rolls on the penalty of losing matching funds, which amount to about 70 percent of the total benefits distributed by the State."

The glaring weakness of the whole welfare set-up in the 48 States is the Federal provision imposing secrecy except to politicians and political groups taking part in administration of the funds.

More than a dozen States have taken legislative steps of some kind toward an end to welfare secrecy. Governors of 46 States—2 Governors, including Louisiana's, being absent—voted unanimously last week for an end to secrecy.

The blame and the remedy both rest with Congress itself. It made the foolish law and it alone can unmake it. If the Harrison bill is bypassed or sidetracked, the voters should note carefully which legislators helped in the bypassing and sidetracking. It's time for Congress to awaken, that is true; but it is time for the people to awaken and start setting off a few alarm clocks under dozing or indifferent Senators and Representatives. If the alarm clocks do not have effect, a wholesale tossing of ballot bombs on election day certainly would work.

Ewing Raises a Righteous (?) Anger

EXTENSION OF REMARKS

OF

HON. GLENN R. DAVIS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 10, 1951

Mr. DAVIS of Wisconsin. Mr. Speaker, I insert herewith a very pertinent editorial from the Wisconsin State Journal, of Madison, Wis., which speaks—and very well indeed—for itself:

EWING RAISES A RIGHTEOUS (?) ANGER

This time, Oscar Ewing may have stubbed his toe.

At their Gatlinburg, Tenn., conference, the governors of the 48 States voted unanimous approval of a move to reserve to the States the right to decide whether relief rolls should be open to public inspection.

Mr. Ewing, the Federal Relief Administrator, attended the meeting. But he made it plain the governors' views did not change

his own opinion that relief rolls should be kept secret. Reminded that he had said he had come to the conference for advice Mr. Ewing—a public employee—snapped:

"Yes, but I reserve for myself the decision whether I will take it."

That put the governors back in their seats, seething with anger.

That anger is good. It is healthful. And in it lies hope.

For until the American people do become angry, angry enough to take action, they will continue to be shoved around by the Fair Deal administration and its bureau chiefs who have the idea they are our masters, rather than our servants.

The relief-roll issue that blew off the lid at Gatlinburg was itself brought about by Mr. Ewing's arrogance.

Early last summer two women circulating the Stockholm peace petition (then being pushed by pro-Communist groups) were discovered to be Indiana State Welfare Department workers. There was an investigation and a few pinks were fired from the department. But a byproduct of that probe was the discovery that Indiana relief rolls included a substantial number of chiselers.

Some relief recipients had enough money to buy new automobiles. Others lived in \$160 a month apartments. Some headed for Florida vacations—with relief checks in their pockets. Relief checks were going to race-track touts and to people holding down well-paying jobs.

The legislature, with Republican majorities in both houses, decided the best way to knock off the chiselers was to allow quarterly inspection of the relief rolls. The Democratic Governor vetoed the bill.

Ewing stepped in and threatened to cut off Indiana's Federal relief money unless the rolls were kept secret.

That threat made the legislature so angry it passed the publicity bill over the Governor's veto. Explained one legislator:

"That threat crystallized opinion for the bill. Up to that time we were principally interested in eliminating relief chiseling. After his threat, we saw the main issue hinged on whether a Federal administrator could tell a State legislature what to do. Hoosiers don't like ultimatums."

Neither do taxpayers in other States.

Although Mr. Ewing may not be inclined to "take advice" and "allow" open inspection of relief rolls, he cannot very well avoid a law passed by the Congress of the United States. The United States Senate already has passed a bill giving the States discretion in this matter. The House should approve it soon.

Mr. Ewing's insulting and arrogant speech to the Nation's governors should do much to convince Members of the House that action is necessary.

John Otto's Wilderness

EXTENSION OF REMARKS OF

HON. WAYNE N. ASPINALL OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 9, 1951

Mr. ASPINALL. Mr. Speaker, in the hurly-burly rush of our modern day, when faith seems more a condition sought after than a status giving rest within, it seems appropriate to call attention to a story about a complete and absorbing faith of yesterday.

This story about John Otto and his dedication to the task of preserving for

posterity a beautiful area of the handiwork of nature appeared recently in the Empire magazine of the Denver Post. It gives graphic portrayal to a man's life, a man who asked but little from his fellows but a chance to open up and make available to them a restful spot of beauty and inspiration. Thousands now come each year from all parts of the Nation, over fine highways and trails, to see the unspoiled monuments which John Otto loved enough to protect in the interest and for the benefit of those who would follow.

Not only western Colorado and the people living near the Colorado National Monument but many citizens of many areas throughout the entire Nation have benefited from the preservation of this awe-inspiring uplift of rock, shaped and weathered by wind and water. Many are those who owe John Otto a great vote of thanks, and may this insertion be a part of that process by which we say "thank you, John Otto, and well done."

The article follows:

JOHN OTTO'S WILDERNESS
(By Nell Murbarger)

About 50 years ago, John Otto wandered into western Colorado, apparently from nowhere. He recognized the work which he seemed to have been put on earth to accomplish; and once his self-appointed chore was completed, he moved along westward and into obscurity.

That's about all men know of him or his affairs; excepting, of course, those years he devoted to fulfillment of his mission.

Practically everyone around Grand Junction, Colo., is familiar with John Otto's work in gaining national recognition for Monument Canyon, 5 miles southwest of town.

A towering wilderness of sheer precipices and tumbling red sandstone monoliths, of deep gorges and cross-fissures, colossal amphitheaters and massive pilasters fantastically fluted by wind and water, this was a wonderful place, said men of the locality . . . a wonderful place to stay out of.

There seemed no question about this being good advice, but in Otto's case it was only so much wasted breath. Something about that wild land of the monoliths seemed to fascinate the man, seemed to draw him to it.

THIS WAS HEAVEN

After buying a few pounds of flour, bacon, and beans, the stranger loaded his old bedroll and other worldly possessions on the backs of his burros, Foxie and Cookie, and alone headed toward the forbidding red cliffs beyond the town.

The more he saw of the canyon in the weeks which followed, the more he fell under the spell of its majesty and massiveness, the quiet grandeur of its great, silent aisles; the delicate loveliness of its forested retreats where early summer spread a carpet of wild flowers and ferns. For John Otto this was heaven on earth; yet it wasn't enough that he alone should see and enjoy this place. All men must be given an opportunity to see and enjoy it with him.

To that end John Otto began a single-handed project of road and trail building and publicizing; a work which he pursued for more than 10 years without a breather and with no thought of profit.

Grand Junction didn't see much of him except on his infrequent trips to town for flour and beans and blasting powder, whenever funds permitted. Now and then some adventurer would hire him as a guide on a hunting trip into the canyon. The few dollars he made this way apparently constituted his only income.

Through these visiting sportsmen, this strange frontiersman's labor of love at last began to attract the outside interest he had sought so long. National magazines started publishing articles about the Old Hermit of Monument Park, and the trails he had built through the gorges, over the mesas, and along the cliffs.

TO DO SOMETHING BIG

Eastern folk, visiting at Grand Junction, began asking to see the place. Eventually this remarkable area in Mesa County was brought to Uncle Sam's attention.

That day in 1911 when President William Howard Taft ordered this 18,000-acre wilderness placed under Federal protection and supervision as Colorado National Monument was probably the greatest in John Otto's life. He felt that this was a marvelous thing Uncle Sam had done, and to show his appreciation he vowed to do something big, something outstanding.

He could think of no grander expression of his gratitude than to unfurl the Stars and Stripes from the top of Independence Monument. The highest monolith in the canyon, this solid rock spire towered 500 feet above the valley floor, and its entire height contained scarcely a large enough ledge to make a footstool for a buzzard.

That the hazardous perpendicular had never been scaled (even professional alpinists considered it unscalable) didn't faze Otto. He had made up his mind to climb it with the flag.

COLORS OVER THE WILDERNESS

Working with single jack and chisel he would laboriously drill a hole in the solid rock and drive a strong iron bar into it. Climbing a single step higher, he would chisel out another hole and insert another bar. Day after day, week after week, this operation went on, until the hermit at last pulled himself up on the pinnacle of Independence Monument. Exhilarating, frightening moment. No man before him had been there to have this eagle's view.

So, with neither fanfare nor witnesses to salute his accomplishment, John Otto raised his flagpole and triumphantly ran up the colors to fly over the wilderness. After a time he climbed back down from that dizzy height.

The flag became somewhat faded and tattered after a year or so, and Otto decided that a new one was in order and another trip up the rock was scheduled. On this occasion, however, he had plenty of witnesses, who gathered from miles around to celebrate in his honor and to watch him make the climb.

Viewing the perilous ascent was blood-chilling enough; but when the man had planted the new flag and started back down the sheer rock, lowering himself from one fragile-looking bar to the next, it is said that women fainted and scores of men—unable to watch his downward course—found themselves compelled to close their eyes or turn away.

FAME AND FACILITY

The monument has gained in fame and facility considerably since John Otto first forced a trail into it with pick and shovel and pack burros. Today an excellent highway skirts the canyon rim for most of its 22 miles. Parking areas have been provided at all the main points of scenic interest, and an excellent camping and picnicking ground has been established for convenience of visitors.

Some of the more spectacular scenic stops include Cold Shivers Point—a narrow rock ledge overhanging Columbus Canyon 800 feet straight down; Red and Ute Canyons; the Coke Ovens—a group of natural rock formations resembling old-time charcoal furnaces—and Independence Monument, where the flag was placed by Otto. Grotesque formations of less prominence bear such interpretive names as Cleopatra's

Couch, the Praying Hands, Devil's Kitchen, Liberty Cap, Monolith Parade, Window Rock, Keyhole Rock, and so on.

From many sections of the monument, particularly from the campground and from Trail-of-the-Serpent Drive, it is possible to look across the Colorado River and the wide sweep of orchard-planted Grand Valley, far below, to Book Cliffs, on the northern horizon, and Grand Mesa, the world's largest flat-topped mountain, which looms to the east.

Fossils and petrified wood are found within the monument area. The rocky slopes between its boundaries and the Colorado River have yielded five different species of dinosaurs, including the diplodocus, largest land-living animal known, and the brontosaurus.

Considering John Otto's long and unpaid service during which he built roads and trails and opened the forbidding places to visitors, it would have seemed right had the hermit been appointed as the monument's first official custodian, but this was not done. Still, for several years after creation of the park, John Otto continued to serve its best interests—without remuneration. And then—no one appears to remember exactly when—he simply dropped out of sight.

HOW BIG ARE THE ROCKIES?

Just a few weeks ago he wrote a letter to *Empire* magazine from Klamath River, Calif., where the editors had managed, after considerable research, to locate him.

They had inquired diplomatically after his health, to which John Otto answered: "I am today—as far as I know—the healthiest man in the world and going it as strong as ever." (His age remains his secret.)

As an afterthought, just before mailing his reply, he printed a rather homesick note on the back of the envelope. "How big are the Rocky Mountains? They are as big as my heart. Nobody loves them more."

Social Security

EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following enlightening article that appeared in the September edition of the *Bar Bulletin* published by the Boston Bar Association and written by Julia T. Sullivan, a member of that organization who is well versed on the social-security law and presently employed with that agency in the Boston office, Boston, Mass.:

THE SELF-EMPLOYED UNDER SOCIAL SECURITY (By Julia T. Sullivan)

The Social Security Act embodies a number of provisions, such as old-age and survivors insurance, grants to States for old-age assistance, for the needy blind, for the needy totally and permanently disabled, for dependent children, and for public health.

Title II of the act, effective January 1, 1937, covering old-age and survivors insurance, as amended to August 28, 1950, established a system of Federal insurance providing for monthly retirement benefits to insured workers and their families when the worker retires at age 65 or later, and for his family when he dies. The cost of paying the insurance benefits is met by taxes which are levied at equal rates on both employers and employees under subchapter A of chapter 9 of the Internal Revenue Code, referred to as the Federal Insurance Con-

tributions Act. Prior to the Social Security Act amendments of 1950, approved August 28, 1950 (Public Law 734, 81st Cong.) this system of Federal insurance applied primarily to workers in commerce and industry. Under the 1950 amendments the system was expanded to be effective on and after January 1, 1951, with respect to services performed by many new groups, in the same manner that the original groups were covered.

One of the largest of the newly covered groups to come under this law are the self-employed individuals who have income from trades or businesses which they operate either as sole owners or as partners. Some of the different kinds of trades and business in which earnings will count toward old-age and survivors insurance payments are:

Operating a tailor shop, tourist court, printing shop, store, beauty parlor, filling station, shoeshine stand, barber shop, etc.

Working for oneself as a writer, photographer, adjuster, private teacher, independent contractor, etc.

The amended social security law, however, specifically excludes those whose income is derived from operation of a farm and whose services are performed as sole operators or partners in certain specified professions.

Excluded are physicians; dentists, lawyers; osteopaths, chiropractors, optometrists, naturopaths; veterinarians; architects, professional engineers, funeral directors, Christian Science practitioners; certified, licensed, registered, or full time practicing accountants.

The revised law also excludes the net earnings from self-employment derived by a duly ordained, commissioned, or licensed minister of a church in the exercise of his ministry, or services by a member of a religious order in the exercise of duties required by such order.

Although income from self-employment in these specified professions is excluded, persons so engaged as employees will have their wages credited toward insurance benefits. Moreover, an individual who is self-employed in an excluded occupation may become eligible for old-age and survivors insurance if, apart from his noncovered profession or business, he engages in other work, either as an employee or as a self-employed person, which comes under the social security law.

For old-age and survivors insurance benefit purposes, self-employment income, subject to certain exceptions, means net earnings derived from a covered trade or business during any taxable year beginning after 1950. The minimum net yearly earnings reportable are \$400; the maximum net yearly earnings, together with wages, which can be credited to a social security account, are \$3,600. These net earnings may be from full or part-time self-employment.

Net earnings are gross income derived from a covered trade or business, less the allowable deductions attributable to such trade or business as computed under the income tax provisions of the Internal Revenue Code. In case of a partnership, each partner will include in his net earnings his distributive share of the ordinary net income or loss from the partnership enterprise. Whether or not a distribution is made, each partner must consider his distributive share in arriving at the amount of his net earnings reportable for social security.

Excluded from net earnings are rentals from real estate (including personal property leased with the real estate) unless the person is self-employed as a dealer in real estate. Income from real estate investments, such as from ownership of apartments or houses, may not be included in net earnings. Moreover, the proprietor of a store or shop is not permitted to count as a part of his self-employment income any money received from rentals of parts of the premises not used for his trade or business. By the

same token, dividends or interest from personally owned stock or bonds, or notes, or certificates, must not be included as net earnings from self-employment, unless the person is self-employed as a dealer in stocks or securities.

An individual may have both self-employment income and wages from employment during the same year. In such cases, wages from a job covered by social security would be credited toward old-age and survivors insurance first. Then the difference between \$3,600, which is the maximum yearly earnings which can be reported, and the total amount of wages would be determined. Net earnings from self-employment amounting to \$400 or more would be taxed to the extent that they did not exceed that difference. The excess would not be taxable.

The report on a self-employed person's income will be coordinated with his income tax return. All that he will need to do is to transfer certain information from the trade or business schedule of the return to a social security schedule on the same return. The amount of the social security contribution for self-employed persons from 1951-53 will be 2¼ percent. Self-employment income must be reported for every taxable year beginning after 1950. Thus, the first report will be made after the close of 1951. The taxable year is the calendar year unless the self-employed person uses a different taxable year for income-tax reporting.

Under the "new start" provisions of the amended act, the self-employed person needs as quarters of coverage—a quarter of coverage is a calendar quarter in which self-employment income is at least \$100 or wages are \$50—only half the number of elapsed quarters between 1950 and his attaining age 65 to be fully insured. The minimum of quarters of coverage is six. The maximum number of quarters of coverage ever to be needed for a fully insured status is 40. They may have been gained at any time, and either as an employee or as a self-employed after 1950 in work covered by social security. For each full year in which his self-employment is \$400 or more, the self-employed person will receive credit for four quarters of coverage.

Before the time of filing the 1951 income tax return—in 1952—every one of the 4,600,000 covered self-employed will need a social security account number. Many of these people have, at one time or another, been employees in covered work, and already have social security cards. If a self-employed person has never had a card, or has had one but has lost it, he should contact the social security office which serves his area. The card showing his account number, will represent his Federal insurance policy. It will identify him when he applies for monthly insurance payments to himself and his family when he retires, or if he dies, when his surviving dependents apply for benefit payments.

Every social security office has informational literature. A post card or telephone call is sufficient when requesting the material. The Intown Boston office is located at 161 Devonshire Street.

Testing Time

EXTENSION OF REMARKS OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 10, 1951

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the Rec-

ORD, I include the following editorial from the Oregon Journal:

TESTING TIME

The next 3 months with their critical power problems will be a testing time for the people of the Pacific Northwest.

They will test the ingenuity and skill of regulatory and public utility officials. They will test the understanding of industrial and commercial users to which power is an essential of continuous operation. They will test public patience.

The extent to which this ingenuity and understanding and patience and cooperation is extended by all elements will determine just how much or how little real damage will be done to the region's economy, to national defense and to employment.

The stakes are tremendous. Among them are production of aluminum and other critical items for rearmament business profits, jobs, and personal comfort.

Some of the things necessary to be done are either being done or are programmed.

For right or wrong, the decision not to extend daylight saving time has been made by the governors of Oregon and Washington. It was made for legal reasons and because estimated savings for October—250,000 kilowatts on peaks and 100,000 kilowatts throughout the month—were at best educated guesses with no actual experience to sustain them.

On other fronts, however, the actual curtailment and power saving program is proceeding.

Interruptible power contracts with aluminum companies have been canceled. They involve 215,000 kilowatts.

Bonneville Power Administration is raising the level of the Bonneville Dam pool with stoplogs to realize another 40,000 kilowatts.

BPA also is signing a rainmaking contract designed to seed clouds in the Pend Oreille, Clark Fork, and Flathead Basins in an effort to increase the flow in the upper reaches of the Columbia Basin. (Rain in the lower basin is meaningless insofar as additional power is concerned.)

An emergency steam-plant program to supplement the region's overstrained hydro output is being pressed in the Congress.

Efforts are being made to unstick projects like Pelton, to obtain the go-ahead on PGE's 225,000-kilowatt Round Butte job, to speed up installations at Rock Island, to revive the Oregon-California Intertie (100,000 kilowatts involved), and to remove various roadblocks that have stymied Tacoma's Cowlitz projects and other proposed developments in the region.

And the Columbia Basin interagency committee is urging earliest possible completion of Hungry Horse, McNary, Chief Joseph, Albion Falls, Detroit, Big Cliff, Lookout Point, Dexter, and Fallsdam Dams. It makes no recommendation of the controversial Hells Canyon and Ice Harbor projects.

Meanwhile defense electric power administration orders, affecting curtailment of industrial and commercial uses of power in the Pacific Northwest, are ready and will be put into effect in steps (16 blocks in all) starting October 1. No one can estimate the exact power savings involved, but they are substantial.

For practical purposes, that leaves the power savings that may be attained on a strictly voluntary basis by domestic consumers. And this program, to be spelled out soon by public and private utilities, may prove to be very important. Indeed, providing the final push that may avert disastrous consequences.

In simple terms, household users of power will simply be asked not to waste power—on indoor and outdoor lighting, heating, cooking, and hot-water heating.

The possible saving by domestic consumers is variously estimated at from 50,000 kilowatts (operating group of the Northwest

power pool) to 150,000 kilowatts (Henry Kaiser) over the next 3 months' water-storage period. But even the minimum saving implies complete—not hit or miss—cooperation.

The thing to be remembered—by industries, commercial, State, city, and county users and domestic consumers—is that every step they take, inconvenient as it may be, every block of power they save, small though it be, adds up to hundreds of thousands of kilowatts.

These are the kilowatts we must have if we skin through the next 3 months without serious curtailment of vital defense industries and serious damage to business and employment.

Peter Mihaly Berend

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 20, 1951

Mr. KLEIN. Mr. Speaker, I am today introducing a special bill in behalf of Peter Mihaly Berend, a young man who came to the United States in 1949 from Hungary as a student, but due to the unwillingness of the Hungarian Government to extend his passport could not be admitted to this country. He was paroled and is now an engineering student with a splendid record. He is strongly anticommunistic and desires to remain in this country permanently. The Commissioner of the Immigration and Naturalization Service has informed me that since he never technically entered the United States as a student but was only paroled, he does not qualify for permanent residence under the Displaced Persons Act of 1948, as amended. This bill will, if enacted, overcome this technical obstacle and permit this young man to qualify as a displaced person and to contribute his intelligence and skills for the benefit of this country.

An Overdue Switch in Foreign Policy

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Detroit Free Press:

OUR NEW FOREIGN POLICY—A SWITCH

At a recent press conference President Truman reiterated that the foreign policy of the United States aims at peace through strength.

The free world must be put in position, said Mr. Truman, where it can force the Soviet Union and its satellites not only to keep the peace but also to honor their treaty agreements.

Accepting this as the objective now guiding administration policy, when and why did it replace the policy of appeasement

pursued by the administration until it led to a war in which more than 80,000 young Americans have already been killed or wounded?

Certainly it was not peace through strength that directed the pell-mell demobilization of our Armed Forces under the Truman administration.

Certainly it was not peace through strength that caused the administration to fritter away \$50,000,000,000 voted for defense between V-J day and the Korean outbreak.

Certainly the Soviet Union and its satellites were not encouraged to keep the peace and honor their international agreements by Secretary Acheson's writing off Korea and Formosa as of no importance to us and waiting for the dust to settle.

Certainly Stalin was not deterred from his knavish tricks by Mr. Truman's declaring during the 1948 campaign that Joe's a decent fellow.

The fact is that the peace-through-strength policy for which Mr. Truman now takes exclusive credit was forced on him by public opinion, aroused and alarmed by the consequences of his playing footsie with the Commies at home and abroad.

As much as any one man, Senator Arthur H. Vandenberg, of Michigan, was responsible for forcing this shift of policy.

The American people took the reins out of the hands of men who should have led but were misleading them. That is democracy in operation.

While Mr. Truman may claim credit for executing a policy thus imposed upon him, the credit for originating that policy belongs to the Nation as a whole.

All of the military power we may forge will not save this Nation from disaster. Courage to use that power will not save us. A third element is necessary to our survival: the intelligence to use our strength and courage wisely, and not for mean and petty political purposes.

Time To Atone for Yalta and Potsdam Agreements

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 9, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, the disgraceful bargains made at Yalta and Potsdam with the lives of innocent people will always be dark pages in the history of our country. The crimes committed there against humanity call for atonement if we are a Christian nation. A day of repentance should be set aside in public acknowledgement that the Yalta and Potsdam agreements were wrong and must be repudiated.

Mr. Speaker, in the name of humanity, what manner of official was he who agreed to the expulsion of 7,000,000 German citizens from Silesia and other parts of eastern Germany. Further, who was responsible for the expulsion of 3,000,000 "ethnic" Germans from Czechoslovakia and Rumania? Men, women and children were uprooted from their homes without notice, driven like cattle along the highways where thousands died and were left homeless. Their blood, Mr. Speaker, is upon the doorsteps of the United States Government and the British and the Russians. We pay lip service

to the principles of liberty and freedom, we profess great faith in the moral law and say, "In God we trust." We have flouted the moral law and cried out, for revenge. "Unconditional surrender," was the slogan. There was unconditional surrender and in its wake another war confronts us. "As ye sow, so shall ye reap," and today we reap the whirlwind. It is time to atone for our national sins, and we must be big enough to rise to such heights.

Mr. Speaker, as part of my remarks, I shall include an article by Iain Wilson which appeared in the *Christian Century* for October 3, 1951:

GERMAN REFUGEES' OWN STORY

(By Iain Wilson)

Enough has been said and written about the German refugee problem to make thoughtful people aware of its existence and dimensions. The articles of the Potsdam Agreement which authorized the expulsion of 7,000,000 German citizens from Silesia and other areas of Eastern Germany involve the American, British, and Soviet Governments in direct responsibility for the fate of these people. Scarcely less direct is their responsibility for the expulsion of about 3,000,000 ethnic Germans from Czechoslovakia, Rumania, and other countries which took their cue from Potsdam.

It is true that some steps have been taken to ease the difficulties created by the inrush into Western Germany of this vast human tide. Some 3,000,000 refugees are industrially or agriculturally employed in the Bonn Republic's precarious economy. Full political rights have been granted the expellees. Legislation for equalization of burdens has been passed. The Expellee's Bank, with guaranteed funds of \$5,000,000, has helped organize over 50,000 small businesses and industries. Over \$130,000,000 has been furnished by state governments and Marshall plan funds to establish refugee enterprises. The undertakings in behalf of these people of such voluntary agencies as the Hilfswerk, largely financed from ecumenical sources, are of real if restricted importance.

WHY ARE REFUGEES GOING EAST?

In spite of such developments, refugees are flowing back to the Russian zone in large numbers, disillusioned by the west. With all that has been done, the economic and political menace they present has been only superficially dealt with. For the most part, these millions remain propertyless, impoverished, and unhoused. They can be transformed into a healthy and constructive element in western society only by a planned international action of unprecedented imagination and generosity. However, our leaders are at present otherwise occupied.

The church should see and proclaim that in, through, and beyond the economic and political aspects of this situation there looms a tremendous spiritual problem. Far more relevant than argument about the justification of the Potsdam decrees is the question, What ideas and attitudes are developing among the refugees? What do we expect of people who have been forcibly driven from their homeland, deprived of their possessions, and subjected to inconceivable hardships and indignities, and are now wholly dependent upon such help as can be given them by others who are themselves harassed to the limits of human endurance? We in this country cannot even begin to enter imaginatively into such a situation unless we try to realize that almost every factor we take for granted as contributing toward our physical and mental health is totally lacking to these people.

We prize a free nation, a home of one's own, regular employment with reasonable remuneration, adequate food and clothing, the possibility of privacy, an unquestioned recognition of one's significance as citizen and individual. Replace these by their opposites—worst of all, by the sense that one is of no interest or value as an individual and is regarded, if at all, as a problem by the rest of mankind—and you begin to suspect faintly the continuing wretchedness of their existence. We might reasonably expect either such bleak nihilism as would play into the hands of the Communists, or such savage nationalism as could sweep the neo-Nazi demagogues into power. At least it is obvious that in face of the present actualities and potentialities, it is of secondary importance to argue about the apportioning of guilt.

DOCUMENTS OF COMPASSION

It is therefore encouraging to find so many signs that the refugees have in many cases come through with a vigorous Christian faith, more realistic than ever before, and a perception of ethical values more vivid than is commonly found among ourselves, whose sensitivity is blunted by reliance upon material power. One portent of the moral leadership that may yet emerge from this deepest abyss of Europe's degradation is a small book published by the Holzner-Verlag of Kitzingen-Main, Germany, called *Dokumente der Menschlichkeit—Documents of Compassion*. The book was got together by a group of refugee scholars located in Göttingen, who are convinced that an overwhelming majority of the refugees have been brought to realize, through their sufferings, that it is human nature itself, their own included, which is radically sinful, and that to talk of nations or groups as good or bad is a senseless, although demonically powerful, folly. Repudiating every assimilation of the individual into collective categories, they now place a new value upon man as an end in himself, and it is on behalf of man's dignity that the book has been conceived. Thus the Göttingen group echoes Bishop Dibelius' cry, "Let man be man."

THE TESTIMONY OF SIMPLE PEOPLE

The *Documents of Compassion* consists of one-hundred-and-thirty-odd stories of humane actions experienced by German refugees, during their trek to the west, at the hands of foreigners—Poles, Americans, Czechs, Russians, British, French, and so on. The stories were received by the Göttingen group following press and radio requests, and the printed collection is a selection from the replies. The result is unpretentious and almost crude, devoid of literary graces—as concrete and free from speculation as the Old Testament narratives. Many of the stories are evidently the work of illiterate men and women writing under the compulsion to testify. The very insignificance of most of their laboriously told recollections gives the book its pathos and power.

We see the 70-year-old Frau Guenther sitting alone and exhausted in a Czechoslovakian ditch and thinking her end has come, when a Negro American soldier approaches. He says, "Can't you make it, Mother?" and takes her as far as the frontier, giving her coffee and buttered rolls and telling her about his family in the States. We meet two Belgian DP's who left east Prussia with a wagonload of German peasants. One of the Germans, Fritz Meller, tells how gently the Belgians assisted his aged mother in and out of the wagon when it halted. There is the Czech doctor—unnamed for fear of reprisals—who, after examining a middle-aged German who has just been released from 9 months of internment, springs agitatedly to his feet exclaiming, "This is intolerable" and who then tends and protects the man and his family.

A RUSSIAN SAMARITAN

A Russian soldier drives away a gang of hooligans who are molesting an old German woman, and comforts her while she weeps, and gives her a cow he has stolen. A young Polish officer lays his hand on the shoulder of a German mother as she stands by her son's grave and says, "Don't be so sad, matka, those who sleep here are well off." Anton Knobloch, once a substantial farmer in east Prussia, tells of his "dear, faithful Frenchman" who had worked as a DP on his farm and stayed with him when he had lost everything, including his family, and was sick and in flight. There is the little story of the hundreds of bewildered Pomeranians waiting to board the steamer that is to take them to Travemünde, staring wide-eyed as the English guards carry a couple of weeping children aboard and stuff their little mouths with chocolate, so that "their tears quickly dry in the laughing morning sunlight."

To some, these may appear to be pitiful enough notes of compassion in the uproar of human cruelty. But they mean a good deal to the humble people who recorded them. And there can be no understanding of the spiritual situation of the German refugees without serious appreciation of what this book is saying—that the smallest loving deed has power that is simply unbreakable, and that this is known best by the people who have suffered most from human hatred. This is a heartening assurance with which Christians may continue to seek the good life for the world's dispossessed millions, so that "their tears may quickly dry in the laughing morning sunlight."

Employ the Physically Handicapped

EXTENSION OF REMARKS

OF

HON. AUGUSTINE B. KELLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 10, 1951

Mr. KELLEY of Pennsylvania. Mr. Speaker, it so happens that this week is devoted to employ the physically handicapped.

To me, every week should be Employ the Physically Handicapped Week.

From an enormous testimony amassed in the Seventy-eighth and Seventy-ninth Congresses by the Committee on Aid to the Physically Handicapped, of which I had the honor to be chairman, there was conclusive proof that the handicapped person can fill a position, in many instances, as well as a normal person. During the Second World War it was necessary to tap this pool of the handicapped. Many highly reputable industries kept records of the performance of the handicapped and discovered, to their amazement, that the performance of the handicapped on jobs to which they were suited equaled those of the normal person. Some truly astonishing records were revealed. Thus, with this evidence, there is no excuse for not placing handicapped people in positions where their capabilities can be used. The drive to place the handicapped on jobs has resulted in some success, but the percentage of handicapped employed is small compared to the total handicapped persons living in the United States.

Only Religion Can Counter Communism in Germany or Elsewhere

EXTENSION OF REMARKS OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 8, 1951

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Dorothy Thompson:

UNITED STATES FAILS TO RECOGNIZE GERMAN SPIRITUAL HUNGER

(By Dorothy Thompson)

If communism is a secular religion—whose youth festivals and other ceremonies are liturgical rites—then it should be obvious that it can never successfully be countered by democracy. Democracy is not a creed, nor has it power to evoke the devotional instinct.

Communism and nazism have appealed to an irreligious generation. The roots of nazism were pre-Hitler. Its mass mania followed an epoch of agnosticism, breakdown of personal and public standards and inhibitions, characteristic of all western countries between the two wars.

Like communism it was a religious substitute, elevating the swastika as a new cross and preaching a mystical union of the Germanic peoples in blood and soil. Like communism it appealed to empty-souled youth who had been taught that there are no transcendental values, that all things are relative, that religion is superstition, and who nevertheless craved an answer to the eternal question, "Child, why were you born?"

The Nazis had an answer: To redeem the world through Germanic blood.

The Communists have an answer: To redeem the world through Lenin-Stalinism.

Both could evoke a higher loyalty because no other higher loyalty competed.

The only resistance to nazism which encompassed voluntary martyrdom came from German Protestants and Catholics, for whom nazism was patent blasphemy.

It is possible to convert a Democrat, a capitalist, an intellectual, or an agnostic Jew or Christian to communism, and even such pastors as conceive Christianity to be a code of ethics without divine origin. It is not possible to convert a follower of Judaism or anyone for whom Christianity is a God-inspired faith. For these have no unsatisfied devotional instincts.

The greatest failure of the western occupation of Germany has been failure to recognize the German spiritual dilemma—the stirrings, self-probings, and inarticulate longings, especially of German youth, not for a new form of state, but for a new content of life. This longing is not assuaged by formal declarations of the rightness of secular democracy. When one has descended into hell, one seeks more than an external order; one seeks salvation and redemption, the process by which one makes one's peace with God, oneself, and mankind.

The occupation authorities, indeed, not only have failed to recognize the longing; many officials actively have opposed it, being themselves state worshippers or actively anti-Christian, holding Christianity to be somehow reactionary. (So, of course, did Hitler.)

Nor was the Christian Democratic Party any help. Its aims are realistic and political.

Thus an opportunity for the birth of a social order founded in spiritual revulsion

from the war and the Hitler epoch was submerged in great power greeds, petty party politics, paper purges, and horrendous bureaucracy, all without inner substance or comprehensible purpose.

Only the Communists in the east zone, recognizing the longing, are again perverting it into the channels of another secular religion, which has its ecstasies, though they be of tom-tom inspiration.

In all the western democracies, including our own, the grounds are being laid for totalitarianism through the gradual emptying of society of its spiritual content. Christian criticism of government is frowned on as violating the separation of church and state, and in the separation the church is relegated to the fringes of life.

Every cure for juvenile delinquency—playgrounds, boys clubs, and what not—is energetically promoted, except one; that children should be taught to fear God and keep His Commandments, and even without sectarianism be taught so in the public schools. The welfare state emerges as the substitute for Christian charity, to the point where few will lift a finger for their neighbors.

But when the state becomes God, you get the essence of communism, no matter by what name it calls itself.

It might even call itself anticommunism.

Newspaper Week

EXTENSION OF REMARKS

OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES
Tuesday, October 9, 1951

Mr. ASPINALL. Mr. Speaker, we all have an unfortunate tendency to get carried away by our own virtues and importance and the need for us to shed light in someone's "darkness." I have commented in the past that very often the small independent newspaper editor seems to have a firmer grip on reality and a closer touch with the ordinary individual who makes up America than one who, of necessity, is faced with great issues and great problems.

Under leave to extend my remarks, I include a short and pungent editorial from the October 4, 1951, issue of the Gunnison Courier, an independent newspaper in my district. I offer this editorial for whatever value it may have to anyone or any organ carrying some great, but self-imposed, burden of trying to be all things to all people.

NEWSPAPER WEEK

This is Newspaper Week.

On this occasion the editors have the privilege of letting their hair down and claiming a certain extra-extra concern for all our freedoms.

We do feel a certain concern about this world we live in, but we find that most of our fellow citizens and newspaper readers are about as aware as many of our editors.

The Courier occasionally indulges in comment on the wider world we live in, but much of the time just tries to give Gunnison County readers a fairly accurate, fairly complete picture of what's going on right here at home.

Sometimes what goes on here at home has far-reaching implications and we often feel that we should go further in pointing out

our interdependence with others of our State, Nation, and the world we live in.

One small example—local folks are attempting to get the mining industry in Gunnison County out of the doldrums. Some folks we know are working with a project to take tungsten from local mines. But the fate of such a project can be determined by international policies. If we prefer to buy our tungsten from Red China (from groups who may not want to see the United States producing its own tungsten) we may not have such a local mining enterprise. But in case of war, the Nation might have to engage in desperation tactics to get that very mineral from that very same place. So even the question of stockpiling vital minerals can come right here to affect our local economy. It has caused ups and downs for Whitepine in the past.

This is only one of a dozen ways the world steps right in to affect our future in Gunnison County.

We hope this newspaper—and every newspaper—can get better and better in bringing to your doorstep the relationship of seemingly unrelated political arguments to your daily life.

Should Wages Be Tied to Living Costs?

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 8, 1951

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include a copy of a reliable weekly news letter from France. When some Americans are advocating tying all wages to cost-of-living index, we might well take a look at what a level-headed Frenchman thinks about it:

DEAR SIR: This week's letter will be concerned entirely with an analysis of the National Assembly's recent decision to tie all wages to the rise and fall of a cost-of-living index. The idea is to work out a standard subsistence budget, to fix a guaranteed minimum wage to cover it, then when this budget (following a rise in the cost of living) goes up by as much as 5 percent, to adjust the guaranteed minimum wage accordingly. This increase will be followed, within 15 days, by a corresponding rise in all wages. In this way the promoters argue that the workers will no longer suffer from fluctuations in prices.

SLIDING SCALE ADOPTED

By 410 to 203 votes the French National Assembly passed, at first reading, the bill to introduce the sliding scale. By this bill a standard worker's budget will be worked out by the Committee for Collective Agreements. This standard budget will be used as a basis for calculating the guaranteed minimum wage.

The bill proposes that as soon as the standard budget goes up by more than 5 percent, the guaranteed minimum wage will be adjusted correspondingly. In its turn the rise in the guaranteed minimum wage will automatically be translated, at the end of a fortnight, into a rise in all wages.

A once-yearly revision of the standard budget by the committee in question is provided for (it should be remembered that the standard budget includes only the barest essentials) "so as to adapt it to the growth of production and the extension of consumption."

All sane and competent people in economic, financial, industrial, and political circles, both public and private, are against this law in its present form.

The National Assembly has quite simply dispossessed the executive of its power to exercise control over the movement of prices, and therefore over the whole economic life of the country—and this in favor of a committee whose powers are ill-defined.

There is nothing to stop the Committee for Collective Agreements from applying blindly, with mathematical rigor, a system which takes no account of the numerous political, economic, social, and even seasonal factors, besides which the National Assembly has allowed itself to be led astray by the labor unions as to the real nature of the guaranteed minimum wage.

As we have made clear in previous letters, it was intended to protect unqualified workers from starvation wages. It concerns only a small proportion of workers in France, where nearly all are qualified. By its recent vote the National Assembly sanctioned the guaranteed minimum wage as a basic wage on which to adjust all wages with the rise (and, theoretically, fall) in the cost of living.

It must be said, however, that the Government itself was the first culprit. For example, in August 1950 and again in March 1951 officials of the French social security scheme demanded and obtained a rise in salaries corresponding to an increase in the cost of living and proportionate to the guaranteed minimum wage.

As regards the power given the committee to add one or two items of expenditure each year to the standard budget following the growth in productivity, it tends to falsify completely the whole productive effort by swallowing up immediately as goods for consumption what ought largely to be left for investments, reserves, and the capitalization of French industry, badly hit by the war.

A VICIOUS CIRCLE

The adoption of the sliding scale for wages will of course lead in a very short time to its application to pensions, military and civil, family allowances, and such like * * * and of course the Government will have to foot the extra bill when already it can't afford to pay what it pays now—or rather, the overburdened taxpayer can't. For in this eventuality the Government would have no alternative but to levy further taxes to meet the increased bill for pensions and allowances.

The producers, still further burdened with taxes, would then have to up sale prices, which in turn, by affecting the standard budget, would lead automatically to a general rise in wages. This would have to be followed by an increase in those same pensions and allowances to pay for which sale prices went up in the first place.

Furthermore, producers and traders have been hesitating up to now to raise prices for fear of discouraging their buyers and customers, whose purchasing power has remained roughly stationary. With the introduction of the sliding scale this fear disappears, as wages follow prices automatically—a process which leads, of course, to inflation, a debasement of the currency, and economic instability.

The real solution advocated by clear-headed economists is not the sliding scale or anything of the sort, but an increase in the flow of goods and especially consumers' goods, and higher productivity, which will effectively raise the purchasing power of all sections of the community.

In fact, happily for the economic future of the country, the harm may not be so great as one might first imagine. The Government itself is determined to resist the adoption of such a senseless measure. And the Council of the Republic (the French Senate), before which this measure has been sent and

which has the constitutional power to hold it up for 2 months in order to study it, will not fail to amend the whole project radically. And lastly the Committee for Collective Agreements has got to draw up a worker's standard budget that will be acceptable to all parties. Up to now it has been unable to do this.

THE RETURN TO REASON

Between the first passing of this bill by the National Assembly and the final approval giving it the force of law there are the local elections in France (October 7 and 14).

That is to say, the political parties—and in particular the SFIO (Socialists)—who have stood up for the sliding scale in the National Assembly (so as to curry popular favor) will be able to boast of their success during the coming electoral campaign.

Once the elections are over, however (i. e., after October 14), they may prove themselves more amenable. Many deputies in fact who voted in favor of the sliding scale are hoping desperately that the Senators will not endorse their vote. What they want to do in a country where the electorate is often ill-informed about the real state of affairs is to make a gesture that will bring them easy popularity. After the elections are over it might well be that they will return to safer notions about the economic future of the country. It is worth recording that in January 1947 Mr. Ramadier (Socialist) declared, at a time when he had just been made Prime Minister, "a rise in wages leads to a rise in prices, the sliding scale then renews the rise in wages."

Foreign Policy Is the National Issue

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 9, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, there is a lot of shadow boxing as to what the issues are before the people as the 1952 presidential campaign gets under way. We are blind unless we see and appreciate that the only issue in that campaign is foreign policy as it operates all over the world under the Democrats. I have said repeatedly on the floor of this House that our foreign policy has been and is an absolute failure. It has failed so badly that now it must be implemented by armed force. Korea is a pitiful example of foreign policy gone wrong under a President who thumbs his nose at the Congress and declares war without getting its approval as provided under the Constitution.

Mr. Speaker, it is futile to protest against high taxes, undeclared wars, the draft, OPS and NPA, and many other complaints. The basic cause of all our gripes is foreign policy—nothing else. And only an aroused people can correct the mess we are in.

As part of my remarks, Mr. Speaker, I am including an editorial from the Washington Times-Herald of October 6, 1951:

THE FORGOTTEN ISSUE

Republican Party leaders from Eastern and Southern States met in Washington a few days ago to talk things over. They were told by a number of speakers that crime, communism, and corruption are to be the big issues in 1952 and apparently believed it.

Now, there is no doubt that crime, corruption, and communism should be stressed in next year's campaign. The Republican orators will have no difficulty in showing that the criminal syndicates, the Bolshevik spies and fellow travelers, and the grafters have enjoyed the protection of the New Dealers and have had easy access to the White House during the New Deal era. The facts ought to be told and retold until every voter is aware of them and their implications.

But there is another issue—foreign policy—that touches the people more closely and the failure to stress it is ominous.

The people want tax relief. It is idle to pretend that they can have it except through a revision of the foreign policy that makes high taxation today and higher taxation tomorrow inevitable.

The people don't want the draft, but as long as the present foreign policy is pursued the draft will continue.

The people want the threat of inflation ended, but the foreign policy of inviting war everywhere and extending military and economic aid to an ever-growing list of nations overseas makes inflation inescapable.

The people want the war in Korea ended and of the press preserved, but there isn't much hope of preserving liberty in a garrison state, and it is a garrison state that the New Deal foreign policy is fastening upon us.

The people want the war in Korea ended, but the Truman-Acheson foreign policy won't let us win or even get out.

Foreign policy, despite its overwhelming importance, was the forgotten issue at the conference and it is easy to see why. Some of the conferees were real Republicans and the rest were Truman Republicans. All could agree on the evils of crime, communism, and corruption, to hear them denounced gave a feeling of unity that may have seemed genuine to the participants but is not likely to deceive anyone else.

The New Deal Republicans have had their way in the last three national conventions and have led the party to successive defeats. If once again the central political issue of our times—the foreign policy of the United States—is regarded as too hot to handle in a presidential campaign, the Republicans will lose. They will lose because they will have offered to the country no relief from present ills and because their cowardly evasion will be apparent to every voter.

Disarm the Pirates by Making Gerry-mander Impossible

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave granted to extend my remarks in the Record, I include the following letter:

CONGRESS OF THE UNITED STATES,
House of Representatives,
Washington, D. C., October 10, 1951.

HON. EMANUEL CELLER,
Chairman, Committee on Reapportionment, New York City, N. Y.

DEAR MANNY: Thank you very much for your kind invitation to give me the opportunity to testify before your Committee on Reapportionment. This is far more consideration than I have had from the Albany boys.

I deeply regret that official business holds me here in Washington for I would like noth-

ing better than to testify in favor of your bill, designed to save what little is left of fair and decent alignment of congressional districts.

The next best action I can take, therefore, is to ask you to incorporate this letter in your hearings.

As you may know, the most heinous example of gerrymandering has been proposed for our State. I doubt that the old masters of crooked and dissolute politics of the last century could have approached the finesse with which this Albany gang have proceeded. Two years ago last summer, I called their shots and accused the Committee on Reapportionment with double dealing. According to the Gannett newspapers, one of their members shouted then that I was all wet.

They were simon pure, he averred, and I was way out of line to suggest they would stoop to anything but strict compliance with the loftiest principles of reapportionment.

Time and again, the newspaper records will show, that I charged the committee with a plot to gerrymander, and time and again, they have retorted likewise.

Every charge I made has come true, at least if we are to believe the unerringly accurate accounts of the Gannett news service on this subject.

The secret, clandestine workings of this committee behind heavy doors and in smoke-filled rooms have proved I was right in every statement and every prediction I have made.

They have produced the most disgraceful, bare-faced, lewd, and rotten plan for gerrymandering the country ever saw. Their whole pattern follows the horizontal likeness of a nest of crocodiles.

Before anything else is touched upon, it should be pointed out that the reapportionment plan of 10 years ago was carried out aboveboard and on time. The opportunity was given to every candidate for Congress to know what counties he should run in nearly 2 years ahead of his campaign.

Some smart but shady politicians down in my neck of the woods remembered how advantageous such an arrangement was for candidates such as me to have time to meet the people. They recalled how completely I campaigned in a new county fully a year and a half ahead of primary day, getting my fences pretty well built, and they vowed such would never happen again.

So procrastination was the weapon these enemies of the people have employed, thus blocking honest men from presenting themselves to their proper constituencies time enough ahead to get acquainted and friendly.

Such a deliberate delay, if it did nothing else, acts as a drug upon the natural enthusiasm the rank and file Americans have for direct representation.

The only chance the public has to give proper study to their elected officials is to know them thoroughly and completely before a campaign. In the case of our State and in some others the people will be denied that choice.

Such denial only serves to increase the power of ruthless political overlords and bosses, who are the characters most detested in the popular mind today in this country.

However, the New York crowd has taken this into cunning thought and is now using it for all it's worth.

So much for the delay in this terrible scheme of things. That alone may suffice to deprive the people of our State of what free-thinking candidates they have left and help plunge Congress into an even greater mental vacuum than they complain of now.

The greatest sin they are committing is to seriously consider charting districts of elongated or irregular shape.

There can be but one reason for any such move and that is for the sake of dirty, crooked, dishonest, designing politics. Such a shape is atrocious, undesirable, and entirely unnatural. It is not conducive to decent

government and thus would have great appeal to these moral lepers.

They are bent upon debauching, raping, and degenerating all chances of preserving our American form of government and a fair, equitable election system.

There is nothing a group of vultures such as these won't stoop to. They have been told to sabotage up-State Republican congressional districts in New York State and they are doing a thorough job of scuttling their own ship. They are out and out pirates.

As I see it, and I have given this vital matter the most thorough study, there is but one way to stop this present-day gerrymandering. The Congress should pass the Celler bill or some such measure and pass it before these desperados can commit the political murder they plan.

Your bill will outlaw for all time the nefarious work of picaresque politicians by making it mandatory for those who claim to be responsible men, not monkeys, to draw congressional districts compactly, contiguously, fairly, and intelligently.

The only way to deal with zealots who will go so low as to gerrymander, which is the most atrocious of all human crimes, is to hogle them. Give them the only kind of treatment they know, the total kind. Shear them of power, for they are not fit to use it with even a spark of decency or judgment.

Your bill will outlaw the gerrymander. It will erase that ugly carbuncle from the American political scene and will eventually wipe out dictatorship and bossism over the honest public official.

Your bill will eliminate the danger of having distant and unrelated sections of a State represented by a Congressman who finds himself helpless to adequately meet the needs of so many different segments and occupations, with widely divergent interests.

The only sensible and sane way to create a congressional district is embodied within your proposal to concentrate in as compact and square an area as possible the confines of such a district. Such a pattern is better for the district itself, better for the country, and better for efficiency in representation.

I do hope that you can prevail upon the high-minded, the right thinking, and the truly American Membership of our Congress to get busy before the present session adjourns and enact into law your much-needed bill.

If this is possible, you will be saving America and especially our own State from the most ravenous, hateful, and vicious wolves ever to threaten our civilization, those who would gerrymander out of office the duly elected representatives of the American people.

I sincerely hope you will not rest until you have accomplished your noble task.

With best wishes for success, I remain,

Your colleague,

EDWIN ARTHUR HALL,
Member of Congress.

Russian Communists Direct Red China's Actions

EXTENSION OF REMARKS
OF
HON. CHARLES J. KERSTEN
OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 10, 1951

Mr. KERSTEN of Wisconsin. Mr. Speaker, the Communist seizure of power in China, far from being a spontaneous action of the Chinese people them-

selves, has been directed and promoted continuously by the Russian Communists for years.

Mr. Everett S. Allen's fourth article of a series which appeared in the New Bedford (Mass.) Standard-Times last June shows how the Russian Communists colonized Red China.

I include herewith Mr. Allen's article which appeared on June 29, 1951:

RUSSIANS COLONIZE CHINA BY INFUX OF COMMUNISTS WHO TAKE KEY POSTS

(By Everett S. Allen)

Heavy infiltration of Communist China by Russian nationalists, many of them hand-picked, rapidly is bringing certain sections of the country under the iron-handed jurisdiction of the U. S. S. R. The Sovietization program in China is expected by Russia to be completed in 2 years.

Superimposition of technical advisers, civic administrators, party organizers, propaganda experts and secret police by the Soviet—all of whom work in background advisory capacity, is molding China forcibly into the party-line schedule. Planned immigration by Russians, plus improved transport systems between Russia and North China are major tools in this operation.

Heavy-handed experts have started the job of grafting the U. S. S. R.'s political philosophy upon the society and economy of China.

The relationship between Communist China and Russia is at the crux of the problem which the Western nations must solve. A Chinese liberal, an author, commented, "I had hoped Mao would prove to be another Tito. I felt he was Chinese first, and Communist afterward. But my faith is wavering."

A former high-ranking officer in Chiang's Army, a university graduate, declared, "The Western Powers still delude themselves with the dangerous dream that Mao will one day break away from Moscow."

RUSSIAN AIM PREVAILING

Evidence would point to the fact that, although Mao may have had different concepts at the beginning of his relationship with Stalin, their alliance now is tending toward the Russian aim of making China a completely docile satellite. It may not be successful, if the Communist regime is overthrown, and it may take a considerable time, but that is the trend.

And where Mao's government, so-called, inept and inexperienced in iron rule and administration, might conceivably break down with a little anti-Communist pressure, Moscow is determined it shall not. The U. S. S. R. is injecting U. S. S. R. methods and men into China to stiffen Mao's bamboo screen into a genuine iron curtain by 1953.

Up to now Stalin's hand has worked behind the scenes, but to observers inside China he has gone so far toward sovietizing by immigration and influence that it is difficult to conceal the program longer.

The much-discussed secret treaty of February 12, 1950, signed in Moscow, is a major key to the unholy alliance which exists between Mao and Stalin. It was signed by Chou En-lai and Andrei Vishinsky, delegates plenipotentiary of their respective nations. Both nations agreed its terms were not to be publicly announced.

TREATY OUSTED

There was good reason for this if the English translations of the reported treaty which have seeped out of China since have even a vestige of truth. These quote the treaty as stating:

1. That the population of the Chinese People's Republic must, owing to the existing lack of resources, be diminished by 100,000,000, since otherwise they cannot be sustained. Detailed procedures to accomplish this end are left up to the discretion of the Chinese People's Government,

2. That the Chinese People's Republic will be responsible for the mobilization of 10,000,000 Chinese workmen to assist Soviet Russia in collectively constructing Sino-Soviet military establishments in order to "cope with imperialistic activities and aggression."

3. That the contracting parties agree to reorganize the Chinese people's liberation army into an international Communist army to be under the direct command of the highest officer of the Red army.

4. That the contracting parties for the purpose of "preventing together imperialistic invasions and for coping with the third world war," agree that the Chinese People's Republic will permit the Union of Soviet Socialist Republics to station troops within the Chinese boundary with a view toward "protecting together world peace."

FOUR MILLION MORE SOLDIERS

5. That the Chinese People's Republic will, before the end of this year (1950), increase the number of soldiers by 4,000,000, so as to be ready for meeting the "imperialistic act of aggression."

6. That within the boundary of the Chinese People's Republic, the cities of Peiping, Tientsin, Shanghai, Kwangchow, Changsha, Hangchow, Kuli-kan, Chungking, Fuhu, Amoy, Swatow, and Foochow are to be earmarked as the central district to serve as residential districts for the "immigrants" from the U S S R.

Exact nature of these immigrants has aroused considerable speculation, since some of them apparently are "opposite numbers" for both district and provincial Chinese officials. Others are technical advisers and secret police experts.

Taipei reported on March 5, for example, that 5,000 Soviet Russians had arrived in the Central China Province of Hunan to give the Chinese Communists practical lessons in NKVD (Russian secret police) purge methods.

The informant, whose identity was concealed, said, "Soviet Russia wants all internal resistance in China to be ruthlessly crushed. Moscow feels the Chinese Communists need lessons in purge techniques. The idea is to make effective opposition to the regime as hard in China as it is in Russia. The Russians believe China can be Sovietized in this respect in 2 years' time."

"The initial proving ground is in six hsien (counties) in Hunan Province, native Province of Mao Tse-tung. Altogether, there are 77 hsien in Hunan. The Province, often called China's 'rice bowl,' has an area of approximately 84,000 square miles, which makes it about the size of Idaho. The idea is that the Soviet Russians, after having crushed all opposition in the six counties, will extend the Soviet-style purge to 12 counties and then to others in the Province. The Hunan pattern will then be extended throughout the country."

RUSSIAN INFLUENCE SHOWN

It is the opinion of most experienced observers that Chinese entry into the Korean war is one of the best examples of Russian influence over Mao. The Chinese always have felt a sense of paternalism toward Korea since the thirteenth century. At that time, Chinese armies defeated Japanese invaders on Korean soil in a bloody 18-month war which cost 20,000,000 lives and left Korea barren. Up to June 1950, when the present conflict started, Korea still was trying to rehabilitate a red-ink economy wrecked by the ancient war.

Of all the areas of possible conquest in the Far East, Korea was the least rewarding, the most sterile. Those Chinese Communists who favored a military campaign beyond their own borders would rather have gone into Indochina or Burma, both economically important.

But by Russian direction, either by persuasion or exertion of influence, Mao went into Korea. Admittedly, it was a bright psy-

chological bauble. If he had pushed U. N. forces into the sea, and there were many—even in the west—who said he would, he would have gained tremendous prestige. But now, Korea is a millstone about his neck.

There are many other signs of the alliance. Last December, an undisclosed number of Russian ships arrived at Canton to help the Communists in transportation there.

In April, a foreign national who had lived with the Russians in Shanghai reported the Russians now colonizing China are a "generation of faceless men." He said the new Russians will not even talk to the old Russians although the latter are Soviet citizens. The informant described the Soviets as "tough, ruthless, emotional country boys," completely lacking everything but brute intelligence.

A-BOMB PLANT REPORTED

On April 11, guerrilla troops opened fire on Russian workers at Whampoa shipyards. In April and May Nationalist sources quoted rumors inside China to the effect the U S S R. had started to build an atom-bomb plant in Sinkiang Province. The missing Italian atomic scientist, Pontecorvo, was said to have arrived at Tihua, capital of Sinkiang, in March, in connection with the plant.

In this country a well-informed Chinese authority said last week that the Soviet Embassy in Peiping is the superauthority of Chinese communism. The number of Russians in China, he added, is steadily on the increase. Already they are so numerous that it is no longer possible for them to remain inconspicuous, a practice to which they resorted at first, by living in widely scattered areas.

This corps of "carpetbaggers and locusts," he said, is treated as a group of distinguished guests. They ride first-class on all public transportation and are provided with ample first-quality food, liquor, and clothing.

They are technicians and advisers to administrative officials in many cases. "In the wings of the stage, therefore," said the Chinese observer, "the Russians have excellent and increasing control of the political and economic operations of China."

The Province of Manchuria is the first area to be completely sovietized and there, thousands of Russians and Chinese live and work, shoulder to shoulder, although there is no question of the Russian superiority in the economic marriage.

Most of the skilled Chinese in Manchuria were lured there by attractive newspaper advertisements which offered high pay and good living quarters. They found neither existed when they got there, but it is not known that any ever returned; Nationalists presume they are not permitted to leave.

MAO NOT TO BE TRUSTED

There is no evidence, Chinese observers say, that Mao can be trusted, even if he were free to make his own decisions—which appears increasingly doubtful.

Most radical theory with regard to the Russian domination of China is that the Soviet wants the Chinese Army eliminated. It is noteworthy that Chinese Communist prisoners of war have expressed discouragement because they had to attack without support, since Russian-promised tanks and planes failed to materialize in Korea.

The factor of greatest importance to the West in all this lies in the grim prediction of an American businessman, who has lived and traveled extensively in China and who has had more than 30 years' affiliation with that nation and its people.

"Russian and Chinese Communist leaders intend that the United States shall be destroyed ultimately," he said, "and they are confident of their ability to accomplish it."

"Mao Tse-tung rates Chiang Kai-shek as his No. 1 enemy and the United States as No. 2. Mao has said neutrality is a camouflage; his philosophy is, 'You are either for us or against us.'"

Overthrow of Chinese Communists Still Possible

EXTENSION OF REMARKS OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 10, 1951

Mr. KERSTEN of Wisconsin. Mr. Speaker, when communism seized power in China, the Chinese people knew little about its terrifying practices. As a result many of them did not strongly resist communism. Now, however, the bloody regime of Mao Tse-tung has shown them the true horrors and barbarism of communism. And they are, therefore, much more strongly impelled now to try to throw off the Communist yoke.

Mr. Everett S. Allen points this out in his fifth article of a series which appeared in the New Bedford (Mass.) Standard-Times in June.

I include herewith his article of June 30, 1951:

DOCILE IN ACCEPTING COMMUNISM, CHINESE STILL MIGHT BE REDEEMED
(By Everett S. Allen)

Communism in China may endure through inertia, but with little organized resistance could be overthrown. This is easier to understand if it is realized that communism, in coming to power, has not used so much actual force, as a display of force where needed. Redemption of China by the Nationalists presumably need only follow the same tactics, since the caliber of both armies is substantially the same.

Wherever a display of force has been made by either side, there has been ready submission or retreat with insignificant casualties, so that active resistance, following a succession of such stands, could just as quickly see the redemption of China.

Traditionally in China, wherever civil war is concerned, the armies have readily shuttled back and forth to whichever side for the moment offered the better security; there is little question of allegiance or principle involved.

NO FREEDOM OF EXPRESSION

Complete suppression of the freedom of expression, joined with propagandizing raised to a high art, accounts for the real strength of communism in China. A high rate of illiteracy forces the average Chinese citizen to obtain all his news of nation, province and county by word of mouth. Mao's agents make capital of this and show increasing skill in disseminating party-line doctrine in the guise of news.

By comparison, the Nationalist Party has little facility for propaganda-making, more often, it resorts to dignified silence, which is totally ineffective when dealing with an uninstructed people.

The church is the sole articulate organ in China to counteract this, but though rooted in the sound farming class, it is numerically insignificant and unprepared for the quick distribution of efficient propaganda.

Here in the words of the man much of whose mature life has been spent within China, is the story of the Allied betrayal, the fumbings of circumstance which brought the Communists to power.

Communists adapt their methods to the locality. If they are weak in a given area, they placate local opposition by proclaiming freedom of religion. This is followed soon by suppression of neutral or opposing newspapers and the appearance of atheistic articles in "liberated" publications, insinuating that

the church is capitalistic and dominated by imperialistic governments.

Private schools are urged to continue, but teachers are under pressure to attend indoctrination courses; new textbooks in many branches are issued, emphasizing Soviet-inspired reform. The entire course in civics is abolished and a new course is substituted on a universal stateless, Sovietized regime. Patriotic songs are suppressed in favor of Communist martial music.

INFORMATION CONTROLLED

First efforts then are to control information. Radios are confiscated, and later registered and returned, to permit listening to public trials and other propaganda their uncontrolled use is not permitted, however, and there are eavesdropping teams to report violators. Private telegrams are suppressed, rebellious editors are removed and replaced and printing plants are confiscated and immediately set to work printing party pamphlets.

Propagandists spread out through the country speaking wherever a group can be formed, oratory is new to China, it draws a crowd readily. National and provincial schools are absorbed by the party for "indoctrination" classes; students are housed and fed gratis and guaranteed jobs upon being graduated. This is a major attraction in a country which, in the best of times, has at least 30,000,000 unemployed.

Fifth columnists meet the "liberators" on their arrival, they already have drawn up a list of the wealth of each family, and a contribution based on this estimate is levied immediately. The lists also furnish a working basis for deciding who is a despot and who is a peasant. Stores are obliged to remain open; often prices are fixed and new currency is issued. Hoarding is penalized, and sales taxes are heavy.

Deliberate attention is paid to the efficiency of the party's first phase of "reform"; it is designed to look good. Gouging by local officials is halted; exorbitant transportation fares charged by private companies are dropped; one-man courts, capable of rendering absolute decision, cut through the red tape of their predecessors and settle local disputes. Wages are equalized, even though scaled into five categories depending on party loyalty—workers who merely stay at their jobs are paid the lowest; those who cooperate fully or even become party members get highest compensation.

It must be understood that the Chinese people were not won over by communism. They were docile in accepting it, because they never have taken any part in government; no one ever asked or permitted them to vote. Always, officials have been changed without public notice, there never has been any expenditure of taxes on public works, and about the only return the people ever got for assessments was some protection from full-scale banditry.

PEOPLE ALWAYS PASSIVE

For centuries these people have been accustomed to the coming and going of armies, living on local confiscation, they submit to officialdom without much thought of resisting graft or redressing wrongs. They never have had a voice in government, so when communism came they remained passive as always.

Moreover, the unemployed, unmarried young man found an opportunity to get into the Communist Army; it appeared a better future than the utterly bleak one which he faced at home. Those few persons who were literate did not in any sense understand the Communist Party doctrine but no doubt found its references to equality fascinating.

"Communism in China," said the observer who saw it come, "has taken advantage of the disorganization of a very loosely knit country toddling toward the first steps of responsible government. The trend toward a democratic government was showing real

promise when the Japanese invasion interrupted it.

"Ten years of aggression from without could have been slowly repaired, but the rash allied betrayal of the recognized government at Yalta, which resulted in recruiting and arming a hitherto insignificant horde of Communists, suddenly presented China with a formidable enemy within the country, sponsored by China's allies. Thus was communism in China, formerly discredited as a band of mountain outlaws, baptized into respectability. The moral effect on a friendly nation was disastrous."

Communism is not strong in China, not in the western sense of strong governments. For no government in China ever has been really integrated with the people nor has it ever reached efficiently into the great sprawling vastnesses of the country.

Moreover, the Communists found themselves abruptly in power, and with a crippling shortage of trained personnel. They were in no position to operate railroads, commerce, industry, communications, or utilities. Thus, they were forced to leave some persons of questionable sympathies on the job, at least temporarily. Their only real experience was in fighting, propaganda, and sabotage, and although these would have done them little good in any other country, all three are of value in retaining control of a naturally disorganized area.

ARMS CONFISCATED

All civilian arms, of course, have been confiscated; public expression has been suppressed and the death penalty and confiscation are exercised daily. Since it is dangerous to confide in others, the Chinese citizen is thwarted at the outset in any effort to unite in rebellion. Thus, the only manner in which an overthrow might come—without external aid—is through the ponderous passive resistance of the defenseless peasantry. Naturally, if military assistance came from without, the united action, or even the continued noncooperation of the peasantry could be a strong force.

Nothing is more illustrative of the value in war of citizen opinion than the European campaigns of World War II. For the most part, the Germans fought in countries where the citizenry was hostile, they were accordingly sabotaged, harassed, confused, and kept on the constant alert. The means by which the same civil populations assisted the Allies were manifold and of inestimable military value.

Like a snowball, anti-Communist resistance in China needs an initial impetus, once started, it will increase in size and strength of its own volition after being assured that the overthrow has a reasonable chance for success.

Behind the Chinese Iron Curtain

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. BENDER. Mr. Speaker, some of those Americans who have urged the recognition of Red China or who refuse to be shocked by the recognition of the Communists there by Great Britain and other countries theoretically friendly to the west should read the current reports emanating from behind the Mao Tse-tung iron curtain. In at least 30 well-authenticated cases, Americans and other nationals have been ruthlessly

seized by the Chinese Red authorities and no word whatever of their fate has leaked through to their families or friends.

Prominent on this list are Protestant and Catholic missionaries, whose principal crime against the Chinese Reds appears to have been their determination to bring religious doctrine and ethical teachings to the people of their communities. Businessmen, too, have disappeared.

In the Communist-dominated countries of central Europe, the leaders make a great pretense of observing the forms of prosecution, trial, and sentence, despite their obvious denial of all the elementary principles affecting the rights of the accused. The Chinese make no bones whatever of their wholesale disregard of personal liberties, and do not so much as bother to offer even a vestige of the western concept of fair trial. To consider the recognition of so barbarous a regime is unthinkable in this era of world crisis, and those who advocate it are wise to silence their views.

A Diplomat Retires

EXTENSION OF REMARKS

OF

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 25, 1951

Mr. GAMBLE. Mr. Speaker, under unanimous consent of the House, I insert in the Appendix of the CONGRESSIONAL RECORD the attached editorial which appeared in the New York Times, October 1, 1951, entitled "A Diplomat Retires":

A DIPLOMAT RETIRES

The United States Foreign Service loses one of its outstanding diplomats today, when Norman Armour retires after 36 years in Government posts. This is an opportunity not only to pay due tribute to one of the most distinguished American civil servants of our time, but also to point a moral. In these days when the State Department and all that belongs to it are being so unjustly—and sometimes dishonestly—criticized, it is well for all of us to be reminded that our Foreign Service has men of the caliber of Norman Armour. The gibe of "cookie-pusher" becomes silly when one studies careers like his, with devoted service stretching from imperial Petrograd to the strategic oil capital of Caracas, Venezuela. Such careers rarely bring public notice, because they are held, by voluntary choice, within strictly official, diplomatic limits. Our spectacular envoys are more likely to be the businessmen-contributors to the party chest rather than the career man for whom diplomacy is a profession.

Like all professionals, the true reward and the judgment that one really values come from colleagues. There is no diplomat in the American service more highly regarded than Norman Armour. For years he has been a model of the American envoy at his best. This is a matter of training, knowledge, judgment, the preparation of reports, the administration of embassies, and (however badly this may make the critics feel) of tact and social gifts. To be first class in

reality, as well as in grade, requires qualities and talents of exceptional order.

Norman Armour has been one of the best. He came back from retirement twice at the call of duty. Such men are too valuable to let go, but this time, although he is eminently capable of carrying on, one must wish him the rest that he has merited.

The "Threat" to Aluminum

EXTENSION OF REMARKS OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 10, 1951

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Oregonian:

THE "THREAT" TO ALUMINUM

Defense Mobilizer Charles E. Wilson's "threat" to aluminum production in the Pacific Northwest sounds like the half-baked result of inadequate information, special interest pressures, or both. This newspaper, however, declines to get excited until it can be determined what is behind the proposal that the aluminum companies inform Wilson of the cost of moving some of their units elsewhere.

It would be sheer nonsense to relocate existing pot lines or build new ones in areas where power sources would have to be developed which would reflect costs to the companies greater than the combined costs of Columbia River hydro and new steam plants. It would also be a poor investment for the Government, which now needs and will always need assistance to its run-of-the-river hydro plants in the form of standby steam generation.

Senator Guy Cordon's suspicion that Mobilizer Wilson's mystifying proposal may have originated with the aluminum companies themselves, or one or two of them, needs to be explored. The aluminum manufacturers are as well aware as are the people of the Northwest that it is not a healthy situation for the region to have more than half the production of electricity from the Government's Columbia River system going into aluminum. There has been criticism of the sale of such a huge block of power to aluminum, while new and diversified industries have been discouraged from entering the area because of the power shortage.

Nevertheless, the Columbia Basin offers the natural and most advantageous long-time home for aluminum, which requires vast amounts of electricity but few workmen in its primary manufacture. No other river basin or area supplied with other fuels can compete in rates of power production or power volume yet to be developed.

The aluminum companies may desire to create a more favorable public reception to their power-consuming operations in the face of a regional brown-out; they may even be willing to go anywhere, in this emergency, if assured prime contracts to supplant the interruptible contracts which the Bonneville Power Administration was forced to cut back because of this summer's drought. But Alcoa and the others did not come to the Northwest by accident, and the future power benefits of the region are evident.

Examination of the situation probably will show that the Government can build or subsidize construction of steam plants in this area to firm up the hydro supply with greater rate advantage to the aluminum companies

and more benefit to the Federal investment than would be the case if the units were moved. The annual congressional reluctance to maintain the schedules for Columbia Dam construction necessary to meet the needs of heavy industry and the expanded Northwest population is, of course, the basic trouble. Low water and mobilization have made the problem acute.

This situation arising from Wilson's proposal—which is, after all, only a request for more information—certainly requires that the Northwest review its power program and lay all the facts, including the overbalance of aluminum power demand, on the table. It is no time for factional bickering.

A Survey of New Construction in Westchester County

EXTENSION OF REMARKS OF

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 25, 1951

Mr. GAMBLE. Mr. Speaker, under unanimous consent of the House, I insert in the Appendix of the CONGRESSIONAL RECORD the attached article from the Westchester Realtor, August 1, 1951, entitled "A Survey of New Construction in Westchester County":

A SURVEY OF NEW CONSTRUCTION IN WESTCHESTER COUNTY

(By John W. Lane, president, Westchester County Realty Board)

A survey of new construction in Westchester County by the Westchester County Realty Board, covering the period from January 1, 1950, to July 1, 1951, shows an unusual amount of building activity.

The total number of one-family dwellings built during the 18-month period was 6,038. In the first 6 months of 1950, 2,003 one-family houses were built. The last 6 months produced 2,233 units, our record for the post-war period. The first 6 months of 1951 showed 1,802 one-family houses constructed.

In comparison, the first half of 1951 is only 10 percent below the same period of 1950. Full effects of regulation X are not indicated because of commitments issued prior to October 12, 1950, which continued through the last two 6-month periods. The figures also indicate good volume despite regulation X, especially in higher-priced homes.

VACANCIES UNDER 7 PERCENT

Our survey further shows that the purchase of these 6,038 new houses has been heavy percentage-wise. The number of vacant new houses throughout the country as of July 1 is under 400, or less than 7 percent of the total. Acceptance by the public, therefore, continues very high.

It is important to remember that the survey shows only new construction; not the remarkable record of used-home sales in the county. Demand for new and used houses continues to be very good, and the market shows a healthy condition.

During the 18-month period, 4,412 apartment units were built. While our survey does not indicate the percentage of privately financed buildings to Government-guaranteed financing, we know the latter is higher.

ANSWER TO RENT CONTROL

With 10,579 family accommodations in apartments and one-family houses provided

in 18 months, certainly the argument for rent control becomes very thin indeed.

Dollar amounts in the charts indicate only the permit value rather than actual-sales value. The board estimates that permit value represents only 60 percent of true value.

Bearing this in mind, \$31,699,000 of commercial and industrial construction, including alteration work, displays a remarkable activity in this phase of building.

Demand for modern one-floor factory space is very high. Existing buildings have enjoyed pronounced activity. Plant expansion and commercial activity as a result of decentralization is becoming a greater factor in our county. Large corporations are moving offices to Westchester County in increasing number.

Our growth is solid, steady, and ably financed, and we look forward to a continuation of this normal expansion which is ours.

The Land and the People—Part I

EXTENSION OF REMARKS OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 10, 1951

Mr. WICKERSHAM. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address by H. H. Bennett, Chief, United States Soil Conservation Service, at the missionary conference of Methodist ministers of the Southeast at Lake Junaluska, N. C., July 21, 1951:

THE LAND AND THE PEOPLE

It is an inspiration to meet with you ministers of the gospel concerned with the welfare of people whose very life depends on the fruitfulness of the soil.

There are many texts for sermons in the Bible, which tell of man's dependence on productive land. One could select from man's experience on earth many texts, also, which reveal specifically how generations of men have suffered penalties of deprivation, want, and exile when they wasted their God-given heritage of fruitful land—when, actually, they sinned against the land by misusing and abusing it.

Poor land makes poor people and poor people make poor congregations in any church. Man lives not by bread alone, but bread he must have to live. Moses had sound reason when he assured the children of Israel that in the Promised Land they should "eat bread without scarceness." "Give us this day our daily bread" has been a primary supplication of Christians down through the centuries.

BREAD COMES FROM THE LAND

Bread comes from the soil and from nowhere else, as does the great bulk of our food, all of our wood products, cotton, wool, leather, and vegetable oils and fats. If we fail in our stewardship of the land which the Creator provided as the source of our food and raiment, we inevitably must go hungry and barefoot. Although historians seem largely to have overlooked this relationship between land and people, the civilized world is strewn with monuments to man's improvident use of the land.

Almost without exception, the civilizations that have come and gone left behind them great areas of wasted land. They progressed and prospered and were usually able to resist invasion as long as their land

was productive. They declined and fell as the land became unproductive through overuse and was no longer able to support a progressive and prosperous civilization. I am not contending that soil erosion was entirely responsible for the decline and fall of all the ancient civilizations that came to grief. Some of them, as we know, declined because of wars and morals and economic decay. But I do say that misuse and abuse of the land played a vital role in the decline and fall of some of these civilizations, and that this mistreatment of the land played a much more important role than most historians seem to realize.

EROSION SPEEDED FALL OF SOME CIVILIZATIONS

There has been much convincing evidence of this. Archeologists, for example, had to dig 18 to 28 feet in places to reach the tops of the magnificent buildings of the once great city of Antioch in Syria, where the Apostle Paul struggled so hard in getting the Christian religion established.¹ They were covered by the debris of erosion, washed down from neighboring mountains.

On his return some years ago from the excavation of the theater at ancient Corinth, Dr. T. L. Shear, of Princeton University, told me that in order to uncover the structure, they had to dig 40 feet through soil washed down from the adjacent hillsides where most of the vegetation had been removed by goats.

In Asia, Africa, and southern Europe are found areas where there now is much barren and desolate land. Some of these areas, seats of former great empires, now support only a half, a third, or less of their former population, and they support that reduced population at a very low and precarious standard of living. You have but to examine the land as it is today to see why these regions are no longer capable of supporting a well-fed and prosperous people and a progressive civilization. The poverty and backwardness of the people in many areas are indicative of the poverty of the land. In general, you will find, if the countries are explored in detail, that most of the topsoil has been stripped from the uplands, although the valleys in many places still contain considerable productive alluvial soil.

When the world was younger, its smaller population was better able to stand such waste, with people making adjustments through migrations to rich, undeveloped lands that lay beyond the next range of mountains or across the sea. But the time is long since past when man, anywhere in the civilized world, can afford such extravagance in the use of his most priceless heritage—productive land. The world of today is fast maturing and must assume mature responsibility for its remaining supply of productive land and other resources if millions are not to perish.

SOIL EROSION IN THE UNITED STATES

The history of land exploitation and soil waste right here in our own country is by now a familiar story to most of you. When our forefathers settled along the Atlantic seaboard and later pushed westward toward the Pacific Ocean, there was a seemingly inexhaustible supply of good land, virgin timber, clear streams, fish, and game. It is understandable that warnings against land-wasting farming methods by even such eminent men as George Washington and Thomas Jefferson should have gone unheeded in the tempting pursuit of territorial development and free land across the continent.

The fact remains, however, that before we woke up to what was going on—an awakening that has come almost entirely in our

own generation—we allowed something like half of our productive land to be damaged by erosion, millions of acres of it so severely as to be rendered unfit for further immediate practical cultivation. As a result, we have left today in the United States only about 460,000,000 to 500,000,000 acres of high-grade cropland, as well as we in the Soil Conservation Service have been able to determine. This includes considerable land not now in cultivation which is suitable for cultivation. All but about 100,000,000 acres of this limited supply of good land is subject to erosion or other forms of depreciation when used without adequate safeguards. Also, millions of acres of rangeland have suffered erosion damage and loss of productive capacity.

TURNING THE TIDE AGAINST EROSION

We have made remarkable strides in soil and water conservation in recent years, but still haven't closed the gap between the rate of soil loss and the rate at which we are safeguarding our land through soil conservation. We are still losing hundreds of thousands of acres of land every year—probably not less than 500,000,000 acres—through the process of unnecessary erosion which damages many areas beyond further practical immediate cultivation. That is because we are not yet practicing true conservation on all our land. In fact, only about one-fifth of the farmers of the United States are practicing full and complete conservation farming on their land—and until this is done, erosion is likely to continue in some degree.

I mention these facts now, not to discount in any way the fine progress that is being made in getting on with the soil and water conservation job, but by way of emphasizing the fact that we cannot at any time afford to be too complacent about the problem, since the main job still lies ahead. Certainly we must not slacken our efforts or cease our conservation educational work, through the schools, the churches, and by all other available means. Some of the ancient peoples I have mentioned started conservation work as they saw their land slipping away from them, but apparently they not only started too late—after much of their best land had been wasted or damaged almost beyond repair—they also failed to recognize the need for doing a complete conservation job and for halting such ruinous practices as overgrazing and stripping the timber from their remaining sloping lands.

Today, we cannot plead ignorance of either the problem of erosion and water waste or effective methods of dealing with the problem. We have measured the size of the problem, located and mapped the various problem areas, and perfected the conservation tools for coping with it. I am referring to the comparatively new science of soil conservation, built on the basic principle of treating each acre of land according to its needs and using each acre according to its capabilities.

Modern soil conservation is based on (a) sound land use and (b) treatment of the land with all the proven appropriate measures needed to keep it permanently productive while in use. It means terracing land that needs terracing; and contouring, strip cropping, and stubble-mulching the land in need of this kind of protection, along with supporting practices of crop rotations, cover crops, stabilizing outlets for excess water, building farm ponds, locating farm roads and fences as nearly on the contour as practicable, planting steep, highly erodible land and shallow soil to grass or trees, development of good pastures, and devoting good management to them after they have been developed.

Modern soil conservation, moreover, consists of doing these and still other necessary things. Where the land is too wet, it calls

for careful water control, with full consideration given to fish and wildlife needs. Where the climate is too dry, modern soil conservation calls for irrigation; if the land is subject to wind erosion, it calls for wind strip-cropping, tree planting, growing cover crops, and stubble-mulch farming. If the plant nutrients, lime, and humus supply of the soil have been depleted, it calls for fertilization and addition of lime and organic matter; if water-soluble salts have accumulated in toxic quantities, as in parts of the West, it calls for drainage and leaching out of the salts by flooding. And modern soil conservation calls also for the use of the most adaptable varieties of crops as well as the most efficient of adaptable tools available to farmers. In other words, it means using land within its capabilities (as imposed by nature) and treating it according to its needs (resulting from man's use of the land, or, perhaps, abuse of the land).

Modern soil conservation likewise includes, for flood control and reservoir protection, treatment of whole watersheds with the right combinations of practices, land use, and small structures in the smaller watersheds where flood waters start. Applied at the right time and place, such watersheds treatment saves soil and reduces flood and sedimentation damage, puts water in the soil for plant use and, where conditions are favorable, in ground-water reservoirs, and otherwise benefits general farm, industrial, and municipal water users.

This sound, acre-by-acre soil conservation is based on painstaking research dating back to 1929, and on some 18 years of application and use of soil and water conservation practices and methods by farmers from one end of the country to the other. Since 1937, when the first farmer-organized and farmer-managed soil conservation district anywhere was established right here in Anson County, N. C., these conservation measures have been applied to the land by landholders in such districts, with the technical assistance they request of the Soil Conservation Service. Each farm, and each field on the farm, is treated and subsequently maintained according to a complete conservation plan worked out by the farmer and the technician out on the land—not in an office. This plan, in turn, is based on a detailed land capability survey, or land inventory, which shows the best and safest use of every acre, as determined by such factors as the soil, slope, climate, amount of erosion, and susceptibility to erosion, and so on.

FARM PLANS FOR SOIL CONSERVATION COMPLETE ON 250,000,000 ACRES

At this time, approximately a million farmers in the 48 States, Alaska, Hawaii, Puerto Rico, and the Virgin Islands have such farm plans already made of their farms, or have taken steps to have their farms planned, and an estimated half a million others have delayed the filing of formal requests for planning services at the suggestion of the district supervisors. Final accomplishment figures for the first half of the 1951 calendar year—to July 1—are not yet available, but we estimate that the conservation farm plans to July 1 will cover approximately 252,000,000 acres, of which about 143,000,000 acres have been treated with conservation practices as needed. And detailed conservation surveys have been made to date on an estimated nearly 375,000,000 acres.

And now, with farmers in soil conservation districts further speeding up their conservation planning through group action—neighbors getting together and doing their initial planning as a group so the assisting soil conservationist can work with several farmers at once—it appears that not fewer than 2,000,000,000 farmers and ranchers have taken some action toward carrying out completely coordinated soil conservation work.

¹ Bennett, H. H., *Soil Conservation*, pp. 25-27. McGraw-Hill, New York, 1939.

on their farms. In other words, these thousands of farmers and ranchers are either active or are ready for action in the field of modern soil conservation; and it is estimated that easily another million in soil conservation districts are interested in the work.

SOIL CONSERVATION DISTRICTS BEST EXAMPLE OF DEMOCRACY IN ACTION

Farmers of the Nation so far have organized approximately 2,350 soil conservation districts. They include more than four-fifths of all our farms and three-fourths of all the land in farms in the United States, amounting to a total of about 1,225,000,000 acres. North Carolina is high on the list of States in district organization with 95 percent of its farm land and 93 percent of its farms within district boundaries as of June 1, this year. Virtually all of the other southeastern States are three-fourths or more covered by soil conservation districts, Alabama and South Carolina being 100 percent within districts.

Probably the present method of furnishing technical assistance to soil conservation districts, where farmers and ranchers set up and manage the affairs of the districts, is the best example of democracy in action that we can find anywhere on earth. The organization of soil conservation districts represents a distinctive step, not only in our conservation program but also in democratic government. These districts are democratic institutions, whose affairs are managed by locally elected neighbors pursuant to provisions of State enabling laws but beholden to no Federal or other outside authority.

They have programs of work that are drawn up by their governing bodies, assisted by technicians and scientists from the Soil Conservation Service and other agencies. They are doing an excellent job of getting the farmers within their boundaries to practice conservation. In short, these districts are local governmental agencies—State agencies—on which we must depend to get this conservation job done, and get it done on time. Our present soil and water conservation program is definitely a reform, as well as a nation-wide technical program based on a new science (the science of soil conservation). In relation to the importance of our natural resources, it is the equivalent of a great national reformation (which, however, is still not great enough). With respect to land use and protection, it amounts to an agricultural revolution never previously approached.

So we see that this system of modern soil conservation, operating through local, democratic districts, does not end with the physical measures put on the land. It doesn't stop with the terraces or diversions that are built, the kudzu, sericea lespedeza, or Suiter's grass which are grown, or the farm ponds or wildlife borders which become part of the rural landscape. It goes far beyond those physical aspects, as basically important as they are, to both the physical and spiritual well-being of people—those who actually till the soil, as well as all the rest of us who depend on its products.

Men and women who normally would have little or no concern about such a matter as soil erosion are spending considerable time and energy these days in support of soil and water conservation. They are beginning to see that their own future is founded on productive land. They have discovered that good land, duly safeguarded against erosion and against overcropping, overgrazing, or wasteful timber slashing, is something a man and his family can see, and feel, and count on, to a very great extent, through periods of trouble as well as in times of prosperity. The idea extends beyond the farmer. Throughout our society there is developing a deeper respect and appreciation for productive land as a source of strength and well-being.

The Land and the People—Part II

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 10, 1951

Mr. WICKERSHAM. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address by H. H. Bennett, Chief, United States Soil Conservation Service, at the missionary conference of Methodist ministers of the Southeast, at Lake Junaluska, N. C., July 21, 1951:

AND FLOODS CONTINUE TO HARASS US

Today, for example, when people over the country read about such a disastrous flood as that which has just swept down across Kansas and Missouri, they are more aware than they used to be of the tremendous loss in our productive resources which goes far beyond the itemized dollar-damage to urban property, railroad bridges, highways, manufacturing and processing plants, etc. More people now understand that, over and above the currently growing crops that are ruined by floodwaters, there is formidable damage to uncounted acres of good, productive farm land from floodwater erosion and burying of good land under sand and gravel and other flood debris.

Conservationists do not claim, of course, that all floods can be prevented, but it is known through experience that such conservation practices as contour cultivation, growing soil-holding grass crops on steeply sloping land, and other safeguarding measures used throughout a given watershed or group of watersheds do reduce floods. Although actual figures had not been compiled when I left Washington, Soil Conservation Service men in the Kansas-Missouri flood area had sent in reports on their observations that farm land having the benefit of sound conservation measures suffered much less damage than did land lacking such protection.

The same kind of reports came from the Great Plains wheat country, last spring and the years before, when winter drought and high spring winds brought recurring threats of local "dust bowls" all too reminiscent of the 1930's. We were able to show definitely how soil and water conservation farming practices like stubble-mulch tillage, using water-holding terraces, and so on, cut down on the wind erosion damage to a very great extent. And—confirming further our growing awareness of the importance of such phenomena as floods and dust storms to all of us—I want to mention the fact that the dust storms in particular immediately bring us many expressions of concern and requests for information from a wide range of business, radio, and press, and other interests here in the East and elsewhere.

MOUNTING INTEREST IN LAND

All this interest in our land—including the very circumstance of your inviting me to be on your program today—plainly indicates, I think, that the country has about reached the point where we need to give positive consideration to a long-time land policy that will conserve our resources and permanently assure our growing population necessary amounts of food and fiber from the land. I know that you are directly interested in this important matter, because your modern missionary activities embrace the satisfaction of the physical as well as the spiritual hunger of the people. As a result, you inevitably must recognize the proper responsibility of the church for sharing importantly in all

feasible efforts for conservation of the land. As Rev. James W. Sells, your extension secretary, wrote me, "The church needs a basic land policy as much as America does."

You will be interested in knowing that the Department of Agriculture is engaged in a cooperative study with the land-grant colleges to determine our capabilities for future production, with 1955 as the target goal. Future agricultural production no longer can be measured just on the basis of acres of farmland; it involves an evaluation of all such factors as land, water, fertilizers, and pesticides, labor, and machinery. The department has directed attention to the fact that we are going to have to depend on the land we already have instead of looking to bringing new areas into crop production. There are some new acreages potentially available, but no very great area. However, good use and good care of the land is the equivalent of more land in that it results in increased per-acre yields.

A NATIONAL LAND POLICY

The land-use goal in our national land policy must be a complete soil and water program on every farm, ranch, forest, and watershed in the country. To build toward that objective it is necessary that as a sound guide we make an inventory of all physical land resources with respect to area, capability, and condition. Such a land policy is requisite to sustained and improved agricultural production, erosion control, and reduction in flood damages and siltation of reservoirs, harbors, etc.; protection of irrigation, power, municipal, industrial, and recreational water supplies and maintenance of underground water resources; irrigation and drainage development on additional suitable lands; and fish and wildlife protection.

I submit that such a sound national land policy also is requisite to maintaining a strong and God-fearing democracy over a long period of time for our common well-being and security, and for world peace and security. There is no place in our economy any more for exploiters of our land and water resources. Neither can we afford to put up with slipshod, low-producing methods in our agricultural production any more than we can afford them in industry or elsewhere. We have to have high-efficiency use of our remaining productive land in order to keep up our desirable standard of living and to meet our continuing and expanding domestic and international obligations as the world's leading democracy.

Latest figures from the Bureau of the Census (on June 29, 1951) showed that the population of the United States has already passed the 154,000,000 mark, having increased at an average rate of around 200,000 a month the past year. Not only do we require additional farm production because of increasing population, but we have shouldered responsibilities in the free parts of the world, ranging from assistance in maintaining armed forces abroad to sending wheat to famine-pressed India. All of these activities bring additional pressures on our own resources. No one knows how long present world uncertainties and conditions may last, during which we must be prepared to defend our country and democracies elsewhere. But the longer it does last, with the continuing need for maximum agricultural production, the more indispensable becomes our productive land. And the more important becomes the conservation and efficient use of land, as well as the water that makes land produce.

Meanwhile, coming back closer to home, the experience of the past 15 to 20 years dispels any doubt that comprehensive soil conservation, scientifically applied to the land, is the great need and the great hope of the South, as I pointed out in that part of the

1948 report of the Cotton Subcommittee of the House Committee on Agriculture dealing with Soil Conservation and Land Use in the South. (I believe we still have some copies of this document, which is well worth reading, if some of you should write me for it.)

GREAT OPPORTUNITY IN SOUTHEAST

With soil conservation safeguarding and increasing the agricultural productive capacity of the lands of this region, the South can become an area of vast opportunity, not only for material well-being but for the spiritual well-being so essential to a great people. It is rapidly becoming a more productive area than it ever has been, wherever the land has not been ruined by excessive erosion. As a native of the South myself, from North Carolina, I have heard all my life the call for diversification and more livestock and grass and legumes. With the modern soil conservation now going forward under the program I have been discussing, the South is fast getting these highly beneficial agricultural and other advantages.

I am sure, also, that if you have studied the situation even casually, you have been impressed by the broader community benefits stemming from this advancement—benefits which radiate from beyond the farm and the farm family proper to the schools and churches, and to industry, business, and the professions in town. Although there are many similar instances of rural communities lifting themselves by their soil conservation bootstraps, so to speak, the experience of the Sylvania community in Lonoke County, Ark., is an outstanding example.

SOIL CONSERVATION HOLDS YOUTH ON FARMS

When the farmers in the Sylvania community started practicing soil conservation, in 1936, the main crop was cotton. But today dairying is the major enterprise centering about the old community church. It has developed into a profitable farm business—more than a million-dollar business in this part of the Lonoke-Pulaski Soil Conservation District. A study of an average group of 10 families in the community revealed that the farms were paying from 6 to 10 times more taxes of all kinds than they paid 10 years earlier, with the Sylvania community dairymen marketing \$3,500 worth of milk a day at the time the study was made.

But here is another most significant point about this Sylvania development. 9 out of the 26 children of these 10 families had become partners with their parents in dairy farming; 11 had married and gone into dairying themselves locally; and 3 were still at home and going to school. Only three had left the community. A similar study of 10 families in a nearby community—having the same kind of land but with everybody still depending largely on cotton for their income, and few having started conservation farming—showed that only 8 of their 33 children had married and settled in the community, and 2 were still at home going to school. There were no father-and-son partnerships. But 23 of the 33 children had left the community to make a living elsewhere.

It hardly is necessary to pose the question of which of these communities affords the better opportunities for most effective work of the church or any other essential community activities. The answer is obvious. Dr. T. S. Buile, of Spartanburg, S. C., who is regional director of the Soil Conservation Service in your southeastern region, has called my attention to what I understand is a still unpublished church survey based on land capability, made last year by the Reverend E. H. Coale, Methodist missionary from Nigeria, who was in the States on sabbatical leave. The Soil Conservation Service cooperated in assembling the information.

THE LAND AND THE CHURCH

I shall not recite the various details of this significant survey report, covering 155 rural Methodist churches in the Piedmont section of the South Carolina conference; but I do want to emphasize that it shows the direct relationship between the vigor and the prosperity of the church and the productivity of the land within the 2-mile radius of each church covered in the survey. Seventy-three of the churches were in the good-land group (i. e., with 50 percent or more of the land in capability classes I, II, and III, representing land suitable for row-crop production); and 82 were in the poor-land group (having less than 50 percent of these better classes of land).

Results of study may be summarized as showing that the good-land group of churches had more frequent services and larger attendance, larger contributions, more adequate church buildings, and better paid pastors despite the fact that the poor-land congregations devoted a larger percentage of their contributions to the minister's salary. Also most significant, I think, was the fact that the poor-land communities were making but a fraction of the progress in soil conservation that the good-land communities had made, although the entire area involved is covered by soil-conservation districts.

It seems to me that this study, made in a representative southeastern area, definitely points to the interest and responsibility the church itself has in good farming and conservation of the land, which invariably means increased per acre production, higher income, and better living for the farm families practicing soil conservation. I should like to repeat some thing I have said before in appearing before church groups:

I am glad to see the church as a body taking up the fight for conservation of soil and water. I have said that there is no one answer to these problems that we face. It is a field in which science and religion can work side by side for the betterment of man. I can't think of a more glorious common objective, or any other activity so promising of rich rewards. People working together to safeguard and improve the land and to make wise use of the water that falls on the land are all engaged in work that results in common benefit to all. This kind of work develops better understanding among people, increased security through increased yields, increased friendliness, and increased cooperation.

The church has the primary responsibility to help and serve human beings, for the greater glory of God. I believe that man was given this marvelous resource—the land—not as an outright possession to do with as he chooses, but in trust to use and improve and pass on to succeeding generations. I also believe that man has a moral obligation to care for the land so that it may continue to produce abundantly for those who will come after us. Unquestionably, they will judge us, their forebears, according to whether we treat well or badly the vital land inheritance we bequeath them.

The prime sponsors of soil conservation are men who live on the land and unselfishly devote time and energy to saving soil. They must have, and do have, a love of the land. The leadership in conservation is composed not only of farmers, but of business and professional people who have acted wisely in thus shouldering some personal responsibility to the public interest and to the future of America. Man holds stewardship of the land; and it is our duty to conserve and protect our land for our present use and for use by future generations.

Every pastor, more especially every one in a rural community, has a rich opportunity to give practical, inspirational leadership in conservation stewardship of the land; for truly "The earth is the Lord's and the full-

ness thereof" (Twenty-fourth Psalm). The church holds a place of first importance in such community life and would be indeed remiss in performance of its proper functions if it ignored community soil conservation activities. If there were time, I could cite you various examples of how this has worked out in practice, in your own southeastern region and elsewhere. Of course, you are familiar with such outstanding cooperative undertakings as Soil Stewardship Sunday, sponsored annually by Farm and Ranch-Southern Agriculturist in cooperation with local pastors and soil conservation district supervisors, and with the annual selection, by the Progressive Farmer in cooperation with Emory University's school for town and country ministers, of the rural minister of the year. Did you know that 2 of the 14 Southern States' pastors selected in 1951 were soil conservation district supervisors?

In the 9 States of the southeastern region, there are more than 2,000 of these soil conservation district supervisors. These men generally are leaders in rural church activities as well as in soil and water conservation. They are good men for the pastor to get acquainted with in familiarizing himself with the facilities available in his community for promoting the common welfare, and I am sure that each pastor, in turn, can be of real inspiration and service to these and other agricultural leaders in his community. I understand that during Soil Conservation Week, sponsored last September by the Georgia Association of Soil Conservation District Supervisors, 274 sermons on soil conservation were delivered to congregations totaling more than 32,000 people.

That fine performance illustrates one way of forging strong links between the land and the people. We will never achieve our goal of permanent soil conservation until every citizen thoroughly understands the utter necessity for soil conservation that is scientifically applied to the land, and is well informed about current progress in the field. Not only must all people who handle or manage our basic resources be conservation-minded and know how to use such resources without wasting or destroying them, all of the people who depend on those resources must recognize the stakes involved and know what is being done about conserving them. We can achieve such true conservation only through an informed citizenry; and the church has one of the largest roles in bringing people to see that the earth is holy and that man's relationship to it is essentially moral.

"THE LAND SHALL NOT BE SOLD FOREVER"

The rural church of the South, as well as of the Nation, can be of still greater service to the South, and to all parts of the Nation, than heretofore. Through such sound soil conservation as you are now getting from the highly cooperative program of the soil conservation districts and cooperating soil conservation technicians, you have a new and greater opportunity—and I think obligation—to serve the people. You have made a good start. My advice is—and I have crossed the line of three score and ten—go ahead with this work, even on an expanded basis. There is missionary work to be done here at home, as well as abroad.

I certainly hope you will find ways and means for expanding your efforts in this challenging field. Get better acquainted with this work I have been talking about for a long, long time. Do what you can to improve and safeguard the going program of soil and water conservation. Our lives on earth depend on the salvation of our land. I believe the parable of the talents supports this conclusion.

"The land shall not be sold forever, for 'the land is Mine,' saith Jehovah, 'and ye are strangers and sojourners with Me'" (Leviticus 25: 23).

Can We Stop the Waste of Our Hard-Earned Money?

EXTENSION OF REMARKS OF

HON. RALPH W. GWINN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 10, 1951

Mr. GWINN. Mr. Speaker, I call the attention of the Members of the House to the article *How High Can Taxes Go?* by Roswell Magill, president of the Tax Foundation and former Under Secretary of the Treasury, which I have asked to have printed in the Appendix of the Record:

How High Can Taxes Go?

(By Roswell Magill)

Is there any outside limit to the taxes you and I can be required to pay? Must we look forward to paying a quarter or a half of our incomes to the Federal Treasury all through the indefinite future? Is there any limit to the Federal expenditures that compel the high taxes except the collective judgment—or imaginations—of Congressmen?

We have always thought of America's resources and financial capacity as unlimited. We have everything here—automobiles and the Grand Canyon and frozen orange juice, and once we had roast beef in every oven. Recently we have acted on the basis that we can have all the good things of civil life—the highest standard of living in the world—and pay for a few wars besides, at least small-scale wars.

But now there seems to be a catch. The Senate is wrestling with a tax bill designed to yield \$7,200,000,000 on top of Federal taxes that take about \$60,000,000,000 out of our pockets. The Treasury says the tax bill isn't big enough. It ought to produce \$10,000,000,000. In any event, the Secretary of the Treasury implies that he will be back next year to ask for more.

Some Senators are saying, however, that the tax bill can't be made greater without grave damage to each of us and to the economy. We are told that we have just about reached the limit of Federal taxpaying capacity, and it looks very much as if we have. The bill increases the Federal tax on cigarettes to 8 cents a pack. That is a sales tax of about 80 percent, for the cigarettes themselves cost only about 10 cents. (The average State tax adds another 3 to 5 cents.) The tax on liquor will go up to \$2.60 a quart. Gasoline is to be taxed 2 cents per gallon. (All the States tax gasoline, from 2 to 9 cents per gallon.) Sales of automobiles are to be taxed 10 percent, and parts are to be taxed 8 percent, aside from State and city sales taxes. Not all of these are taxes on luxuries. The average man is being hit just about as hard as the Federal Government can hit him.

For instance, let us take an average suburbanite who lives outside one of our larger cities and commutes to work. We will call him Henry Suburban, and he might be any one of us. He knows that he pays an income tax, and a heavy one, as well as a social-security tax. They come off his pay check every week. But that is only the beginning of his tax troubles.

Henry is aroused in the morning by his alarm clock (price \$6 plus \$1.32 tax). Partially awake, he walks across the floor of his \$8,000 house (annual property tax, \$240) and switches on the electricity (3½ cents tax on each dollar of his monthly bill), which lights the bulb (price 20 cents plus 2 cents tax). On his way to the bath-

room Henry turns on the radio (price \$30 plus \$2.54 tax).

As he shaves—forgetting the taxes that went into the price of his razor and shaving cream—he listens to a radio newscaster reporting that the Federal Government is preparing to increase income taxes and special taxes on many of the things he buys. After shaving, Henry finishes up with some bay rum (price \$1 plus 22 cents tax).

He dresses quickly, fastens his tie clasp (price \$1.60 plus 33 cents tax) and, as he leaves the bedroom, puts on his wrist watch (price \$70, tax \$15.40—not counting customs duty) and fastens his cuff links (price \$3.50 plus 77 cents tax). He hurries downstairs and kisses his wife (marriage license, \$2), who gives him his toast from the electric toaster (price \$20.50 plus \$1.74 tax). She pours his coffee from the pot on the gas stove (price \$190, tax \$16.18) and gives him his fruit juice from the refrigerator (price \$300, tax \$25.52).

A TAXING DAY FOR HENRY

Henry's wife tells him to buy some talcum powder for the baby (50 cents plus 11 cents tax), a roll of camera film (price 34 cents plus 4 cents tax), and since some friends are coming for dinner, a bottle of liquor (price \$4.69 including \$2.72 in taxes). A glance out of the window shows it is raining, so he asks his wife to telephone (monthly bill, \$12, tax, \$2.05) for a taxi. Too many other people want taxis on a wet morning, so Henry gets out his own car (price \$1,800, plus \$102 Federal tax, plus \$38 sales tax, plus State license fee, plus tax of 5 cents a pound on the spare tire, plus 5 percent on each new part or accessory, plus average State and Federal gasoline tax of 5½ cents per gallon). On the way to the station, Henry lights a cigarette (price per pack, 10 cents, plus Federal tax, 7 cents; plus State tax, 4 cents) with a match (tax 5½ cents per 1,000). He boards his train and gives the conductor his ticket (price 85 cents, tax 13 cents) and sighs (no tax). And Henry has been up only an hour.

Yet, the biggest part of Henry's tax story is still to be told. Take Henry's toast. That started from a loaf of bread and it started on the farm. Just as anyone else who owns property, the farmer had to pay taxes on his land and buildings and machinery, and he also paid most of the taxes Henry pays. These taxes are just as much a part of the farmer's cost of raising wheat as seed, lime, or fertilizer.

The miller, too, had taxes to pay—taxes on his personal property, on his real estate, as well as all the taxes that went into the making of his milling machinery and his flour sacks. Transporting the flour included taxes—railroad taxes, taxes on gasoline and oil, licenses, and so on.

The baker, too, paid taxes—the hidden taxes in the yeast and other ingredients that go into his bread, the hidden taxes in his oven, wrapping machinery and other equipment. Furthermore, he paid taxes on his property, unemployment-compensation and social-security taxes on the wages he paid his employees, as well as his income taxes and other business taxes.

When the bread reached the shelf of the grocery store, the retailer's markup included still more taxes—those that the retailer had to pay. So that there are literally hundreds of taxes which find their way into the price of the loaf of bread which Henry's wife used for his toast, and ultimately the price Henry pays for the bread includes a large share of all these taxes.

So that Henry, along with every one of us, is paying far more than he realizes for Government. Just how much is Henry's total tax burden—the part that he sees and the part that's hidden in the prices he pays? Economists have studied this question for years and have yet to come up with a satis-

factory answer. The necessary facts and statistics are difficult to gather and a good many assumptions, including some dubious ones, must be made as to how people in different income brackets spend their money, how successful sellers are in passing on tax costs in their selling prices, the supply-and-demand situation, and so forth. However, recently several economists who have studied Government figures on the 1948 expenditures of individuals and families with different incomes have attempted to allocate the total tax burdens upon these spending units.

If Henry's family was in the \$3,000-to-\$4,000 income bracket in 1948, and his income was the average for his bracket, \$3,500, we come up with this picture of his tax burdens:

	Fed- eral	State and local	Total
Personal income taxes.....	\$230	\$3.16	\$233
Corporation income taxes (paid by or passed on to Henry).....	156	8.49	164
Excise or sales taxes (paid by or passed on to Henry).....	168	125.00	293
Property taxes (paid by or passed on to Henry).....	-----	111.00	111
Payroll taxes (paid by or passed on to Henry).....	106	-----	106
Total.....	660	248.00	908

Thus a little over one fourth of Henry's income ultimately found its way to government in the form of taxes. Economists differ in their estimates of the incidence of different types of taxes, but there is some agreement that this calculation of the total burden on Henry is about correct.

The plain fact is that the tax money the Federal Government must have can't any longer be collected just from the big corporation or from the rich man who lives in the big house on the other side of the street. For 20 years now, Congress has tried to balance the Federal budget that way—and most of the time has failed to balance it. Congress still wants to raise the money that way. Congress proposes now to take for the Government more than half of corporation earnings, and up to 70 percent of corporate earnings in some cases. Congress proposes to take 94½ percent of the top earnings of individuals. The rates of tax, State and Federal, applicable to many individuals, will be a little over 100 percent. Only the fact that the Federal Government allows a deduction for State taxes prevents the taxpayer from having to pay a little more than he earns for the privilege of earning additional money.

Probably that's the limit so far as the well-to-do are concerned. Still the Federal Government wants more tax money to pay for defense, for more atomic bombs, for more veterans' hospitals, for more old-age pensions, for more farm parity to keep food prices up, for more public works, for more Federal employees. Where can Congress get more tax money?

It begins to look as if the new taxes will have to be collected from Henry, and that means from you and me.

If new tax money is so hard to find, why bother? Why should we break our backs to balance the budget if expenditures are climbing and taxes are already so heavy? Why not let the Government run a deficit?

For years the Government has been going into debt, issuing bonds to pay its bills, instead of collecting enough taxes to balance expenditures. The result is inflation and a dollar that's now worth only about 50 cents. We've got to stop it or the dollar won't be worth anything. That means we've got to balance the very high Federal budget expenditures with very high taxes, if we are to keep the dollar from going the way of the franc and the mark.

One way to keep from going into debt is not to spend so much. The Federal Government could try that plan, but it's very hard to do, for we have become used to thinking the other way. Everything ought to grow bigger and bigger—we've got plenty of money. Bigger Government departments, with more divisions and bureaus and sections, so that half a dozen or fifty or a hundred people are working on everything anyone can think of. That makes jobs for lots of people. Lots of reclamation and rivers and harbors projects, so that the battleship *Missouri* can sail into any harbor and up to the fork of every creek. Better have two or three Federal agencies working on each of these things. They can compete with one another to see which can spend the most. It all improves the country and we can certainly afford to pay for it.

But can we? President Truman presented us with a \$71,600,000,000 bill for Government expenses from July 1951, through June 1952—about 10 times what the Government spent in the 1930's. Later this estimate was reduced to \$68,400,000,000. Congress has trimmed it a few million dollars here and a few hundred thousand dollars there, and there has been a lot of talk about economy. There are plenty of soft spots in the budget, but most of the budget items are based on past congressional authorizations. For the most part, the Budget Bureau has simply put down in a column and added up the cost of all these new veterans' hospitals and farmers' parity and reclamation projects and new steam plants for TVA that Congress has voted in the past.

The only way to get the budget down is to wipe the slate clean—to wipe off the old lush peacetime authorizations and start over again with a shorter list of items and a smaller total that we can afford in times like these. Almost any of us could cut our family budgets if we had to do it. Congress and the Budget Bureau can do it, too, if they will. Students of the problem have shown that seven to ten billions of dollars can be cut out of the budget without any real damage to anything that absolutely needs to be done by the Government.

If the Federal budget is cut that much, we won't have to have any new taxes. But you'll have to do without some governmental frills. You'll have to get along without that new yacht basin in Bureau Creek and maybe there won't be a Federal job for Johnny or Mary.

Certainly we can do without Government loans for snake farms and fur ranches, and special calendars for Congressmen at a cost of \$6,000 per year—equal to all the income taxes paid in a year by 27 families earning \$4,000 a year. Why should we be paying for ski lifts in Austria? Why should it cost a Government agency \$13.39 on the average to process purchase orders, even one for a popular 50-cent men's magazine? Do we need 15 agencies to deal with public housing or 65 to do statistical work? Unquestionably there is ample room for substantial cuts in the budget, if we start with a clean slate.

But suppose Federal expenditures aren't cut very much. It really doesn't look as if they will be, in spite of all the talk about economy. How much money will the Federal Treasury have to have to balance the budget?

Business is going great guns. There aren't any unemployed to speak of. The total national income is about the highest it ever has been, and that means the base for taxes is very large. Even so, the Treasury will probably need at least \$5,000,000,000 more taxes to balance the budget, and it might need \$7,000,000,000 or \$10,000,000,000 next year, for defense expenditures have finally got into high gear and we are spending a lot of money every month. Where is the tax money to come from? Have we really reached the end of the road?

The well-to-do and the moderately prosperous have already been squeezed pretty dry. A lot of our people pay the Government more in taxes than they can keep for themselves. Consequently, if we put a 100-percent tax on all taxable income over \$10,000 the Treasury would get less than \$3,500,000,000 more money, and that isn't enough. To get \$10,000,000,000 more from the individual income tax, the Treasury would have to take all taxable income over \$4,000. Yes, a 100-percent income tax on taxable incomes over \$4,000.

Taxing the man with the smaller income is equally difficult. The Department of Labor has studied family budgets for a family of four in representative cities across the country. Their figures show that there is very little fat in a worker's income out of which more taxes can be squeezed. Whether you make \$4,000 or \$10,000 or \$25,000, if you are taxed 50 percent or 100 percent, how much better off are you than a Russian?

In this connection, perhaps we can learn a lesson from England—a lesson that should help dispel the notion that taxation hits the wealthy while government expenditures benefit the poor. In April 1950 the London Economist published a table showing that the current social-welfare expenditures of the British Government amounted to 57 shillings per week per family. That was the measure of the welfare-state program which the Socialist British Government had established as a criterion of what a paternalistic government should do for its people. The startling fact brought out by the Economist was that the approximate taxes paid by the average low-income family in 1948 was 67.8 shillings per week, or 10 shillings per week more than the welfare benefits it presumably received. These figures applied to families with incomes under \$1,400 a year, and they made up about 80 percent of the British population. Thus the Government program, initiated largely for the benefit of the low-income groups, had reached a point where the taxes resting on the beneficiaries of the program were greater than the benefits. Of course, most of these taxes were hidden in the price of the beer and tobacco and other items which these families consumed.

Can't we hang the additional taxes on corporations? That won't hurt us—or will it? After the corporation pays the tax, what happens to it? The only money that the corporation has is what it gets from selling goods to its customers. It must try to add the tax to the price of its goods—and then you and I will have to pay the tax, or the tax will come out of the earnings that would go to stockholders or out of the money needed to expand the business and keep production high. If stockholders can't get a decent return on their investment in common stock, they sell the stock and buy bonds or put their money in the savings bank.

A few years ago a prominent business magazine made a careful survey among business executives to discover what effects seriously heavy taxes have on them. One of the questions asked was, "Have you passed up an opportunity to invest in a new business in the last 5 years because the return after taxes would not justify the risk?" Forty percent of these executives answered "Yes."

Will you and I take our chances on setting up a business to make a new gadget when we must bear our own losses, but the Government will take half or three-quarters of anything we make? Won't we do better to work just for what we need to pay for our living, and then sit under a tree and fish the rest of the time?

When a wealthy individual decides not to risk his money in an investment in a new business because over the years the Government will take out in business taxes and in personal income taxes 10 times the amount

he can hope to keep, we need not shed any tears over him. It's true that he would take all the responsibility and risk and the Government would get most of the profit, and if he died it might be necessary to sell his business to pay the inheritance taxes. However, he needs no sympathy from us since he is already in the 90 percent income bracket.

But we need him. We need the new industry which his willingness to gamble could give us. He can decide not to gamble and he still has his money. But we are out a new industry, with all that that means in new jobs, more production and a higher standard of living for all our people.

Undoubtedly most of us have other incentives to work besides the money we make. Fortunately most of us like our work and we want to do a good job at it. But the incentive to take on more work, or to start a new industry, is fostered by the prospect of a decent financial return for the additional effort. If the prospect is slight or nonexistent, then people won't work harder and won't produce more; and the country loses much more than the prospective taxes.

Aren't there some other kinds of taxes than taxes on corporations or individuals? Yes, there are sales taxes and estate taxes and gift taxes and property taxes. They are levied on different things and transactions, but they all come out of people's incomes. The Federal Government already levies many sales taxes, and many States levy sales taxes, too. The States actually do a much better job than the Federal Government, for the State sales taxes apply equally to all sales—generally excepting food and clothing—while the Federal taxes are selective and discriminatory, as well as much steeper in rate. Unless the Federal budget can be pruned, Congress is going to have to levy a general sales tax, retail or manufacturers', for there is just no other way to raise more billions on top of present taxes.

The Federal Treasury is already getting all the money that it can in estate and gift taxes from the well-to-do. To get more would mean taxing the small gift and small estate, and even then not much revenue would be produced. In general, the Federal Government can't constitutionally levy property taxes; they are reserved for the States and localities.

Well, is there a tax ceiling? Can taxes go much higher?

Colin Clark, the Australian economist, who is Under Secretary of State for Labor and Industry, and Financial Adviser to the Treasury in Queensland, recently examined this question. Looking at the experience of France after the First World War, and again in the 1930's he came to the conclusion that "the critical level of taxation beyond which inflationary forces come into play is around 25 percent of the national income." In other words, when the Government begins to take more than 25 percent of the national income inflation sets in. As the money begins to be worth less—and the total national income rises in terms of a currency of lesser value—a stabilization point is usually reached when taxes are once more taking only about one-quarter of the national income. Mr. Clark's conclusions are supported by the experience of Great Britain, Italy, Japan, Finland, Switzerland, Denmark, Sweden, and to some extent the United States during the 1940's.

Where do we stand now? Congressional tax experts recently pointed out that in the calendar year 1950 the receipts of all levels of government in the United States were about 29 percent of the national income. They were 38 percent in Great Britain. If we assume that there will be a higher level of national income this year and next in the United States, we find that the tax increases proposed in the House bill will raise the percentage in the United States to 32 percent. We are certainly treading hard on

the heels of Great Britain in driving incentives to produce out of the economy, and in inviting catastrophic inflation.

So we're back where we started. There is no good way or satisfactory way or tolerable way to raise \$70,000,000,000 for the Federal Government to spend. It can't be obtained from the well-to-do. They don't have it left to pay. It can't be obtained from corporations, without killing their activity and their growth or without shifting the ultimate burden to the consumer through higher prices. Seventy billion dollars can be obtained only by taxing you and me much more heavily than we've ever been willing to stand for. We haven't been willing to stand for it, because the money we would pay in taxes is what otherwise we would spend for the things that make life worth living—our standard of living—toys and education for the children, an automobile, a television set. We don't absolutely have to have them. We can get along on less. But we've never been willing to cut our standards of living in order that Washington and the Government can spend more than was ever spent before in time of peace.

Still, the CONGRESSIONAL RECORD contains at least one report of a Congressman to his constituents in which he states that in the fiscal year 1951 he secured \$80,000,000 of direct appropriations for his district; authorizations of rivers and harbors and flood-control projects totaling \$681,000,000; electric-power projects totaling \$47,200,000; and Rural Electrification Administration loans of \$3,851,000. He is working for other rivers and harbors and flood-control projects totaling \$480,000,000. During his 8 years in Congress he says that he has secured for his district direct appropriations of at least \$265,000,000.

As long as the Congressman's constituents want and approve such activities, how can Federal expenditures be reduced? If Federal expenditures can't be reduced, you and I are certainly going to have to stand for higher and still higher Federal taxes—on ourselves. The bill must be paid in one way or another; either through taxes, through inflation—which is worse—or through both.

The Working Boy

EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 9, 1951

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following interesting story published in the periodical entitled "The Working Boy," of Newton Highlands, Mass., by Mr. William W. Buechel:

JESUIT'S BARK (By William W. Buechel)

Malaria is one of the great scourges which yearly visit the southern part of the United States. Most people will be surprised to know that malaria is native here in America; most seem to regard it as solely a jungle fever. While it truly is a tropical disease, it can be found in almost any consistently hot land. Two hundred fifty thousand cases are treated here every year.

Any one who has seen a malarial attack will know what a terrible scourge it is. At first the victim is cold and chilly even though the weather is hot. His teeth chatter. Then the exact reverse takes place: The poor victim is burning up with a fever that can reach 105 degrees. Along with this, the victim may

become delirious and even fall into coma. His skin takes on a clayish color; his breathing becomes hard and forced. Sometimes he may even become a dangerous maniac.

Those are probably the symptoms a certain Indian had, better than 800 years ago in Peru, when he was carried by the townsmen out of their village to the side of a small stream and left there to die.

Burning up from thirst, the sick Indian while waiting for death drank copiously from the stream. Death did not come. Instead, in a few days robust and healthy once more the Indian was able to return to his village. Naturally the villagers were sure that they were seeing a ghost. It took a great deal of persuading to change their minds.

However, they did want to know what was the story behind this sudden recovery. The Indian could tell them nothing except that to quench his thirst he had taken numerous draughts of water from the stream. Hearing this, the villagers took all their feverish sick and carried them to the side of the stream. All who drank from the "holy stream" were cured. However, such a rush was made on the waters that the supply was not equal to the demand and the water apparently lost its curative powers.

The sages of the tribe realized that the water itself was not the benefactor in this case but that something somehow saturated the water with its curative qualities. Without the aid of modern scientific equipment and know-how, they found that a certain species of tree, the cinchona tree, lined the banks of the stream and that it was from the bark of this tree that the water obtained a certain bitter taste.

So they stripped the bark from the trees and pounded it into powder which they used as medicine. So great were the healing powers attributed to this new febrifuge that it was not long before the Jesuit missionaries found out about it and tested it for themselves. The results were so amazing that they took back to Europe great quantities of the bark. They distributed it freely. That is how modern-day quinine acquired the name "Jesuit's bark."

A story is told of a French merchant who stored a vast quantity of the bark in an unoccupied apartment that he owned. Because the bark gave off such a disagreeable odor, it seemed unlikely that the room would ever be occupied as long as the bark was stored there.

However, some travelers carrying a dangerously sick companion happened to pass through this town and begged to be allowed to rest their feverish companion in the apartment. He was placed in one of the rooms containing the bark. After the first day he felt much better. In a few days, without any medical attention whatever, he was completely cured. Subsequently many feverish sick were placed in these rooms and all were cured.

The discovery of "Jesuit's bark" was as important to medicine in its fight on fever as gunpowder was to war. As many as 80 alkaloids have already been extracted from the bark, but the most important from every point of view is quinine, discovered in 1820 by two French pharmacists. It has been said that quinine is more precious than all the gold and silver in the world today. It is so important a preventive treatment that the American Government spent huge sums of money during World War II to get enormous amounts of "Jesuit's bark" from the wild jungles and mountain sides of South America, for it was no longer possible to get any from Dutch Java which had been captured by the Japs.

Previously the Dutch Government had supplied most of the world's supply of quinine although no small amount was always forthcoming from India. "Jesuit's bark" in South America, strangely enough, is not as consist-

ent in its quality as the Java product. Fortunately, research chemists in the United States were able to produce a substitute.

Since quinine is the medical specific used against malaria attacks, it goes without saying that it was an invaluable ally to our boys fighting in the hot lands of the Pacific. Today in Korea, quinine is like a hovering guardian angel, for without it our boys would die like flies.

Little did that lone Peruvian Indian, centuries ago, dream his feverish attempts to slake his feverish thirst would start such a string of events down the succeeding centuries. Little did he realize that he was but the first of a long line of hundreds of thousands who, like himself, would hasten joyfully back from the dead to the bosom of the living because of the inherent medicinal qualities of the tree bark from which, centuries later, pharmacists extracted the king of febrifuge—quinine.

Stalin Trying To Exterminate Catholicism

EXTENSION OF REMARKS

OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 10, 1951

Mr. KERSTEN of Wisconsin. Mr. Speaker, Stalin is well aware of the strong opposition of the Catholic Church to the doctrine and practices of communism. He knows that in order to effectively consolidate his gains in Eastern Europe he must wipe out all the influence of the religious principles and philosophy of the Catholic Church in the hearts of the people. He is now relentlessly and rapidly pursuing this objective.

I include the following article by Ernest O. Hauser, which appeared in the Saturday Evening Post of September 22, 1951, which vividly portrays the persecution now going on behind the iron curtain:

WHAT STALIN HAS IN MIND FOR CATHOLICS (By Ernest O. Hauser)

The death struggle between the Catholic Church and the governments of Eastern Europe's slave states has moved into a critical phase. No longer can this struggle be appraised merely in terms of show trials, prison terms, ravaged convents, and closed churches. What is causing alarm on Vatican Hill today is the fact that the clergy behind the iron curtain is beginning to show symptoms of combat fatigue. Already, thousands of Catholic priests have pledged allegiance to the "people's democracies." Hundreds have joined Communist-run ecclesiastical fronts hostile to the Vatican and the west. One priest serves as Minister of Public Health in Czechoslovakia's Red government, while another, in open defiance of Rome, has usurped the administration of a Czech bishopric. In two predominantly Catholic countries, Poland and Hungary, the Catholic hierarchies have signed accords with their governments. The accords were received here with astonishment and sorrow.

Such attempts to come to terms with plainly atheist regimes are, unfortunately, just what Moscow needed to carry out its deadly operations against the Church of Rome. The Soviet master plan envisages the destruction of the Catholic Church in two major steps. One is the isolation of the clergy from Rome and creation of a

schismatic national church controlled by the Red regime. The second step is liquidation. While the integration of Protestant churches, always organized along national lines, called for no deep-laid plans, Catholics posed a special problem. Catholicism, by its very nature, is supranational. A Catholic, wherever he may be, looks to Rome for spiritual guidance. A Catholic bishop, in exercising his sweeping spiritual and jurisdictional powers, represents the Pope, to whom he must report in person at fixed intervals. Here, then, was a link with the free world which had to be broken before the Catholic community could take its place in the monolithic state.

Today we are witnessing the breaking of that link. In Czechoslovakia, where 75 percent of the population are Catholic, the Communist regime first reduced the church to poverty by stripping it of almost all its possessions and revenues, then offered to put the clergy on the Government payroll. All it asked in return was an oath of loyalty to the people's democracy. In October 1949, the bishops—still refusing to take the oath themselves—advised the lower clergy to accept the offer. All but a dozen did.

"I had to live and my parish needed me," said a Czech priest, now safely in Rome. "When my bishop said it was all right, I saw no reason for holding out. I went to the office of the district Soviet and took the oath: 'I promise upon my honor that I will be faithful to the Republic of Czechoslovakia and to its people's democratic regime, and not to attempt anything which could be contrary to its interests, its security, and integrity. As a citizen of a people's democratic republic, I will conscientiously fulfill the duties resulting from my job and will try to assist the reconstructive effort which is promoting the well-being of the Czech and Slovak peoples'."

"But I added, ' . . . if it isn't contrary to the law of God, the church, or the natural rights of man'."

(This reservation was insisted upon by the bishops in their advice to the lower clergy.)

"That part is invalid," the top official said.

"Perhaps I put it in, just in case."

"In case we'd tell you to go against the laws of God? We'd never do that."

"So much the better," said I.

Once the Government had the priests impoverished it went after their souls. Another Czech clergyman now in Rome recalls the trying visits of the local church commissar, an elderly ex-cabinetmaker who had been reeducated in party schools. "He'd come to the parish at all hours, sometimes twice a day," the clergyman related. "He'd sit there and try to convert me, repeating what he'd read in the papers about communism not being against religion or just trying to trick me into taking one more little step toward Moscow. He always had some appeal or other he wanted me to sign, and when I said no, he called me the most stubborn man in town, and warned me of the consequences."

Out of renegade fragments of the lower clergy the state, in June 1949, formed a religious front tauntingly named Catholic Action, after the leading lay organization sponsored by the church. Its creator was Joseph Plojhar, a priest, and Minister of Health in the Prague government. Growing slowly but steadily, the violently anti-Vatican organization now includes several hundred priests—proving, as the Communists would have it, that "the lower clergy is on the side of the people" and no longer speaks to Rome.

Just how the Government goes about increasing its supply of "people's priests" is illustrated by the account of a monk who fled Czechoslovakia only a few weeks ago. Ever since a night raid on his monastery in April 1950, a night in which most of the country's 2,500 monks were arrested, he had

shared the misery of 200 of his colleagues in a deserted abbey turned into a "concentration monastery." Here the prisoners were subjected to an intensive reeducation program, listening to lectures and writing papers on such topics as Communist culture and the place of the priest in the people's state. Now and then special agents would take one of them aside, inquiring whether he was ready to be freed as a party-line school teacher or a secular "people's priest." Surely, the special agents' talk went, there could be no doubt that Christianity, like communism, provides for a better world in which the rich share their wealth with the poor. As the months dragged by, more and more of the trapped monks agreed, outwardly, at least.

Not this one, though.

"One night 10 of us were loaded on a truck and whisked off to jail," he said. "They tossed me into a tiny, brilliantly lit cell and left me there for a month. Then they questioned me, day and night, day and night. Why didn't I like the people's democracy? What were my contacts with foreigners, with the Vatican? Sometimes I had to kneel before my interrogator for five hours, answering questions. I was beaten and kicked by a squad of four. Between sessions they kept me standing for hours in a dark disciplinary cell. After a fortnight of that, they suddenly returned me to the re-education routine. Apparently I wasn't ripe, but they assured me the cycle would be repeated every couple of months. 'The last of you will crack in two, three years,' they told me."

All that remained to be done was to tie up the loose ends. In June 1949, Czechoslovakia's primate, Archbishop Joseph Beran, was made a prisoner in his Prague residence. He has recently been deported and his present whereabouts is not known. A year later all of the remaining bishops, except three who were jailed and have since been sentenced to long prison terms, were under house arrest. Guarded by armed police, they could not communicate with the parishes of their bishoprics, could not receive visitors and were closely watched by a people's commissar. In at least one case, the commissar actually slept in the same room with the bishop he was assigned to watch.

Moscow moved in where Rome was elbowed out. In January 1950, Bishop Skrabec, of Banska Bystrica, died. Before the Vatican could name a successor, the Czech Government grabbed the bishopric. A communist priest, John Decht, appointed "administrator," assumed episcopal jurisdiction, and let it be known he would yield to no one. Since then, several other bishoprics have been taken over by Communist "vicars general" blithely exercising the administrative powers of the muted bishop, who has no way of disowning them.

Few were surprised when, on March 12, 1951, a triumphant Czech Government announced that three residential bishops and one titular bishop—Ficha, Trochta, Carski, and Laznik—had yielded at last and taken the people's democratic loyalty oath. Given a choice between seeing their jurisdictional functions usurped by Communist stooges, and of comforting their flock once again as "free" men, they had chosen the latter. With that, the power of the hierarchy was broken. The parish priest, hopelessly confused, and more and more frequently hitched up to a chain of command that ended in Moscow, could resist no more. Nine million Czech Catholics were adrift. From the Kremlin, Stalin could flash his Czech confederates a "well done."

There are roughly 50,000,000 Catholics living in Eastern Europe, and though it is generally agreed that fiercely Communist Czechoslovakia spearheads the drive against the Catholic Church, it is hard to say where things are better, and where they are worse.

Communist strategy everywhere adapts itself to local conditions. In one iron-curtain country Catholic schools still limp along; in a nearby country they've long since disappeared; in one, religious processions still use the streets, in another they are confined to the interior of the church or to the graveyard.

THE CHURCH IS SPARED—FOR PROPAGANDA

The least tormented area now under Red control is probably Eastern Germany. With the majority of German Catholics concentrated in the western zones, the Soviets still go slowly for propaganda reasons. By contrast, from sketchy reports available here, one might conclude that persecution has gone furthest in Lithuania, a heavily Catholic nation of 2,900,000 inhabitants where only 400 out of a prewar total of 1,600 priests are still around. The rest, including all of the country's 11 bishops, have disappeared from sight. In little Albania, where Catholics form a small minority, the clergy was disposed of by a method best described in one word, "massacre." By a recently passed law, Albania has cut off all relations between its Catholic citizens and Rome, and has announced it will subsidize and administer the church in Albania.

Tito's Yugoslavia, which first evolved some of the techniques now applied against the church throughout the communist countries, has called off the bloodhounds. The marshal recently offered to release Archbishop Stepinac, who, in October 1946, was sentenced to 16 years at hard labor. He did this with the stipulation that the Archbishop be recalled by the Holy See. The compromise was vetoed by Rome, which felt that acceptance might look like an admission of the primate's guilt.

The one country about which even the refugees are reluctant to talk is Poland. "Really, we've had little trouble so far," they say. "Let sleeping dogs lie." Perhaps because postwar Poland is 95 percent Catholic, the regime has been slow to apply the more drastic methods used elsewhere against the church. Although some 600 Polish priests and 1 bishop, Monsignor Kaczmarek, are in jail, many of them on unproved charges of wartime collaboration with the Germans, Catholic schools and newspapers still function, and people who saw this year's Corpus Christi procession in Warsaw have nothing but praise for the traffic police, who kept the main streets open with a smile.

Yet it is toward Poland that the Vatican now looks with the most profound concern. For Poland's hierarchy was the first to capitulate. On April 14, 1950, the secretary of the Polish episcopate and two bishops, acting on behalf of the entire clergy, put their signatures to a pact by which the Church solemnly condemned any anti-Government attitude, and promised to exhort the faithful to respect the authority of the state and to punish priests taking part in any secret or anti-Government movement. In return, the Government acknowledged the Pope's jurisdiction over the church in religious and spiritual matters. It further guaranteed the supervised freedom of Catholic teaching, the Catholic press, processions, and religious orders.

Rome, which could only guess at the pressure under which the bishops had signed, received the agreement with wide-eyed incredulity. However, now that the shock has been absorbed, the feeling here is that the Catholic Church, during its present ordeal, can afford to take a long-term view. In times of persecution, sources close to the Vatican explain, the church can back up a step or two to find a *modus vivendi*. It can yield what it considers legitimate rights in the fields of education, charity, and the press. As long as the concessions do not touch on dogma itself, or surrender a moral principle, they can be upheld.

When, last April, Poland's primate, Archbishop Stephen Wysynski, unexpectedly arrived in Rome for the official ad-limina visit which bishops are obliged to undertake periodically, Vatican observers were relieved to find him as warmly devoted to the Holy See as ever. They were struck, at the same time, by the unusual deportment of his traveling companion, Bishop Klepacz, of Lodz—one of the three signers of the 1950 pact. "He just wasn't his old forceful and outspoken self," one Vatican official said. "He walked as if in a dream and never opened his mouth." Together with the archbishop's secretary, the two visitors stopped at a Polish convent here and refused to see any of the important people who had rushed to Rome from several countries in the hope of obtaining a fresh view of iron-curtain developments. It has since become known that, in return for permission to go to Rome, the primate had agreed to do the Warsaw government a favor. While here he urged the Vatican to recognize as Polish bishoprics the former German dioceses taken over by Poland after the war. He was turned down; no peace treaty has as yet granted these regions to Poland.

New propaganda blasts against the clergy after the primate's arrival back home suggest that the shaky truce may have run its course. No longer useful to his Government the hapless archbishop may well be next in line for a "full confession" before the people's court. The guessing here is that his time is up.

It is in Red Hungary that the formula of striking the shepherd and dispersing the sheep—first evolved by Marshal Tito—has been developed to perfection. In this iron curtain country, where Catholics number 68 percent of the people, Church resistance centered around the person of the primate, Joseph Cardinal Mindszenty. On December 26, 1948, after an organized press campaign had denounced him as the chief enemy of the people's state, the cardinal became the first Prince of the Church to be arrested since the time of Napoleon. The rest is history, painfully remembered.

With the primate out of the way, the government confronted the lower clergy with the usual choice of "collaborate or suffer." Scores of priests were arrested and tortured. Monks and nuns were carted off to labor camps and concentration monasteries. A group known as the National Committee of Hungarian Catholic Priests began to demonstrate how church and state could live happily under the same roof. It was headed by Magr. Miklas Beresztoczy, a prominent clergyman who was sentenced together with Cardinal Mindszenty and who emerged from prison in the spring of 1950 with his fingernails torn off and his personality changed beyond recognition. No exact information is available here as to the number of his followers, but 150 peace priests seems to be a fair estimate. The organization publishes an anti-Vatican weekly called the Cross, which is graced with a rendition of Picasso's peace dove. Five of its leaders, among them the renovated Beresztoczy, were recently decorated with the Order of Merit of the people's republic.

Meanwhile, Archbishop Joseph Grösz, next in line of seniority to the imprisoned primate, had taken over Mindszenty's duties as head of the hierarchy. A quiet, unassuming man—"the son of a peasant, and proud of it," in the words of a friend—he was at first considered more tractable by the authorities than the impulsive cardinal. This appraisal seemed confirmed when, after a stiff series of church-state conferences, during which the pressure on the lower clergy steadily increased, Archbishop Grösz apparently felt the time had come to follow the example of the Polish bishops. On August 30, 1950, he signed, on behalf of the Hun-

garian hierarchy, a humiliating accord with the Government in which the bishops made four crucial concessions. They agreed to support the people's republic and punish all priests opposing it; they condemned the "exploitation of religious feelings and of the Catholic Church for political aims opposed to the state"; they threw their support behind the 5-year plan and land collectivization; they endorsed the peace movement and condemned warmongering and atomic weapons.

In return, the Government guaranteed complete religious freedom and, perhaps to take some of the hollow ring out of the phrase, reopened eight Catholic high schools. The state also undertook to finance the church, which had already been stripped of its properties, on a gradually diminishing scale for all of 18 years. (At the end of this period the Catholic Church in Hungary, presumably, would be either self-supporting or dead.) Unlike the Polish accord, the pact said nothing about papal jurisdiction.

Once he had signed the accord, Archbishop Grösz could be discarded. Last June he stood before the same expert judge who had sentenced Cardinal Mindszenty, as well as Robert Vogeler. He "confessed" to having led a movement to overthrow the Government and was sent to jail for 15 years.

When, last July, the nine not yet imprisoned bishops swore loyalty to the people's democratic state, Hungary's Red bosses could relax at last. What isolated pockets of resistance remained they'd have no trouble mopping up. The church in Hungary was beaten.

With this slow, crumbling process holding our attention, it is easy to forget that one entire segment of Rome's spiritual empire has all but disappeared. There are, or were, in eastern Europe some 5,500,000 Christians worshipping according to the eastern, or Oriental, rite of the Catholic church. Because their ancestors at one time belonged to the orthodox church—which split with Rome in the eleventh century—these Catholics still retain the old ritual and allow their priests to marry. But they are devoted sons of Rome, with which they have been reunited for several centuries.

For them, Stalin had a special recipe. It was first tried out in the Soviet Union, which, at the end of the war, found itself with 3,500,000 of these eastern-rite Catholics on its hands, most of them in the amputated part of Poland. Informed that their church no longer existed, these new citizens were told they now belonged to the orthodox church of Russia—the bell-ringing arm of the Soviet Government. To drive home the point, their priests and bishops were shipped off to Siberia.

Things were less simple when it came to the 1,570,000 eastern-rite Catholics in Rumania, the 320,000 in Czechoslovakia, and the 195,000 in Hungary. The invitation was always the same: Return to the orthodox mother church. At this writing, Hungary's lone eastern-rite bishopric is still relatively free; there is no orthodox church there to do the absorbing. But Czechoslovakia's eastern-rite Catholics have fared badly. Their organization was swallowed by the tiny local branch of the orthodox church, their bishop sentenced to life imprisonment, and their churches declared orthodox.

In Rumania, where 75 percent of the population are orthodox, the greater part of the Catholic community belonged to the eastern rite. Known for its intensive work in the field of primary education, this eastern-rite clergy was considered particularly dangerous. When all appeals for it to break with Rome were ignored, the Government got 36 priests to announce, early in October 1948, that their church had returned to the Orthodox Church. With that, the Catholic Church of the eastern rite officially ceased

to exist. Priests refusing to knuckle under were given the full treatment, the methods ranging from crude blackmail to indescribable tortures and slow death. By now, one-quarter of the former eastern-rite clergy have taken their places in the ranks of the Rumanian Orthodox Church, whose patriarch, a former horse dealer, boasts he was a Communist when Rumania was still under a king.

Painfully scrawled letters, arriving at the Vatican by circuitous routes, ask: "Shall we bury our dead like dogs? There is no Catholic priest here." "How can I baptize my baby?" "Can we marry a young couple at home?" Radio Vatican—and people do listen, under the bed covers—tries to give the answers: "Only in extreme emergencies call an Orthodox priest. Stay faithful. Do as follows . . ."

As for Rumania's 1,235,000 Catholics of the western, or Latin rite, the national-church formula sufficed. A Catholic action committee, founded in April 1950, and headed by a turncoat priest, Andrea Agatha, now speaks for the democratic clergy. Since the expulsion, in July 1950, of the papal representative, Archbishop G. P. O'Hara, of Savannah, Ga., little news has been available here from Rumania. We know, however, that many churches are closed—two of the finest serve as ballet schools—and that between 300 and 400 priests are in jail. All of the country's 11 Catholic bishops—5 of the Latin rite, 6 of the eastern rite—have been arrested. Two have died in jail and a third, 81-year-old Bishop Pacha, is reported to be doing forced labor on the Danube-Black Sea Canal.

As Eastern Europe's battered clergy looks to the Holy See for comfort and protection, there is little Rome can offer. It has at its command spiritual weapons only, and their effect on the disciples of Marx is problematic at best. Ever since the Vatican decree of 1949, denying the sacraments to professing Communists, the church has made judicious use of its harshest penalty, excommunication, against the enemies of God. Among iron curtain priests thus expelled from the community of the faithful are the leaders of Czechoslovakia's schismatic Catholic Action; Andrea Agatha, the Rumanian priest heading the Catholic Action Committee; and John Dechet, the Czech priest wielding episcopal jurisdiction as administrator of a bishopric.

The next move, clearly, is up to Stalin. With Red administrators and vicars already usurping the jurisdictional functions of the bishops, what is there to prevent the Communists from enthroning puppet bishops? All they'd have to do is force one of the many legitimate bishops now in jail to consecrate, as bishop, a renegade priest. Endowed with the spiritual powers of a Roman Catholic bishop, the renegade could then proceed to ordain new priests and consecrate new bishops. The chain reaction obviously would break the church in two.

Confronted with this prospect, the Vatican is helpless. The prison-cell consecration would be valid in the eyes of the church, despite the presence of duress, provided the consecrator, for some reason, did not withhold his intention. Merely to discourage aspirants a Vatican decree of April 9, 1951, ruled that any bishop, archbishop, or cardinal who consecrates a new bishop without the approval of Rome incurs the severest form of excommunication, even though he may have been coerced by grave fear. The bishop thus consecrated faces the same punishment.

Should Stalin decide to go ahead and beget a line of new Red bishops, the future of the people's democratic church would be assured. Then what? Once again the Church of Rome is preparing to go underground. Already, behind drawn shades, laymen well

grounded in the faith and society ordained as priests, say mass in private homes. Men in overalls or business suits, secretly consecrated as bishops, have taken over in some dioceses where the bishop is no longer free. "We are going back to the catacombs," said one priest from far behind the curtain. "Hard times are ahead, harder than the church has known for centuries."

The Complete Watershed Program in Flood Control—Part I

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 10, 1951

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by H. H. Bennett, Chief, United States Soil Conservation Service, at the newspaper editors flood control meeting, Lincoln, Nebr., August 11, 1951:

THE COMPLETE WATERSHED PROGRAM IN FLOOD CONTROL

It is a real inspiration to me as a soil conservationist to meet with you newspaper editors assembled here in Lincoln to consider the critical problem of flood control. It is a significant milestone, I think, in the Nation's march toward preserving its basic soil and water resources, when several hundred busy editors come together this way, on their own initiative and at their own expense, to discuss ways of achieving sound and effective flood control in this breadbasket of the Nation.

The recent flood catastrophe in Kansas and neighboring States has, once more, focused attention on the urgent need for doing the very best we know how to prevent the recurrence of disastrous floods which every year somewhere in this area, as well as in other parts of the country, tear down across productive farmland and through prosperous towns and cities. The effects of floods are very real to you people right here in Lincoln and throughout southeastern Nebraska after your experience of May and June last year, and again this year.

FLOOD CONTROL IS URGENT

What can be done—what must be done—to prevent the staggering losses in crops, property, and even human life, depends in large degree on the determination and efforts of you people who are in this audience today.

Some among you may feel that we cannot afford the cost of flood control in these times of national emergency. As a civil servant, I did not come here to tell you what the Nation's policy should be in this regard. That is for you, the people to say. But there are some things I can tell you.

First, the rivers out here did not wait until we had settled our score with the Communists before they decided to go on a rampage. We hope that neither we nor our children will live to see another flood catastrophe like this last one. But, unfortunately, we can be certain that, emergency or no emergency, costly floods, in all probability, will strike again next year, and the next, somewhere in Nebraska, Iowa, Kansas, Missouri, or other parts of the Nation.

Secondly, I can tell you that it is possible to control these floods. It is possible to eliminate almost completely the smaller and

more localized floods, and it is practicable to greatly reduce the damages from tremendous storms that cause super floods like this last one.

COORDINATED FLOOD CONTROL PLANS ARE ESSENTIAL

No single method of flood control, however, will do the whole job. We have seen in this great flood, for example, how levees high enough to have withstood the largest previous floods of record were overtopped. On the other hand, we have also seen how the soils of some of our best pasture lands became so saturated with water after 2 months of heavy rains that they could absorb very little more from the final big rain. No, to meet all kinds of flood conditions, and to prevent or minimize flood damages wherever they occur, we must use every available method of control.

We must develop a sound, coordinated plan for every watershed to assure a properly balanced and truly effective attack directed toward prevention of flood damage. The day of piecemeal flood control—where only a part of the damages in a watershed are considered—is rapidly drawing to a close.

Our efforts to control floods must begin where the rain strikes the ground. We must get what water we can into the soil and hold or retard the runoff of the excess on farm fields by soil conservation practices applied on the land as needed. What does run off the fields into the drainage ways and creeks we must slow down with small retarding structures and with grass, crop rotations, contouring, and so on. What flows out of the creeks we will have to handle in the main river valleys by more imposing measures, such as reservoirs and levees. Our job of flood control begins then where the raindrop falls and it does not end until the water reaches the ocean.

The important problem now confronting all of us is to determine, in cooperation with each other, what kinds and combinations of measures are needed, watershed by watershed, to accomplish the most effective flood control we can afford. In doing so we must, of course, bear in mind our continuing need for irrigation storage, for power production, for municipal water supply, for pollution abatement, for preserving fish and wildlife resources, and especially the need for maintaining maximum agricultural production on fertile valley lands. Our watershed plans must provide not only for the control of floodwaters, but also for their conservation for beneficial use. In this connection, let us bear in mind that the limited number of available sites for larger reservoirs should, wherever possible, be considered with respect to multiple land and water needs before they are dedicated solely to flood control.

There are several reasons why sound and enduring flood control, aimed to benefit all the people, can be achieved only through a coordinated attack. The first of these reasons is apparent from a glance at the distribution of flood damages. Although some engineers may dispute what I say—and might even quote Webster against me—I submit that flood damages begin where the rain falls on the land, regardless of what Webster may have thought about it when he was living. The crops on upland farms that are swept down by storms that cause great floods are just as truly lost as the crops on overflowed land in the valley below. The soil washed off upland fields reduces the productivity of the land just as much as does deposition of soil by the water flooding over agricultural bottom-lands along the rivers. Floodwater damages to agricultural lands in thousands of miles of small creek bottoms throughout our watersheds represent just as much loss per acre as flooding of the wide Missouri River Valley between Kansas City and St. Louis.

1951 FLOOD DAMAGES ON UPSTREAM WATERSHEDS

The Soil Conservation Service has just completed a preliminary survey of the storm and flood damages in Kansas and Nebraska during July. This is what we found. Losses of crops on upland farms amounted to approximately \$110,000,000. Losses or irreplaceable topsoil, the thin and fertile layer that sustains agriculture in this granary of the Nation, has been estimated at \$200,000,000. This figure is based on the differences we have found in crop yields with different depths of topsoil. Losses from floodwater and sediment in the creek bottoms and small stream valleys, above the points where anyone has yet proposed specific flood protection measures, were estimated at \$102,000,000. The total of these three figures is \$412,000,000. Additional losses in Missouri, Oklahoma, Iowa, Illinois, and other neighboring States would bring the total to well over a half billion dollars in the one month of July.

Without in any way minimizing the staggering losses at Kansas City and along the major river valleys, we believe that these astounding damages along the tributaries are convincing evidence that a flood-control program aimed only at downstream cities and river bottoms is only a partial flood-control program and not one designed to benefit all the people who have suffered losses.

Let me give you another reason why this country needs a coordinated and complete flood-control program extending to every acre all the way down to the sea. To be sure, superfoods like this last one are comparatively rare events. I am told that the flood discharge at Kansas City far exceed the highest ever previously experienced, which was back in 1844. When an event exceeds all previous expectations and wrecks such havoc, it not only makes banner headlines, but it becomes an historic classic. It gets into our memories and textbooks. People come to look on it as characteristic rather than something rare—or unique. Actually, if one spreads the enormous damage caused by this flood over all the years between such rare events, the average annual loss is considerably less than the damages from all the smaller local floods than occur year after year in the smaller watersheds throughout Kansas, Nebraska, Missouri, Oklahoma, Iowa, and Illinois. A typical example of the smaller, more frequent floods has occurred here on Salt Creek these last 2 years. You local people are only too familiar with this kind of flood.

UPPER WATERSHEDS ARE SOURCE OF MOST FLOOD LOSSES

Our surveys show that 75 percent of our average annual flood loss has occurred above the main river valleys and large cities. This, of course, is due in no small measure to the fact that a substantial part of our major river flood plains and cities are already protected by levees and major reservoirs, for which credit is due primarily to the effective work of the Army's Corps of Engineers.

I can give you still other reasons why a coordinated approach to flood control is essential. Soil erosion on watershed lands must be brought under control to protect downstream flood-control works. We must control erosion to protect our flood-control reservoirs from rapid silting and loss of effectiveness. We must control erosion to prevent the silting of stream channels, which further reduces their flood-containing capacity. We must control erosion, moreover, to prevent overwash of infertile sand and subsoil material on our productive bottomlands. But even more important than all of these, we must control soil erosion if we are to maintain the base of our agriculture, our national strength and defense, and indeed prevent our civilization going the way of many great nations of the past which failed to take care of their agricultural land.

SOIL CONSERVATION SERVICE'S FLOOD-CONTROL POLICY

So that there may be no mistake about where we stand in the Soil Conservation Service, let me reaffirm:

1 That we believe, and our widely multiplied experience confirms, that flood control is a job which begins where the rains fall and the runoff starts; that is, in the fields and pastures, and forests, and ends only when the runoff has safely reached the ocean.

2 That we believe wholeheartedly in coordinated planning and treatment of entire watersheds and drainage basins in cooperation with the Army Corps of Engineers, with soil-conservation districts, with watershed associations, and with all other Federal, State, and local agencies that have a responsibility in land and water management.

3. That the work of the Soil Conservation Service is in the fields and pastures and wood lots on the upstream tributaries of the major rivers. Our job is first to assist landowners and operators to use their land within its capability, and to treat it with sound conservation practices in accordance with its needs. Beyond this, our job is to assist organizations of local people to install upstream flood-prevention measures, such as small retarding structures, gully plugs, and channel improvements. If through such a program we can cause the water which falls on the lands in the upper watersheds, or even a considerable part of it, to delay its race to the sea, we have by that action won part of our objective—completed part of the job.

But this kind of program alone will not prevent flooding of the main river valleys and the cities in them.

I understand that some of your local papers have editorially attributed to soil conservationists claims to the effect that the amount of money spent on large flood-control reservoirs would, if spent in the watersheds, dry up the rivers. I don't believe any employee of the Soil Conservation Service ever thoughtfully made such a statement. If he did, I repudiate it here and now. In my opinion, additional controls such as reservoirs, levees, and other main channel protective works will be needed to safeguard the flood plains of our major rivers against such disasters as we have just experienced. This trunk-channel job is the responsibility of the Corps of Engineers, which has ably fulfilled its part of the job for more than a century.

4 We believe that coordination of the river control and watershed programs was the intent of Congress when it passed the Flood Control Act of 1936. We believe it is still the intent of Congress. We do not believe that Congress intended one program to be in any sense a substitute for the other, but rather that they should be complementary parts of a single job.

The Complete Watershed Program in Flood Control—Part II

EXTENSION OF REMARKS OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 10, 1951

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by H. H. Bennett, Chief, United States Soil Conservation Service, at the newspaper editors' flood-control meeting, Lincoln, Nebr., August 11, 1951:

The Flood Control Act of 1936 and subsequent acts provide all the authority needed

by the Department of Agriculture and the Corps of Engineers to work together in planning and carrying out a complete program for alleviating flood damages and conserving soil and water resources. Such watershed and river basin plans for flood control, as we see it, involve three principal types of operations, namely:

PRINCIPLES OF WATERSHED-RIVER BASIN TREATMENT

1. Land treatment: Our conservation farm and ranch planning is based on the principle of treating every acre of land according to its need, and using each acre according to its capabilities (that is, for cultivated crops, grass, timber, or wildlife). It also includes safe and orderly disposal of runoff water originating on the farm or ranch. Land-treatment measures prevent erosion, maintain soil fertility, conserve water by storing it in the soil, prevent damage on the farm from the erosive action of rainfall and runoff, and reduce the sediment loads of creeks and rivers. Land-treatment measures are now being rapidly installed by landowners throughout this area—as well as in other areas—under the programs of the locally organized soil conservation districts, aided by technical assistance from the Soil Conservation Service and by other forms of assistance such as educational and financial. We have ample authority for this part of the program, but funds available for technical assistance fall far short of the need. If we expect to achieve substantial flood protection in the next 10 to 15 years

2. Upstream engineering for waterflow retardation and channel stabilization. This phase of the watershed plan involves work on the tributaries and waterways to control or retard runoff from neighboring farms. These measures alleviate damage to the agriculture of the smaller watersheds above the downstream engineering works. It slows runoff and stabilizes sources of sediment in upstream channels.

We are doing these things now just as rapidly as our facilities permit.

3. Downstream engineering for flood control. This comprises the work done on the major waterways to control runoff after it has reached the main stream. It alleviates urban damages and damage to agriculture in the flood plains of the major rivers. This major engineering work is the responsibility of the Corps of Engineers.

There you have, as we understand it, a coordinated approach to flood prevention and control—a program that protects the farmer or rancher of the uplands as well as of the lowlands, while protecting the cities, too.

Congress has so far authorized watershed programs, including land treatment and upstream engineering, on 11 watersheds in different parts of the country. Many of you no doubt are acquainted with the work under way on the Little Sioux watershed of northwestern Iowa, and the Washita River of Oklahoma. We are carrying out the works of improvement in these two flood-control projects—as in the other nine—primarily through the farmers' soil conservation districts. In all instances our work is coordinated with the authorized work of the Army engineers farther downstream.

NEBRASKA'S SALT-WAHOO WATERSHED IS GOOD ILLUSTRATION

We need go no farther than the city limits of Lincoln—into the Salt-Wahoo watershed—to find what is to my mind a splendid example of the coordinated watershed approach to flood control. Here is a striking illustration of effective community cooperation, including the Salt-Wahoo Watershed Association, which is made up of city people and farmers in soil-conservation districts, the Soil Conservation Service, the Army engineers, and other local, State, and Federal agencies.

Joint studies of this watershed are being made now by our Service and the Army engineers under authority of the Flood Control Act of 1936. We hope that this study will lead to authorization of a coordinated program for flood control in this area similar to that already authorized in 11 other watersheds. I think the soundness of this cooperative approach was well stated in the progress report on the joint watershed survey made by these two agencies (Army engineers and Soil Conservation Service). The report pointed out that the two agencies had one objective in this study—that is, to prepare an over-all plan for the entire watershed "which will represent, from the standpoint of both agencies, the best plan for the basin as a whole which is practicable within the limits of economic feasibility, and one which both agencies can recommend and support without reservation."

"Both agencies feel," the report added, "that this objective can best be realized by a joint study which will produce a single plan mutually developed by both agencies rather than a compromise between two individual plans developed by the two agencies acting independently."

The Salt-Wahoo undertaking also graphically illustrates the importance and effectiveness of local group action in watershed planning and development. Here, as elsewhere, the local soil-conservation districts are taking an important part in the permanent watershed program. As the principal organization through which soil and water conservation measures are being applied to the land by individual farmers the country over, it is only logical that these districts also should be called on to serve directly in such flood-control activities in the public interest.

IMPORTANCE OF GROUP ACTION—SOIL CONSERVATION DISTRICTS

By the same token, the Salt-Wahoo situation shows why there is a place for an advisory group, committee, or association like the Salt-Wahoo Association, which brings together the interests of farmers and city people. In other words, for a watershed-development program to operate successfully—in Nebraska, Kansas, or anywhere else—the basic responsibility for that program must involve the people residing in the watershed. That means there must be a local responsible organization such as a soil-conservation district, watershed association, or flood-control district, which is representative of all the interests in the watershed and which can act to coordinate the activities and services of all agencies and interests to formulate the necessary broad, flexible program for watershed development and protection.

We have found that the most efficient way of carrying the soil- and water-conservation job beyond the planning stage anywhere is through coordinated group action of the landowners and operators—with technical and other assistance from other sources. Group action is especially effective, and necessary, in dealing with problems of watershed extent. Soil-conservation districts themselves, of course, are basically group-action devices; and their efficiency and success in this direction have been proved by their rapid organization and growth. In only 14 years, approximately 2,350 such districts have been formed in the 48 States, Alaska, Hawaii, Puerto Rico, and the Virgin Islands. They now include more than four-fifths of the farms and ranches in the United States and three-fourths of the country's farm land. Fortunately, the area you editors represent is largely within soil-conservation districts. Nebraska, for example, is one of 10 States completely covered by soil conservation districts. Kansas is not far behind with more than 99 percent of its area in districts; while Iowa is 98½ percent covered. If your county doesn't yet have a district, I recommend that you urge the local people to organize one.

SPECIAL TECHNICAL SKILLS ESSENTIAL IN WATERSHED TREATMENT

Let me emphasize, however, that planning and application of the watershed program requires special technical skills. Downstream, as you know, the highest order of engineering skill is necessary for building big dams, main channel stabilization works, and so on. Also, in the uplands technical know-how is required to plan and apply sound land treatment and upstream-engineering measures. Such plans must be based on painstaking research and on wide practical experience. They must take into account the principles of hydrology, engineering, agronomy, land science, forestry, biology, and other related fields. Under varying conditions of climate, topography, and drainage, the wrong thing done, or the right thing left undone, or any part of a farm can do serious injury.

In no event can this watershed planning and treatment be accomplished overnight by some magic formula, although it takes heavy rains and excessive run-off only a few days, or even hours, to do irreparable damage to watershed land and property. Our conservation land-treatment and upstream-engineering activities are based, in the first place, on detailed land-capability surveys. They show, acre by acre, the needs and capabilities of the land in relation to combinations of such factors as soil, slope, rainfall, erosion, and so on. Our watershed plans involve the location of sites for small floodwater-retarding structures, water-disposal systems, gully-control structures, streambank stabilization, and other upstream-engineering measures.

Our Soil Conservation Service technicians work out on the land cooperatively with farmers, covering entire farms, acre by acre, and field by field. We cannot depend on windshield surveys and office planning in doing a job of the complexity and magnitude of safeguarding the farm lands of the Nation. Nor can we have a ready-made plan including a fixed set of practices to slap on any farm or watershed. Land, and the behavior of the water that falls on it, differs from watershed to watershed, from farm to farm, and from acre to acre. So every watershed and each parcel of land must be dealt with individually.

That, briefly, is how we go about the treatment of agricultural land for effective soil conservation and flood control. We have developed a unique combination of soil conservation, engineering, and vegetative practices designed to dispose of surplus water safely while making the best practical use of the water that otherwise would be wasted. For the first time in history, we are going into the small watersheds to do everything possible to provide relief from recurring flood damages.

FLOOD CONTROL BENEFITS DEMONSTRATED

Splendid examples of the effectiveness of tributary stream flood control can be cited from the experience of the Soil Conservation Service.

On May 16, this year, Sandstone Creek with a watershed of 65,000 acres, southeast of Cheyenne, Okla., had 4½ inches of rainfall. The watershed had been treated for soil conservation and flood control. The runoff water did not even come up to the drawdown pipes in the dams. None of the permanent pools were filled. Sandstone Creek, which had been noted for its flooding, contributed practically no flow to the Washita River, while other similar creeks of the locality were flooding and doing great damage.

Farther west, near Clinton, during the same wet period, the Barnitz Creek watershed received about 13 inches of rain within 24 hours. Within its watershed of 4,000 acres four detention structures had been built and the usual surface treatment of terracing, regrassing, contouring, and the like had been completed. The creek stayed within its banks while neighboring creeks did great damage with this same precipitation.

WATERSHED TREATMENT ALSO PROTECTS RESERVOIRS

Rates of silting have been measured two or three times in some reservoirs—first, before any conservation work was done on their watersheds and again after a substantial part of the needed conservation measures had been applied. Treatment of about 40 percent of the watershed resulted in a 33 percent reduction in the silting rate of the municipal reservoir at High Point, N. C. In contrast, it was found that more intensive use of land for row crops and lack of conservation measures caused an increase of 20 percent in the silting rate of the water supply reservoir at Decatur, Ill.

In conclusion, let me say that with whatever resources we are provided the Soil Conservation Service will continue to work toward sound soil conservation, wise land use, and protection of the Nation's water resources as well as its land. We will do this in cooperation with local, State, and Federal agencies, or with any other organizations and groups which have like objectives. In working toward the permanent solution of our water problems, the service will continue to give full consideration to all beneficial water uses, including those for recreation and wildlife. Also, the service will continue to encourage conservation districts and other conservation organizations to use, to the fullest extent practicable, all available assistance from public and private sources.

Our men throughout the field are acquainted with the principles I have mentioned and I am sure you may count on their living up to them to the fullest possible extent. We will actively cooperate with soil conservation districts and other similar groups. This, together with the positive support of agencies and community leaders like those represented here, who are in a position to help, will expedite the conservation program throughout the country.

We have the knowledge of how to do the job, the conservation tools have been perfected and tested, we have an organization equipped not only with the necessary technical skills, but with the knowledge and understanding to work with local people, individual farmers, community groups, organized districts and associations, city people, and industries as well. As a Nation we have no excuse for not doing the job of conserving our basic soil and water resources; indeed we dare not shirk it, because our individual and national security, peace, and prosperity depend on it.

Antidiscrimination Legislation Has Worked and Is Working in New York

EXTENSION OF REMARKS OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. KLEIN. Mr. Speaker, I am, as Members know, an enthusiastic supporter of a Fair Employment Practice Act because I know that the law can help form folkways. Certainly when the Supreme Court struck down the civil-rights statutes over 50 years ago a powerful shove was given to latent racism; the momentum of that shove is only now being overcome.

In the May issue of the *Annals of the American Academy of Political and Social Science* there appeared a scholarly article by Mr. Will Maslow showing that

New York's State fair-employment-practices law has worked in New York and is continuing to work, and that there is no longer any question of its value in an industrially strong democracy.

To save space, I have omitted all footnotes and references and a portion of the text which does not affect the main thesis.

PREJUDICE, DISCRIMINATION, AND THE LAW

(By Will Maslow)

In December 1944 a New York legislative investigating committee recommended the enactment of a State fair employment practice law. The bill introduced to carry out the committee's recommendations proposed the creation of a State commission against discrimination with power to investigate complaints, hold public hearings, and issue cease-and-desist orders enforceable in the courts. At that juncture, six distinguished New York citizens, including Oswald Garrison Villard, all of whom strongly opposed racial or religious discrimination, wrote to the *New York Times* on February 13, 1945, opposing the fair-employment-practice bill as a remedy worse than the disease. They urged that it was far wiser to rely on the force of slow but steadily growing public opinion than on any coercive legislation. Their view was not shared, however, by the Republican-dominated legislature, which quickly adopted the first State FEP law.

The lugubrious prophecies of the six liberals have not been fulfilled. The New York State Commission Against Discrimination has not been overwhelmed with claims. It has been demonstrated that it is possible to lessen discriminatory practices by law and serious harm has not been done to the entire antidiscrimination movement. On the contrary, since 1945 seven other States (New Jersey, Massachusetts, Connecticut, Rhode Island, Washington, Oregon, and New Mexico) have enacted FEP measures modeled on New York's Ives-Quinn law. Two States (New York and Massachusetts) have adopted fair educational practices laws. Two others (New Jersey and Connecticut) have created new administrative machinery to enforce prohibitions against discrimination in hotels, restaurants, theaters, and other places of public accommodation. Finally, six States (Indiana, Minnesota, New Jersey, New York, Pennsylvania, and Wisconsin) have forbidden discrimination in housing built with the assistance of the State, the so-called urban redevelopment projects.

DISCRIMINATION DISTINGUISHED FROM PREJUDICE

But even were we to accept this popular notion, discrimination as distinguished from prejudice could still be attacked successfully. Many victims of discrimination cannot wait upon the long difficult, and uncertain process of eradicating prejudiced attitudes. They are concerned here and now with hostile acts. They are willing to risk working, studying, living with bigots, if only they may be granted opportunities still denied them. Whether or not rigid subjective attitudes can be softened, this group seeks to attack outward behavior so that it may reap the fruit of such work. Even if legislation had no effect on prejudicial attitudes or worsened them, this group would nevertheless press for curbs on discrimination.

Fortunately, we know a great deal more about prejudice and discrimination than was known a generation ago. We know that they are different phenomena, differently motivated and responding to different treatment. We can no longer accept as a simple axiom that prejudice causes all discrimination and that removing the latter is impossible unless the former likewise is extirpated. We know, for example, that many a person conforms to the discriminatory patterns of his group, not because he is prejudiced but because it is easier to discriminate than to

resist the group's demand for conformity. We know, too, that attitudes do not automatically flower into behavior, and that whether or not a prejudiced person acts in accordance with his beliefs depends on many factors, not the least of which is the community's notion of what is right and proper. We also know that while some prejudice is based on misinformation, a more significant root cause is the status gain achieved by looking down on an inferior group. Finally, recent studies of the authoritarian and prejudiced personality indicate that hatred and hostility toward large groups in our society are essentially a displacement into other channels of aggression bred by frustration.

THE CONFORMITY FACTOR

Much discrimination does not stem from prejudiced attitudes but from the need to conform to prevailing social standards. When Dr. Cheln refers to as the "conformity dimension of prejudice" plays a large role in sustaining discriminatory behavior. As he points out, "educational measures applied to this dimension only succeed in engendering guilt feelings" and perhaps hostility toward the victim of the discrimination. The importance of this conformity is likewise stressed by Professor Merton, who describes the "fair-weather liberal or the unprejudiced discriminator who follows community patterns without believing in them.

In no community, no matter how prejudiced, is there a uniformity of attitude. Northerners are prone to regard the South as one undifferentiated mass of bigotry. Such a conclusion is of course preposterous. The best demonstration of its falsity is the elaborate legal measures designed by the southern lawmaker to create and reinforce prejudice. If everyone in the South looked at the Negro with contempt and revulsion, it would not be necessary to enact laws (and occasionally to punish violators) forbidding racial intermarriage and rigorously commanding the separation of Negro and white. Southern Jim Crow laws are designed to whip the rebel, the nonconformist, and the laggard in line. It is this minority lacking prejudice but conforming to the mores that would readily accept and obey a statute which forbids antisocial or discriminatory behavior.

How large this minority is, even in the South, is indicated by recent opinion polls. A survey of factory workers' opinions by the McGraw-Hill research department showed that 48 percent of southern workers approved a Federal Fair Employment Practices Act. A Gallup (American Institute of Public Opinion) poll of January 17, 1949, revealed that one-third of southern whites favored a Federal antilynching law, and one-sixth did not believe that Negroes should be segregated on interstate railways or busses.

Recent findings by psychologists indicate that conventionality and submissiveness to authority play a significant role in the prejudiced personality, that "he would be impressed by legal restraints against discrimination," and that his "self-restraint would increase as minority groups became stronger through being protected." Such an insight leads the way to the profound conclusion that, if prejudice causes discrimination, discrimination causes prejudice, and that an attack on either will lessen the other.

EXPERIENCE IN HOUSING PROJECTS

New York City in the last decade has been engaged in a tremendous public housing program. Today 50,000 families, about 200,000 persons, live in such housing projects in that city. All of that housing is completely biracial and unsegregated. The administrators of this vast housing program were concerned with providing shelter for those desperately in need of decent homes. Psychologists, however, wondered what effect this

living together had in an atmosphere where Negro and white were considered as equal and where there were no all-Negro or all-white projects or buildings or even wings. They compared the attitudes of housewives in two New York City housing projects with two comparable Newark, N. J., projects where Negroes and whites lived in the same development but were assigned to different buildings or portions of buildings. Having satisfied themselves that both groups of tenants were people of similar education and circumstances, who possessed similar attitudes toward Negroes before moving into these housing developments, they learned that after living in such projects:

1. The attitudes of the housewives in the two integrated projects were considerably less prejudiced than those in the two segregated ones. From 10 to 13 percent spontaneously revealed prejudice in the former, as against 31 to 38 percent in the latter.

2. Two-thirds of the housewives in the integrated projects reported a desire to be friendly with their Negro neighbors, as against one-tenth in the segregated projects.

3. In the segregated projects from 72 to 82 percent stated that they would rather not live in the same buildings with Negroes; in the integrated projects the corresponding percentages were 22 to 25 percent.

4. Finally, and most significantly, the percentage of those who themselves reported a changed attitude in favor of Negroes was 59 and 62 percent in the integrated projects, and only 13 and 17 percent in the segregated ones.

So we find that an effort to eliminate discrimination has resulted in significant changes of attitudes, in a lessening of prejudice more substantial than could have been achieved by frontal assaults on mental states.

IN THE ARMY AND IN DETROIT

The same change of attitudes took place under dramatic circumstances during the fighting in France. Faced with a shortage of combat troops, the theater command of the Army invited Negro service troops in the area, then serving in segregated units, to volunteer for combat service in white divisions. Negro soldiers organized into platoons were then placed in white regiments in 11 white combat divisions, where they fought side by side with white troops for months.

Thereafter, white officers and men in seven of the divisions were interviewed, including two divisions composed of men predominantly southern in background. Although two out of every three white men admitted that at first they had been unfavorable to the idea of serving alongside of colored platoons, three out of every four stated that the feeling had changed after this combat service. The response of the southerners varied only slightly from that of nonsoutherners.

That living or working together on a plane of equality results in a lessening of prejudice was demonstrated by the experiences in the Detroit race riot of June 21, 1943. Although this bloody riot raged through the entire city, competent observers reported no untoward incidents in mixed neighborhoods where whites had lived alongside of Negroes, in the Detroit war factories where integrated employment was the rule, or in Wayne University, in the heart of Detroit, where Negro and white students continued their classes without any friction.

These experiments have great potentialities in race relations. They show not only that discrimination may be lessened without first removing prejudice but also that removing discrimination results as a by-product in a lessening of prejudice. Thus, as Roscoe Pound has observed, law makes habits instead of waiting for them to grow.

PROOF OF DISCRIMINATION

There is a widespread skepticism about the effectiveness of antidiscrimination laws which arises from the notion that it is difficult, if not impossible, to prove a case of

discrimination. Professor Saenger, in another of his studies, asked a sample of residents of New York City whether they believed the Ives-Quinn law could be effective. Sixty-nine percent of the Jews questioned did not have confidence in such legislation. The reason for this lack of confidence was the belief that an employer could always conceal the basis for his biased rejection of an applicant and that the law was too clumsy an instrument to reveal the truth.

That there are difficulties in proving an individual case of discrimination goes without saying, but Government agencies have been able to establish not only racial or religious bias but motivations far more complex. The simple fact is that discrimination involving any considerable group of persons over any considerable period of time cannot be concealed. The National Labor Relations Board has experienced no difficulty in establishing an employer's discrimination against union men in every incident of the employment relationship: hiring, promotion, transfer, and discharge. There are now over 86 volumes of NLRB decisions which record countless unsuccessful efforts of employers to conceal antiunion actions. When the Wagner Act became law in 1935, there were about 3,000,000 organized trade-unionists in the country. Ten years later, before the Taft-Hartley Act weakened the powers of the NLRB, the number of trade-unionists had risen to 15,000,000—an increase which most observers attribute in large part to the zealous enforcement of the Wagner Act. Racial or religious discrimination is in principle easier to detect, because it is directed against entire groups instead of specific individuals.

Most discrimination is crude and avowed. The factory which gives Negroes menial jobs only, the restricted development which bars Jews, the copper mine which pays Latin Americans less than "Anglos" for the same quality and quantity of work, the medical school which puts a quota on the number of Jews it admits—all of these are vulnerable to any governmental investigation.

Six years' enforcement of the New York and New Jersey FEP laws indicates that even cautious and slow-moving administrators are able to prove discrimination when in fact it exists. The New York State Commission Against Discrimination, in investigating a complaint, examines the over-all policies, practices, and patterns of an employer, as well as the merits of the individual complainant. It is significant that in almost 6 years of operation it found an over-all discriminatory policy in 403 cases even though there was no merit to the complaint of the individual who first brought the problem to SCAD's attention.

DISCRIMINATION IN EDUCATION

Proving discrimination in education likewise presents no insuperable difficulties. In 1948 David S. Berkowitz made a study of educational discrimination for the New York State Temporary Commission on the Need for a State University, in which he established the statistical principles upon which discrimination, that is, unequal treatment, could be proved. Any investigator who follows his analysis, examining both the rejected and the successful applications to a school and sorting them as to the factors, avowed and suspected, upon which selection is made, will be able to establish discrimination against a group, even though not against a particular individual.

Of course, the enterprises or institutions which will be regulated by a proposed statute will always find arguments against legislation. The Association of American Colleges meeting in 1948, while conceding the prevalence of discriminatory practices against racial and religious groups, urged education and voluntary action instead of coercive legislation. The association feared that such legislation would threaten the freedom of colleges now independent of political control.

It suggested therefore the appointment of a national commission under the auspices of the association which would launch an active program to broaden educational opportunity. Such a commission on minority groups was appointed, but, according to its 1949 and 1950 annual reports, it planned nothing, did nothing, and merely endorsed the voluntary action of other educators.

A more disinterested group of educators, the President's Commission on Higher Education, while urging educational institutions to act as pioneering agents in fighting discrimination, pointed out that the urgency of the issues did not promise to let a satisfactory democratic outcome await tardy voluntary action. In recommending State fair educational practice laws, it observed: "Where assurances of good conduct in the fields of public concern have not been forthcoming from citizens' groups, the passage of laws to enforce good conduct has been the corrective method of a democratic society.

LEGISLATION IS EDUCATIVE

An unfortunate dichotomy is sometimes made between legislation and education, as if they were conflicting techniques. The fact is that legislation thrives best when it receives the alert and informed support of the entire community. That support can be quickened and nourished by an educational campaign which attempts to encourage voluntary compliance with its provisions, to inform its direct beneficiaries how they can utilize it, to correct misinformation, and in general to transform the commands of the statute into the behavior patterns of the community. Even the campaign for the enactment of a bill is itself an educational device which stimulates the flow of information, stirs advocates and opponents to debate, and transforms the sociological problem into a popular issue. Thereafter, every step in the enforcement of such a law provides opportunities for the deepening of popular understanding and the awakening of support: the issuance of regulations, the public hearing, the announcement of cases settled, and the annual report. Civic agencies share with government the obligation to participate in this effort to educate.

Of course, the converse is also true. Carey McWilliams in a seminal essay has shown that antioriental prejudice [on the west coast] becomes a part of the mores in large part as a result of incessant propaganda and agitation for the enactment of various [antioriental] legislative proposals.

Law itself is an educational device. As Dicey has pointed out: "No facts play a more important part in the creation of public opinion than laws themselves." The enactment of a law is often the signal for a reappraisal of past thinking and past behavior, and the replacement of attitudes and conduct based on unthinking conformance to outmoded patterns. Cantril reports that after statutes were enacted repealing the arms embargo, instituting conscription, and repealing prior neutrality laws there was a 10-percent rise in opinion favorable to these actions, compared with opinion before the statutes were adopted.

USEFULNESS OF LEGISLATION

Granting the effectiveness of well-drafted laws which can be enforced, there will always be those who insist that particular legislation is not timely, that it does not have popular support, and that consequently it will boomerang. One short answer is that our legislative bodies are so slow to move, so resistant to new ideas, so packed with representatives of rural areas, that legislation really in advance of popular understanding and support will not be enacted. The civic agency which seeks a legislative reform need not be deterred, therefore, by the fear that it is acting precipitately. It will not succeed until the legislators who possess

more sensitive instruments for listening to the public pulse believe the times are ripe. Meanwhile, even the premature and, therefore, unsuccessful legislative campaign prepares the way for the future.

Of course, legislation, in the sense of statutory commands or prohibitions, will not solve every problem in race relations. When gang fights occur in a city like Boston between Jewish and Irish Catholic boys or between those of Irish and Italian descent, we are in an area where the heavy hand of law can do little more than preserve the peace. The underlying tensions created by a virulent prejudice can yield only to other remedies—not within the scope of this essay.

But when we contemplate the vast areas in which the irrelevant factors of birth or ancestry still stand as barriers to the achievement of full and equal opportunity, we must realize that no other technique of social control promises as quick, durable, and meaningful results as well-conceived and vigorously enforced civil-rights legislation.

Grass for Soil Conservation and Better Yields—Part I

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 10, 1951

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by H. H. Bennett, Chief, United States Soil Conservation Service, at grass conference, Atlanta, Ga., August 19, 1951:

I well remember how farmers of the South—and many other parts of the country, too—were being exhorted, a few decades ago, to adopt a more diversified type of agriculture. One-crop cotton farming was not getting the South ahead, we were told, and there was much truth in that point of view. The clean tillage methods used to produce cotton, along with the corn that was grown—and more cotton and little else—were conducive to erosion, 1-year tenancy, and poverty. Millions of acres had been ruined for further immediate practical cultivation and a vast area was damaged in varying degree by the erosion resulting from continuous planting of cotton and other clean-tilled crops. Furthermore, many of the people did not have an adequate diet because farmers were not producing the milk, butter, and beef needed for a good diet and a good agriculture. Most of the milk and cheese and much of the butter and beef consumed came from outside sources. That took income out and brought in nothing for the betterment of the land—not even manure.

I am sure many of you present can remember the agricultural situation in Georgia during and before the First World War. I was traveling extensively over the country during those years, and spent a great deal of my time in Georgia and other States throughout the Nation. I recall vividly the extensive cotton and cornfields of Georgia. Also, I recall the very distressing lack of good pastures and meadows. According to the statistics, United States Department of Agriculture yearbooks, Georgia farmers used around 5,500,000 acres for cotton each year from 1910 to 1920, and about 5,000,000 acres for corn—some of it half-hearted corn. At the same time, less than a half million acres of hay were harvested in the State each year. Georgia farmers were beginning to grow pea-

nuts for market. Statistics also fail to give the acreage of improved pasture at the time, but I know from personal observation it was not large. I doubt if it was as much as 50,000 acres of really good, improved, and properly managed pasture in the whole of Georgia. Moreover, the fact might be mentioned also that very few farmers were even thinking of planting winter cover crops to protect the land against erosion. And you seldom saw a farmer who was using a good practical rotation including either grass or legume.

I don't think I need to describe to this audience the erosion conditions that resulted from this type of agriculture. Soil erosion in Georgia has been rather freely advertised, both locally and nationally. Gullied and abandoned fields can still be seen in too many places, especially in the Piedmont section. And similar conditions were showing up in parts of southern Georgia.

During the decade following World War I, the agriculture of Georgia began to undergo a change. Some farmers began to heed the warnings that they must adopt a more diversified agriculture. The boll weevil discouraged many farmers from overplanting to cotton, but some went on planting little but cotton—and corn. I have heard it suggested that the boll weevil may have been something of a blessing in disguise to many Southern farmers. The greatest shift in crop production, however, at that time was from cotton to peanuts in Georgia, and somewhat later to tobacco. These shifts were more or less of a local nature. It seems that many farmers thought that if they rotated peanuts (a legume) with cotton and corn and used more fertilizer, they could maintain the fertility of their land. To check erosion in their cotton, corn, and peanut fields, they relied largely on terracing.

Some of you may remember the first two decades of the century when terraces were constructed on thousands of acres in Georgia. Farmers generally seemed to think that a few terraces across clean-tilled fields would halt the erosion that was steadily impoverishing their land. Often they built the terraces on land that was too steep and these without proper outlets. Tillage operations were frequently carried on across the terrace ridges—a practice that quickly causes breaks in the system. At the best, the terraces only slowed down erosion, at the worst, they did more harm than good. American farmers and agriculturists, in general, had not then conceived the idea of coordinated soil conservation treatment of the land—where each tract is used within its capabilities and treated according to its needs as determined by its condition. Most of them had not realized the highly important part vegetation must play in any practical and effective erosion control-soil improvement program. In other words, most farmers were struggling along with halfway soil conservation measures, applied in piecemeal fashion.

GRASS WAS TAKEN FOR GRANTED

Grass was more or less taken for granted by Georgia farmers, and too many other American farmers, also, up to the beginning of our national soil-conservation program in the early thirties. A few farmers occasionally planted some type of grass—frequently not the most adaptable or best variety. In the main, if a farmer wanted grass for hay or pasture, he just waited for it to grow somehow. Sometimes nature would plant and grow a fairly dense stand of fairly good grass, more often she would grow a scant stand of poor grass, along with plenty of weeds. Even those who seeded grass seldom thought of fertilizing it or giving it any special care. They assumed that grass would take care of itself.

Legumes were given a little more consideration, but not nearly enough. Too often, when seeded, they were planted on the poorer

land and given no special care. They were used in regular crop rotations by very few farmers, and seldom as a protective cover crop or catch crop for soil conservation.

In other words, American farmers were essentially row-crop and grain farmers—in the South principally the former. Improved grasslands had little place in the scheme of American agriculture.

It is vastly different now. Grass and legumes have become important crops to hundreds of thousands of farmers all over the country, and especially in Georgia and other Southeastern States. Now more and more grass is being planted, fertilized, and taken care of just as diligently as cotton, corn, tobacco, or wheat. The farmers have become grass-legume conscious—and from that "grassland farmers."

WHAT IS GRASSLAND FARMING

The term "grassland farming" has become so popular in recent years, it probably should be defined at this point. What does it mean? It simply means giving grasses, legumes, and other sod crops a much more important place in the farming system. It means more and better pastures and ranges. It means more grasses and legumes in the crop rotations and more and better hay crops and grass silage. It means more and better cover crops, grass waterways, strip crops, including the grass and legumes, and the use of sod crops in any other way that helps conserve soil and water and, at the same time, constitutes an important source of income. It also means better balanced and more profitable farming; more diversified farming with less risk, by having a too restricted income source.

Practically all grasses and legumes conserve both soil and water and improve the structure of the soil. They are the farmer's principal agents for controlling erosion on sloping land in many parts of the country. Nearly always they improve both soil tilth and fertility and increase the water-absorbing and water-holding capacity of the soil, whole growing, and also after being turned under as green manure or left on the ground surface as a protective mulch.

The advantages of grassland farming, moreover, are not limited to beneficial effects on the land. Grassland farming takes less labor than cultivated crops. The labor is usually distributed more evenly over the year, and in these times of farm labor shortage this is important. It has increased the income of nearly all the farmers who have really tried it out. Furthermore, it is usually a more interesting and enjoyable way of farming. Many farmers enjoy working with livestock more than the usually harder labor of planting, cultivating, and harvesting row crops. And good grass is the main base for profitable livestock farming.

GRASS FARMING FOR EROSION CONTROL

With all of its advantages, one might suppose grassland farming would have become more popular long ago. More pay with less work and more enjoyable work should appeal to any farmer, it would seem. But as long as good land was plentiful, few farmers awoke to the fact that more grass and legumes meant better pay and less work. Most of them started grassland farming within the last 10 or 15 years, mainly to control soil erosion. They became increasingly interested when they saw how their farms and ranches were being safeguarded from impoverishing erosion and useless runoff of water—and otherwise benefited. They learned also that the crops and the milk and beef they produced are profitable crops.

When the old Soil Erosion Service (later the Soil Conservation Service) started its conservation program back in 1933, the need for more grassland farming became strikingly obvious. There was no other practical way to plan a thorough-going, balanced soil and water conservation program for a great number of farms and ranches of the country.

Grasses and legumes were needed and were used increasingly as the national program of soil conservation advanced.

For example, the soil conservation experiment station at Guthrie, Okla., has found that more than 10 times as much rain water runs off an 8-percent slope planted to cotton as from the same type of land covered with Bermuda grass, while the corresponding loss of soil amounted to nearly 500 times as much. At Bethany, Mo., the soil conservation experiment station found that more than 4 times as much water runs off a sloping cornfield from the same kind of land planted to alfalfa, with the corresponding soil loss amounting to about 400 times as much. The soil conservation experiment station at Zanesville, Ohio, compared the runoff and soil loss from an unimproved native pasture with that from a pasture which had been limed, fertilized, and planted to a good pasture mixture. It found that the runoff was more than three times as much from the native pasture and the soil loss about twice as much. At Statesville, N. C., in the Piedmont, the average annual loss of soil from cotton was 31.28 tons per acre, as against only 0.3 ton lost from the same kind of land on the same farm where there was a good grass cover. Thus, grass was 104 times more effective in holding soil against erosion than cotton.

It was research findings such as these that made grass enthusiasts out of our soil-conservation technicians, as well as many farmers. The conservationists began to recommend more and better grasses and legumes. Conservation-conscious farmers soon saw the light and the movement began to get under way.

GRASSLANDS BRING UP NEW PROBLEMS

It was not all smooth sailing; more was involved than just planting grass on formerly cultivated land and watching the grass grow. It wasn't always easy to change from straight row-crop farming to grass farming. More land in grass usually meant more livestock—and more manure on the land, or part of the land. Many farmers had to buy the livestock to start with, and often on credit. Some row-crop farmers found that they had to learn new methods of farming in order to grow and to harvest the advantages of these hay and pasture crops. In some instances new machinery was needed. Usually more fencing was necessary. In fact, it almost added up to a new way of farming for many operators; often it meant a complete overhauling of the farm. In spite of these obstacles, however, the grassland movement gained adherents rapidly. At the moment, probably at least a fourth of the million farmers cooperating with soil-conservation districts of the country are, to some extent, either grassland farmers or are becoming grassland farmers.

CONSERVATION NURSERIES SUPPLY MORE AND BETTER SEED

Both the soil-conservation technicians and the farmers soon ran into difficulties of another kind. They couldn't find enough seed to plant all the pastures, range areas, eroded fields, critical slopes, and waterways that needed to be covered with a good, protective sod. They had to sponsor a big seed-growing campaign. The Soil Conservation Service nurseries in many parts of the country undertook, in the thirties, to help supply more and better seed for the conservation grass program. Eventually, some 50 such nurseries were established (the Service still operates 24 of them).

Specialists attached to these nurseries looked over our grass acquisitions from many parts of the world, and over our wild natives, too, for new and better species and strains of grasses and legumes. Up to the present, thousands of different kinds of promising grasses and legumes have been ferreted out and their values observed in the nurseries.

Some of the foreign species came through the Plant Exploration and Introduction Division of the Bureau of Plant Industry. Some were picked up by service technicians traveling abroad, and others were sent by friends and scientists from foreign countries. The highways and byways of this country were searched, too, for both native and naturalized species and varieties. Several dozen native grasses have already proved worth while, and have gone into use in our American agriculture as domesticated natives—as the result of the carefully planned and prosecuted search for new conservation tools for the program.

Promising strains or species were planted in small plots at one or more nurseries. They were observed and their growth habits studied, sometimes for several years. If they looked exceptionally promising, seed were harvested and larger plots planted. Then the seed from these plots were planted on several farms of the region to see whether the plants still grew favorably under average farm or ranch conditions. If a plant met the tests satisfactorily, the conservation nursery then planted larger areas for seed multiplication. These seeds were shipped in small lots to soil-conservation districts in those areas considered adaptable to the plants. Enough seed to plant seed-increase plots were sent to soil-conservation districts having adaptable growing conditions for the particular grass or legume at hand. The districts, in turn, turned their seed over to interested farmers for use and further multiplication. Farmers often multiply the seed and sell them to their neighbors.

THE SPREAD OF BETTER GRASSES AND LEGUMES

It was through this conservation nursery program of discovery, observation, multiplication, and distribution that many of the important grasses and legumes of today were spread to conservation farmers. For example, some years ago nurserymen of the Service discovered two promising strains of Bahia grass, one at Pensacola, Fla., and the other at Wilmington, N. C. The original seed of these grasses probably had come to the country as stowaways on ships from South America. Some seed were collected and observational plantings made at two Service nurseries. Both grasses came through all tests most promisingly and were then multiplied at the nurseries and distributed to soil conservation districts throughout the Southeast. More than 100,000 acres had been planted to these grasses by 1950. Last year enough of these seeds were harvested by farmers and nurseries to plant another 150,000 acres. Thus a valuable new pasture plant was added to the Nation's agriculture. And so it has been with many other grasses and various now highly important legumes.

Something over a decade ago it was learned that a strain of tall fescue had been growing on the Sulter Farm in eastern Kentucky since about 1890. In 1941, the Soil Conservation Service bought about 100 pounds of seed from this farm. The purchased seed was planted at the Chapel Hill Nursery in North Carolina for increasing the supply. Since 1942, enough seed has been produced from the original purchase to plant one or more 5-acre seed-increase plots in soil conservation districts in 687 counties in the Southeast. This grass (variously called Sulter's grass, tall fescue, Kentucky fescue, Kentucky 31) has proved so sensational that it has spread widely through the Southeast and as far west as Texas and Oklahoma. It also has spread to the Middle West and parts of the Northeast. By 1950, more than a million and a half acres had been planted throughout the country. Enough seed was harvested last year to plant another million and a quarter acres. In Georgia alone, enough seed was harvested by soil conservation districts and cooperating farmers to plant nearly 100,000 acres. And these new grass seed are actually being planted, not just harvested for chicken feed.

Grass for Soil Conservation and Better Yields—Part II

EXTENSION OF REMARKS OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 10, 1951

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by H. H. Bennett, Chief, United States Soil Conservation Service, at grass conference, Atlanta, Ga., August 19, 1951:

The story of crested wheatgrass in the northern Great Plains is somewhat similar to that of Suiter's grass. Crested wheatgrass, I have been told, was introduced into this country from Russia in 1898. The North Dakota agricultural experiment station at Mandan showed that it was a valuable grass for the region, as early as 1915; but by 1934 only a few thousand acres had been planted by scattered farmers and ranchers (as well as could be determined). Soil conservationists decided it was one of the best grasses to plant on "blown-out" croplands and denuded ranges over much of the northern and central Great Plains. Nurserymen and field technicians began multiplying the seed and distributing them through soil-conservation districts. Several million acres have now been planted to this valuable pasture plant.

Blue lupine was doing fine at the experiment station at Quincy, Fla., in 1937; but not much of it was being grown by farmers. Soil conservationists observed it and thought it might make a fine winter cover crop, especially for the peanut fields of the South. Nurserymen and soil-conservation field technicians started multiplying and distributing the seed. Soil-conservation districts of the South gave excellent cooperation. During World War II, peanut acreage was greatly expanded. Erosion had been unusually severe on the sandy peanut lands after the crop was harvested. In this situation, blue lupine proved itself a valuable soil-saver, as well as soil-improver. Today, practically all conservation-minded peanut farmers of the southerly peanut area seed their peanut land to blue lupine during the summer. It serves as a protective winter cover and is often plowed under as green manure in the spring. In 1950 enough blue lupine seed was harvested to plant more than two million acres.

I might cite one example of what blue lupine is doing for peanut farmers of the South. Mr. W. C. Aultman, a soil-conservation district supervisor at Bainbridge, Ga., says that he decided in 1942 he had failed as a peanut farmer. This crop, along with the cotton that had formerly grown on the farm, had so depleted his land that he was raising only 400 to 500 pounds of peanuts to the acre, and his yield of corn was about 10 bushels. He became interested in blue lupine, purchasing enough seed to plant about 50 acres. He produced 800 pounds of seed per acre from that crop. He decided that this was better than the meager peanut and corn crops he had been raising, so he quit planting row crops altogether for 5 years. He planted 200 to 300 acres of lupine each year and harvested about half of it for seed. He produced 800 to 1,400 pounds of seed per acre. Since there was a ready market for the seed, he found it a valuable cash crop. In 1948, Mr. Aultman began planting limited amounts of row crops on the land that had been in blue lupine. His peanuts averaged better than a ton per acre

and the corn made about 45 bushels the first year.

Ladino clover was well known to most agronomists and a few farmers of the Eastern States, but it was not being planted extensively. Conservationists began recommending it as a soil-conserving and forage plant. Its use spread rapidly. Enough seed were harvested last year to plant nearly a half million acres. Crimson clover was well known through the East and South, too, but it was not used extensively until soil conservationists started using a hard-seeded strain that would reseed itself annually. Now it is planted on several hundred thousand acres. The seed harvest for last year alone was enough to plant nearly a half million acres.

The lespedezas, vetches, and others have similar histories. And we should not forget kudzu and Bermuda grass (usually multiplied by crown or sprig plantings). These gully-stoppers and fine pasture and hay plants came into widespread use mainly because conservation farmers and technicians wanted plants that would stop soil erosion while also producing good forage. Then there are blue panicum, weeping lovegrass, and King Ranch bluestem in the Southwest. One of them came from Australia, one from Africa, and the other originally from Asia. All three are valuable strains, now spreading rapidly among southwestern ranches and farmers. Pangola grass from Africa is spreading rapidly as a pasture plant in Florida, especially on sandy lands. Smooth brome grass in the Middle West and many native grasses, such as the bluestems, grammas, sand lovegrass, and Indiangrass in the Great Plains, have spread phenomenally. Dozens of others have had less phenomenal seeding histories but are filling important needs for certain situations.

And this process of exploration, observation, multiplication, and distribution is still going on.

CONSERVATION FARMERS GROW MORE SEED

We must not overlook the farmers, however, while giving credit to the conservationists, the experiment stations, other Government agencies, and the 2,300 soil-conservation districts of the Nation for what they have done. In the final analysis, it was the conservation-minded farmers and ranchers of the Nation who planted the grasses and legumes and who are now growing them.

Once the grass farming program began to gain momentum it was not hard to get farmers interested in harvesting seed. Grass and legume seed became one of the best cash crops with many. Thousands of farmers and ranchers all over the Nation soon found that they could sell their seed crop for much more than they could sell a corn, cotton, or wheat crop from the same land. In addition, they usually got a lot of good pasture or hay from their grasses and legumes. Many conservation farmers use their best cropland to grow grass and legumes for seed. Some irrigation farmers in the West have planted native grasses in rows and cultivated and irrigated them to grow seed for market.

SEED CLEANING AND PROCESSING

Many grass seeds need cleaning, decortication, or other processing before they can be advantageously planted. Also the seed often need to be dried to prevent heating before storing or shipping. At first soil conservationists and farmers did most of the cleaning on the farms with home-made cleaners or with hammer mills and fanning machines. Fresh seed were dried by spreading in thin layers on barn floors. But when seed began to be produced by the hundreds of thousands of bushels these improved methods proved impractical. Commercial cleaning and drying plants were needed, especially for seed that were being offered for sale through commercial channels. Then cleaning and proc-

essing plants began to spring up all over the country. A new industry was created.

In 1940 W. A. Womack, of Ashford, Ala., planted 35 acres of blue lupine for seed. The seed crop proved so profitable that he increased his plantings to about 500 acres by 1946. He harvested around 750,000 pounds of seed that year. As his seed production increased, he found it impractical to clean the seed with a small fanning mill. He started a commercial seed cleaning and drying plant and began custom cleaning for his neighbors. Then he increased his storage facilities and soon was in the seed processing business on a commercial scale. He began to grow large quantities of sericea lespedeza, crimson clover, and Bahia grass for seed. Now he is fully in the seed business. Not only does he market his home-grown seed all over the Southeast, he also cleans and stores seed for most of the other farmers of his community.

Womack's experience is an example of how the seed business has grown by leaps and bounds during the last few years. There are now more than a thousand such plants throughout the Nation. Practically all farmers in soil conservation districts of the South and Southwest now have access to a commercial seed cleaning plant, and the industry of seed cleaning is rapidly spreading to other parts of the country.

Some seed-processing plants are operated by soil-conservation districts. Many others were created at the instigation of and with the support of district supervisors or the soil conservationists working with districts. For example, in 1949, the supervisors of the Santa Fe soil-conservation district in Florida recognized the acute need for a seed cleaning and drying plant. They bought the necessary equipment and constructed a small plant at a cost of about \$4,000. During the first 2 years of operation, the plant processed about 650,000 pounds of grass and legume seed valued at more than \$150,000. The original cost of the plant was paid for from the processing charges. Furthermore, two privately owned seed-processing plants have since been constructed in this district, mainly because of the showing made by the district-owned plant.

GRASSLAND RESEARCH EXPANDED

There were many other problems confronting the modern grassland pioneers. Which grass or legume or mixture to use; where to use it, what kind and how much fertilizer to use under varying conditions; seedbed preparation, the use of nurse crops; renovation of depleted pastures, weed and pest control, and numerous other problems needed more adequate research. Prior to 1929, research on grassland farming was rather meager. Most agricultural experiment stations had devoted the major part of their work toward improving the more commonly cultivated crops. The grasses and legumes were largely neglected, aside from a few of the more common hay crops.

When the first soil erosion experiment stations were established, beginning in 1929, they began, as already noted, devoting a major part of their research toward using more grass and other sod crops in erosion control. Within a few years, this work began to direct attention to other grass and legume problems. As the grassland movement gained momentum, the State experiment stations carried on more and more research on the use and management of these soil-holding, soil-improving, and animal-producing crops. During the past 15 years, a great fund of scientific knowledge about grasses, hitherto unknown, has been developed. Today most grassland farmers can get much more accurate information about their various problems than they were ever able to get before.

The present-day grassland farmer knows that it pays to fertilize most pasture and hay

crops. He knows, also, that it pays to fertilize and reseed old pastures where stands of grass are thin or where poor forage types of grass predominate. He mows weeds and clears brush from his pastures and meadows and often uses a chemical spray to control weeds in grass-seed plots. He knows which grasses are best for his waterways and which will do best on his eroded or worn-out lands. Soil Conservation Service research has shown the resistance various grasses offer to water flowing along waterways in various parts of the country, and this aids greatly in making the right selection of grasses to stabilize these outlets for excess runoff. This knowledge and these services are helping greatly as guides to the advancing grass program. Besides, farmers have a variety of choices in selecting grasses and legumes that fit into their long-term crop rotations. But probably, above all, farmers are now able to get the right seed for the different kinds of land.

An indication of how the grasses have become increasingly important in the soil conservation program during the last few years is found in a comparison of the amounts of terracing and pasture improvement work done by conservation farmers in five southeastern States. Up until the last few years, terracing was generally the most widely used soil conservation practice among farmers of North Carolina, South Carolina, Georgia, Alabama, and Mississippi. Terracing is still important in this region but it is no longer the most widely used conservation practice; improved grasslands are now considered much more important by most farmers. For example, in 1945 the acreage of pasture improved by reseeding, fertilizing, or other means was only about three-fourths as much as the acreage terraced by farmers cooperating with soil conservation districts in these States. In 1950, the acreage of pasture improvement was about three times as much as the acreage terraced.

Georgia has been one of the leading States in this phenomenal grass boom of recent years. As of July 1, this year, nearly 66,000 farmers of the State were cooperating with their soil conservation districts on complete conservation farming programs, and another 30,000 had made application to the districts for technical aid in conservation. Almost without exception, these conservation farmers have expanded and improved their grasslands. Recent reports show that nearly a million and a half acres of pastures had been improved by seeding, fertilizing, brush clearing, or other means on these 66,000 farms. Around 700,000 acres of new or old pasture land had been planted to Suiter's grass, Bermuda, Bahla grass, sericea, kudzu, clover, or some of the other better grasses and legumes that greatly increase the forage yields. In addition, around 2,000,000 acres of cover crops are being planted on cultivated lands, and grass waterways and improved meadows are found on practically every conservation farm.

The farmers of Georgia are now planting much less cotton than formerly. They have also reduced the acreage of corn. At last, I think we can truly say that Georgia farmers are really beginning to practice a diversified agriculture—they are now planting the grass and legume crops and raising the livestock that was recommended 30 or 40 years ago. Largely as a result of this agricultural change, farmers are more prosperous and both farm and city people are eating a more healthful diet, with more milk, butter, beef, eggs, and fresh vegetables on the table.

This change to a grass-livestock agriculture is not confined to Georgia and other Southeastern States by any means; although the change is probably greater and more noticeable here. All across the country there are hundreds of thousands of farmers who have changed or are changing from row-crop farming to grassland farming. Many of them are putting their entire farms to

grass, aside from that used for woods. Obviously, all farmers can't put their entire farms to grass or woods. Grain, oil crops, fibers, tobacco, vegetables, potatoes, and other crops are also needed. But most grassland farmers do not put all their land to grass. They simply use grass as it should be used in a practical conservation farming program, with the land properly adjusted to its capability. They plant their steep, highly erodible lands and other areas less suitable for cultivation to pasture or meadow. They grow sod crops in rotation with row crops to maintain good soil tilth and organic matter. They use cover crops in their clean-tilled fields when and where needed as a common-sense matter of land upkeep. They use strip cropping, grass waterways, and grass-stabilized diversions where needed. And, above all, they take better care of their grasslands—they give them the same consideration that they give their cultivated fields.

A PERMANENT AGRICULTURE FOR THE NATION

It is not just the individual farmers who will profit from a grassland agriculture. The Nation has a vital stake in this matter. It means better conservation of our basic soil and water resources. It can provide one of the best means for adjusting agricultural production each year to the actual needs of the country, with eroding and deteriorating crop lands being planted to sod crops when a surplus of grain and fiber crops seems probable. The grassland, in some instances, can be safely plowed up when an emergency demands an increase in cultivated crops. In fact, grassland farming does not necessarily mean less corn, less cotton, less wheat, less potatoes, or less tobacco. The acreage of these crops is usually decreased to some extent on grassland farms, but the yields per acre usually go up within a few years, so fast that the total production may be increased—has been increased on numerous farms. Furthermore, the amount of gain consumed by livestock is much less where plenty of good pasture and hay and grass silage are available.

In the final analysis, grassland farming is an adjustable type of agriculture that can be made to meet our needs as conditions bring about the need for changes in production. In addition, the productivity of the land can be maintained almost indefinitely, and per-acre yields are increased. This is a natural way of farming, and a practical way of farming. It is conservation farming—the only kind of farming that can be done year after year without depleting the land. It is farming in strict accordance with nature's example—that is to say, nature employs grass and trees to keep the land perpetually productive. Grassland farming follows this example, with grass as the basis of stability and permanence.

A Plea for a Modified Form of Senate Bill 75

EXTENSION OF REMARKS OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 10, 1951

Mr. MURDOCK. Mr. Speaker, the House Committee on Interior and Insular Affairs at its session today had under consideration the act S. 75 as it came over to us from the other body. I had proposed amendments which greatly reduced the substance of the measure by holding in abeyance authorization for

expenditures at this time of national emergency. In fact, the watered-down measure which I had proposed was intended, without costing the Government a dime, to make the controversy between Arizona and California over the waters of the lower Colorado River a justiciable issue in the United States Supreme Court so the high Court could take jurisdiction and render a definitive judgment. The following was my plea this morning for this reasonable and logical form of the bill:

This may be the last time I shall appeal to you in behalf of this phase of the future of my young State of Arizona. Her future for many a long year hangs upon what this committee in its wisdom may do for her now. I am not talking for my own political future, for that is of small moment; nor is the political fortune of any man comparatively important. The future of Arizona, that old-new land, for centuries to come is important. The welfare of unborn generations is the chief consideration here. The first step in the assuring of that future can be taken here and now without injury to any State or section, and can be taken in full keeping with the laws of man, of nature, and of God. This bill, even this watered-down bill, is far from perfect, but this modified bill does provide without a penny of Federal expense for the first essential step—a judicial determination as to what is the law of the river as it affects Arizona.

Time works in favor of the opposition in southern California. Arizona has tried several times to get a judicial determination, and in those earlier cases the Supreme Court has refused to take jurisdiction on grounds which this bill will remedy. If Arizona is prevented from having her day in court, she will suffer inestimable injury in a way which cannot be remedied and also in a way in which she cannot submit an effective claim for damages. If Californians can prevent Arizona from getting Colorado River water which Arizona knows to be rightfully hers to use, not Arizona alone but the entire Nation will be the loser and very few individuals will be apparent gainers. Do not for one moment believe that Los Angeles will be a gainer.

In voting for this bill you are not voting to authorize the spending of money in the near future, nor for anything but a sound development later. You will be voting only to offer a plan to deliver water into Arizona so that because of this general plan the high Court may decide whether such diversion is according to law. No Federal money can be authorized to divert such water until after the Supreme Court has "declared the law" and only after this committee finds such a proposal feasible in the light of future conditions. If neither of these two things happens, it will be up to Arizona to do something else or do without that water. I plead with you to give the future of Arizona a chance by giving her a day in court.

Yom Kippur and the Good World

EXTENSION OF REMARKS OF

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 9, 1951

Mr. SIEMINSKI. Mr. Speaker, the other day, it was my pleasure to have at lunch in the House restaurant two distinguished citizens of the Jewish faith

from my district. Conversation turned to the manner in which speakers sometimes refer to the Christian world, when in truth they mean the good world, including all people with faith in God.

A new nation is born—Israel. It appears to me that greater appreciation of its people can be gained by understanding one of its rites, Yom Kippur. Accordingly, I should like to list below an article from the Jersey Journal of recent date which describes the significance of this Day of Atonement:

YOM KIPPUR RITES CLOSE HIGH HOLY DAYS PERIOD

Yom Kippur, the Day of Atonement and the last day of the penitential period, which began with Rosh Hashonah, the most sacred of days in the Jewish calendar, will be ushered in at sundown today with the special Kol Nidre service in synagogue and temple in Bayonne, as the members of the respective congregations join their coreligionists throughout the world in the observance.

Services will be held at Temple Emanu-el, Talmud Torah Synagogue Beth Abraham, Synagogue Agudas Achim, Ohab Sholem Anshe Sfard, and Synagogue Ohab Sholem Uptown, and the synagogue at the Gluckman Home for the Aged. The entire day is spent in the synagogue tomorrow, Yom Kippur, in fasting and praying for forgiveness of all sins.

Late this afternoon the family gathers around the table for a solemn meal, called the seudah hamaphseketh, the stopping meal, after which the fast begins, shortly before sunset. It is a silent meal, tense with the feeling that one's destiny for the coming year is to be sealed the next day. Those present ask for forgiveness from each other, blessings are bestowed upon the children by the parents, and charity is given to the poor.

The bread that is served and the candles that are lit are shaped in tapering form to symbolize that the prayers will ascend to God. Prior to the meal at the Minnah service in the synagogue one relinquishes all grievances that he may have nursed during the year against his fellow men, and in turn asks forgiveness and attempts to right any wrongs that he may have done to others during the year.

The synagogue services start on the eve of Yom Kippur with the chanting of Kol Nidre before sunset, and end at sunset the next day with the blowing of the shofar (ram's horn) at the end of the Ne'illah, the closing prayer.

BACK TO MOSES

According to the sages, originally Yom Kippur too was a historical festival. It marked the day on which Moses brought down the second Luhoth Ha-B'rith (Tablets of the Covenant) on which were engraved the Ten Commandments. After the Revelation, Moses retired to the top of Mount Horeb for 40 days, and when he returned he brought with him the Tablets on which had been engraved the Ten Commandments.

During his absence the Israelites in the desert felt lost without their leader. Confused and discouraged, they followed the example of the Egyptians and made a golden calf and worshiped it. This happened just a day before Moses returned. When Moses saw what they had done, he felt bitterly disappointed and in his anger he dashed the tablets to pieces. After reestablishing order in the community, he again ascended the mountain, and after another 40 days he brought down a duplicate set of the original Luhoth Ha-B'rith.

Tradition has it that this second event took place on the tenth day of Tishri, which is the day of atonement. As the second tablets marked the fact that God had forgiven the people for their sins in worshipping the golden calf, the day on which they were

brought down came to be observed as a day of prayer and atonement.

A distinctive feature of the Yom Kippur service is the prayer for the dead. God is asked to forgive not only one's own sins, but also those of the departed ones. Theirs are the most important sins to be forgiven, since they no longer can make good their errors. Prayers for the repose of their souls (Hazkarath Neshamoth) are offered in the synagogue and temple. At home a special memorial lamp is lit to commemorate the soul of a departed relative. This light burns throughout Yom Kippur and is symbolic of immortality.

SERVICE SCHEDULE

The Kol Nidre service at Temple Emanu-el will commence at 5.15 p. m. today with Rev. Abraham M. Felnerman having as his sermon topic *How Shall We Face God?* At the Yizkor memorial service tomorrow his topic will be *Fear Not the Sentence of Death.*

At Talmud Torah Synagogue this evening the Kol Nidre will be chanted by Cantor Samuel Glatt at 5 o'clock. Rabbi Jacob Danishefsky will speak on *The Day of Forgiveness Tomorrow* the service will begin at 8 a. m., with the Yizkor service at 10 30 a. m. Rabbi Danishefsky's sermon topic will be *Our Obligations to Past and Future Generations.*

American Labor Movement

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 9, 1951

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article entitled "High Lights in the American Labor Movement" from a recent edition of the *Laborer*:

HIGH LIGHTS IN THE AMERICAN LABOR MOVEMENT

1786: Philadelphia printers gain minimum wage of \$6 a week by earliest authenticated strike of workers in United States

1791: Philadelphia carpenters stage first recorded strike in building trades as unsuccessful attempt for 10-hour day and additional pay for overtime.

1806: Philadelphia Journeymen Cordwainers bankrupt by conviction of members, tried for criminal conspiracy on charges of combining to raise wages and injure others

1827: First city central type of labor organization formed in Philadelphia as Mechanics' Union of Trade Associations.

1828: Workingmen's Party, including wage earners, craftsmen, and farmers, organized in Philadelphia.

1834: First national labor federation, National Trades Union, formed in New York City.

1836: First national labor union of specific craft, National Cooperative Association of Cordwainers, formed in New York City. Printers, comb-makers, carpenters, and hand-loom weavers formed similar organizations soon afterwards.

TEN-HOUR DAY RULE

1840: President Van Buren established a 10-hour day for Federal employees on public works.

1842: A Massachusetts court held that trade unions, as such, were legal organizations. The decision also denied that the attempt to establish the closed shop was unlawful. Massachusetts and Connecticut

passed laws prohibiting children from working more than 10 hours a day.

1852: Typographical Union, first national organization of workers to endure to this day, formed. First law limiting women to 10-hour day passed in Ohio.

1859: Iron Moulders' Union formed, forerunner of Molders and Foundry Workers.

1862: "Molly Maguires" come to public attention; 10 later executed

1863: Brotherhood of Locomotive Engineers founded

1866: National Labor Union, a national association of unions, formed.

1868: First Federal 8-hour day law passed by Congress.

1869: Knights of Labor organized, declined with emergence of AFL

1874: Union label first used by Cigar Makers' International Union

1881: Federation of Organized Trades and Labor Unions, later named American Federation of Labor, formed in Pittsburgh. Gompers, 8 national union leaders, 107 delegates present.

LABOR DAY SUGGESTED

1882: Peter J. McGuire, New York carpenter, suggests first Labor Day

1884: United States Bureau of Labor established as part of Department of Interior.

1886: Under FOTLU 340,000 participate in move for 8-hour day. Public prejudiced by Chicago Haymarket riot. American Federation of Labor organized in Columbus

1894: Injunctions and Federal troops defeat strike of American Railway Union. Eugene V. Debs jailed.

1908: Outlawing of yellow-dog contract by Erdman Act, declared unconstitutional.

1911: New York factory fire kills 146 workers, leads to improved factory conditions.

1912: Massachusetts adopts first minimum-wage act for women and minors

1913: Department of Labor established by law. William B. Wilson first Secretary of Labor.

1914: Clayton Act limits use of injunction; legalizes picketing

1916: Adamson Act provides basic 8-hour day on railroads.

1917: Yellow-dog contract upheld.

1918: Federal Government seizes wartime control of railroads.

1919: Gompers leads fight for organization of International Labor Organization; first session in Washington, D. C., on October 29.

1921: Supreme Court denies Clayton Act legalized secondary boycott or protected unions from injunctions for conspiracy in restraint of trade.

1922: Labor unions held suable for their acts.

1924: Samuel Gompers, president of AFL, dies on December 13.

1926: Collective bargaining imposed on employers by Railway Labor Act; provides for mediation, voluntary arbitration, and fact-finding boards.

1931: Davis-Bacon Act provides for payment of prevailing wages for laborers and mechanics employed by contractors in public construction.

ANTI-INJUNCTION LAW

1932: Anti-injunction (Norris-La Guardia) Act prohibited Federal injunctions in labor disputes and outlawed yellow-dog contracts. Wisconsin adopts first unemployment insurance act in United States.

1933: United States Employment Service created in Department of Labor.

1934: United States joins International Labor Organization.

1935: National Labor Relations (Wagner) Act passed.

1936: Labor standards on Government contracts established, including minimum wage, overtime compensation for hours in excess of 8 a day or 40 a week, child and convict labor provisions, and health and safety requirements.

1937 National Labor Relations Act held constitutional

1938 Fair Labor Standards Act provides minimum wages and time and a half for hours over 40 a week

1942 President establishes National War Labor Board NWLB lays down "Little Steel" formula for wartime wage adjustments. Stabilization Act authorizes President to stabilize wages and salaries.

1943 President creates Committee on Fair Employment Practices War Labor Disputes Act, passed over President's veto, authorizes plant seizure if needed to avoid interference with the war effort.

1947 The Norris-LaGuardia Act prohibition against issuance of injunctions in labor disputes held inapplicable to the Government The Labor-Management Relations (Taft-Hartley) Act passed over the President's veto.

1948: The Federal Government's first national conference on industrial safety meets in Washington, D. C.

1949. International Confederation of Free Trade Unions, with AFL, CIO, and United Mine Workers participating, formed in London

1950. AFL, launches year-long observance of the centennial of the birth of Samuel Gompers. National emergency occasions formation of the United Labor Policy Committee, composed of representatives of AFL, CIO, and railroad unions.

The Missouri: We Need Unification

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, October 11, 1951

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have an article on the proposed Missouri Valley Administration, written by me some time ago, printed in the Appendix of the RECORD. The article was written prior to the Kansas floods, and hence does not refer to the fact that recent developments prove still more strongly the desirability of a Missouri Valley Administration, and the shortcomings of the Pick-Sloan plan.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE MISSOURI: WE NEED UNIFICATION
(By HUBERT H. HUMPHREY, United States Senator)

When there is no teamwork among the armed services, it shows up in lost battles, in "Pearl Harbors." When there is no teamwork among our civilian services, it shows up in our tax bill, and in the waste of our great natural resources. It is in the Missouri Valley that we have today the most outstanding illustration of what rival civilian bureaucracies can do to disappoint the people's hopes and to saddle them with debt.

There are few more important projects or problems facing the American people than the proposal made by Senator MURRAY, myself, and others, to harness the mighty Missouri Valley, stop the periodical ravages occurring in that territory, and put the river to work for the benefit of all the people. The control and development of the Missouri River is not a local problem; it is a national problem. The waters of the Missouri River wind their ways through my own State of Minnesota, Wyoming, North and South Dakota, Nebraska, Kansas, Missouri, Colorado,

Montana, and Iowa. Within this vast region is found our largest undeveloped stores of rich farmland, forests, hydroelectric power, fertilizers, minerals, wildlife, and recreational wonderland areas of unsurpassed beauty.

This great Missouri River Basin is an important untapped reservoir of raw resources needed for our Nation's defense. It is important, however, also for its potentialities for the development of vast amounts of essential civilian production. These potentialities are so great as to offer to America a new economic frontier for the use of our capital, our unused manpower, and the utilization of our great enterprising and democratic genius.

The Missouri River drainage system encompasses an area of 500,000 square miles, almost one-fifth of the land of the United States, but in 1950 its population was less than 16,000,000, or one-tenth of our population. Every year whole families and vigorous single workers leave this area. This is a serious problem which must be met.

Farms are being abandoned in this area, too. In 1930 the United States census was taken in the 430 counties of the Missouri Basin and another census was taken in the prosperous year of 1945. During the intervening 15 years, the number of farms operated declined by more than 12 percent. Some 90,000 families gave up their lifelong stake in farming. Those who still owned farms in 1945 suffered a money loss of more than \$2,330,000,000 in the value of their farm properties. Here are problems which warrant the attention of the American people and their Congress.

Only a balance between agriculture and industry will ever reverse the loss of population trend and raise the standard of living to which the people of the area are entitled. In all this vast area, covering 10 States, there were only 20,000 manufacturing establishments in the prosperous year of 1929, employing less than 600,000 wage earners. Yet by 1939, despite a very substantial national economic recovery, the number of factories still operating in the Missouri area fell to 17,000, and the number of wage earners declined one-fifth.

The Missouri Valley is known for its national wonders, its parks and monuments, its wild game, birds and fish, its great forests, and an infinite variety of wild flowers. But these resources are being wasted. Ponds and waterways are drying up; streams are being polluted, destroying birds and fish; and timberland is being ruined; overgrazing of grasslands is endangering the open range. The rich heritage of our Nation is being jeopardized. America has a stake in this serious problem.

The evidence is clear that the Missouri Valley can develop its potentialities only under a unified and balanced development of all its resources. With such a unified approach it can develop with an assured future, and can create new wealth, attract new populations and raise the standard of living for the people in the area. It can go far to stabilize our economy at full employment.

In spite of this promising future, the present is a dismal one for the Missouri Valley. The mad rampages of the Missouri River have already cost more in lives of animals and humans, suffering diseases and destruction of valuable property than our imaginations can state. Today, in spite of years of effort, and hundreds of millions of dollars spent in dyking the river, strait-jacketing it in levees, the big Missouri is less tame than ever before, and sweeps away millions of dollars in one season's floods. In spite of man's ingenuity, we cannot order the weather to suit our purposes. Storms, floods, droughts, hot suns will continue to take their heavy toll until engineering projects for flood control, irrigation, soil conservation, reforestation, and hydroelectric power de-

velopments are combined into a single system under which the rain will be held where it falls, surplus water will be stored and then its flow directed for the benefit of the valley. Only a unified attack on the manifold problems of resource development and control will accomplish what is essential to the future of the area.

Why then is the present development of the Missouri Valley failing to fulfill the potentialities of the area? A brief word of history is in order. Following the floods of 1943, the Army engineers, under the direction of Gen. Lewis A. Pick, rushed together a plan for the lower Missouri River and presented it to Congress. The Bureau of Reclamation, of the Department of the Interior, however, attacked the plan vigorously. Its spokesman, W. Glenn Sloan, claimed the Army's plan to be extravagant, unnecessary, and misdirected. The conflict between the two agencies was primarily a conflict over whether the emphasis should be on navigation, which was the Army's primary interest, or on irrigation, the Bureau's chief concern. The Sloan plan was in turn attacked by the Army as extravagant, fantastic, and unnecessary. At about this time the concept of an integrated Missouri Valley Authority, similar in approach and based on the valuable experience of our Federal Government in developing the Tennessee Valley Authority was presented to Congress.

The effect on the Army engineers and the Bureau of Reclamation was electric. After accusing one another in the public press and before congressional committees of inefficiency and lack of planning, they joined together in mutual opposition to this concept of a unified MVA. To head off the growing movement in Congress to create an MVA, they frantically entered into an agreement after 2 days of conference, to share all the construction work of the Missouri Valley. They split the dams, the power plants, and other construction work between them on a basis which has never been explained satisfactorily. Whereas they had previously criticized one another's plans for the development of this crucial area, they now apparently laid maps of their two conflicting plans side by side and engaged in a barter deal. They sealed their agreements with a bond of silence, and all the loud and bitter engineering criticism of one another's plans were suddenly hushed up. They divided up projects totaling \$6,300,000,000 without ever settling down and developing a full river plan.

The result to date has been a total failure, a great disappointment to the population, to the region, and to the Nation's taxpayers who carry a heavy and unnecessary burden. Further evidence of this failure is a statement from a task force report to the Hoover Commission whom, describing the Pick-Sloan plan which said:

"After sharp clashes over plans for the development of the Missouri Basin, the Corps, and Bureau announced complete agreement on the Pick-Sloan plan. Analysis of that plan reveals the fact that it contains many projects which previously had been subjected to devastating criticism by one or the other agency. The compromise consisted for the most part of a division of projects, each agency agreeing to forego the privilege of criticizing projects assigned by the agreement to the other."

The Hoover Commission, in its final report, stated:

"There is simply no escaping the fact that so long as the present overlapping of functions exists with respect to the Corps of Engineers, the Bureau of Reclamation, and the Federal Power Commission, costly duplication, confusion, and competition are bound to result. It has been demonstrated time and again that neither by voluntary cooperation nor by executive coordination can the major conflicts be ironed out. * * * Consolidation of these agencies is the only

remedy. The Commission feels there is a possibility that the disastrous Portland floods last year reflect the failure of the present divided program."

Compare this to the Tennessee Valley Authority, a tremendous success, a plan which has improved the economy and the life of the people of that valley. We have invested about \$800,000,000 in the Tennessee Valley development, but the TVA has already paid for itself more than once. Today the Tennessee is one of the most flood-proof rivers in the world. The use of electric power in the homes, farms, and industries of the Valley has boomed. Residential users, who consumed only 600 kilowatt-hours average in 1939, 11 years later consumed more than 2,500 kilowatt-hours in 1949. On some systems residential use was averaging 4,000 kilowatt-hours a year in the Valley.

When the Congress established the Tennessee Valley Authority the seven affected States were paying 34 percent of the total income taxes collected by the United States Treasury. In 1947 the same area was paying 6.3 percent of the total income-tax payments made in the United States. Today, after 15 years of TVA, with improved agriculture, 2,100 new factories, and cheap electric power, the Valley is paying almost twice as much income tax percentage-wise as it did before TVA.

There are now 1,000,000 acres of terraced land in the Valley, and pasture acreage has increased 800,000 acres, reflecting a tremendous gain and a solution to the problem of soil erosion. Livestock has increased 9 percent, dairy cattle numbers are around the same, while milk production is up 22 percent. The Tennessee Valley, as a result of an integrated resources development program, is no longer a problem area. It is an area that contributed great strength to our Nation in wartime, and continues to contribute strength in peacetime.

Why then can we not learn from the experience of the TVA, and produce a valley administration idea comparable in scope and results, although on a larger scale? Our people in the Midwest have been looking at the miracle of the TVA. They have seen cheap electric power from the river's flow. They have seen industries grow up near the cheap power, and they have watched the great atom plant working in the Tennessee Valley for the progress and people of the world. They have seen soil conservation, flood control, and navigation improve constantly in the Tennessee Basin. They have wondered, and they have every right to ask why cannot the same be done for their valley, for the Missouri Valley?

The Missouri Valley can prosper. As the Tennessee Valley grew under TVA, the Missouri Valley can grow under MVA. The Missouri Valley Authority bill is based on the principle that where there is one river system with conflicting claims upon its water, with different problems as to its course, there must be one center of responsibility, one authority acting on the principle of equity. This authority must consider the interest and welfare of the country as a whole, after obtaining the best advice available from all groups and all sections in the area directly affected. This is the democratic way to solve a complex problem and to judge conflicting interests and demands. Under this plan, the people will always have a check on the program, because MVA can continue, and its principle can be put into operation only as a result of annual appropriations by the Congress of the United States.

Our bill would create a Government agency described as the Missouri Valley Authority. It would preserve much of what is now being done by existing local, State, and national agencies. The bill proposes that the agencies now engaged in reclamation, irrigation, flood control, soil erosion, forestation,

wildlife, power development, and so forth, are to be coordinated and integrated so as to eliminate waste and duplication, achieve economies, and preserve the needs of the area as a whole.

Headquarters of the MVA are to be in the region itself, with regional offices throughout the area. This decentralization of Federal Government activities is sound in that it allows day by day scrutiny, participation and evaluation of the problem in the area, at the same time as the great benefits of Federal financing, planning, engineering, and administration are achieved.

The MVA will be administered by a Board of directors of five American citizens, three of whom must have had a residence of at least 5 years in the Missouri Basin. The board of directors are required to consult with an advisory board, and no plan for the area can be presented to Congress and to the President until the advisory board has carefully examined and commented on the plan. The advisory board is to represent agriculture, industry, labor, and wildlife and recreation in the Missouri Valley. The fact that the 10 governors from the 10 States in the Missouri Basin will constitute a special committee to advise and cooperate with the MVA is a guaranty that the interest of the region will be preserved. Furthermore, the Congress and the people will be kept thoroughly informed of proposed plans, work, accomplishments and progress through the requirement that the MVA is to make quarterly reports to the Congress. Here then is a decentralized, carefully planned and efficient administrative policy designed to obtain a unified program of river development.

A Missouri Valley Authority is not a luxury. It is a necessity which the people of the Nation cannot afford to neglect. Unless we act, irreparable damage to our Nation can follow. The need for the development of the Missouri Basin is not disputable. All agree. The only question that remains is how to meet that need. Opponents of the MVA assert that the Pick-Sloan plan can do the job. They do so, however, in the face of the facts. What are the facts? The facts show constant failure to meet the needs.

Let us look at the shortcomings of the Pick-Sloan plan. The Pick-Sloan plan is but a fraction of a total basin plan. It deals with a river, it does not deal with the problems of the land, of soil conservation, of the development of land and mineral resources, and the human resources of the Valley. It has no plan to stop the loss of 300,000,000 tons of topsoil annually. It does not provide for the development of the plant-food resources on the western rim of the Missouri watershed to make conservation practices economical for farmers, who would then help to stop erosion and floods. It does not contain any forestry plans to help stop floods and protect and restore our forests and our soil. In fact, a land and forest program proposed separately by the Department of Agriculture is being opposed by the Department of the Interior for fear it will jeopardize main-stream projects by holding water on the land.

The Pick-Sloan plan does not provide for the development of recreational facilities, for the maintenance of wildlife, for power and navigation coordination, so that new industries can be established for industrial research. The Pick-Sloan plan is limited and, as we have seen, has not been successful even within its limited scope.

Let us more carefully look into the question of the power potential of the area. The Federal Power Commission has pointed out that there is a potential of ten to fifteen billion kilowatt-hours of electricity per year in the lower reaches of the Missouri. Yet all that the Pick-Sloan plan is doing is attempting to provide an open, flowing navigation channel in that section of the river

which will not generate electricity for the unlighted sections of the valley. The electric power potential of the area is being overlooked, but electric power is vital in an industrial age. Low cost electric power is vital if farms are to keep pace with modern agricultural techniques. Low-cost electric power is important to farmers who have to pump water for irrigation, and it is also important to every farmer who wants relief from drudgery, better living and attractive surroundings for his children, who now move away from the family home. More than 60 percent of the electric potential of the Yellowstone River, a tributary of the Missouri, is being ignored. One of the most needed and most prevalent of the Missouri resources, electricity, is not being tapped to any adequate degree, and where it is planned, the evidence is conclusive that it is being planned so poorly as to discredit the whole project.

Let us look at flood control. You will recall the words of the Hoover Commission: "The Commission feels there is a possibility that the disastrous Portland floods last year reflect the failure of the present divided program." Here is a severe condemnation of the Pick-Sloan plan which cannot lightly be dismissed. It can be proved further that the Missouri River floods of 1943, 1945, and 1947 were not at all alleviated by the work of the Army engineers, but rather on the contrary, the floods were apparently worsened by the fact that the navigation planning of the engineers overlooked the necessity of planning for flood control.

One of the most essential concerns of any river valley plan must be soil conservation, yet the Pick-Sloan plan failed to integrate soil conservation into its planning, since Pick-Sloan only has jurisdiction over one percent of the surface area of the Missouri valley. Soil conservation must begin where the rain hits the ground, not where it flows into the river, carrying rich top soil with it. Proof of this is the fact that the Department of Agriculture last year reminded Congress of the omission of soil conservation from the Pick-Sloan plan, by printing a 2-pound, 200-page report which said, in effect, that if the shortcomings of the Pick-Sloan plan are to be met, an additional appropriation of \$8,500,000,000 would be necessary for soil conservation. This is not only a severe condemnation of neglectfulness on the part of the agency now developing the valley, but also an example of the high cost to the American taxpayer of bad management, shortsightedness and uncoordinated plans.

The irrigation possibilities of the Missouri are also being damaged by the present plan. It is very clear that the navigation channel projects under the present plan will take millions of acre-feet of water away from much needed irrigation. A 9-foot channel which the Army is digging in the lower Missouri, which will result in damage to the irrigation possibilities of the area, is scheduled to cost \$222,000,000. The Bureau of Reclamation is planning a recreation project which would spend considerable money and use enough water annually to irrigate 55,000 acres. Yet Mr. W. G. Sloan, of the Bureau, told a St. Louis Post-Dispatch reporter that he did not think this project was the best use of the water, but that he was doing it nevertheless to get those people over there to stop talking.

There is one further consideration which must be revealed. It concerns the relationship between the irrigation needs of the valley and the navigation needs of the valley. The navigation flood-control projects of the Army engineers depend on impounding and holding a large amount of water for downstream use while the Bureau of Reclamation requires an ever-increasing amount of water for upstream area irrigation and power generation. Expert engineers reveal that there simply is not enough water over

wet and dry cycles to meet both needs. Neither agency has ever squarely faced this fundamental problem.

Most of the expensive dams now being planned and built on the river are not for flood control. The flood-control needs of the Missouri River could be taken care of with 10,000,000 feet of storage, yet the dams now being built provide almost 80,000,000 feet. The extra 70,000,000 feet therefore are for navigation and irrigation. Yet, as we have seen, the problem is not being effectively met. We now find that even the navigation part of the development has been incompletely thought out and is being seriously challenged. The Army engineers, under the present system, have planned for a 9-foot channel, yet most of the neighboring Mississippi-Ohio navigation system is based on a 12-foot channel. Big barges, therefore, will not be able to move up the Missouri, which means that barge cargo loads will have to be shifted from one size barge to another when loads are transferred from the Missouri to the Mississippi or back. The expected advantages from making the Missouri part of an inland waterway system are therefore not going to be achieved.

We could go on with more criticism of the Pick-Sloan plan. Garrison Dam, for example, is being built in North Dakota to back up 17,000,000 acre-feet of water at a cost of about \$180,000,000. We find in the record that the Bureau of Reclamation, through its Chief Engineer, W. G. Sloan, told Congress:

"Garrison Dam is unnecessary in any plan of developing navigation, or any other purpose." He also said, "We recommend the elimination of the Garrison Dam because we think it is unnecessary and not worth the expenditure." This criticism was made, however, before the bond of silence between the Bureau of Reclamation and the Army engineers was entered into in 1944.

Lower down in the river, a dam is being built at Gavins Point, S. Dak. It is basically a power dam, and will cost over \$30,000,000. Mr. Sloan, again before he took the vows of silence, told Congress "It is a very expensive dam for the benefits to be derived from it. As a power proposition, the cost per kilowatt-hour for the development there is 30 to 40 times the cost of power at any of the other dams."

America is paying a big price, and an unnecessary price, for the waste of our resources in the Missouri Valley. The Missouri Basin is an essential part of America. In the Missouri Basin is raised nearly half of our foodstuffs. Here are limitless deposits of coal and phosphates, timberlands, and mineral deposits. But here, too, is a river rushing away to the sea in floods, thousands of acres of rich land and irreplaceable natural resources.

The issue of an MVA is not a sectional issue at all. It is a national issue. MVA will mean more and cheaper production from more and cheaper electricity. It means more diversified agriculture, providing crops in demand rather than crops in surplus. It means cheaper finished products because it will bring cheaper transportation of raw materials out of the valley. MVA can make a great contribution to food security for the world, because its soil-conservation provisions will improve and extend the conservation practices of the basin. MVA can strike a blow for free enterprise against monopoly in such fields as light metals and fertilizer, where big business controls supply and controls price. New business growing from MVA's cheaper electric power can break the monopoly control.

MVA is a symbol of liberalism in that it is an acknowledgment that the meaning of democracy in 1949 is that responsible government should be the agency through which the people can act together to do for themselves what each individually cannot do. It is a symbol of conservation in

that it champions efficient and economical government and practical business administration. It is plain good sense. And it is urgent.

MVA should come out of the Eighty-second Congress. Sound economy and the requirements of efficient and constructive use of our natural resources, present compelling evidence for the establishment of a Missouri Valley Administration.

Resolutions of the Annual Assembly, National Jewish Youth Conference

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 20, 1951

Mr. KLEIN. Mr. Speaker, from August 31 to September 7, 1951, the annual assembly of the National Jewish Youth Conference met at Camp Wel-Met, Narrowsburg, N. Y. Two hundred young people coming from all parts of the United States met to consider the problems of Jewish youth at midcentury.

The National Jewish Youth Conference is a permanent Nation-wide body which represents more than 300 local and regional Jewish youth and young adult councils and 10 national Jewish youth organizations and has a membership of 300,000 young people. It is sponsored by the National Jewish Welfare Board.

Under leave to extend my remarks, I wish to include some of the resolutions adopted at the annual assembly of the National Jewish Youth Conference which clearly reflects the thinking of many of our young people. They follow:

RESOLUTIONS OF THE ANNUAL ASSEMBLY, NATIONAL JEWISH YOUTH CONFERENCE

I

Whereas the charter of the United Nations states "In order to unite our strength to maintain international peace and security, and to ensure, by the acceptance of principles and the institution of methods, that armed force shall not be used, save in the common interest, and to employ international machinery for the promotion of the economic and social advancement of all peoples," the United Nations was created; and

Whereas the lives of our generation have been disrupted by past wars and preparations for possible future wars; and

Whereas we feel that the interests of the world in general and youth in particular can be best served through negotiation of differences within the framework of the United Nations; Therefore be it

Resolved, That the 1951 National Jewish Youth Conference commend the United Nations for the efforts it has already made and urges it to continue to explore every avenue which may lead to a peaceful solution to these differences and so avoid world conflict; Be it further

Resolved, That the United States Government, through the United Nations also continue to explore all possible avenues of peace.

II

Whereas the United Nations is the only international organization that can establish a strong and durable peace; and

Whereas the United Nations is our best hope to build the economic, social, and political foundations necessary to achieve world peace and security based upon the rights and dignity of peoples and nations; and

Whereas the United Nations is designed to serve people and since survival in this critical period will depend upon the kind of support we give it; and

Whereas people have a decisive role to play in assuring the continued effective operation of the United Nations; Therefore be it

Resolved, That in order to create community awareness of our stake in the United Nations that the 1951 annual assembly of the National Jewish Youth Conference call upon all local and regional Jewish youth and young adult councils and national Jewish youth organizations to observe United Nations Day on October 24, 1951.

III

Whereas the delegates to the 1950 annual assembly of the NJYC unconditionally oppose the adoption of the McCarran bill; and

Whereas we still believe that the McCarran Act "jeopardizes the rights of individuals and organizations which are not subversive but which are dedicated in principle and program to fight antidemocratic forces"; Therefore be it

Resolved, That the 1951 annual assembly of the National Jewish Youth Conference calls upon the Congress of the United States to repeal the McCarran Law.

IV

Whereas the annual assemblies of the National Jewish Youth Conference for the past 3 years have stated their opposition to the resurgence of nazism in Germany, and

Whereas we note with pain and anger the rapidity with which the murder of 6,000,000 Jews and millions of peoples of all nations is being forgotten; and

Whereas events since the last annual assembly indicate that far from abating, the danger of nazism has increased;

Therefore the 1951 annual assembly of the National Jewish Youth Conference—

A. Opposes the encouragement of Nazi revival in both East and West Germany.

B. Specifically opposes the commutations of sentences and extension of clemency to Nazi war criminals

C. Recommends to local councils and national Jewish youth organizations that they consider this matter and take action on it.

V

Whereas the annual assembly of the National Jewish Youth Conference considers it essential that human rights be achieved for all people of every country in the world; and

Whereas the United Nations Universal Declaration of Human rights enumerated those human rights which are the ultimate goal of all democratic people;

Therefore all people should pledge their support of this declaration, and all Americans should work to eliminate violations of human rights. Jewish youth in America should play a vital role in this effort;

Therefore the 1951 annual assembly of the National Jewish Youth Conference should—

A. Urge its constituent councils and national organizations to undertake, by the most effective means, practical programs to educate its members and to work for the elimination of violations of these rights.

B. Focus attention on such issues at its annual assemblies and take action on those issues where there is general agreement.

C. Supply factual information to its constituents on issues agreed upon by the assembly to enable them to take intelligent and informed social action.

VI

Whereas many studies by responsible groups have revealed many instances of bias toward minority groups in textbooks and the entertainment industries; and

Whereas such bias has led to a lack of understanding and its consequent instances of discrimination: Therefore be it

Resolved, That the annual assembly of the National Jewish Youth Conference take the best effective action to encourage objectivity in textbooks; and be it further

Resolved, That we call upon the entertainment industries to lend their facilities to promote a better understanding among all groups.

Whereas the National Jewish Youth Conference through the Young Adult Council is related to the World Assembly of Youth; and

Whereas the World Assembly of Youth has developed an international program for the coming years to bring about international understanding; and

Therefore the National Jewish Youth Conference should support the program of the World Assembly of Youth by making the purposes and activities of the World Assembly of Youth known to its constituents.

VIII

Th 1951 annual assembly of the NJYC notes with gratification the inclusion of grant-in-aid to Israel in the Mutual Security Act which was recently passed by both Houses of the United States Congress. The 1951 annual assembly of the NJYC urges the Joint Appropriations Committee of the United States Congress to make funds available to implement speedily the act.

IX

The 1951 annual assembly of NJYC expresses appreciation for the efforts of the United States delegation to the United Nations in spearheading the Security Council resolution calling upon Egypt to end its blockade of Israeli-bound ships passing through the Suez Canal as another step toward promoting peace and stability in the Middle East.

X

Whereas the National Jewish Youth Conference having participated in the Mid-Century White House Conference on Children and Youth through resolution by its Annual Assembly in 1949 and 1950, and

Whereas through the participation of the National Jewish Youth Conference and the National Jewish Welfare Board, delegates in the meetings of the White House conference in Washington, D. C. and through the participation of local and regional councils and national Jewish youth organizations and the leaders of the National Jewish Youth Conference in the activities of local and State committees and in the Mid-Century White House Conference on Children and Youth both before and after the December meetings in Washington,

Be it

Resolved, That the 1951 annual assembly of the National Jewish Youth Conference call upon Jewish youth and young adult councils and national Jewish youth organizations to continue to lend interest and support to the achievement of the goals of the Mid-Century White House Conference on Children and Youth as expressed in the recommendations of the conference and pledge to children, and be it further

Resolved, That we commend the President of the United States on his establishment of a national committee to implement White House conference recommendations and pledge it the cooperation and support of the National Jewish Youth Conference, and be it further

Resolved, That we record our appreciation for the full opportunity for youth participation both in the planning and conduct of the White House conference, and be it further

Resolved, That we approve and endorse the recommendations made by the Mid-Century White House Conference on Children and Youth and that during the period ahead the National Jewish Youth Conference continue to give high priority to the recommendations calling for the separation of church and State, the adoption of President Truman's civil rights program, Federal aids to tax-supported educational institutions, adequate housing, slum clearance, youth participation in community affairs, and employment opportunities and guidance.

More Potent Than Beefsteak, and Dirt Cheap, Too

EXTENSION OF REMARKS

OF

HON. PAUL CUNNINGHAM

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 10, 1951

MR. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article of Harriet L. and Harry C. Andrews which appeared in the Iowa Farm and Home Journal Register of September 2, 1951:

MORE POTENT THAN BEEFSTEAK, AND DIRT CHEAP, TOO

There's a new food available which you can put in a canister on your pantry shelf—along with your sugar and flour—and have a supply of concentrated protein and mineral on hand at all times.

It is nonfat dry milk.

You've already heard of it, and it's been on the dinner menus of pigs and chickens for years. Bakers and ice-cream manufacturers have been using it, and now the housewife has access to this valuable food for her daily cooking.

Nonfat dry milk solids are made from fresh whole milk from which the fat has been removed. The milk is dried by a low-heat process during which the milk is shot in a very fine spray and under extremely high pressure through heated air. It instantly turns to a very fine powder, almost white, odorless, but with a pleasing taste.

This nonfat dry milk solid or dried milk powder contains 35 percent protein, 50 percent milk sugar, 8 percent mineral, numerous vitamins and about 4 percent moisture. (There's a tiny bit of the butterfat still in it, but not enough to count.)

Dry milk can be bought economically and used conveniently by adding it to many familiar recipes.

This is especially important when you consider that the most expensive part of a well-balanced diet involves the protein foods which the housewife customarily purchases. Addition of dried milk makes an inexpensive way of upgrading the diet and providing the protein lacking in so many meals.

This low cost is an important factor in these days of high prices for many of the proteins. The housewife who knows good nutrition now can supplement meat, fish, poultry, eggs, cheese, and milk with dried milk powder and thus afford better nutrition for her family without spending much more.

Nutritionists say the average workingman weighing 150 pounds should have 2½ ounces or 70 grams of protein daily. Requirements may range from 1½ ounces or about 40 grams for the 2-year-old child and 2 ounces or 60 grams for the 8-year-old to as much as 3½ ounces or 100 grams for the active teen-ager or a pregnant woman.

About half of these daily requirements can be met by adding one cup of dry milk per person per day to the diet, or a total of 2 pounds weekly (one cup weighs a little more than a quarter of a pound). One cup contains about 1½ ounces of the highest quality complete protein, which can be purchased at from 6 to 13 cents—the price depends on whether it is purchased in a small package or in bulk.

This nonfat dry milk is a highly concentrated food, not only in protein but in carbohydrates and food energy as well, with a bonus of minerals and vitamins.

One cup of dry milk at a cost of 6 to 13 cents is the approximate equivalent in complete protein content to a half-pound of beefsteak at 50 cents or two-thirds of a pound of pork loin at 33 cents or seven eggs at 30 cents or a third to a half-pound of Cheddar cheese at 20 to 30 cents.

Each cup of dry milk contains 434 calories. One pound contains 1,643. It is especially valuable for those who require a low-calorie, high-protein diet as well as for older people and children.

From the standpoint of the Iowa dairy farmer, the wider use of dry milk may prove an important economic factor. For every pound of fat a cow produces, she also produces about a pound of high-quality protein.

It may be possible for the dairy farmer to realize as much from the sale of protein in the form of dry milk as he gets for the butterfat now being marketed. This might bring either considerable increase in return from sale of dairy products or a lessened cost of butter.

Butter has had to carry most of the cost load of dairy production because the returns from protein have been relatively small when the milk has been separated and the cream or butterfat sold for churning into butter.

With wider use of the protein content of milk, it should be possible to provide better food, cheaper, to consumers and at the same time increase returns to milk producers. Present sale of the protein content of milk in dry form for human consumption now is yielding returns in dollars and cents approximately half what a dairyman gets for fresh, whole milk.

The dairy farmer is now in a position to help alleviate the world-wide protein shortage. On the basis that a cow produces a pound of protein for each pound of butterfat, each Iowa cow produces about 225 pounds of protein per year. It would take the equivalent of four 940-pound steers to yield this same amount.

Dried milk has been available for some time, but much of it has not been suitable for human consumption. Now that grade A dried milk is here, homemakers should know more of its value and how to use it.

Most of the emphasis on household use of dried milk has been on reliequifying or reconstituting it by adding water. Little has been done to use the dry milk powder itself in cooking, and there has been little imagination in preparing dishes that add both fortification and glamour to daily meals through use of the powdered milk.

Dried milk may be used as liquid (by reliequifying, of course) or may be made into pastes of various consistencies with any desired amount of liquid such as water, whole milk, or the liquid in which vegetables have been cooked.

For example, one may enrich the liquid in making scalloped potatoes, corn, or macaroni and cheese by adding one cup of dry milk to two cups of liquid. Dry milk also mixes well with semiliquids such as shortenings, corn sirup, and peanut butter.

One of the best ways to use it is to mix the dry milk powder with other dry ingredients. This saves time and helps with the subsequent dissolving.

Many familiar recipes may be used with the addition of dried milk to provide better eating. This can be done without materially increased cost or sometimes at even less cost in these days of high meat prices.

Children who don't drink enough milk—either because it's not available or because they don't have enough appetite for this and other proteins—may get much of their protein requirements by the addition of dried milk to their diets.

Better consult your doctor about adding it to baby's prepared cereal or other foods as a supplementary protein.

Youngsters will benefit from a few teaspoonful added to their eggnogs, chocolate drinks, and other milk dishes. The same will be true of an extra amount of dry milk added to cream soups, puddings, and desserts.

One cup of dry milk, when reliquified, makes about a quart of milk. So when a cup of powder is added to any food the family is getting all the health benefits of an extra quart of milk without having to consume the extra fat and water.

When reliquified for drinking, dried milk is not only palatable but quite tasty. Some persons even say that when it has been properly mixed and chilled, they prefer it to fresh whole milk. There is no question about its palatability now that proper methods of making it have been developed. Its high protein content makes certain types of dried milk valuable for formulas for infants, too.

One of the advantages of using protein in dry milk form is that it is an animal protein and as such incorporates into the diet valuable amino acids. Amino acids are the building blocks with which muscle, blood cells, and tissues are made and repaired.

Many vegetable proteins actually are incomplete and a diet requires the addition of animal proteins to get these necessary amino acids. No balanced diet is possible without them, and so the use of more dried milk is a way to better nutrition.¹

Still another property which makes dry milk so worth while as a food is that it can be stored almost indefinitely without refrigeration. This storage does not require any further processing or preservation, and with proper storage, the powder will retain all of its valuable properties.

This very fact means a great saving to the wholesaler, the retailer, and to the housewife. You can store the product almost indefinitely merely by putting it in a moisture-proof canister or fruit jar on the kitchen shelf.

It is more economical to buy it in larger quantities than the small packages now on the market, but once a package is opened, it should be placed immediately in a moisture-proof container.

Dry milk can serve as an effective means of storing food against emergencies such as floods or atomic attacks. Persons cut off from supplies of fresh milk and meat could subsist for some time on dried milk powder and water. The powder is 50 percent carbohydrate and 35 percent protein.

It is a concentrated food and can be transported easily because of its character and bulk.

It is hoped that repetition of this old, old story will help the public to appreciate the true value of nonfat dry milk, a fine product derived from the once lowly skim milk.

Again scientists and engineers have found a byproduct that has been looked down

upon and thought worthless for human consumption for many years, and through the development of a proper recovery process, it becomes available and is recognized as extremely valuable.

The value of this dry milk can scarcely be overestimated when you realize that it is one of the richest sources of protein which in turn is the primary structural material from which the human body is built.

Furthermore, these developments will make it possible for the first time for every person in America and many people in foreign countries to receive the high protein diet necessary for best health.

The securing of these great benefits now waits primarily for the Nation's housewives to acquire sufficient knowledge of dry milk's value and varied uses.

Penalties for Influence Peddling

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 11, 1951

Mr. SCHWABE. Mr. Speaker, the following editorial appeared in the Columbia Tribune, published at Columbia, Mo., a staunch Democratic newspaper. This editorial appeared in the issue of that newspaper of September 25, 1951. It is timely and, coming from where it does, I submit that it should be observed that even the Democrats of Missouri are becoming disgusted with the practices of the present national administration. The editorial follows:

PENALTIES FOR INFLUENCE PEDDLING

From some of the remarks he has made about William Boyle and some other members of the White House family who have gotten lucrative fees, mink coats, trips to Florida, and other things of value in exchange for help in getting Government loans, one gets the impression that President Truman thinks it's all right to sell influence. Apparently the President, being an old-line politician himself, holds to the Jacksonian idea that "to the victor goes the spoils."

Maybe influence peddling and other forms of capitalizing on political power weren't too bad in the days when Andrew Jackson put the spoils system on a national basis. In those days the Federal Government and the spoils that could be gained from it were peanuts compared to the gold mines that can be worked in Washington today. The Reconstruction Finance Corporation alone dishes out more money than was spent by the entire Government under Jackson. So influence peddling is a practical matter as well as a matter of principle. It is costing the taxpayers a lot of money. If the American people aren't shocked by widespread lack of moral standards among high-placed public officials, maybe they will get stirred up when they realize that these unprincipled officials actually are taking money out of the people's pockets.

It is said that the Senate Committee on Labor and Public Welfare will soon issue a scathing report containing some practical suggestions on ways to improve moral standards in official conduct. This report will be the result of Senator FULBRIGHT's resolution calling for an investigation of public morals. It has the active backing of such Senate stalwarts as DOUGLAS, of Illinois, and other crusaders for more responsibility in government. It is also said that the commit-

tee's report will recommend changes in present laws to more clearly define the limits to which public officials can go in selling influence without reaping criminal punishment as well as public condemnation. For instance, the acceptance of gifts, such as mink coats and free hotel rooms, would carry penalties.

This seems like a sound approach to a problem that is growing more serious as Government grows bigger. Legislation alone won't make all public officials conduct themselves in an ethical manner. You can't legislate morality. But the threat of a fine or jail sentence would give pause to the more flagrant violators and might change the current attitude that it's all right to peddle influence, especially if you are smart enough to stay within legal bounds.

Where the Money Goes

EXTENSION OF REMARKS

OF

HON. J. HARRY MCGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 11, 1951

Mr. MCGREGOR. Mr. Speaker, United States Government spending will reach a peak during fiscal 1952 far beyond any previous yearly expenditures by the Nation except in periods of all-out war. Many people realize a vast amount of money is being spent for military purposes, but few know exactly what the entire amount of money is buying.

Repeatedly in letters and personal conversations with citizens of the Seventeenth District, I have been asked the question, "Where is the money going?" It is hoped that the facts and figures presented here will help to bring these expenditures into the open.

Government spending this year starting July 1, 1951, will total \$69,000,000,000, according to the present plans. With our economy geared to a partial mobilization program, many of the funds will go for defense purposes.

American industry, through defense contracts, will get the largest share of this year's outlay. About \$15,800,000,000 will go to producers of guns, tanks, and other similar weapons of war. Aircraft manufacturers will receive \$7,300,000,000 in contracts this year and, with prospects of the Air Force being increased to nearly 150 groups, their share of the national budget will be increased.

THE ARMED FORCES

Pay and allowances for men and women in the Armed Forces will account for \$12,500,000 in this fiscal year. Uniforms and food to clothe and feed these troops is estimated at \$5,000,000,000 and includes other miscellaneous items of equipment.

The total for pay and allowances that servicemen will draw is more than it cost to run the entire Government prior to World War II. Should the war in Korea become more explosive, these figures also will rise sharply with any increase in the size of our Defense Establishment.

Other items of the budget more or less related to defense are: \$2,000,000,000 for firms with foreign-aid orders, \$1,900,-

¹Livestock feeding specialists, having known for a long time that animal protein adds something valuable to the diet that vegetable protein does not supply, called this unknown quality or substance "the animal protein factor." Research, of course, has now determined that at least a part of this difference between animal and vegetable protein is due to a recently-discovered vitamin in animal protein, vitamin B-12.

000,000 to building contractors for construction of critical installations, \$1,500,000,000 will go to the important atomic energy program, and \$1,200,000,000 will be used to purchase raw materials for stockpiling purposes.

Persons holding United States Government bonds and other securities will receive \$6,000,000,000 in interest during the coming year. Although major expenditures for the education of veterans under the GI bill have been completed, the sum of \$4,900,000,000 is allotted to veterans during the year and includes pensions, medical payments, and so forth.

Through the farm subsidy program, the Nation's agriculturalists will garner a \$1,600,000,000 chunk of the budget pie. State and Federal public works programs, including such items as bridges, roads, flood control, and so forth, will take \$1,600,000,000 of the outlay, too.

RETIREMENT PAYMENTS

Persons on relief and others, including retired postal employees, users of the postal service and the shipping industry will receive \$7,600,000,000 in direct or indirect subsidies.

Pay for the Nation's 2,500,000 Government workers is included in the figures previously given and will total \$9,700,000,000.

This breakdown is for the fiscal year of 1952. Our top economic planners believe the total Government spending will reach \$84,000,000,000 in 1954, when, barring a global conflict, the spending will level off.

Now more than ever before there is a need for economy in our Government. The public debt will rise along with the national budget since economists say the United States Government's income will not equal its outlay and we will be using red ink on our country's account books for many years to come.

Now is the time to cut unessential expenses before this enormous spending program gets out of control. We must all recognize the need for the United States to be strong, but we must also recognize that waste and unnecessary expenditures in the Government must be stopped before it is too late to halt this inflationary trend.

Guilt by Association

EXTENSION OF REMARKS

OF

HON. HAROLD H. VELDE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 10, 1951

Mr. VELDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Peoria Star newspaper of October 8, 1951, entitled "Guilt by Association."

The editorial is very well written. I was extremely pleased to note that there has been somewhat of a change of policy at the University of Chicago. I want to commend the board of trustees and fac-

ulty members of the University of Chicago for taking the initial step to rid the campus of the subversive element, and hope they will continue their efforts in this direction.

GUILT BY ASSOCIATION

Last week the University of Chicago ousted from his position the student-editor of the school's weekly newspaper, the Chicago Maroon. Reason for the action was that the student had been a sponsor of and participant in the Communist World Youth Festival in East Berlin, Germany, last August.

The dean of students said that "sponsoring and attending the East Berlin Youth Festival demonstrates your lack of qualification to edit a free and independent newspaper."

But this is evoking the guilt-by-association doctrine which Robert M. Hutchins so bitterly denounced when he was chancellor of the university. Apparently no one at the University of Chicago has any idea what the student-editor has been doing in East Berlin. All they know is that he met there with young Communists and apparently had a part in organizing the meeting. To penalize him for associating with Communists is quite plainly to declare him guilty under the doctrine of guilt by association.

Of course, we have always thought that guilt by association had considerable validity. If a bank officer regularly plays golf with a convicted embezzler, or if an elected official spends his evenings with known racketeers, he expects to be thought guilty by association. But we have had some brilliant intellectuals in recent years who believed that they could belong to Communist-front organizations and associate freely with members of the Communist Party and talk like Communists without any suspicion of Communist sympathies being attached to them.

Mr. Hutchins was one of these. After some University of Chicago students, along with students from Roosevelt College, staged a riot in Springfield, demonstrating against Senator Paul Broyles' anti-subversive bill, Mr. Hutchins was subpoenaed before the legislature's seditious activities investigation commission.

Here are some of the statements from Hutchins' testimony:

"I cannot testify concerning subversive activities at the University of Chicago because there are none."

"The university has many thousands of students. None of them, so far as I know, is engaged in subversive activities."

"It would not be in the public interest to exclude students of communistic leanings. If we did, how would they ever learn better?"

"The university does not subscribe to the doctrine of guilt by association. The university does not believe that an individual should be penalized for actions other than his own. The university believes if a man is to be punished that he is to be punished for what he does, and not for what he belongs to."

"It has sometimes been said that some members of the faculty belong to some so-called Communist-front organizations. The University of Chicago does not believe in the un-American doctrine of guilt by association. The fact that some Communists belong to, believe in, or even dominate some of the organizations to which some of our professors belong does not show that those professors are engaged in subversive activities."

But 2½ years later a student editor is found improperly qualified for his position because he met with Communists in Berlin.

Mr. Hutchins stated several things in which the university did or did not believe. Apparently it was Mr. Hutchins who did or did not believe in those things. Now that he has left the university, that institution appears to have adopted the doctrine of guilt by association.

Like all people with good common sense, the university now concedes that if a bird is seen with ducks, walks like a duck, swims like a duck, and quacks like a duck, it is probably a duck.

Cuckoo Statistics

EXTENSION OF REMARKS

OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 11, 1951

Mr. WILLIAMS of Mississippi. Mr. Speaker, under leave to extend my remarks, I include an editorial that appeared in the October 5 issue of the Jackson (Miss.) Daily News. It follows:

CUCKOO STATISTICS

President Truman slings a mean statistic. A casual reader of his budget-defense address Tuesday gets the impression that, considering the defense effort, Government expenditures are quite modest, kept that way by a penny-pinching Chief Executive.

Yet here are record taxes, with at least another \$6,000,000,000 coming up. What's wrong?

It's the way the President uses the statistics. These may not be the kind he calls butterfly statistics, taken out of the air with a net. They are cuckoo statistics, come to lay eggs in the wrong nest.

The President extracts defense expenditures from the budget because we must pay what it costs to be free. He extracts the national debt because "we can't repudiate the signed obligations of the United States." He extracts veteran costs because he doesn't believe in "economizing at the expense of men who have bled their breasts to save their country." He also extracts grants for the blind, aged, and needy with the statement that money couldn't be spent for a better purpose. And finally he extracts a little half-billion item for highway grants, which somehow also carries an appearance of inevitability.

So with \$60,000,000,000 written off as sacrosanct, the \$8,000,000,000 that is left just covers the bare cost of essential Government operations, like the Coast Guard, the FBI and the Public Health Service. Or so the President says.

It's an old trick, this marking off untouchable budget items. Too old to be convincing. For the chances for economy are everywhere. Even in the interest on the national debt.

Included in the debt item are a bunch of interest payments to Government trust funds and Federal corporations and agencies, and these payments form a concealed subsidy. The National Service Life Insurance Fund invests in Government securities and gets 3 percent interest, compared with the 2.2 percent paid to public purchasers of Government bonds. A couple of retirement funds and an Indian trust fund gets 4 percent out of the Government. Taxpayers getting refunds from the Government enjoy 6 percent interest.

The Tax Foundation, Inc., computed that \$145,000,000 a year could be saved here, without incurring any of the dishonor Mr. Truman suggests.

If there are not savings also to be made in defense, veterans and grants to the State, then the millennium is here.

The President also has a prize cuckoo statistic in the statement that over the last 5 years "we" have operated the Government with a surplus of nearly \$8,000,000,000. "We" indeed. The despised Republican Eightieth

Congress, over Mr. Truman's own vehement objections, effected reductions or rescissions in budget requests amounting to almost \$10,-000,000,000. By far the greatest part of "my" 5-year surplus was achieved by the Republicans.

Even the present Democratic Congress has already cut \$2,000,000,000 off what the President calls his tight budget, and it's not finished yet.

But what is going to be said for the average citizen to take is the President's calm assumption that all the complaint about taxes is really just blowing off steam—half the fun of being a citizen in this country comes from complaining. And he cites the man who goes into a night club and pays \$10 or \$50 but screams about a \$30 tax bill. Believe us, Mr. President, any man who spends like that has a \$7,000, not a \$30, tax bill.

As against cuckoo statistics, let us have butterfly statistics.

Farm Electrification in Connecticut

EXTENSION OF REMARKS OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 11, 1951

Mr. PATTERSON. Mr. Speaker, after reading the estimate of the REA report made relative to the State of Connecticut, I questioned the accuracy of the report.

In order to clarify a situation of conflicting reports, I requested an explanation from the State of Connecticut Public Utilities Commission, a copy of which I include under the extension of my remarks.

Mr. Speaker, it is apparent that the Connecticut Public Utilities Commission report is based on facts whereas the REA report is based on estimates. Apparently the Government report should be corrected as previously recommended by that most able chairman of the Connecticut Public Utilities Commission, Mr. Eugene Loughlin.

Mr. Speaker, also included in my extension of remarks is an article appearing in the Hartford Courant on October 8, 1951, written by Bob Byrnes, who is well informed on the affairs of the State of Connecticut, especially where those affairs originate in our Nation's Capital.

Therefore it is my suggestion that the REA correct their report in order that the taxpayers of Connecticut may have a factual report instead of an estimated report.

The above-mentioned follows:

STATE OF CONNECTICUT,
PUBLIC UTILITIES COMMISSION,
Hartford, August 14, 1951.

Mr. CLAUDE R. WICKARD,

Administrator, Rural Electrification Administration, United States Department of Agriculture, Washington, D. C.

DEAR MR. WICKARD: The commission acknowledges receipt of your letter of July 13, 1951, requesting information concerning the number of farms in Connecticut that were receiving central station electric service as of June 30, 1951.

During the past 5 years, the commission has used the 1945 Farm Census which listed 22,241 farms in Connecticut. Based upon this figure and as reported to you in our letter of August 3, 1950, there were 22,216 farms receiving electric service, or 99.9 percent, as of June 30, 1950.

We note from the Administration's release of July 30, 1951, with regard to farm electrification that, according to the preliminary 1950 census statistics, there were 15,615 farms in Connecticut, of which 14,408 were receiving central station electric service as of April 1, 1950, or 92.3 percent. This represents a substantial reduction both in the number and percentage of farms electrified when compared to our report of 1950.

According to a copy of the preliminary report for 1950 Census of Agriculture, Bureau of the Census, for Fairfield County, Conn., there were 1,427 farms reporting as being electrified compared with 2,475 in 1945. We note on this report that among other items, telephone and electric service are listed under specified facilities and equipment, after which there is a star (*). At the top of this column is a notation in explanation of this star which reads as follows:

"Generally, the data for both 1950 and 1945 are based upon the tabulation of reports for all farms in the county. However, the 1950 data for items followed by a star (*) represent estimates for all farms made on the basis of reports from a sample of approximately 20 percent of the farms."

It is the commission's opinion that, based upon the results of a 20-percent sampling of the farms reporting in the State as a whole, the figures are not representative or accurate enough to draw conclusions therefrom, and, for this reason, the commission must take exception to the REA release of July 30, 1951.

The State of Connecticut for the past 25 years has been vitally interested in farm electrification as evidenced by the active interest taken in this work by the public utilities commission, county farm bureaus, agricultural agencies, and privately owned utilities operating within the State. Accurate annual figures have been kept by this Commission of the farms to be furnished with electric service, with a resurvey being made three years ago. Therefore, we are confident that the figures on farm electrification kept in this office are accurate and reliable.

For your information, we are enclosing a tabulation on farm electrification as of June 30, 1951. This report indicates that only 10 farms in this State remain to be served, of which 6 have been offered service but declined and 3 where extensions are not justified because of inaccessibility. This leaves a balance of 1 farm still to be served. Therefore, it is the commission's opinion that the line building phase of the farm-electrification program in Connecticut is practically 100-percent complete.

Yours very truly,

PUBLIC UTILITIES COMMISSION,
LOUIS B. WARREN

Farm electrification data, June 30, 1951, State of Connecticut

WASHINGTON REPORT—CAPITAL DEVELOPMENTS OF SPECIAL INTEREST TO CONNECTICUT CITIZENS

(By Robert D. Byrnes)

REA SAYS 1,015 FARMS NOT ELECTRIFIED

WATERBURY, CONN., October 9, 1951.—The Rural Electrification Administration, in its latest estimate of the rural electrification situation, says there are 1,015 farms in Connecticut, or 6.5 percent of the total number of farms in the State, which do not have central station electric service. The announcement of the statistics does not reveal the manner in which the estimate was made, other than an indication that the 1950 census enters into the computations. The announcement cited preliminary figures of the 1950 census of agriculture which showed 14,408 of the 15,615 farms in Connecticut had central station electric service. The REA estimate, for June 30 of this year, as opposed to the April 1, 1950, date of the census, was that 14,600 farms in the State now have central station service.

With an estimated 93.5 percent of the farms electrified, Connecticut is well below the top-ranking States in the REA estimate table. States with higher percentages of electrified farms than Connecticut, and their

percentages, are California, 95; Idaho, 94.8; Indiana, 96; Iowa, 95.8; Michigan, 97.8; New Hampshire, 94.7; New Jersey, 94.7; New York, 95; Ohio, 94, and Washington, 93.7.

REA is required to make an annual estimate of the number of electrified farms in each State. This estimate is used as a basis for apportioning REA funds to States for loans. On the basis of history, this aspect is academic for Connecticut, as it is one of two States which has never had an REA loan.

Capitalist!

EXTENSION OF REMARKS OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 11, 1951

Mr. WILLIAMS of Mississippi. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I include herewith a parable which appeared recently as part of an advertise-

ment in one of our national magazines, but which illustrates graphically the apparent philosophy of our present-day social planners and many of our administration leaders:

CAPITALIST!

Johnny used to be a laborer. Brother Tim still is.

Both cut lawns. Both used to use customers' hand mowers. Each could do one big lawn a day, and got \$2 for it.

Tim spent his \$2 on movies and candy. Johnny saved some money, borrowed some more, and bought a power mower. Now he can cut 5 lawns a day, and so makes \$10.

He puts aside \$2 a day to pay back his loan, and \$1 toward another mower when this one wears out.

He still has \$7 where he used to have \$2, and is helping more people get their lawns cut when they want them. Yet some enemies of business would say that that shows Johnny is too big; he should be limited in the number of people he can serve.

These same strange enemies would prevent Johnny from setting aside \$1 a day out of his own earnings, to buy a new mower when this one wears out. (Of course, that means Johnny would go back to hand labor at \$2 a day, and fewer people would be served—but these strange people don't care about that.)

And some people say Johnny should be forced to share his \$7 with Tim so Tim can keep on spending his \$2 for movies and candy.

Sounds ridiculous? Not at all. Every one of these charges and demands is leveled at American business today.

Truly a Day of Atonement

**EXTENSION OF REMARKS
OF**

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 20, 1951

Mr. KLEIN. Mr. Speaker, under leave, I insert in the RECORD an article by Prof. Max Lerner, from the New York Post of October 10.

It is ironic, Mr. Speaker, that the published installments of the Forrestal diary should, on Jewry's Yom Kippur, the Day of Atonement, be concerned with the late and great Mr. Forrestal's curious inverted attitude toward world Judaism.

Washington was full of whispers of Mr. Forrestal's antagonism against the Jews during his Government career. I have no way of assaying the truth of those rumors, except as they are partially borne out by the diaries; but it seems to me that the course of history in the Middle East has proven that, on policy levels, he was as mistaken as are all other people who fall into the grave error of mass prejudice.

President Truman's "state ship" has, obviously, been of finer craft, for he has piloted the world's most powerful Nation through 7 years of international uncertainties; and one of his greatest acts has been his consistent support of Israel.

Perhaps it is not amiss to say that the coincidence gives an opportunity for the people of other faiths who have, even temporarily, fallen into such grievous error, to observe a day of atonement also.

Professor Lerner's column is so inclusive that I permit him to speak for me:

FORRESTAL ON THE JEWS

(By Max Lerner)

By a curious timing, the installment of the Forrestal Diaries dealing with the Jews and Palestine appear in various newspapers today exactly on the Jewish Day of Atonement. Individual Jews, like individuals of every other faith, may have many things to be penitent about, but I cannot believe that the Jews as a group played the monstrous role in the Palestine crisis that Forrestal's pages try to assign to them.

It is ungracious and futile to argue with a dead man, who led an agonized life and met a tragic end. But when the dead man's papers, now published, give so distorted a view of a living people, who will have to bear the hatreds of millions of bigots which his pages are bound to strengthen, the picture must be set back in focus.

Forrestal's big theme was that American military security depended on winning the Arabs—which is to say, appeasing them by the sacrifice of the Jews, that the American Jews were pressing for action in line with their sympathies but not with our national security; and that Truman, Haunegan, and McGrath were too weak to resist the pressures and, by playing politics, presumably sold out the national security to the Jewish voters and the big Jewish campaign contributors.

I put some of these things more baldly than Forrestal. I am trying to get at the essence of his argument, stripped of indirection and adornment.

Almost every element of the argument has been proved wrong by the history of the 4 years since he made these diary notes.

American security has not turned on the attitude of the Arab States. We have strengthened our basic military position, which depends on Europe and Asia, on our air strength and atomic strength, on our industries, on the attitude that decent men of all faiths have toward American decency. We have done this even with the Arabs half-hostile to us.

On the question of oil, we have stronger positions in the Middle East than the British, whose whole policy under Ernest Bevin was to surrender the Palestine Jews to the Arabs.

As for the military strength of the Arabs and Jews, Forrestal overrated the one and underrated the other. The later collapse of the Arab Armies, and the victory of the small band of despised Jews, was a measure of Forrestal's whopping error.

Forrestal was even wrong on the domestic side of the question. It was not the Jews alone who urged the administration to back up the U. N. partition plan. The whole of Christian liberal opinion, not only in America but throughout the world—as shown by the reports of the many commissions of inquiry—was for partition as a policy of sheer justice. It was the military, under Forrestal's spearheading, who tried to sell out a just position for the fancied advantage of appeasing the Grand Mufti's cohorts. What the combined pressures of Jewish and Christian liberal opinion did was to put American policy back on the track again, where it belonged.

Possessing a good mind, Forrestal covered his militarist and anti-Jewish position with high-flown language. He was trying, he said, to lift the Palestine issue from politics, and put it on the high level of national security alone. Which meant that those who differed from him were low-minded politicians, while he was a patriot.

The trouble is there were many who thought true patriotism demanded that America act as a great people, and not in the image of the Nazis. American greatness could not be expressed in brutally abandon-

ing to the Arab mercies those who had escaped the fate of the millions who had been burned in Hitler's furnaces.

We shall be hearing many times in the future the cry about lifting certain issues of decency and honor and American greatness out of politics. Let us remember that sometimes those who say it will be suffering from a disease—the disease of fearing the American people, and therefore fearing the political democracy through which the people operate.

Forrestal tried to live in a high place, away from the sweat and hearts of the people. In the end he fell from it tragically, toward them.

Bucking the Lobby

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 11, 1951

Mr. DINGELL. Mr. Speaker, recent action by the Government of Canada has focused renewed interest in the St. Lawrence seaway and power project. I think it appropriate, therefore, that the Congress, as well as the American people, be presented with a brief explanation as to how and why American participation in the development of this project has long been stymied.

I doubt, if any great project has ever enjoyed the unanimity of authoritative and expert support that has been acquired by the St. Lawrence proposal. The project's development has been urged by every President, Republican and Democrat, since Woodrow Wilson. Year by year the St. Lawrence project has attracted under its banner an ever-increasing number of State and municipal governments and national farm, labor, business, and veterans' organizations. Today, every major national farm organization in the country supports the project. Many of the leading labor organizations have rallied to its cause; and a substantial segment of American industry has urged its completion. To top it all, the chiefs of every Federal agency concerned with the proposal informed the Congress early this year that the St. Lawrence project is needed not only as a valuable adjunct to our expanding national economy, but especially as a vital part of our national defense mobilization program. Among those attesting to the defense importance of the St. Lawrence project were Defense Mobilizer Charles E. Wilson, Secretary of Defense Marshall, Secretary of the Army Pace, the Joint Chiefs of Staff, the National Security Resources Board, the Munitions Board, and the Permanent Canadian-American Joint Board of Defense.

Why is it, then, that the pleadings of such eminent and responsible authorities have gone unheeded? The answer lies in the persistent machinations of a small but powerfully entrenched group of special interests whose chronic antipathy toward the St. Lawrence project has led them into destructive activity detrimental, in the long run, to their

own as well as the Nation's best interest. The nucleus of this opposition is the railroad industry. However, this general identification can be misleading and requires some careful delineation.

There are 19 registered lobbyists whose interests are in opposition to the St. Lawrence seaway project. Fourteen of these represent the following railroad interests: The Association of American Railroads, the Pennsylvania Railroad, the National St. Lawrence Project Conference, the Mississippi Railroad Association, the Texas railroads, the railway conductors, and the Santa Fe Railroad.

It is no surprise that the most virulent opposition to the St. Lawrence seaway project comes from States where the Pennsylvania Railroad, the Baltimore & Ohio, and the New York Central operate. This includes New Jersey, Pennsylvania, Maryland, Virginia, Ohio, Indiana, and Illinois, as well as down-State New York. We occasionally find traces of their activity even in Michigan, but they do not dare come out openly in our State because they know the crushing effect of public opinion would descend upon them.

The Pennsylvania Railroad, along with the Baltimore & Ohio, has managed to create seemingly unanimous opposition among business groups through their representation in chambers of commerce in Pennsylvania, Maryland, and Virginia. Its influence extends into Virginia through its subsidiary, the Norfolk & Western, as well as the Richmond & Fredericksburg Railroad. It is interesting also that the Pennsylvania Railroad's influence extends into Kansas and the southwestern territory through Kansas, Oklahoma & Gulf Railroad, all of the directors of which are from Philadelphia and some holding interlocking directorates with the Pennsylvania Railroad.

The New York Central Railroad, though not registered under the Lobby Act, is one of the most aggressive opponents of the seaway project. Through its subsidiary, the Boston & Albany, it extends its influence into Massachusetts. From St. Louis and Chicago to New York and Boston, wherever there is a New York Central, Pennsylvania, or Baltimore & Ohio depot, you can expect to find a cell of violent and virulent opposition to the seaway project which extends this influence through their trade connections into the business life of the community.

The Association of American Railroads is fronting for these eastern railroads. It is known that the voting power in the Association of Railroads is on the basis of gross revenues of the member roads. This gives the major roads, which are controlled from New York, Boston, and Philadelphia, a preponderant voice in the management of the Association of Railroads.

Each member of the association enters into a compact with the association to follow the policies of its board of directors and, in case of disagreement, resort to arbitration within the association. Members of the association are therefore contractually bound not to take public exception to its policies. The result is that, even where any member

railroad is in disagreement with the policy of the eastern railroads, they are not free to express themselves publicly. Thus, directly through their own lobbyists, as well as through the Association of Railroads, the eastern railroads are able to mobilize country-wide opposition to the seaway.

The so-called National St. Lawrence Project Conference, which is supposed to represent many chambers of commerce, is actually financed largely by the Association of Railroads and acts as a front for eastern railroads.

Thus, a pattern of influence and intimidation has been created throughout the country, centered in the Association of Railroads and the eastern railroads and banking interests which they represent. The activity is usually pinpointed at those areas where they wish to influence congressional opinion. For instance, when the Governors' Conference of Inland America held its first session in Omaha in June, the Association of Railroads sent a representative from Washington to undermine the conference and they also had the assistance of a director of the Burlington Railroad and Northwestern Bell Telephone Co., Chris Abbott, in attempting to discredit the conference.

Again, the lobby reports indicate that the Texas railroads are registered as opposing the St. Lawrence project. By no stretch of the imagination can one conceive of the interest the Texas railroads can have in this project, except perhaps the fact that Congressmen and Senators from Texas hold responsible and honorable positions in the organization of Congress.

It is possible to take up most of the major railroads in the United States, such as the Union Pacific, the Illinois Central, Great Northern, Northern Pacific, the Southern Railroad, Atlantic Coast Line, Baltimore & Ohio, and trace their financial and directorate control to the eastern financial centers; and, when the western roads act in opposing the St. Lawrence seaway project contrary to the regional self-interest of the people of their areas, they are acting at the behest of opponents of the seaway in New York, Boston, Philadelphia, and Baltimore.

It is well known that Fred Gurley, president of the Atchison, Topeka, & Santa Fe Railroad, has been in Washington lobbying against the St. Lawrence seaway. The fact that the Santa Fe Railroad is fighting the seaway is also verified by the registration of one J. P. Reinhold, as representing the Santa Fe Railroad in opposition to the St. Lawrence seaway project—CONGRESSIONAL RECORD, September 13, 1951, page 11342.

It is difficult to explain why the Santa Fe Railroad, serving west of Chicago a rich agricultural territory through Missouri and Kansas all the way to California, should fight the St. Lawrence seaway, which is supported by all of the agricultural organizations in the country as being of great benefit to agriculture. In fighting the seaway, the Santa Fe Railroad is going against the regional interests of the territory it serves and against the interests of the farmers.

There is no basis in logic or in fact for the attitude of the Santa Fe officials.

We must find the reason for this attitude of the Santa Fe in other factors than economic logic or regional self-interest. I think you will find the reason in the control of the Santa Fe by interests located in New York City. If you examine the 30 largest stockholders of the Santa Fe Railroad as reported to the Interstate Commerce Commission, you will find that nearly all of them represent New York and Boston interests, and some Philadelphia and Pittsburgh interests. Although many of these large stockholders are brokerage houses, among them you will find the Equitable Life Assurance Society, Massachusetts Investors Trust, Metropolitan Life Insurance Co., Prudential Life Insurance Co., New York Life Insurance Co., John Hancock Mutual Life, the Fidelity & Casualty Co. of New York.

Again, examining the board of directors of the Atchison, Topeka & Santa Fe, you will find that interests affiliated with New York banking groups have influential representation. Thomas S. Lamont, of J. P. Morgan & Co., is there, as is J. Luther Cleveland, chairman of the board, Guaranty Trust Co., of New York. In addition, there are five directors representing Pacific Telephone & Telegraph, Illinois Bell Telephone Co., and Western Electric—all of which are controlled by the American Telephone & Telegraph Co., of New York; two of them also are directors of the New York Life Insurance Co., and three are directors in common with International Harvester.

Under these conditions, is it any wonder that the Santa Fe Railroad opposes the St. Lawrence project? It is well known that the opposition to the project emanates from those financial circles in New York which are interested in the eastern railroads and power companies. In opposing the seaway project, the Santa Fe management is acting against the interests of the farmers and the businessmen in its territory. When Congressmen from Missouri or Kansas or New Mexico receive letters against the St. Lawrence project, they can be sure that they are stimulated by the railroads, such as the Santa Fe, acting at the behest of the New York and Boston financial groups. Not 1 out of 10 men in the street in the Western States knows much about the St. Lawrence project, but a great flood of letter writing is stimulated by railroads such as the Santa Fe, whose voice may sound like that of the prairie farmer but the words are put there by eastern interests.

The question that confronts the Congress of the United States is whether we shall be intimidated and cowed by the powerful and concentrated attack of this handful of people in the eastern United States who, through economic controls, are able to extend their dominant influence into other parts of the country. Unfortunately, this intimidation extends to many businessmen and bankers who sell goods and services to the railroads. Time and time again, businessmen will say that they favor the seaway but they do not wish to be quoted on the subject because they do

business with the railroads. Has the power of the railroads reached so high that it actually curtails freedom of action and speech in the United States?

In the recent action of the House Public Works Committee on July 26, 10 out of 12 Republican members voted against this project. We know that the Pennsylvania Railroad, the Baltimore & Ohio, the New York Central, and other railroads, operate in their districts, as they do in the districts of most of us. Heretofore, this project had been bipartisan in its support. Are we to conclude from this one-sided result in the committee that the Republican Party has succumbed to the pressures of the railroad lobby, and the other groups that it can activate?

I am bringing these facts to the attention of the House because I do not believe that a majority of the Members on the other side of the aisle would knowingly want to side with one special interest, centered in the eastern financial circles, to the detriment of the public welfare.

And now, we have the recent proposal by the Prime Minister of Canada, a proposal which signifies a shameful paradox. Here is a brave nation, our neighbor to the north, of less than one-tenth the population of its great and powerful neighbor, and endowed with an even smaller percentage of national wealth than we possess, offering by itself to sustain the entire outlay needed in the development of a common waterway—a great artery of traffic whose clearance will be far more lucrative economically and far more important militarily to this great Nation, and to which we Americans like to refer as the bastion of the free world and the democratic mode of life. Can it be that our foresight, courage and our reputation for taking the initiative in matters of this kind have sunk to such a level that we must impose our burden upon the finest and most generous and trustworthy neighbor in the world? Are we dependent upon Canada to provide for an American life line?

I, for one, will not concede this—not until the entire story of the St. Lawrence project has been told to the American people and to their elected representatives. I firmly believe that once all the facts are known and the total story is told, the American Congress will rise in righteous indignation and repudiate those who would have us shirk our responsibilities for the maintenance of our own security and well-being.

Controls Did It

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 11, 1951

Mr. SCHWABE. Mr. Speaker, I am in receipt of a letter from a very alert, active, and practical businessman of Okla-

homa City. Without identifying him, I am pleased to quote as follows:

DEAR CONGRESSMAN: I just saw in one of the weekly letters coming across my desk, an item that reads as follows:

"A still tighter pinch on structural steel for civilians is ahead early next year. Reason is that the figures show bigger Government demand for structural steel for foreign military bases, and for atomic plants. So new and deeper cut-back orders will be issued for January, February, and March. Roads and bridges will be hit the hardest by the new regulations. Offices, stores: most will be banned, except in defense areas. Schools: many will be postponed. Churches will get little steel."

It surely doesn't look encouraging for our business. Controls did it. Without controls there would have been a more equitable distribution of steel production and everybody would have been much happier. Government controls cause unnecessary stockpiling by all governmental agencies. Just watch the United States engineers, the Army, Navy, Atomic Energy Commission, Maritime, Munitions Board, and other governmental agencies move into the reinforcing-bar market and start stockpiling reinforcing bars all over the world in quantities far in excess of the wildest imagination of the requirements. Then, we wonder why there are shortages. How can we avoid shortages with such slipshod governmental controls and with such greedy claimant agencies?

The Action of the Department of Defense in Liberalizing Its Policy on the Release of Reserves Vindicates Those of Us in Congress Who Criticized the Department of Defense for Its Shameful Treatment of Reserve Personnel

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 11, 1951

Mr. VAN ZANDT. Mr. Speaker, the recent announcement that the Department of Defense has revised its program for the releasing of reservists without doubt stems from the concerted efforts of some of us in Congress to correct the rank injustices inflicted on Reserve personnel.

I take pardonable pride in the part I played in trying to correct this situation, as evidenced by the following statements I made on the floor of the House during the present session of this Congress.

On January 12, 1951, I had the following to say:

ADDITIONAL SECRETARIES OF THE ARMY, NAVY, AND AIR FORCE

Mr. VAN ZANDT. Mr. Speaker, for the past week a subcommittee of the House Committee on Armed Services, of which I am a member, has been taking testimony from representatives of the Reserve Officers Association, the Air Force Association, the AMVETS, the American Legion, and the Veterans of Foreign Wars, and other organizations on the question of the Reserve components of our Defense Establishment.

While I do not want to create the impression that I am reporting for the subcom-

mittee or reflecting its views, yet I do want the membership of the House to know that because of the mishandling of the Reserve program, much hardship has resulted. The uncertainty that each reserve is faced with today has thrown both officers and men alike of the Army, Navy, Air Reserve, National Guard, Marines, and Coast Guard into a complete tail spin.

Two years ago I called to the attention of Congress these unfavorable conditions among the Reserves and at that time recommended that action be taken immediately by creating additional Secretaries of the Army, Navy, and Air Force whose sole responsibility would be to look after the affairs of the Reserve components. My recommendation, which was incorporated in H. R. 1439, introduced in the Eighty-first Congress, was the first step necessary to bring about a complete overhauling of all Reserve activities with the hope of eventually building a strong Reserve force. Unfortunately, the legislation was ignored by the Eighty-first Congress.

Mr. Speaker, with the Reserve problem acute today and thousands of reservists being called to active duty, it is incumbent upon this Congress to take immediate action in remedying conditions. With this thought in mind, I have reintroduced my bill to create additional Secretaries for the Reserve components of our Military Establishment. I hope that it will receive favorable consideration.

On June 7, 1951, I made the following statement on the floor of the House:

Mr. VAN ZANDT. Mr. Speaker, I favor the conference report with the exception of the provisions that affect those Volunteer and Inactive Reserves who have been called to active duty against their own wishes. Most of them are veterans of World War II.

When this bill was considered by the House Armed Services Committee we members of that committee spent many hours discussing the treatment accorded the Reserves. After a lengthy discussion the committee unanimously agreed as did Mrs. Rosenberg, Assistant Secretary of National Defense that the Reserve program had been poorly administered by the Defense Department and that the reserve himself had been mistreated. My personal opinion is that the word "mistreated" was mild and that the word that should be used was "tortured," for it more aptly describes the treatment accorded reserves by not only the Defense Department but also by the component branches of our Armed Forces.

After the House Armed Services Committee had spent hours discussing the Reserve problem in general we wrote a proviso into the bill that any member of the Inactive or Volunteer Reserves who served for a period of 12 months or more between December 7, 1941, and September 2, 1945, shall upon application be released to inactive duty after he has completed 12 months of active duty. When I speak of an inactive or volunteer reserve I speak of one who did not attend drills, one who did not take his summer training and one who did not receive pay for being a member of the Reserves. This type of a reserve is one who was solicited by the various branches of the armed services and asked to join a Reserve unit with the understanding that he would only be called to active duty should his country become involved in a national emergency. At the time the reserve was solicited for membership there was nothing contained in any law that permitted the armed services to call him to active duty. Last year without warning the Congress of the United States amended the Selective Service Act of 1948 authorizing the call to active duty of any type of reserve. By so doing, Congress violated the contract that existed between the Inactive and Volunteer Reserves and the Government of the United States.

With this authority the armed services launches a program of ruthlessly calling up the inactive and the Volunteer Reserves without considering the fact that the average reservist served anywhere from 2 to 5 years in World War II. The fact he had decorations, including the Purple Heart, was not given any consideration. There was no concern shown for the reservist or his family nor for his job or his efforts to complete his education. He was abruptly taken from civilian life and the hardships that resulted cannot be adequately described in words.

As the result of this inhuman treatment the reservist's mind is poisoned and his attitude so bitter that there is not a Member of this Congress who has not received scores of letters containing violent protests over the shabby treatment accorded these veterans of World War II who made a stellar contribution in winning that conflict.

These reservists cannot understand why they have been conscripted and thrown into combat while thousands of Organized Reserves are still on inactive duty and Selective Service is monthly lowering the draft requirements. During the month of July draft quotas have been lowered to 15,000 and frankly there is no answer to the criticism voiced by Inactive and Volunteer Reserves. They are the victims of maladministration and the resulting injustice that follows in its wake.

As I have said before the House version of the UMT bill provided for release of these Inactive and Volunteer Reserves after 12 months of active duty. Now we find that this conference committee report extends the 12 months of active duty to 17 months. In the vernacular of the armed services the reservists have been given another shellacking when this bill becomes a law.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. VAN ZANDT. I yield to the gentleman from Iowa.

Mr. GROSS. It does not make any difference how sweetly proponents of this report mouth the words "unless sooner released," the fact still remains that they have added five more months to the active service of Inactive and Volunteer Reserves.

Mr. VAN ZANDT. The gentleman is absolutely right.

Last fall the Department of the Army announced a point system, and distributed information throughout the services telling the men that after they had acquired a certain number of points they would be sent home. Then, within a matter of a week, the Department of the Army completely ignored the point system and the Reserves started asking the question, "Where is the point system?" The truth of the matter is that the Army had no intention of putting the point system in effect. It was nothing more than a sugar-coated promise designed to quiet the Reserves on the eve of last fall's general election.

Mr. PERKINS. Mr. Speaker, will the gentleman yield?

Mr. VAN ZANDT. I yield.

Mr. PERKINS. I would like to ask the gentleman if he does not agree that someone in the Department of Defense has been dragging his feet concerning giving relief to the reservist?

Mr. VAN ZANDT. Absolutely. Mrs. Rosenberg in her statement before the House Armed Services Committee stated the entire Reserve program has been maladministered and the reservists poorly treated.

Mr. VINSON. Mr. Speaker, will the gentleman yield?

Mr. VAN ZANDT. I yield.

Mr. VINSON. Does not the gentleman think in view of the fact that the subcommittee, under the chairmanship of the gentleman from Louisiana [Mr. BROOKS], which is now writing a Reserve program, that if there is

any injustice done in this bill it can be dealt with and corrected by the gentleman from Pennsylvania, who is on that subcommittee?

Mr. VAN ZANDT. Certainly, but that is another sugar-coated promise because it will take months before any Reserve program can be written into law.

Mr. VINSON. With the gentleman's aid I hope we shall have it in less than 30 days.

Mr. VAN ZANDT. Already we have been waiting and waiting for 18 months. We started consideration of it last year and nothing has been done about it yet, even despite Mrs. Rosenberg's report to us that the Reserve program was maladministered.

Mr. VINSON. I hope the gentleman is not trying to convey to the House that the viewpoint he is now expressing cannot be solved; we all recognize the force of the well-meaning criticism the gentleman is directing to this problem, and we are trying to correct it and will when we bring out a Reserve program bill.

Mr. VAN ZANDT. While it is our hope that a new Reserve program will be a reality in the near future we are losing a golden opportunity in this bill to regain the confidence of the reservists and to restore their faith in Congress.

Mr. FORD. Mr. Speaker, will the gentleman yield?

Mr. VAN ZANDT. I yield.

Mr. FORD. Under the conference report can the enlistment of Volunteer Reserves, Inactive Reserves, be extended 1 year beyond the termination date of their contract?

Mr. VAN ZANDT. It can be extended to July 1 of 1953.

Mr. FORD. Can the gentleman give any logical explanation of the right to extend the 4-year term or 3-year term enlistment contract of a volunteer or inactive reservist?

Mr. VAN ZANDT. I cannot. Being brutally frank, the contract that the reservist has with his Government has been ruthlessly ignored so many times in recent months that it appears to be but a scrap of paper. Let me say in conclusion that in my opinion the great majority of all Reserves now on active duty are so sour and bitter over the treatment accorded them that upon discharge they will never have anything to do with the Reserve components of our Military Establishments. They have had enough, and I agree with them.

During House consideration of the military appropriation bill on August 9, 1951, I offered the following amendment, which was approved by the House of Representatives by a vote of 122 for and 102 against:

Mr. VAN ZANDT. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

"Amendment offered by Mr. VAN ZANDT: 'Page 52, line 9, insert '(a)' after 'Sec. 604'."

"On page 52, insert after line 11 the following new matter:

"(b) No part of any appropriation contained in this act for 'Pay and allowances' of military personnel shall be expended for the pay or allowances, accruing after November 30, 1951, of any member of the Inactive or Volunteer Reserves who served on active duty for a period of 12 months or more in any branch of the Armed Forces during the period beginning December 7, 1941, and ending September 2, 1945, if such member shall have served on active duty for a period of 12 months or more after June 26, 1950, unless such member shall have voluntarily consented to remain on active duty.

"(c) No part of any appropriation contained in this act or any other act shall be expended for the pay or allowances, or for benefits under part I or part II of Veterans Regulation No. 1 (a), as amended, as the

case may be, of any member of the Armed Forces serving on active duty if such member was receiving benefits under part I or part II of Veterans Regulation No. 1 (a), as amended, at the time he was ordered to active duty."

In support of the above amendment I had the following to say:

Mr. VAN ZANDT. Mr. Chairman, on the 7th day of June, when we considered the conference report on the Senate bill No. 1, now Public Law 51, we found that the conferees had agreed to a period of 17 months of active duty on the part of Inactive and Volunteer Reserves who had been called to active duty involuntarily against their own wishes.

As a matter of information, when the House approved Senate bill No. 1, commonly called the UMT bill, it provided that the Inactive and Volunteer Reserves called to active duty against their own wishes would be required to serve 12 months. The Senate bill, when it passed the Senate, did not contain any provision whatsoever. So the conferees recommended the 17 months' period of service. During the debate the chairman of the House Committee on Armed Services [Mr. VINSON] stated that in a few weeks the Department of Defense would send to the House Committee on Armed Services a bill providing a new Reserve policy and that it would be certain to correct any injustice that was being done to the Inactive and Volunteer Reserves. The House Committee on Armed Services has received that bill, and there is nothing in it that will correct any injustice which has been done to the Inactive and Volunteer Reserves.

Mr. VINSON. Mr. Chairman, will the gentleman yield?

Mr. VAN ZANDT. I yield to the gentleman from Georgia.

Mr. VINSON. The gentleman is a member of the committee that is now conducting hearings on that bill.

Mr. VAN ZANDT. That is correct.

Mr. VINSON. Is there anything that will prohibit him from carrying out the statement I made, that we could correct it in the Reserve bill, which the gentleman is holding hearings on now?

Mr. VAN ZANDT. I can reply to your question by saying that the bill you have in mind may not reach the floor of the House for possibly a month and it may not pass the Senate for another month. In the meantime these Inactive and Volunteer Reserves are being retained on active duty.

Mr. Chairman, what I am trying to do is provide relief to a group of Americans who served during World War II for more than 12 months, and who joined the Inactive and Volunteer Reserves of our Armed Forces with the understanding they would not be called except in case of war. Unknown to these Inactive and Volunteer Reserves, the Congress of the United States amended the Selective Service Act of 1948 and provided that not only would their enlistment be extended for a period of 12 months, but they could be called up to active duty. Mind you these Inactive and Volunteer Reserves attended no drills, received no summer training, or pay. They were literally reservists on paper. When Mrs. Rosenberg, Assistant Secretary of National Defense, appeared before the House Committee on Armed Services she confessed that the law had been administered poorly. She confessed that the Department of Defense had treated the Inactive and Volunteer Reserves of this country in a shameful manner. Yet, they are still on active duty, and there is no Member of this House who has not received a letter, or numerous letters, telling him about the discrimination that the Inactive and Volunteer Reserves have been subjected to in being separated from his family, his civilian occupation, or his business while Organized Reserves who attended summer training and weekly drills

and receive pay for them remain at home with thousands of young men of draft age walking the streets.

Mr. Chairman, what does my amendment do? It provides that on the 30th day of November, 24 days before Christmas, because of the fact that no portion of this appropriation can be used to pay a volunteer or inactive reserve who has had more than 12 months of active duty he must be separated and returned to inactive duty. I say to the members of this committee, if you want to recognize a group of Americans who have already made their contribution in World War II, and who are being forced to make another contribution in world war III—and I consider the Korean war world war III—and if you want to help the Reserves in the future, I urge that you pass this amendment and return these boys to their homes for Christmas Day 1951.

Mr. COOLEY. Mr. Chairman, will the gentleman yield?

Mr. VAN ZANDT. I yield to the gentleman from North Carolina.

Mr. COOLEY. How does this help the Reserves, by cutting off their pay?

Mr. VAN ZANDT. It means that the armed services will have to return them to inactive duty by November 30, because they cannot be retained on active duty without pay.

Mr. COOLEY. That does not necessarily have to follow. I think the gentleman's purpose is right, but to cut off a man's pay seems to be a very awkward way of accomplishing what he desires.

Mr. VAN ZANDT. It is the only way it can be done. As I mentioned previously we tried to correct the intolerable conditions when the UMT conference report was on the floor but because of the parliamentary situation amendments were barred.

Mr. VINSON. Mr. Chairman, will the gentleman yield?

Mr. VAN ZANDT. I yield to the gentleman from Georgia.

Mr. VINSON. The effect of the gentleman's amendment would be to repeal a provision in the Draft Act.

Mr. VAN ZANDT. Not necessarily.

Mr. VINSON. That is exactly the effect of it, because the result is that it will force the Department to do either one of two things: Turn them out in 12 months or hold them without pay.

Mr. VAN ZANDT. They will not hold them because, under existing law, military personnel ordered to active duty must be in a pay status.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. VAN ZANDT. I yield to the gentleman from Iowa.

Mr. GROSS. If it has the effect of repealing that provision in the Draft Act it ought to be done anyway.

Mr. VAN ZANDT. Definitely so.

Mr. COUDERT. Mr. Chairman, will the gentleman yield?

Mr. VAN ZANDT. I yield to the gentleman from New York.

Mr. COUDERT. I am entirely in sympathy with the objective that the gentleman has in mind, but I wonder if he can tell the committee what effect this would have on the armed services as of today—whether it would release so many men that it would make many of the units of the armed services impotent.

Mr. VAN ZANDT. When I considered introducing my amendment I took that into consideration, and that is the reason for establishing the date of November 30. At the present time there is a rotation program under way. There is, in addition, a program providing for the release of reserves under this program. They are releasing so many thousands every month. Among those released are inactive and volunteer reserves. Therefore, on November 30 a great majority

of inactive and volunteer reserves who were called during July and August of last year will be released under the 17-month provision which is a maximum, and not a minimum, period of service.

It is now August 9 and we are giving the armed services nearly 4 months' notice to call up paid reservists and draftees to replace the inactive and the volunteer reservists. Therefore, the results of my amendment in returning to inactive duty the inactive and volunteer reserve will in no manner disrupt the Armed Forces of our country. It will, however, in a small measure let the inactive and the Volunteer Reserves know that Congress recognizes the shameful treatment accorded them and is making a ninth-inning attempt to correct a situation that should have never developed.

Mr. MAHON. Mr. Chairman, I had reserved a point of order against the amendment, but it seems to be clearly a limitation on the pay of certain military personnel and I think it is not subject to a point of order. I therefore withdraw the point of order.

I ask unanimous consent that all debate on this amendment and all amendments thereto close in 10 minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

The CHAIRMAN. Without objection, the point of order is withdrawn.

There was no objection.

Mr. VINSON. Mr. Chairman, I wish to be recognized in opposition to the amendment.

The CHAIRMAN. The gentleman from Georgia is recognized.

Mr. VINSON. Mr. Chairman, I hope the Committee will vote down this amendment.

The question propounded by the distinguished hero from Wake Island was very pertinent. This amendment would have the effect absolutely of practically destroying a great many elements, particularly in the Navy.

I offered this amendment in the committee when we were considering the draft bill because I was very anxious to do what was right and proper for the inactive and voluntary reservists, and I fixed the period of service at 12 months.

Mr. TOWE. Mr. Chairman, will the gentleman yield?

Mr. VINSON. I yield.

Mr. TOWE. The gentleman's amendment was not the one that was approved by the House, the one that was approved by the House was the one offered by the gentleman from New Jersey now interrogating the gentleman.

Mr. VINSON. That is right.

Mr. TOWE. The gentleman's amendment provided that they be turned out if it was convenient to do so.

Mr. VINSON. That is right. I withdraw that statement and give the distinguished gentleman from New Jersey [Mr. TOWE] full credit, but the issue was brought up in the committee at my suggestion.

Admiral Sherman pointed out that to do what is proposed by that amendment would completely destroy a great many units in the Navy, it would be utterly impossible to administer without great military damage. So when we went to conference we reached the decision to limit their length of service to 17 months, and the services are trying to get out the Inactive Reserves now. If you adopt the amendment offered by the gentleman from Pennsylvania the effect would be to force out immediately every one of the inactive and voluntary reservists who are now in service because the Army could not pay them, the Navy could not pay them, the Air Force could not pay them; and certainly, therefore, you could not hold them involuntarily in the armed services.

Mr. VAN ZANDT. Mr. Chairman, will the gentleman yield?

Mr. VINSON. I yield.

Mr. VAN ZANDT. The gentleman will certainly agree that there are literally thousands of Organized Reserves who have not yet been called, and who are receiving drill pay and expect to be called.

Mr. VINSON. That is true.

Mr. VAN ZANDT. Why were they not called instead of the Inactive and Volunteer Reserves?

Mr. VINSON. The gentleman understands my position on that. I think the services made a mistake in not calling first the Organized Reserves instead of the Voluntary Reserves. But what this here would do is force the departments to turn Reserves out immediately, within 12 months, and the effect of it would be that half of your Army would come out of Korea, half of it would come out of Germany, and a large number of Reserves would have to come out of the Navy. So I trust this amendment will be defeated.

Mr. VAN ZANDT. Mr. Chairman, will the gentleman yield?

Mr. VINSON. I yield.

Mr. VAN ZANDT. The interim report submitted to the Congress by the Brooks subcommittee shows that as of April 1, 1951, there was a total of 360,000 Reserves on active duty and the majority of them are represented by the National Guard divisions, and the Organized Reserve units of the Army, Navy, Air Force, and Marine Corps leaving literally only a handful of individuals called to active duty from the Inactive and Volunteer Reserves.

When the conference report on the military appropriation bill was before the House on October 5, 1951, I made the following statement:

Mr. VAN ZANDT. Mr. Speaker, amendment No. 46, which is contained in the conference report, represents a compromise on the part of the conferees of both Houses. I appreciate the difficulties that confronted the conferees, but I am not satisfied with the 16-month provision. It represents nothing more than window dressing.

To refresh the memories of the Members of the House, my original amendment provided that where a veteran of World War II was a member of the Volunteer or Inactive Reserves and was called up against his own wishes, if he had more than 12 months' service in World War II and had served 12 months in the Korean war, then beginning November 30, 1951, he would be separated from service because no money would be available to pay his monthly wages.

Mr. SCRIVNER. Mr. Speaker, will the gentleman yield?

Mr. VAN ZANDT. I yield to the gentleman from Kansas.

Mr. SCRIVNER. Here is the thing that was pointed out, and it had quite a bit of merit to it, namely, that many of these men about whom the gentleman and I are concerned have already been in 12 months or more. Some of them went in late in July, some early in August, and some in September. The language of the bill as written is that if they have served over 12 months that would prohibit the use of any of this money for paying them. If this is adopted right away, it will take 2 weeks or 3 weeks or a month to process many of these men for immediate discharge. Therefore, taking all of those things into consideration, the gentleman and I would not want them to be deprived of their pay just because they have been in 12 months; would we?

Mr. VAN ZANDT. They would not be deprived of their pay because under my amendment they are not eligible for separation until after November 30, which is approximately 8 weeks from this date.

Mr. SCRIVNER. Yes, they would, because none of this money could be used for the payment for their services after the expiration of 12 months. Seeing that picture, and

while things went on in conference that may not be made public. I am not going to make any bones about the fact that I did not like the 12-month provision. I went up to a figure a trifle higher. This was the best we could do. It will take a few days to get this through. Let us say it becomes effective the 1st of November. Then, by the 30th of November, by the time most of them will be processed out, it will be close to 15 months.

Mr. VAN ZANDT. I repeat that under my amendment an inactive or volunteer reservist to be eligible for discharge after November 30, he must have 12 months' service in World War II and 12 months in the Korean war.

Mr. SCRIVNER. I thought all the way through that really was the best we could do.

Mr. VAN ZANDT. I appreciate what the gentleman says he tried to do in conference, but, frankly, here is the situation. Under existing law the volunteer and inactive reservists can be discharged after 17 months of service unless the need for his rank or rate is considered critical by the Secretary. The compromise offered us eliminates the officers entirely and provides that the 17 months under existing law is reduced 30 days and made applicable only to enlisted personnel. In short, the so-called compromise is a delusion and a snare.

Mr. SCRIVNER. That is what is happening in so many cases. When they try to get their release, their category is always needed.

Mr. VAN ZANDT. That is right.

Mr. SCRIVNER. This provision is necessary if the majority of these veterans of World War II are going to be out any time soon.

Mr. VAN ZANDT. That is right.

I want to remind you that your mail as well as mine has been full of criticism from members of the armed services who are volunteer and inactive reservists. You know the story of their treatment. I want to remind you that Mrs. Rosenberg admitted before the House Committee on Armed Services that inactive and volunteer reservists have been shamefully treated. Therefore, as a Member of this Congress, I shall not support any so-called compromise because to do so it is simply condoning the shabby treatment accorded Reserve personnel. It is interesting to note that the armed services cried that my amendment would destroy the services and hamper their combat efficiency. As a result of this outburst from the Pentagon I did a little research myself. What did I find? I found that in the Senate, Senator LYNDON JOHNSON's manpower committee had studied the manpower utilization as far as the military is concerned. What do you suppose that committee said about the surplus of military manpower? Let me read from the report of this Senate committee:

"The officers and enlisted men assigned to 'permanent post' status at the 16 installations and performing some type of overhead function total 95,784. This is well over five divisions of men, most of whom are presumably physically and mentally fit for full military duty."

There alone you have enough surplus personnel to replace many of the inactive and volunteer reservists that would be affected by my amendment.

Let us see what a newspaperman has to say about the treatment accorded Reserves. The Boston Globe and Traveler of Wednesday, August 8, 1951, in an article by Hal Clancy, said:

"One reason frankly admitted was because the United States was caught short, and the mobilizers just grabbed the cards of men who were not assigned to organized units."

Then he went on to say, and he is quoting an Army officer:

"Give them the business—give them the business." That is an accurate quote."

Hal Clancy said:

"Those words were said to me by one Army official in an off-the-record discussion."

That is the attitude of some of the Regular Establishment toward our inactive volunteer Reserve.

Then, let me read to you from a letter received by an officer from Korea. Here is what he has to say:

"There are 7 major airfields in Japan which have a complement averaging 3,500 men each. These airfields merely contain an average of 150 personnel engaged in actual flying. Nonflying personnel on the basis of World War II standards for these type airfields should never exceed 2,000 men."

"The staff officers to command such airfields during World War II usually consisted of a colonel and about 20 field grade officers. Currently, the same organization has a brigadier general, 4 colonels, and about 30 field grade officers."

"These airfields contained an average of about 30 fighter-bomber-type aircraft. During World War II airfields of this type were handling three times this quantity of aircraft with smaller personnel. This obviously means that in Japan the Air Force has twice the amount of airfields they actually need."

"In addition to these facts, the internal administration of Air Force bases are broken down into materiel, personnel, inspection, comptroller, special service, legal, intelligence, communications, and public information. I have personally seen the operations of these administrative functions and I would conservatively estimate that each section was overstaffed five times the amount of military personnel required to do the job. This waste of manpower nevertheless is the standard organization set-up for every air base in both the United States and abroad, as put out by Air Force General Vandenberg."

"Each of these airfields in Japan are saturated with social clubs for this overstaffed personnel, including officers' clubs, non-commissioned officers' clubs, airmen's clubs, and a service club. The personnel on these airfields are occupying their time in Government-operated golf courses. One of these golf courses is maintained by 90 Japanese at Government expense. In short, the military personnel in Japan are living like playboys and are furnished a Government home rent free, and are having their families and American cars sent over at Government expense. Each home is given a Japanese house boy and a maid."

Now, let me read what a soldier said at Fort Eustis, Va., who is an instructor in a military school:

"Since the middle of July there have been no students to instruct. We have merely been reporting to work every day, and since that time we have been just sitting around waiting for 5 o'clock so we can go home."

Mr. Speaker, there is plenty of surplus manpower in our Armed Forces and with some efficient handling of personnel, replacement of all inactive and Volunteer Reserves can be accomplished without any ill effect on the armed services.

As I said in the beginning, this so-called compromise is nothing but a delusion and a snare and I cannot conscientiously stand here and support it. Furthermore, I would be nothing less than a hypocrite to urge support of any recommendation of any conference committee of this Congress which would in effect place the stamp of approval on the shameful manner by which the inactive volunteer reservists of this country have been treated.

Mr. Speaker, the job of correcting the shameful treatment accorded Reserves has revealed the necessity for guarding against a repetition of the abuses that were permitted under the present Reserve program. To that end, Congress should immediately pass H. R. 5426, a bill commonly known as the Reserve bill of rights.

Preparation Against Danger From Russia From Without and Inflation From Within

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, October 11, 1951

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Nation Marches Forward," prepared by me and published in the October 1951 issue of the American Vocational Journal, the official organ of the American Vocational Association, Inc.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE NATION MARCHES FORWARD

(By United States Senator LISTER HILL)

The United States is today threatened by two equally deadly forces—Russia from without, inflation from within. Our most effective weapon against both is production—production of weapons for military superiority, production of essential civilian goods to prevent bidding for scarce commodities in the market place.

National security is the business of every citizen. Each must contribute his maximum usefulness to the common effort. We must make the wisest use of our reserves of basic critical and strategic materials, conserving them and finding new sources. We must step up our scientific and engineering research. We must increase our production of food and fiber. We must gear our training of industrial and other skilled workers to the long-range demands of perhaps 5, 10, or 20 years of armaments and military budgets.

The most serious bottleneck to increased production is skilled manpower. It takes far less time to make a bazooka than to train the man who makes it.

When we put engineering genius and skilled worker together what is the result? Industrial marvels such as our one-man-operated giant excavator with the work capacity of 2,200 mules, but which unlike a mule does not stand around most of the day eating its head off.

In such a mechanical Hercules and the trained hand at the controls lies much of the secret of our country's greatness, of our industrial and military superiority, of our atomic supremacy, of our capacity to out-produce both our enemies and our allies during the last war, of why the United States with but one-fifteenth of the earth's population produces and consumes one-third of the goods and services of all the world—achieving a standard of living four or five times that of the average for all the rest of the globe.

Under the threat of all-out war, quite naturally our thoughts turn to weapons in overwhelming numbers—tanks, planes, ships, and guns. But what of the manpower to produce them? Already we have exceeded the peak of employment in World War II and our defense program is still largely in the tooling-up stage. Already the shortage of skilled workers is felt in aircraft construction. Soon it is expected to spread to the manufacture of auxiliary aircraft equipment, then to the production of machine tools, and from there to the metal trades.

We see important elements of the aircraft industry, facing the heavy manpower demands of defense contracts, compelled to

start up their own courses for hasty, incomplete training at abnormally high instructional costs, to be added in the price of the planes to the taxpayers. We see a vast expansion of industrial training by the armed services at a cost running high into the millions and far exceeding the per student cost under established vocational education programs.

Why have these things occurred? The answer is simple. Under our heavy debt load the drive for economy has sometimes cast discretion to the winds and struck in the wrong places—struck at our long range plans for vocational education along with all educational needs. Too many Americans in civilian life remain unskilled. Our pool of skilled manpower is not sufficient to meet both military and civilian needs. The pinch will become more severe as the defense pace increases.

The last war proved once again the essentiality of the instrument maker, the metal worker, the machinist, the draftsman, the scientific farmer, the efficient housewife, the clerk, and the cannery. Following the war, Senator WALTER GEORGE and I and other cosponsors introduced and pressed to passage the Vocational Education Act, providing for a great expansion of our vocational education program. Unfortunately, the funds voted each year have fallen short of the amount authorized by about one-third, roughly \$10,000,000—a drop in the bucket as compared with the cost of less than adequate training today under emergency programs being launched by the Armed Forces and defense plants. How much wiser and less costly it would have been to step up training under our regular vocational education program that contributed 11,500,000 essential workers to the last war effort.

Our intelligence sources tell us that Russia and her satellites are feverishly working to train large numbers of skilled workers, instructed by highly trained vocational teachers taken out of East Germany since the last war. The masters of the Kremlin know all too well that their chance of success in their cold war, a major hot war or the long range struggle for world markets, depends upon maximum efficiency in mass production.

The Senate has made determined efforts to increase the funds for vocational education but each time the House has remained adamant, saying we couldn't afford to spend the money.

And yet, right under our noses lay the greatest source of financial help for American education ever dreamed of—a fabulous treasure of undersea oil off the coasts of California, Texas, and Louisiana. Despite the fact that the United States Supreme Court has held in two famous decisions that the oil belongs to the people of all 48 States, these three States with the help of big oil companies has pushed through the House of Representatives a bill to take all the oil for themselves. The bill would have Congress make them an outright gift of the oil, estimated as being worth at least \$40,000,000,000 at present prices.

I, with several of my colleagues, have proposed an amendment to this bill to require that the royalties from this public oil resource shall be paid into the United States Treasury and used for education. This is the policy that Congress followed in the Morrill Act, providing grants of public land for the establishment of our magnificent system of land-grant colleges. Applying the same policy to this great new "land resource" at the bottom of the sea would be like placing an oil well in the back yard of every vocational school, grammar school, high school, and college in America.

I have been joined in the introduction of the "Oil for Education" amendment by Senators DOUGLAS, of Illinois, KEFAUVER, of Tennessee, MORSE, of Oregon, NEELY, of West Vir-

ginia, TOBEY, of New Hampshire, HENNINGSSON, of Missouri, BENTON, of Connecticut, HUMPHREY, of Minnesota, CHAVEZ, of New Mexico, LEHMAN, of New York, MURRAY, of Montana, my colleague, Senator SPARKMAN, and Congressman MIKE MANSFIELD, of Montana.

Every teacher, every parent knows the desperate financial condition of education—of vocational schools, grammar schools, high schools, and colleges.

This oil offers education's big chance—the means given by Providence without taxes for meeting a large part of education's pressing needs. It is America's big chance to pull away from illiteracy and educational deficiency that has caused the rejection of over 300,000 young men by the armed services since Korea—the equivalent of 17 Infantry divisions.

As one educator recently put it, "The Nation marches forward on the feet of little children." The royalties from this oil must be used for their education—in every State in the Union.

The "Oil for Education" amendment should have the active support of every parent, every teacher, and vocational instructor, every educator.

EDITOR'S NOTE—Senator HILL is coauthor of the Vocational Education Act, TVA Act, Hill-Burton Hospital Act, and the Rural Telephone Act.

MacArthur the Stalwart

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 11, 1951

Mr. SCHWABE. Mr. Speaker, there recently appeared an editorial in the Tulsa Daily World, of Tulsa, Okla., entitled "MacArthur the Stalwart," which I think worthy of our serious consideration. I am pleased to quote this editorial, as follows:

MACARTHUR THE STALWART

Straight, hard-hitting Americanism had a field day when Gen. Douglas MacArthur spoke at Cleveland. He made a direct attack upon the State Department and the general conduct of affairs and sent out a solemn warning that the United States is slipping into totalitarianism. He was direct and almost explicit in his allusions to the national administration and the leaders of our time, they had wasted the fruits of victory in World War II and lost for this country much of its prestige and opportunity.

The general, since his summary return to this country from Japan, has expressed his distrust of current leadership. Now, he becomes specific. The time at which he spoke was significant. The Japanese Treaty was up in San Francisco, the war was raging anew in Korea; Russia was showing its claws and teeth all around. The general was a powerful part of the Japanese renaissance; as commander in chief in the occupied country and the chieftain on guard in the Orient, he exercised power and influence in impelling the Japanese toward peace with the United States and progress toward western conceptions and ways. His removal, under the circumstances of today, now appears more reprehensible and dangerous than it did at the time. The practical adoption from grim necessity, of the MacArthur plan for ending the war is now in sight. His recall at a most critical time still stands out as one of the major blunders of all history.

General MacArthur put into strong words his feeling that the United States Government has become too paternalistic. The domineering conduct of the State Department, its interference in domestic affairs under the pretext of international urgency, its disposition toward appeasement, its faltering on China, all came in for attention. The general put the matter in striking light by saying that the Department now seems to regard itself as a prime ministry, superior in all affairs and meddling in detail.

One big item of misguidance in national affairs was the quick disbanding of the army after World War II. That, with the diplomatic blunders now in painful evidence, made a good basis for the general's charge that the administration and its various leaders can no longer be trusted.

The situation called for stern rebuke, and General MacArthur, with influence and prestige undimmed by most deplorable treatment, is a natural and convincing spokesman. With each succeeding appearance, General MacArthur reaches closer into the core of American thought. The pro and anti MacArthur sentiment cannot long remain unexposed. What he is saying should have been the basis of our national thought and actions all of the time. It is just too bad that it has to be called to public attention at this late period, but better said than left unsaid with the hope that it will reach into the conscience of the people.

Pulaski Day

EXTENSION OF REMARKS

OF

HON. HENRY CABOT LODGE, JR.

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, October 11, 1951

Mr. LODGE. Mr. President, today is Pulaski Day, a day of great significance not only to persons of Polish descent and Polish affiliation, but also to the American people as a whole. For that reason, I ask unanimous consent to have printed in the Appendix of the RECORD some remarks which I made on the radio recently in connection with the observance of Pulaski Day.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

CASIMIR PULASKI: SOLDIER OF LIBERTY

History knows few men of the caliber of Casimir Pulaski. Hero, patriot and soldier of liberty, he crossed oceans and continents to give vivid expression to the spirit and philosophy of freedom.

Before he was 20 years old Pulaski played a gallant and leading part in the heroic effort of his country to save the Courland Province from the onslaught of the Russians. From 1768 to 1772 when organized resistance had been crushed by the invaders, Casimir Pulaski organized and led a band of Polish patriots in what would be known in modern warfare as an underground guerrilla operation.

Eventually, when he realized that Russian oppression had become too organized to defeat by guerrilla methods, he escaped from his native land to seek assistance from the outside. He journeyed from Germany to France to Turkey and further seeking to interest others in the cause of freedom for his Polish countrymen.

Unfortunately, no aid was forthcoming from a Europe which was not yet ready for democracy, and when the turn of events in

another part of the world opened to him the possibility of consecrating his great talents to the cause of liberty. Pulaski joined the American revolutionary forces.

Pulaski's baptism of fire took place in the battle of Brandywine, and shortly thereafter in recognition of his heroic exploits he was formally commissioned Brigadier General and Commander of the Horse. Trenton and Flemington were scenes of even greater valor by General Pulaski; and by the time he fell mortally wounded at the siege of Savannah he had succeeded in writing into the history of the United States a saga of patriotism almost unbelievable in scope.

Casimir Pulaski, early missionary of freedom and democracy, has bequeathed to all of us a stirring example, ageless and priceless. In our twentieth century efforts to establish a free and democratic world we would do well to take notice of that example and thereby gain inspiration for the momentous task of international missionary work in which our Nation is now engaged.

In paying our respects to the memory of Casimir Pulaski, we are acknowledging our national debt to the father of the United States Cavalry, to one of George Washington's most trusted associates, to the intrepid commander of "Pulaski's Legion," to a foremost soldier of liberty. His was the cause of freedom. It is our present cause and eternal cause of decent human beings. In its steadfast pursuit lies the best hope of redeeming those who, like the Polish people today, suffer under the heel of alien oppression.

The President's Executive Order on Censorship

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, October 11, 1951

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement I have prepared opposing the President's Executive order for the censoring of news, together with a letter to me from John A. Creviere, of De Pere, Wis., dated October 8, 1951, and an editorial from the Chicago Daily News, both on the same subject.

There being no objection, the statement, letter, and editorial were ordered to be printed in the RECORD, as follows:

FREEDOM OR CENSORSHIP?

I received yesterday from Mr. John A. Creviere, editor of the De Pere Journal-Democrat, of De Pere, Wis., the text of an open letter which is being printed in this week's issue of his newspaper, rightly protesting against the President's action in his recent Executive order on censorship. A great many Americans feel that this Executive Order No. 10290 can result in the lowering of an iron curtain over information about our Federal Government.

I have already signified that I for one feel as our people do, that the President erred in his action. I think that this order constitutes a violation of freedom of information, and that it lays the basis for a tremendous cover-up of official blunders, errors of commission and omission by defense and non-defense agencies.

I believe that the open letter published in the De Pere Journal-Democrat represents

views which are shared by most of the newspapers throughout the Nation.

The American newspaper profession has never, in my judgment, betrayed the confidence of the American people. It would be the last source in the world which would want to impair America's internal security. Its correspondents have died on the same battlefields as have our American fighting men. It has fought notable battles for liberty from the days of Paul Peter Zenger onward.

During World War II, it abided by the directives of Office of Censorship in a model manner.

But, Mr. President, we are not in a state of total war today, thank God. And, while our men are dying in Korea in what has been mistakenly called a "police action", no case has been made for a closing down of America's basic freedoms because of that conflict.

For that reason I joined with most of the other Republican Members of the Senate in the statement placed in the CONGRESSIONAL RECORD on September 30 denouncing the administration's attempts to silence any opposition.

I hope that the bill offered by the junior Senator from Ohio [Mr. BRICKER], S. 2190, for repeal of the censorship order, will receive prompt consideration, and thus will wipe Executive Order No. 10290 off the statute books.

Mr. Creviere's open letter states clearly the case for information. It points out the dangers intrinsic in this order, principally the likelihood that every bureaucratic blunderer will wrap a cloak of "top-confidential" over his actions, and thus prevent the people from knowing the truth.

It is "the truth (which) sets men free." Let us not lose our right to read the truth, the complete truth, in America's press, while observing sensible voluntary safeguards to protect our real military secrets.

The forthright editorial from the Tuesday, October 9, issue of the Chicago Daily News further describes the inconsistencies of the President's approach, as revealed by the latter's press conference remarks.

JOURNAL PUBLISHING Co.,
De Pere, Wis., October 8, 1951.

Senator ALEXANDER WILEY,
Senate Office Building,
Washington, D. C.

DEAR SENATOR WILEY: Throughout the Nation last week, publications devoted several thousand columns to informing Americans of the heritage they enjoy, in publicizing the celebration of National Newspaper Week.

National Newspaper Week came just after President Truman released his unparalleled executive order setting up censorship in approximately 60 Government bureaus not concerned with the military security of our country. We are in agreement with editors and publishers all over America that the President's order is a definite threat to the constitutional right of freedom of the press.

We have seen the ridiculous extreme to which this order can be carried. This in the Office of Price Stabilization directive to suppress information that might prove to be "embarrassing." We hold this to be but a disgusting sample of the liberties which will eventually be taken, even though this particular order was cancelled by the President.

Without a complete definition of terms, and a sharp rein on irresponsible officeholders, the President's order can easily make mockery of our precious freedom.

We feel it essential that action be immediately taken by our Representatives in Congress to see that the President's order be revoked or cancelled by act of your honorable body. This is not a plea for special privilege,

but a demand to continue to bring the truth to the people.

It is our sincere hope that you will strive to see that this directive is not allowed to remain as official policy in the capital of our country.

Sincerely,

JOHN A. CREVIERE.

[From the Chicago Daily News]

TANGLED TRUMAN

In his press conference last week, President Truman revealed an extremely muddled mind.

The major part of the conference was devoted to a discussion of his recent order to classify security information in all Government departments. It began with the passing out of a written statement intended to clarify the order and promising to amend it if it doesn't work.

The original order that was the basis of discussion extended to all Government departments the duty of classifying security information as confidential, secret, or top-secret.

This process has been well established for years in the military branches and the State Department. The Atomic Energy Commission, of course, has operated under the strictest of military rules concerning information, though the Commission is not an integral part of the military establishment. The Justice Department naturally has confidential files relating to the investigation of crimes.

The controversy that has arisen over the President's order centers around the question of whether the same system should be extended to other departments—to all Government departments, in fact.

The explanation has been that defense activities cover so large a scope that any department may have incidental functions in relation to projects that ought to be kept secret from the enemy.

Truman's formal statement dealt with this subject without, however, making it clear why secret information is likely to reach the variety of departments covered in the order.

Answering reporters' questions, the President launched out wildly in several new directions.

Asked what had prompted the debatable order, he said it was the publication of several specific articles. In every instance the material had been provided by a department already empowered to classify its information.

He also objected to the publication of some air maps that had been provided the Washington press by the Civilian Defense Department. The articles, however, had come from the military or the Atomic Energy Commission.

When this was pointed out, the President declared that the press ought not to print such material no matter who provided it. This was a new departure fantastically irrelevant to the order he had been defending.

If a responsible Government agency provided a piece of news for publication, how could all the editors in the country be expected independently, but simultaneously, to agree that it was dangerous and decide to suppress it? Reporters thought this could not be reasonably expected.

Nevertheless, Mr. Truman stuck to the proposition that if editors were sufficiently patriotic—as patriotic as himself, for instance—they would all agree not to print dangerous information even if the Joint Chiefs of Staff had issued it.

The President maundered around in contradiction and irrelevancy to such an extent that after the interview had ended Joseph Short, the press secretary, had to issue a statement getting him off the hook.

This statement said publishers might rightfully assume it is safe to publish infor-

mation from responsible sources. Citizens receiving military information from unqualified and irresponsible sources should be careful about using it.

With which everybody must agree.

Meanwhile, Mr. Truman had made an exhibition of confusion in his mental processes that is truly alarming.

A Banker Looks at His Supervisor

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, October 11, 1951

Mr. ROBERTSON. Mr. President, during the fiftieth anniversary convention of the National Association of Supervisors of State Banks, held recently in St. Louis, Mr. C. Francis Cocke, of Roanoke, Va., delivered an address which I consider to be a classic in its field. Its title is "A Banker Looks at His Supervisor."

A few days later Mr. Cocke was elected president of the American Bankers Association, the highest honor that can be bestowed by those who manage and serve our unique but highly successful system of independent, dual banking in this Nation.

Mr. Cocke, as a native of Roanoke, as a distinguished member of the bar, as president of the First National Exchange Bank of Roanoke, and past president of his State bankers association, and as one of Virginia's most active leaders in civic affairs, has long held my admiration for his accomplishments, as well as my deep personal affection.

The St. Louis address of the new ABA president summarizes in dispassionate and constructive commentary the occasional differences of opinion which arise between banker and supervisor, and suggests means by which improved relations between them could contribute to sounder banking in this Nation. I therefore ask unanimous consent to have printed in the Record the text of Mr. Cocke's address.

There being no objection, the address was ordered to be printed in the Record, as follows:

A BANKER LOOKS AT HIS SUPERVISOR

(Address by C. Francis Cocke)

When your gracious invitation to meet with you was extended me by your able president, the first thought that popped into mind was: What on earth can I offer a group of supervisors of State banks? His invitation was so persuasive, however, that I could not resist the temptation, and I accepted. My understanding of the technical aspects of your work is too limited for me to venture on such a subject. You deal with the administration of banking laws daily, and although I am a lawyer by training, I could scarcely hope to prepare for and intelligently discuss the banking laws of even a few States in the time at my disposal. It occurs to me, however, that you might be interested, and perhaps find something of value, in a brief résumé of a banker's view of supervision and supervisors. I think it does us all good on occasion to learn how

the other fellow regards us and our work. On such a subject I feel qualified to speak, for, through the years, I have had many intimate contacts with supervisors and sat across the desk from examiners on many and many an occasion. But more than that, I have heard the complaints, justified and unjustified, that have been leveled at examiners, as I have mingled at State and national gatherings of bankers.

As I thought about what I might say to you, I was struck by the parallel in our objectives and the mutuality of our interests. Our common objective is safe, sound, serviceable banking—strong banks and a strong banking system, dedicated to an enlarged and adequate banking service. Immediately came the thought that the contribution supervision can make toward that objective is largely measured by the caliber of the supervisors and their staffs. At once, the divergence in methods of selecting supervisors came to mind: In 10 States, the governor makes the appointment, in 31 other States, he does so with the approval of one house of the legislature, in 5 States, appointment is by a State board; and in 2 remaining instances, selection is by popular election. Whatever the appointive method, one fact stands out: the average tenure of office is too short, the position is all too insecure.

Permit me at this point to make one parenthetical observation. In 34 States the banking department is a separate unit of government; in 14 States it is not a separate unit but is merged with some other department of the State organization. It seems to me that if any one department should be separate and apart from every other department of the State organization, it would be banking. Its independence should be pre-eminent. I am sorry to say that in my own State—Virginia—the banking department is set up as a part of the State corporation commission, and the commissioner of the division of banking reports to the commission. His authority is limited. Someday I hope to see a change made. I realize that it is not within your power to change these constitutional functions of State government, but it is a reform we should be contemplating.

Inevitably, then, my thinking turned to the compensation aspect. In spite of the fact that the cost will generally be borne by them, I think you will find that bankers everywhere will agree that supervisors and their examiners are usually ill paid. These bankers recognize that to obtain what they want from bank supervisors and from examinations, these positions must be filled by men of real capacity—men with keen, incisive, analytical minds—men with perception and perspective. To obtain such men with present pay scales is well-nigh impossible in today's market. In fact, you must be hard-put to even maintain your staffs numerically.

I might elaborate considerably on these twin problems. It is in the interest of the bankers as well as the supervisors that improvement be sought in the matter of appointments and salaries. It is not a condition to be changed overnight, however, for the remedy, if there is to be one, lies in the legislative halls of your respective States. Enlightened bankers will lend their influence and support to the alleviation of these weaknesses in our supervisory system. You can and should exert all possible pressure to secure more adequate compensation for your examiners, and, indirectly, you will be improving your own situations. These problems are not susceptible of direct action on your part, nor by me; hence, I should like to devote the remainder of my time to certain aspects of supervision which you can do something about right now, and in so doing heighten the respect for supervision and thus

create a more favorable atmosphere for pressing our legislative requests.

With you I rejoice that the examiner is no longer regarded as a "detective," to be dealt with at arm's length. We have made great strides in achieving mutual understanding and developing greater cooperation. With increasing infrequency do we find examiners whose approach to each examination is one of, What can I find to criticize in this bank? There is still room, however, for further improvement. Many examiners and some supervisors might well take a leaf from the salesman's book with profit to themselves and to banking.

No American can be driven into cooperation. On this score, bankers are true Americans. They resent the idea of supervision even when acknowledging its need—and surely the horrible record of bank closings in the twenties and thirties clearly emphasized this need, in a banking system comprised of thousands of individual banks. Nevertheless, the idea of regimentation is abhorrent to the banker. Consequently, the "big stick" approach only makes matters worse and is to be avoided. We just naturally resent coercion. Supervisors and examiners, then, should adopt the salesman's approach and "sell" their product on its merits.

Such an approach involves an appreciation of the other fellow's viewpoint and scrupulous avoidance of unnecessary provocation. Perhaps nothing upsets the bank executive more than to receive a copy of a report, which he must present to his directors, that lists criticisms and adverse loan classifications that the examiner never discussed with him. If the criticisms are sound, he resents not having had the opportunity to take prompt corrective action, if they are ill-founded—a fact that could have been developed by discussion in the bank—respect for the examiner and for supervision reaches a new law. The cardinal rule for an examiner should be to get his facts first, and such facts can scarcely be developed without discussion of the matter with the bank executive. Moreover, the simple element of courtesy dictates that the officer be advised of the examiner's views and be given an opportunity to offer an explanation or additional facts in extenuation. The report should take cognizance of such discussion by citing the explanation or at least the fact of the officer's disagreement with the finding, when such is the case.

Another source of irritation is the tendency of too many examiners to pull out the book and cite violations. So often, when the banker undertakes to sit down and discuss the logic and reason behind the rule or regulation, he finds the examiner no better posted than he is, except for the knowledge that such a limitation exists. Most of our laws, regulations, and administrative rules were developed out of sad experience and are founded on sound concepts. It should be part of the bank examiner's training to be well grounded in the "raison d'être" of the laws, regulations, and orders that it is his responsibility to enforce. Most of us yield to reason, even when we don't feel that our particular situation warrants the prohibition.

Examiners naturally employ ratios as rules-of-thumb for expressing various relationships, and that is wholly proper. Some examiners, however, come to regard ratios as important per se—almost sacrosanct. In these recent postwar years, loan volume has been a frequent subject of comment in examination reports and in letters from bank supervisors. Likewise considerable reference has been made to the inadequacy of capital. When is loan volume too high? What constitutes adequate capital? These questions are reminiscent of the words of a popular song, "How deep is the ocean, how high is the sky?" Whether loans are too high or capital too low is not simply a matter of

ratios. It is dependent upon a variety of factors, such as the character and composition and quality of the portfolio, the deposit structure, the capacity of management, and local and general economic conditions at the time and in prospect. These are matters for determination in the case of each individual bank—certainly no average is an adequate guide. An average includes extremes—like the man with his feet in the fire and his head on a block of ice—a statistician might say that on the average he was comfortable. So I say beware of making a fetish of ratios. On the contrary, use them for their true purpose—as danger flags—and support your criticisms with competent analysis of the particular situation.

Still another irritant—and a wholly unnecessary one—is the tendency among so many examiners to overemphasize technical exceptions and matters of minor importance. If supervision is to enjoy the wholesome respect of bankers, then it is essential that examiners distinguish between the truly significant and the relatively inconsequential. That is one reason why I urge that examiners be men of perspective; men with a proper sense of values, who will not detract from the value of their reports by cluttering it up with matters of slight consequence. Usually the mere mention of such features during the course of the examination will be sufficient. Only when continued disregard and the cumulative effect reflects upon management is it worthy of being brought to the attention of directors. Bankers simply cannot avoid placing less value upon the examination and having less respect for the examiners when trivia are so dignified.

As part of his job, the examiner must inquire into the express opinions on all phases of a bank's operations. Generally he is as well qualified to do this, as are most bankers. The attitude with which he approaches the job, however, is all-important, for nothing is more irritating than the occasional examiner who poses as an expert in all fields. If he is dogmatic in his Monday morning quarterbacking, he will arouse resentment even when he is right. In other words, it is not the act itself—the opinion expressed—but the manner in which it is done that draws the banker's criticism.

Finally, though it is so obvious as to require no elaboration, none of us likes to be told how to run our own business. I am sure that supervisors generally recognize that no phase of their work requires greater care than recognition and observance of the tenuous line of demarcation between the banker's responsibility for operating the bank and the examiner's responsibility for pointing out weak spots and unsound policies. In his discussions and in his report, the examiner should exercise extreme care not to invade the province of management. Failure to hew to the line in this respect will invariably impair the close working relationship that holds maximum benefits for both banker and supervisor.

Have I sounded unduly critical, gentlemen? Have I overstated the case? I am sure, as I have tallied off these complaints of bankers, you have recognized men on your staffs who fill the bill.

You know the men who delight in "cracking down" on "that so-and-so"; men whose sole approach to any situation is to bludgeon their way through. Bankers are human, and they react in human fashion. They can be persuaded; they will yield to reason and fact; but they have just enough mule in them to balk at any attempt to drive them.

You know the men who rush away from an examination the very first moment they can, who have no time to discuss their findings with the executive officers and possibly directors. Yet, some of these same men will write scathing criticisms in their reports, make wholly unwarranted inferences and

cite matters that could have been explained in a moment if they had been but mentioned.

You recognize the examiners who are prone to cite chapter, page, and verse of even the slightest prohibition, yet who, when the banker seeks a fuller understanding of the principles involved, can do no more than fall back on the cliché: "That's the law. I didn't write it; it's merely my job to cite it."

Familiar to all of you is the examiner who is "hipped" on ratios and regards any deviation from the average as the sign of an impending disaster rather than a point of departure for further investigation.

You know well, I am sure, the examiners who regard the failure to obtain a title certificate on a real-estate loan as a cardinal sin and a sure sign of incompetent management, yet who fail to recognize an overconcentration of loans to the same line of industry and upon the stock of same.

Finally, there's the boy who knows all the answers. He can come up, instantly, with a pat solution to every problem—so clever, you can't help wondering how he can be content with his job.

Yes, I am sure you recognize all of these characters. They impair the effectiveness of examinations, and they lower respect for supervision. It is for this reason, and not because I relish the role of critic, that I have spoken so frankly this morning. Let me say this, too, lest my remarks be misinterpreted: I am well aware of the many fine men who serve as bank examiners. It would be most remiss of me not to pay tribute to the remarkable job that they are performing, particularly under handicaps. The majority of examiners, faithfully, ably, and tactfully, are making substantial contributions to banking.

Perhaps I might have "pulled my punches" somewhat had I not felt that the conditions of which I have been speaking were susceptible of prompt corrective action—action wholly within your control. I am confident that these sources of irritation can be promptly alleviated. In spite of the fact that you are grossly overburdened in many instances; in spite of the high rate of turnover and the lure of more remunerative fields; in spite of the fact that capable men just are not to be had; in spite of these and other difficulties in your way, I feel that, working with only the material in hand, you can effect tremendous improvement.

My suggestion, first of all, is a bit of in-service training that would stress the mutuality of interest of banker and examiner and would point out the weaknesses in the approaches and attitudes that I have discussed this morning. In such a program, I would urge that the "why" of certain laws and regulations be emphasized, that ratios and rules-of-thumb be relegated to their proper sphere, and that the importance of assembling the facts produced by thorough analysis as the basis for criticisms be taught and practiced. The effectiveness of such training will be enhanced by subsequent scrutiny of reports of examination and close observance of the men themselves for evidences of the sort of things I have mentioned.

Secondly, I would supplement this in-service training with all possible outside educational facilities, including university extension courses; state association conference schools; classes offered by the American Institute of Banking; and, for those who could qualify, the work of The Graduate School of Banking at Rutgers and similar schools. I wish to congratulate you on the progress you have already made in training your examiners. It is gratifying to see so many of them attending these conferences and schools. I want to endorse these efforts most heartily.

Fundamentally, examinations and supervision should be constructive. Better trained and better informed examiners will undoubtedly contribute to this end. Maximum re-

sults can be achieved only through cooperation and mutual respect and understanding. Supervisors and examiners work toward that goal when, in salesmanlike fashion, they take pains to explain, to analyze, and to marshal facts so that bankers will feel constrained to accept the obvious conclusions. Logic and moral suasion will win more real victories than any other approach; if not, then most likely the facts, logic, or salesmanship fell short in some respect. I say most likely, for there are extreme exceptions. There are bankers, too, with dangerously swollen loan portfolios and woefully inadequate capital structures—bankers sorely in need of guidance; and that is what they should receive—guidance rather than arbitrary demands and dogmatic requirements. It is with these banks that a time-consuming selling job is most important; it is with these banks that supervisors can make their largest contribution.

Banker and supervisor, each in his own sphere working toward the goals of a stronger banking system offering improved banking services, have much to offer each other. Greater understanding and mutual respect between them will bring these goals much closer to realization.

In bringing this talk to a conclusion, I wish to close with a statement made to your association by our good friend H. Earl Cook while he was superintendent of banks of Ohio. Mr. Cook said:

"It is then our responsibility as supervisors to cooperate with, rather than to dominate, management; to guide rather than direct; to interpret the laws governing operations as liberally as those laws and statutes permit; not to take the place of management, but rather to be constructive help to the end that depositors may have better protection, stockholders' interests be preserved, and the needs of the community be best served."

If my remarks this morning are interpreted as an effort to encourage a mutual understanding among the supervisor, his examiners, and the banker, and my presence here as a mark of my respect and high regard for you and your fine organizations and staffs, then my visit will have been helpful as well as most pleasant. I thank you for the privilege.

Racial Segregation Under the Exchange of Students Program

EXTENSION OF REMARKS OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, October 11, 1951

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "Defeating Our Purposes," which appeared in the New York Times of Wednesday, September 5.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

DEFEATING OUR PURPOSE

A group of 53 foreign-exchange students who had been brought to the United States to study during the coming year were about to climax an "orientation course" at Indiana University with a trip to the TVA. Fifty-one of the students were white and two were dark-skinned Panamanians. When it developed that the two could not stay at the same hotel in Knoxville as the 51 be-

cause of racial segregation in the capital of the TVA, the 51 refused to make the trip. Net result: 53 foreign students will fail to see one of this Nation's most impressive achievements; the rigidity of racial segregation in the United States will have been sharply demonstrated to 53 inquiring minds; and 53 youngsters who might even yet be enthusiastic friends of America in the 17 countries to which they will return have been given a bad taste which it will be difficult if not impossible to eradicate.

The student-exchange program can be one of the most effective means of building up permanent good will between the United States and other countries. We think that Congress would make a great mistake if it drastically cut the appropriation for this purpose. Yet it cannot be denied that many dark-skinned students from Asia and Africa have had unpleasant and embittering experiences directly due to the segregation practiced in various parts of the United States. They cannot be expected to know that segregation is fighting a losing battle in this country, or to realize that that battle is necessarily a slow and tough one. While, unfortunately, we cannot wipe out segregation overnight, the responsible agencies could by careful planning and skillful guidance pretty well prevent the opportunity for embarrassing incidents from arising. It is essential that great pains be taken to do so; for every colored student who is humiliated while a guest of our country is all too likely to go home an enemy rather than a friend of the United States.

Presentation to Kentucky of the First Post Office at Danville, Ky.

EXTENSION OF REMARKS OF

HON. THOMAS R. UNDERWOOD

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Thursday, October 11, 1951

Mr. UNDERWOOD. Mr. President, I ask unanimous consent to have printed in the *Record* the text of a speech delivered by Dr. William Jennings Price, of Danville, Ky., and Washington, D. C., on the occasion of the presentation to the Commonwealth of Kentucky of the first post office at Danville. The small building stood for many years on West Walnut Street, where Ephraim McDowell Memorial Hospital recently purchased for its new addition the land on which the old post office was located, necessitating its removal and appropriate restoration on Constitution Square. This shrine is a symbol of the aim of service to the people to which the post office was dedicated from its origin.

Dr. Price is a former Minister to Panama, and is one of the most distinguished Kentuckians of the day. I ask to have printed in the *Record* the editor's note of the Danville Advocate and the text of the inspiring address by Dr. Price.

There being no objection, the address was ordered to be printed in the *Record*, together with the introductory note by the editor of the Danville Advocate, as follows:

(Editor's Note.—The address of presentation on Monday, August 20, of the first post office west of the Allegheny Mountains, by

Dr. William Jennings Price, of Danville, and Washington, D. C., at Constitution Square, on behalf of the Danville and Boyle County Historical Society, to the Commonwealth of Kentucky, is reproduced herewith in full. Dr. Price, for over 8 years envoy extraordinary and minister plenipotentiary of the United States to the Republic of Panama, practiced law here before entering the diplomatic service and for 16 years lectured in law at the Centre College Law School and Georgetown University, Washington, D. C. A graduate of Centre College, he has had conferred upon him the degree of doctor of laws, and the doctor of laws and political science by the University of Panama. He negotiated the important Lefevre-Price Treaty, among other things exchanging important lands and privileges with Panama. Dr. Price also conducted the negotiations resulting in Panama's becoming the first nation in the world to join the United States in declaring war on Germany. After an unsurpassed record in the diplomatic service, Dr. Price for a number of years accomplished important legal work for the United States Government. He was a visitor in Danville during the past week. Mrs. Henry Jackson, corresponding secretary of the Danville and Boyle County Historical Society, which sponsored the post office presentation project, served as chairman of the program committee.)

"The soul hath its merchandise;
I barter curl for curl upon that mart."

And its merchandise in founding an empire west of the Alleghenies has been:

"The sense of gallant chivalry;
The silken strength of will."

The Encyclopaedia Britannica in its eleventh edition said:

"The settlement and development of that part of the United States west of the Allegheny Mountains has probably been the notable feature of American history since the close of the Seven Years' War (1763). Kentucky was the first settlement in this movement."

The Wilderness Road was marked by Daniel Boone in 1775 and was passable only for men and horses until 1795, when the State made it a wagon road.

"During this period," says Kerr's history of Kentucky, "1775-92, Danville was the most important road center in Kentucky. The Wilderness Trail leading directly to this place poured out its stream of settlers to be scattered over the country."

Some of the early important sequences of this stream of settlers poured out from Danville in Kentucky said the late Senator Chapman on the floor of the United States Senate was "the conquest of the Northwest Territory under the leadership of George Rogers Clark, and the extension of American influence southwestwardly paving the way for the Louisiana Purchase."

The inspiration and dogged determination to add this vast empire to the then narrower confines of what was America may be said to have surged through the English, Scotch, and Scotch-Irish settlers of the real America and to have originated in the historic town of Danville in Kentucky.

The recognition of what was the genuine America of that day was recorded in the old Kentucky Gazette, the first newspaper west of the Alleghenies, when the advertisement of letters awaiting call in the Danville post office included one addressed to Thomas Knight, America.

Through whatever port this letter from Europe came, the post office authorities in charge knew that if it was to reach the addressee, then Danville, in Kentucky, in all that vast area comprising America, was the one point to be utilized.

"Europe stretches to the Alleghenies," said Emerson, "America lies beyond."

The prestige and usefulness of mail service have been recognized through the centuries. The name of postmaster was used to designate the scholars of Merton College, Oxford. The Postmaster General in Britain is a member of the Privy Council and of the Cabinet. He is a member of the President's Cabinet in the United States.

"From the earliest times," says the encyclopedia, "the speedy dispatch of messages, letters, etc., was attained by relays of men and horses stationed at regular intervals." From the use of these stations have come to us the words, post, post office, postal, postage, postchaise, post-haste.

The carriers became known as Royal Messengers. The beginning of the post office system in America originated in 1692 among the colonies when a royal patent was given Thomas Neale. Single individual posts among the seaboard colonies preceded, but only a few. The Wilderness Road was typical. There were the men and horses with the pack saddle, precursors of the pony express of the West, followed by the Conestoga or covered wagon, by the stagecoach, by the steamboat, mail train, and the airplane.

What an eager gathering of the pioneers there must have been each midday in the old first post office at the end of the trail, which was Danville in Kentucky. What counseling together, what romance, what interchange of joy and sorrow.

From the confines of these old logs come memories as appealing and tender and fragrant as the eloquence which distinguished the pulpit and courtroom and the convention hall of these other log structures on this (Weisiger) Court and Constitution Square where we stand today; come memories as vibrant

"As the winds come when forests are rended;
As the waves come when navies are stranded."

A Kentuckian, it was, who described the beneficences of this postal instrumentality so eloquently that it has been carved above the architrave of the handsome and costly building in the capital, from which its far-flung activities radiate.

It is here quoted:

"The Post Office Department in its ceaseless labors, pervades every channel of commerce and theater of human enterprise and while visiting as it does kindly every fire-side, mingles with the throbbings of almost every human heart in the land. In the amplitude of its beneficence, it ministers to all climes and creeds and pursuits with the same eager readiness and with equal fullness of fidelity. It is the delicate ear trumpet through which alike nations and families and isolated individuals whisper their joys and their sorrows, their convictions, and their sympathies to all who listen for their coming."

Danville, the recognized capital of the district of Kentucky, was the western capital of Virginia, while Kentucky remained a part of the Old Dominion. Here the first educational institution was inaugurated. It was here that statehood was wrested from Virginia. Here the conventions were held, which resulted finally in the achievement of "the first great act of self-government," the adoption of the State constitution of 1792. Here the first court of higher jurisdiction was established. "The Wilderness Trail, leading directly to this place, poured out its stream of settlers to be scattered over the country" (Kerr's Kentucky, p. 298). Its claim to have been "the cradle of the Commonwealth" is meritorious, and it continues to be, as in the early days of Kentucky history, a center of culture, of wealth, and of activity in those things upon which only can be built the true greatness of a proud people's government.

From official letters from the Post Office Department in 1940 these excerpts emphasize

the complete official record authority for the contention that the first post office in Kentucky was established at Danville in Kentucky:

"An act of the United States, approved February 20, 1792, directed that from and after the first day of June 1792 a post road be established from Richmond, Va., . . . to Danville in Kentucky . . . That act is the earliest available record of contemplated postal service to Kentucky."

"The records show that under date of August 20, 1792, the Postmaster General forwarded to Thomas Barbee a commission as postmaster at Danville, Ky. . . . There is no indication in Post Office Department records of an earlier establishment of a post office in Kentucky."

Danville takes pride in the fact that Benjamin Franklin was intimately associated with the development of the United States Postal Service and may be said to have been the first Postmaster General; that his unanctional and administrative wisdom contributed to the establishment and growth of an agency that now numbers its activities by the billion and counts its budget in billions of dollars—greater in scope than that of all Europe combined, takes pride in that Gen. Thomas Barbee was its first postmaster and that among the occupants of the office was the great surgeon, Ephraim McDowell.

On behalf of the Danville and Boyle County Historical Society, I present to the Commonwealth of Kentucky through you, Hon. Henry Ward, commissioner of conservation, as the head of the department of the State, which has done and is doing such splendid work in preserving historic landmarks, this structure of logs, as genuine as the Kentucky forest from which they came and a signpost of all that is most worthwhile in the simplicity of virtue in man and State and Nation.

While claiming all the noble "firsts," to which Danville and Boyle County are so generously entitled, they stand at attention as "America first" passes by today in the procession of nations on a new trail in the wilderness of international relationships:

"Not treading again in the old worn, bloody pathway, which ends inevitably in chaos and disaster, but blazing a new trail, along which, please God, other nations will follow into the new Jerusalem where war will be no more. Someday, some nation must take that path unless we are to lapse into barbarism and that honor I covet," said Ashton Oldham, "for my beloved America. And so in that spirit and with these hopes I say with all my heart and soul, 'America first.'"

The Value of the Dollar

EXTENSION OF REMARKS OF

HON. ANDREW F. SCHOEPPPEL

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, October 11, 1951

Mr. SCHOEPPPEL. Mr. President, with the dollar looming larger and larger as a problem in our minds, and smaller and smaller in actual value, a study of this medium of exchange, in an article I hold in my hand, should be of more than passing interest to all of us.

The Topeka Daily Capital, on September 16, pointed up this matter in a forceful article which, during these days on

tax discussion, we could all read with profit to ourselves and the people of our country, and I ask unanimous consent that it be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

DEFENSE OF THE DOLLAR

1. Defense of the dollar is the paramount problem. The critical front is on the Foto-mac, not the Yalu or the Elbe. Stalin is as keenly aware of this fact as is the President, and the latter goes the limit when he says "If inflation got away from us and wrecked our savings and ruined our economy, that would be the easiest victory the Kremlin could ask for. Communist Russia could win the whole world to totalitarianism without firing a shot."

2. What does he mean? Not merely that the vested capital of the country will be wiped out, including the worth of pensions, of life-insurance policies and of mortgages. He means the destruction of the American system (in terms of politics as well as economics). He means just what he says, namely, that the alternative to a sound dollar is the acceptance of Stalinism.

3. History cannot be mocked. The traditional recourse of the dictator in his quest of power is seizure of the public purse. All other authority follows that. On this account the founding fathers gave the control of money to the Congress and kept it from the Executive. Solvency for years past, prior to 1933, had been anchored to a natural standard—gold—a rock against which the waves of extravagance could make no headway.

4. That control has been lost. It is no longer a barrier to the whims of the Executive and Congress. Nothing other than a temporary agreement among a few officials restrains the Government from printing money in whatever amount it wishes. It need not go to the public for funds, for it can pour its promises to pay into the banking system whenever these officials, or others to follow them, decide again to have the Federal Reserve System support the bond market.

5. Such dollars have a backing so long as they are receivable for taxes, but they are fiat money just the same. They produce the inflationary gap. They are the lifeblood of extravagance.

6. They are fiat for this reason. Just as they are created by decree of the Government, just so their value can be utterly destroyed by another decree. It is only common sense to realize that a single election can, directly or indirectly, repudiate the public debt in its entirety. It can do so by electing a Congress pledged to appropriate no funds for interest payments. It can do so by boosting expenditures higher and higher to the point where paper money will be of value only to museums. After that, the concentration camps.

7. The States are in imminent danger. They cannot print money. They must use whatever currency the Federal Government foists upon them. Already their tax sources have been invaded. Malignant inflation can deprive them entirely of usable funds. More and more they look now to Washington for what is called, with the illusion of language, Federal aid. They get but a part of what has been taken from them. They cannot, even now, sustain their normal and historic functions without begging from the Federal Capital the means to keep alive. Inflation hastens attenuation of the idea of federation. Tomorrow there may be provinces instead of States, ruled by satraps dispatched from

Washington. Constitutions cannot prevail against the power of the purse.

8. All of the foregoing the present Government, directly and by implication, admits. So, it cries: "Inflation must be stopped." But who creates inflation and at what paps does it nurse? They who cry "wolf" are the wolves. The theory seems to be that it takes a thief to catch a thief. And what cure is offered? Give us more money. The taxes, already confiscatory, are not enough. The ideal position, says the Government, in effect, is when virtually all profits flow into its coffers; when the people cannot pay high prices because they have not the means to buy more than a modicum even of essentials.

9. Nationalization of profits is the worst form of socialism. When a Government nationalizes industries it must at least manage them and be concerned with profits or losses. When it seizes the profits of private industry it absolves itself of risk. Call it cowardice or identify it as a subtle method of accomplishing by indirection what Stalin at least has the nerve to do openly and violently.

10. "How long," asks a Senator, "can American business go on paying from 60 to 70 percent of its income in taxes, and survive?" The answer of an official is that, barring a general war, reductions may be permissible after 1955. But taxes then will inevitably be higher, not lower, if inflation has not been stopped in its tracks. And how much longer can the middle classes, the salaried people, and the annuitants, survive under present and proposed taxation? The kulaks need not be liquidated, as was the Russian method, by cutting off their heads. "You take my life when you do take the means whereby I live."

11. Confiscatory taxation is inflation. To put \$17,000,000,000 of additional taxes on the economy is to add even more billions to the cost of doing business. Taxes, like wages, are a cost figure. Somewhere, somehow, the high rates that are prescribed to stop inflation actually bring it about. Listen to the President on that point. He says (not with entire correctness) that the entire \$4,000,000,000 of new taxes levied last fall paid for not a single gun because the inflation meantime had raised the cost of defense purchases by \$7,000,000,000. Consider that—\$4,000,000,000 added to the tax load at a net loss of \$3,000,000,000 to the Treasury! Stalin laughs; we cry.

12. In the shadows of that picture, it is maintained that there is only one answer, namely, to give the Government more power. It wants to put ceilings on prices and to license business. To fortify its demand, officials with one accord, from the President down, keep telling the country that an even more devastating inflation is just ahead. It is an invitation to everybody to rush into the marts and buy, at any price. It is a repetition of the warning from the White House itself, last summer, to use dollars quickly because they were certain to depreciate.

13. "We propose," say officials in effect, "so to expand the facilities of the country that, within a year or two, production will be in such huge volume as to assure competition in the marketplace; we can and will have butter and guns." There is considerable merit in that argument. The American economy, in all truth, is an economy of surpluses. That was true before Korea, and the potentially grows with the days.

14. But political error can be the snake even in such a promised Paradise. Will the private economy expand under the burden of confiscatory taxation, combined with price and allocation controls? Already, there are signs that management is becoming cau-

tious Who is going to buy a production so vast that it would swamp domestic markets? It may not be practicable to subsidize exports interminably. It may be that point 4, whatever its merits, will not be a powerful force in the world economy until decades hence.

15. An expanding economy is a desirable economy, but not if the expansion is at an explosive rate. Not if the assets of the generations to come are sequestered in advance, not moderately but extravagantly. Ours is a mansion already filled with good things. We have, as Charles Kettering has noted, with 6 percent of the world's land area and 7 percent of its population, 58 percent of the telephones, 76 percent of its automobiles and 34 percent of its radio and television sets. That is an establishment worth looting—and the doors are left unlocked for any demagogue to enter when Federal expenditure is unlimited.

16. This enormous accomplishment has been achieved under our American system of free enterprise, which is quite a different thing from the feudal capitalism which in other places is under attack and we are called on to protect. The Nation can live a long time on its fat unless that fat be squandered.

17. The authorities, with support from both political parties, offer only one solution—higher taxes and more controls. Every proposal from the White House is for heavier expenditure. There must be, its propaganda insists, no slowdown of its welfare projects. It wants to increase them and it uses the necessity of defense as a justification for projects that would be of debatable propriety even in normal times. But the more revenue Washington gets the more it is certain to spend. It refuses to recognize that the barrel has a bottom.

18. There has been built up an opinion that it is treasonable to question the practicability of a White House program. Experts in public relations are summoned to Washington to advise the Office of Defense Mobilization how to coordinate the activities of all the multiple public relations officers of the Government to carry a single message to the public, and sell the idea that not only is the policy of the Government perfect and unassailable, but also that its methods of mobilization are beyond criticism.

19. How close are we even now to the one-party system in our Government? It is wise to have partisanship end at the border and to present a united front abroad. But that is quite a different thing from outlawing debate in the formulation of the policy, whatever it may be. Therein lies the fallacy of a bipartisan foreign policy. It is sheer madness to foreclose on discussion. A country under parliamentary forms is in a sorry status if it lacks a loyal opposition. Diplomacy ought not to be deceptive of our own people.

20. The peril is far too great to permit major decisions to be made in secret chambers, even though members of both political parties participate. It is known now that the present danger is largely the consequence of fatal errors made at Yalta and at Potsdam. In the first case, a Chief Executive, sick unto death, with his principal consultant in a similar condition, made concessions that poured strength into Stalin's veins. He did this as Commander in Chief, without consultation with Congress and without reference to the people. That was embezzlement of power. Who can assure that it would not happen again, or that another victory in another war might not be bartered away by a well-meaning but incompetent authority? It is the abuse of our own institutions that makes necessary a defense of the dollar.

21. The people are confused because the danger to the country has not been explained to them with vivid clearness. They have been bombarded with a series of generalities, some of which would tax the credulity of infants. "The only thing we have to fear is fear itself," said Roosevelt, but the Washington bureaucracy, including the generals, has again and again, in public testimony, indicated a dread lest a gesture here or an action there annoy the Politburo.

22. It might be supposed that Russia was the giant and this country the pigmy. It may be doubted if the Politburo is more cunning than America in its programing. It is altogether unlikely that its production equals America's in volume or parallels it in quality, over-all.

23. Extravagance in Government can be moderated, and without impairment of defense. The so-called Marshall shield calls for mobilization of our collective production facilities and an arrangement whereby they may move into maximum output by pressing a button. Most of this capacity already exists. After the last war the Government retained 440 of its War II plants as a reserve of industrial capacity. More than half of these 278 are now producing defense items, and another 66 are being reactivated. Defense has already arranged for \$6,000,000,000 additional in plant expansion and tooling, mostly for the production of aircraft. Private capacities have enormously expanded since War II. Atomic warheads for artillery shells and guided missiles are well advanced, as is the use of atomic power for submarines. Together there exists already, with rapidly increasing potentiality, a Marshall shield.

24. Defense is the one great area in which economy can be practiced. Let it confine its actual production to usable hardware. Let there be no such overproduction, say, of tanks, as to overwhelm our storage facilities. This would serve a double purpose, since it would also tend to minimize obsolescence.

25. Let it be observed, too, that possibly the very hugeness of the appropriations is intended to frighten Stalin, with no present idea of actual use of the amounts in full. Yet defense will always be tempted to spend whatever is authorized. The "watchdog committee" of the Senate can be of incalculable service to the Nation by keeping its tender fingers in touch with this situation.

26. Inflation has already gone so far that possibly some form of price control is essential, but to be used only if necessary and with great caution. Let there be denial of appropriations for projects that safely can be postponed. Let the Congress wait, at least until fall, before imposing any new taxes whatever. Let aided foreign nations also show restraint in spending their and our money on welfare or postponable projects. Let a spirit of devotion to the public weal be substituted for the extravagant atmosphere that prevails in Washington. In a word, let the bureaucracy become patriotic.

27. The thing that is inflated is the Government. Big Government costs big money. Inflation is conceived and born in Washington. Only the Federal Government can spend in unlimited amounts. It alone determines the value of money and the extent of credit because it alone is legally empowered so to do. The administration already has controls adequate to stop the inflation dead in its tracks. It can stabilize the whole economy by utilizing its present powers. It can do so by putting ceilings on expenditures. It can barricade the American system against disaster by itself practicing that economy which it so belligerently calls on the mass public to endure. Congress should insist that it do so.

Some Californians Would Grab the Entire Colorado River—Have Grabbed for It

EXTENSION OF REMARKS OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 27, 1951

Mr. MURDOCK. Mr. Speaker, I wonder if it is known that of the 12,000,000 acre-feet of Colorado River water on an average now flowing annually into Lake Mead that certain water agencies in southern California are planning to use permanently more than 10,000,000 acre-feet, to the exclusion of any and all other American users? I wonder if it is known that of approximately 10,000,000 acre-feet which these California water agencies count on using, they have a legal right under existing law to the use of less than half that amount? I wonder if it is known that of the 12,000,000 acre-feet flowing into Lake Mead the use of more than 7,000,000 acre-feet of that water belongs to someone outside of California?

I wonder if it is generally known that southern California is now getting about nine-tenths of the total of all benefits of the lower Colorado River, both in water and in hydroelectric power, and at the same time is reaching out for more of them? Believe it or not, such is the case, although the Colorado River does not flow through California and there are no tributaries of the Colorado River within the State of California contributing to the natural flow of that river. Only the smallest fraction of California—and that an arid one—is in the natural basin of the Colorado River. The following facts speak for themselves.

BRIEF BACKGROUND SKETCH

Let me give a brief running sketch of the historical development on the Colorado River. That river was, up until nearly the opening of this century, more of a foe to man than a friend. It certainly was an obstruction to the westward movement of the Anglo-Americans, and it was no aid to the northern movement of the early would-be Spanish conquerors. Indeed it remained more or less a river of mystery until toward the beginning of this century, but around the beginning of the present century, American settlers began in earnest to think of using waters of the lower main stream, having already developed the waters of most tributaries. Especially the Arizona main tributary, the whole Gila River Basin, had long before been put to use and largely developed. Thus, for a couple of decades after 1900 an editorial war occurred as to whose river the main Colorado River was and who should get most of it. There were men in all the seven States touching the Colorado Basin who made extravagant claims on it.

So great was the task of taming the main Colorado River that it was apparent the Federal Government would

have to take a hand. This led to the seven-State treaty or compact, which Congress authorized and which President Harding approved by appointing his Secretary of Commerce, Herbert Hoover, to preside over and direct its drafting. This compact is the basic law of the river. It is officially known as the Colorado River compact and frequently called the Santa Fe compact, as it was signed by all seven States at Santa Fe, N. Mex., November 24, 1922. This compact among the seven basin States made a beginning of dividing the waters in the only way that was possible at the time to divide them. Taking 15,000,000 acre-feet annually as the safest dependable figure of the river's average flow at the strategic point known as Lee's Ferry in northern Arizona for use in the United States, the upper basin was apportioned in perpetuity by article III, subparagraph (a), 7,500,000 acre-feet, and the lower basin was apportioned a like amount, or 7,500,000 acre-feet, which latter amount was increased by 1,000,000 acre-feet by subparagraph (b) of article III, making 8,500,000 acre-feet in all for the States of the lower basin, which include Arizona and California. However, it must not be forgotten that three other States have some, though minor, claims on the water apportioned to the lower basin, while Arizona and California are the chief claimants. From this it is logical to assume that the water which California has the right to use under existing law, the compact, is practically all contained in this apportionment to the lower basin.

FIRST IMPLEMENTING LEGISLATION

The next step in formulating the law of the river is that act of Congress known as the Boulder Canyon Project Act of 1928, which authorized the building of Boulder—now called Hoover—Dam on the Colorado River, to furnish, besides power, a large amount of storage in a man-made reservoir called Lake Mead. This act also authorized a canal lying wholly within the United States to convey water from the Colorado River into Imperial Valley. This measure was greatly sought by California and met with considerable opposition during the 8 years that the legislation was pending in Congress.

Its enactment was urged by California as a flood-control measure for Imperial Valley in California and also as an aid to reclamation, but it was well known that Los Angeles especially wanted hydroelectric power produced and transmitted to her area and, almost as a second thought, wanted water for municipal purposes. Last but not least, some men in Los Angeles wanted the river regulated in order to furnish more irrigation water to the delta lands in old Mexico. Harry Chandler, of the Los Angeles Times, testified before a Senate committee in 1924 that he and his associates owned 830,000 acres of land in the rich Colorado delta region in old Mexico. Thus we see a variety of motives prompting the Californians to seek this legislation which was introduced by Congressman Phil Swing, of California, and Senator Hiram Johnson, of California.

FEAR OF CALIFORNIA BY HER NEIGHBORS

The Swing-Johnson bill was resisted or questioned to a certain extent by Members of Congress from the six other Colorado Basin States lying in the Rocky Mountain area. Their principal reason for concern was that they feared the rich and powerful State of California would obtain control first and garner all the benefits of the river. The chief wish of these Members from the Rocky Mountain States during consideration of the bill was to shape the final legislation so as to give California what she actually needed and should have, but at the same time limit her in such a way that what the other States would later need, after a quarter century or half century of growth, should be carefully safeguarded and held in trust by the Federal Government for them.

Accordingly, the Swing-Johnson bill of 1928 became law, and it is known as the Boulder Canyon Project Act. So far as the division of the waters in the lower basin are concerned, this act divides the seven and a half million acre-feet apportioned by the Santa Fe Compact to the lower basin in subparagraph (a) of article III as follows: To Arizona, 2,800,000 acre-feet; to California, 4,400,000 acre-feet; to Nevada, 300,000 acre-feet; these three making a total of 7,500,000 acre-feet thus apportioned by the compact in article III (a). The Boulder Canyon Project Act also assigned to Arizona the full and exclusive use of all the waters of the Gila River within her boundaries, which Arizona had been using for 50 years. A further provision was made by this act that any surplus or undivided water was to be divided between Arizona and California on a 50-50 basis. However, it was not assumed that there should be a great deal of surplus water to be thus divided and such was not to be divided or apportioned prior to 1963. Prudent men could not safely plan or count on the surplus being much, and indeed it has later been shown conservatively to be relatively a small amount.

CALIFORNIA'S SELF LIMITATIONS

From the foregoing, it would appear that existing law contemplates that California's "take" out of the Colorado River shall not exceed 4,400,000 acre-feet, plus a small and indefinite surplus to be later divided, if any. Let it also be remembered that as a condition precedent to the going into effect of the Boulder Canyon Project Act, by the express term of that act, California was required to limit herself to the amount of 4,400,000 acre-feet, plus one-half the surplus, by an act of her legislature in an unconditional and irrevocable covenant. All this was done by California in 1929 when her State legislature enacted the necessary Self-Limitation Act, as required by the congressional act. In the light of the foregoing, it may well be asked: How then does California now claim or plan to use, in one way or another or for one purpose or another, as much Colorado water as at first indicated in the beginning of this statement, or more than 10,000,000 acre-feet?

California advocates point to the "plus" quantity added to their 4,400,000 acre-feet of their Self-Limitation Act. Well, even if it develops that the river can possibly have more than the compact's 15,000,000 acre-feet measured at Lee's Ferry, the upper basin guaranteed to let down only 7,500,000 acre-feet annually. Four States besides California have varying claims on the 7,500,000 acre-feet let down and any surplus coming down, and if there is—as there will be—a surplus, Mexican treaty water must come out of it and then California cannot legally claim more than one-half of it available in the lower basin. But before picturing the successive California efforts to grab more and more of the river's benefit through the years, let us cite "chapter and verse" and where possible and needful quote applicable law.

THE CONDITION AND ACCEPTANCE

That it may be made perfectly clear that Congress did require California to enter into this unconditional and irrevocable covenant with Uncle Sam for the protection of her six younger sisters, the pertinent part of section 4 of the Boulder Canyon Project Act is quoted as follows:

This act shall not take effect and no authority shall be exercised hereunder and no work shall be begun and no moneys expended on or in connection with the works or structures provided for in this act, and no water rights shall be claimed or initiated hereunder, and no steps shall be taken by the United States or by others to initiate or perfect any claims to the use of water pertinent to such works or structures unless and until . . . the State of California, by act of its legislature, shall agree irrevocably and unconditionally with the United States and for the benefit of the States of Arizona, Colorado, Nevada, New Mexico, Utah, and Wyoming, as an express covenant and in consideration of the passage of this act, that the aggregate annual consumptive use (diversions less returns to the river) of water of and from the Colorado River for use in the State of California, including all uses under contracts made under the provisions of this act and all water necessary for the supply of any rights which may now exist, shall not exceed 4,400,000 acre-feet of the waters apportioned to the lower basin States by paragraph (a) of article III of the Colorado River compact, plus not more than one-half of any excess or surplus waters unapportioned by said compact, such uses always to be subject to the terms of said compact.

That it may be made perfectly clear that the sovereign State of California did meet the condition required by Congress just quoted, the pertinent part of the California enactment known as the Self-Limitation Act—act of March 4, 1929, chapter 16, forty-eighth session—is quoted as follows:

The State of California as of the date of such proclamation agrees irrevocably and unconditionally with the United States and for the benefit of the States of Arizona, Colorado, Nevada, New Mexico, Utah, and Wyoming as an express covenant and in consideration of the passage of the said Boulder Canyon Project Act that the aggregate annual consumptive use (diversions less returns to the river) of water of and from the Colorado River for use in the State of California, including all uses under contracts made under the provisions of said Boulder Canyon Project Act, and all water necessary

for the supply of any rights which may now exist, shall not exceed 4,400,000 acre-feet of the waters apportioned to the lower-basin States by paragraph "a" of article 3 of the said Colorado River compact, plus not more than one-half of any excess or surplus waters unapportioned by said compact, such uses always to be subject to the terms of said compact.

SEC. 2. By this act the State of California intends to comply with the conditions respecting limitation on the use of water as specified in subdivision 2 of section 4 (a) of the said Boulder Canyon Project Act, and this act shall be so construed.

DID CALIFORNIANS FORGET

Hardly had the ink dried upon the California statute of March 4, 1929, which was that "irrevocable covenant" by which California pledged herself to Uncle Sam not to take more than 4,400,000 acre-feet of apportioned water from the river, before certain water agencies in southern California did some ambitious planning. In 1931 about a half dozen California water agencies negotiated with the Secretary of the Interior, himself a Californian, Ray Lyman Wilbur, serving as a cabinet officer under a California President, and contracts were made for a total of 5,362,000 acre-feet out of Lake Mead. How can you get 5,362,000 out of 4,400,000? Of course, these were not firm contracts, but were all written with the saving clause, "subject to the availability of the water" under the terms of the Boulder Canyon Project Act and the Santa Fe Compact.

Apparently nobody in California pays much attention to that saving clause, and perhaps few know that it is in the contracts. For that matter, very few Californians know that their legislature did on March 4, 1929, enter into a solemn covenant which was to be irrevocable with Uncle Sam whereby California limited herself to a definite amount of apportioned Colorado River water. Therefore, the plan begins to unfold. These water agencies conveniently forgot about the 4,400,000 limitation and contracted for 5,362,000, and now they speak of such contract "rights" as sacred things which must be sacredly upheld. Astonishing. But that is not all—only the first semi-legal grab. Please read on.

WATER PLANNED FOR THREE PURPOSES

A careful reading of the seven-party water agreement of 1931, as found on pages 557-560 of the Hoover Dam Contracts, by Wilbur and Ely, 1933 edition, will indicate the Californians' plan for Colorado River water for three purposes, as follows: for irrigation within the State of California 4,150,000 acre-feet annually; for municipal use 1,212,000 acre-feet annually; and for power production near the border and for disposal to Mexico, as designed in the construction of the first section of the all-American Canal, 2,190,000. These three amounts added are found to total 7,552,000 acre-feet which have been thus expressly planned for by the Californians, and thus the limit of 4,400,000 is upped even beyond 7,500,000 acre-feet apportioned by subparagraph (a) of article III of the Santa Fe Compact which were to be let down for the entire lower basin. This second grab is beginning to get interesting to the upper basin.

Shortly after these interagency agreements, the city of Los Angeles developed a great thirst and decided to draw on the Colorado River for municipal water. This move has many similarities to the city's move in Owens Valley two decades earlier, but on a larger scale the second time. This was to be a big undertaking and called for the establishment of a metropolitan water district in southern California. At a cost of \$220,000,000—or that was the amount of the bond issue—an aqueduct large enough to carry 1,212,000 acre-feet of water, though a rated capacity of 1,100,000 acre-feet, was built from the Colorado River to the Los Angeles area. Thus Californians planned on taking 1,212,000 acre-feet of Colorado River water for municipal purposes, including San Diego.

Such municipal use meets with general approval—certainly my approval—if given first priority—though it was not—and kept within California's self-imposed limits. Of course, they were building for many years ahead, and it should be noted that during the 10 years of its functioning, the metropolitan aqueduct has not carried more than 7 percent of its total capacity taken over the entire decade of its life.

Of course, this was a less reprehensible grab in the name of dire thirst—of which I am not complaining, if according to the law of the river and if the amount of water is included within the California limitation and not added on top of it. But this human use was rated lowest in the list of priorities, which lowest priority rating certainly does not have my approval.

ANOTHER GRAB IN OVER-BUILT CANAL

The build-up of water for southern California still continues. In the thirties Uncle Sam built the All-American Canal and the Imperial Diversion Dam to furnish water for the Imperial Valley and for other purposes. This canal, built according to California specifications, as well as on California's agreement to repay its cost, has a capacity of 15,000 second-feet at its intake at the west end of the Imperial Dam. Fifteen thousand second-feet capacity converted into acre-feet annually means that through its gates 11,000,000 acre-feet of Colorado River water could be turned into California each year. Oh, but they would never think of doing it, when they so solemnly promised to observe the 4,400,000 acre-feet limit. Do not be too sure they would not. At least they have an oversized first section of this canal. Now, how do they propose to use it?

California water authorities, in a letter to Secretary of State George C. Marshall dated January 9, 1948, indicated an intention or desire of using nearly 6,000,000 acre-feet of water through that canal to create power at Pilot Knob on the Mexican border after which that water could be disposed of in Mexico.

A paragraph from that letter reads as follows:

The plant will have an installed capacity of 33,000 kilowatts, using a maximum flow of 8,000 cubic feet per second. The general layout of the wasteway and power plant, as well as the capacity of the plant, was planned at the time the All-American Canal was de-

signed and constructed. (See Hoover Dam Documents, latest edition, p. A918.)

If to the legitimate quota of 4,400,000 acre-feet to California is added a grab of 6,000,000 acre-feet for certain Californians to use to produce power, that would be most all of the river. Other documentary proof in the form of official documents, especially Senate hearing on water treaty with Mexico, 1945, indicates that some of that water would be carried to land in Mexico at a charge which would produce a profit for somebody in California.

I think we may in all fairness in summing the amounts which somebody in California wants, say that in addition to the 3,850,000 acre-feet, which California plans in her priority agreements to use for irrigation of land within California, plus the 1,212,000 acre-feet which California plans to use for municipal purposes, we must add the 5,840,000 acre-feet which California plans—at least hopes—to put through a power plant at Pilot Knob on the Mexican border to produce power and later to carry that water to land in Mexico at a profit. Adding 5,840,000 and 1,212,000 and 3,850,000, we arrive at a grand total of 10,902,000 acre-feet, which for one or another of three different purposes Californians have indicated their plan or hope to use Colorado River water.

Mind you, this is not hearsay or guesswork on my part or anybody's part. These figures are taken from authoritative sources in black and white. One would never suppose that those who are reaching for nearly 11,000,000 acre-feet of water from that limited and vital river had solemnly promised Uncle Sam that they would limit their take to not to exceed 4,400,000 acre-feet of compact-apportioned water. Let it be noted that the Colorado is not California's last water hole, but it is Arizona's last water hole.

MR. CONGRESSMAN, HAVE YOU REPLIED IT?

Every Member of Congress must have received from all directions of the compass communications undoubtedly inspired by southern California urging that the central Arizona bill now pending be killed. Could there possibly be any connection between the California desire to kill the central Arizona bill and their plan for an enlarged portion of the Colorado River benefits for themselves? Of course there is a very definite connection. However, the central Arizona bill calling for 1,200,000 acre-feet out of the Colorado River is not the only present-day proposal upstream that must be blocked if men in southern California are to have their way. To have their way as indicated, they must ignore the act of their legislature in March 1929—the California Self-Limitation Act—flout the act of Congress of 1928—Boulder Canyon Project Act requiring the irrevocable covenant—and nullify the clear and express provision of the Santa Fe Compact providing an equitable division if they are to succeed in getting as much as they are deliberately counting on and planning to get from that river.

My colleague, can this thing be put over on us? It can by the indifference

or inaction of a majority of us. I beg you not to let propaganda coming out of southern California detract your attention from the main question.

I request that you close your ears to the din of the California propaganda and examine carefully the merit of the central Arizona project, as well as projects in the other States in the Colorado River Basin. I am confident you will not deny development in these States to utilize water which is clearly theirs, in order to aid in the unconscionable attempt of a few Californians to grab all the benefits of the Colorado River.

Tuttle Creek Dam

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, October 11, 1951

Mr. MURRAY. Mr President, I ask unanimous consent to have printed in the *Record* an editorial from the *Kansas Farm Bureau News* for August 1951, entitled "Ultior Motives."

We are being asked to make an appropriation for Tuttle Creek Dam in Kansas on the ground that it would have helped to stop the recent Kansas River flood by holding back the waters of the Blue River. The editor points out in this editorial that the Kansas River backed the water up the Blue, and that Tuttle Creek Dam would have been of little value.

The editor directs attention to a project at New Cambria where a group of farmers organized to pool their agricultural conservation program payments and build terraces, retention dams, and other run-off controls. Their experiment in one small watershed came through the severe test of July rains in Kansas with flying colors, and is indicative that we might save the soil of America and greatly reduce our flood problems if we would put more emphasis on that type of work.

I believe Senators will find this editorial particularly significant, not only for the lesson it proposes to teach in regard to flood control, but also as an illustration of the value of the agricultural conservation program payments. Suggestion was made to this Congress that this program should be drastically reduced. I am happy to say that this was not done. It is my hope that the Congress will continue to maintain it, and that it will be used much more in small watersheds, as it has been used at New Cambria.

There being no objection, the editorial was ordered to be printed in the *Record*, as follows:

ULTIOR MOTIVES

We were mildly surprised recently to learn that Gen. Lewis Pick of the Army engineers is not always a conservative man. We had supposed that an engineer has an approach to his business comparable to that of a banker to his business. Bankers are

always cited as examples of conservatism when they consider the handling of their bank's money, although we have known a few who sometimes were just a little loose with a few nickels in a rummy game. We had supposed that engineers were just as conservative when they sat down to a drafting board or handled complex blueprints involving billions of taxpayer money.

But General Pick disturbed that conception somewhat when he appeared before the Senate flood-control appropriations committee July 19. He declared first of all that a paltry \$300,000,000 would have saved a billion dollars of damage in the Kaw watershed. It may be a minor point, but General Pick apparently ignored the fact that his figure of \$300,000,000 was based on Army engineers' estimates, some of them several years old, and that Army engineers seldom have built a dam and reservoir at a figure which would begin to fit into the original estimate.

More alarming was General Pick's conclusion that Tuttle Creek Dam would have averted most of the disaster to Kansas City. There are not many engineers in central Kansas, but almost all of the residents of that area have completed sixth grade arithmetic, and they do have eyes to watch running water. At Manhattan they saw the Kaw backing the Blue upward toward where General Pick says Tuttle Creek Dam should have been. And these central Kansas folks know that water was spilling over the banks of the Kaw at Kansas City within a few hours after flooding began from Tescott, Wakefield, and Blue Rapids, all the way to Topeka.

General Pick also told the Senate committee soil conservation is not an aid to flood control. We don't know what General Pick includes under the heading of flood control. Out here in Kansas, folks think of soil conservation as including contour planting, terraces, permanent grass, detention dams, and other practices. Now if General Pick will concede that such practices are a part of the conservation program (certainly, they are not Army engineer programs), there are some folks at New Cambria, just east of Salina, who would like to show him how their project controlled run-off of the heavy rains which fell July 9, 10, and 11. Reputable farmers in Saline County will testify that the New Cambria project, featured some months ago in the *Kansas Farmer*, came through this most severe test with flying colors.

At New Cambria, a group of farmers organized to pool their ACP payments in the construction of terraces, detention dams, and other run-off controls. They treated one small watershed as a unit problem, instead of each farmer trying to handle the problem on his own farm without cooperation with neighbors on whose land his water might run or other neighbors from whose land water might run to his farm.

It has been noteworthy that newspapers featuring General Pick's testimony have not bothered to dig deeply for accurate facts. Whenever extravagant statements are made, whenever there is a noticeable lack of effort to investigate thoroughly and to secure accurate facts, it often can be assumed there are ulterior motives.

In this case what motives would there be other than the single purpose of controlling floods. The Army engineers have two rather obvious ulterior motives. First, they must get money to build another big dam. Unless there is some big project to keep them busy, Congress might get the idea of curtailing their activities. And, second, this flood offers an opportunity to stampede Congress into forgetting the 1950 report of the President's Water Policy Commission. That report called for a comprehensive water-resources program. The Army engineers would have been subject in the future to supervision by an over-all water-resources control. They would not have been allowed to go their own way, ignoring other agencies

interested in land and water conservation. And the engineers simply don't want to be curbed.

Finally, at least one large city down the river has another reason for wanting Tuttle Creek Dam, other than the flood-control motive. This large city needs a flush bowl to flush out its sewage when the river runs low in the summer and early fall months. Tuttle Creek would provide such a flush bowl.

Control of Beef Prices

EXTENSION OF REMARKS

OF

HON. ANDREW F. SCHOEPEL

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, October 11, 1951

Mr. SCHOEPEL. Mr. President, in these days, when we hear much loose talk about the virtues of certain controls, and especially with all the grandiose promises that have been made to the American people by the control authorities with reference to livestock and beef production, I thought it might be refreshing to place in the *CONGRESSIONAL RECORD* from down West Texas way an article appearing in the *West Texas Livestock Weekly* on Thursday, September 27, 1951, entitled "Unregistered Bull in a Hotel Lobby." I ask unanimous consent to have it printed in the Appendix of the *Record*.

There being no objection, the article was ordered to be printed in the *Record*, as follows:

UNREGISTERED BULL IN A HOTEL LOBBY

(By a Contented Cowman)

"From where I am," said John, "it looks like the OPS is having more trouble than a near-sighted man judging a beauty contest. Every time they make a move, somebody slaps 'em."

"Personally, I'm glad of it. Us cowmen tried to tell the bureaucrats they'd wind up with beef ceilings and no meat, and they thought we were just a bunch of profiteers, trying to fill our pockets at the public expense. They were right, of course. Anytime I fool with a string of cattle, I'm doing my dead level best to make as much money as possible without doing something that will get me whipped or jailed. Punching cattle is fairly healthful, maybe, but there's lots of other outdoor exercise you can take without risking losing a fortune or being obliterated by a bull."

"But I'm no optimist where the OPS or any other bureau is concerned. The OPS is in trouble, but that doesn't mean the OPS is going out of the picture. I think it means present OPS officials will get promotions so they can take on the responsibility of bossing some extra help that'll have to be hired; when a bureau gets in a jam, it always seems to get bigger and get an extra bureau or two to help it."

"I don't claim to be any economist either, or I'd have a position in Washington. I'd have charge of a bureau office, with a string of good-looking secretaries to drink coffee with on week days and scotch and soda with on weekends."

"But I don't think it takes so much of an economist to know that if people have a lot of money and are hungry for meat, they're gonna buy it. If they can't get it from legal sources, controlled by the OPS, they'll get it wherever they can, and pay an extra high

price because bootleggers charge more than legal operators, whether it's beef or bourbon you're buying.

"But the main thing is that you simply can't control beef prices in this country, as long as it's making any pretense of being a democracy, without holding down production. We're close to having a record number of cattle now. Cattle speculators and meat packers would be in a good shape to find themselves with a low market right away if it wasn't for the fact that production and distribution are already messed up to the point where there's a meat scarcity in butcher shops, and unions keep striking for higher wages every day.

"The OPS has proved it can't even enforce ceilings on fat cattle, let alone on stockers and feeders or pot roasts.

"If the OPS really wanted to control inflation, instead of screaming for more power it would suggest that (1) all OPS personnel and about a million or so other Government employees be fired immediately so there wouldn't be such a shortage of help around ranches, feedlots, and packing houses; (2) unions be prevented from jacking up wages and manufacturing costs, so laborers wouldn't be so anxious to give a black market man \$2 a pound for steak; (3) lobbyists of all kinds, including those of the cattle and packing industries, be told to shut up whenever they start putting the pressure on Washington for special handouts of Government funds or privileges.

"But I don't look for anything like this to happen as long as the average citizen prefers to have lots of dollars instead of lots of meat, and is willing to vote for politicians that promise to hand him a new home on Easy Street."

Background on Secrecy

EXTENSION OF REMARKS

OF

HON. JAMES I. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 11, 1951

Mr. PATTERSON Mr. Speaker, Robert D. Byrnes, able Washington correspondent for the Hartford Courant, exposes in a special column for that paper the weakness of the recent Executive order by the President concerning the suppression of news by executive agencies.

Exposing by factual observation the fallacies of the order, Bob Byrnes demonstrates very clearly that the order was ill-conceived and totally lacking in substance. The impugned slur on American newspapers should not go unnoticed.

The fault, if there is fault, for the dissemination of news detrimental to our security, lies with the agencies involved, not with the faithful reporters of such happenings. Through this order the President of the United States has lowered a paper curtain of involuntary censorship in this Nation.

The article follows:

BACKGROUND ON SECRECY

(By Robert D. Byrnes)

WASHINGTON.—Here is a case history, in part factual observation from a third-row seat at the President's press conference Thursday morning, and in part speculation based on background and experience.

The President, in discussion on his order on safeguarding information of military

value, issued September 24 to Government departments, made it clear to 50 or more newspaper men and women, including several foreign correspondents, that the prime responsibility rests on publishers for circulating information of military value, regardless of what source, including the Pentagon and Members of Congress, gave out the information.

During the conference the President, in response to a question, branded as an example of disclosing military information the statement of an unnamed Congressman Wednesday that the latest explosion of an atomic bomb by the Russians had been within 4 or 5 days.

Later in the conference the President was asked if there is any relation between the information security order and the explosion of the Russian bomb. There was no relationship, the President said, and the information order was signed before the report on the Russian bomb was received.

The order was signed September 24, which is 11 days ago. All that is factual and a matter of record.

Now suppose a publisher, exercising the prime responsibility the President said (before his statement was clarified) he should use on all information pertaining to national security, regardless of where it came from, considers the revelation by the President that news of the Russian bomb explosion was received within the past 11 days. A publisher is not expected to be an expert in nuclear physics, meteorology, and espionage, and possibly other fields which might enter into the evaluation of the significance of the time-lag between the actual explosion of the bomb in Russia and the announcement of that event by the President of the United States. The publisher might recall that the White House announcement of the bomb gave no date for the explosion, but did say that details, presumably including the date, cannot be given without affecting our normal security interests.

It is quite possible that publishers, and directors of other news media, would be divided on whether they had a prime responsibility to suppress the revelation from the President that news of the Russian bomb explosion had been received within 11 days. This condition of divided opinion would mean some segments of the population would get the news and some would not. This would be sort of a geographical division of the truth, or, in an uncommon use of the term, a half-truth.

Half-truths, including those only half heard or half understood, as everyone knows who has been on the answering end of a newspaper telephone, are the finest spawning ground for rumors. But if all the publishers and all the directors of other news media agreed to suppress the news about the 11-day aspect of the bomb report, and in the improbable event their action did not spread by word of mouth, there is still the probability of several people having the same question in their minds as the reporter who asked the President Thursday morning if there is any connection between the Russian bomb and the information order.

Such questions, when banded about unanswered, have a way of becoming transformed into statements. What such a statement, traveling by the "have you heard the inside" route, can effectuate strains the imagination.

The likelihood of publishers being required to exercise what the President referred to as their prime responsibility to second-guess official sources of information, now seems to be remote. During the press-conference exchange there was a question, which was almost a reminder, about the role of the free press in America, and an acknowledgment by the President that the free press is just as important as the Bill of Rights.

Then, some time after the press conference was over, the President's position was "clarified" by his press secretary in a statement which included the pronouncement that the recent order on information "does not in any way alter the right of citizens to publish anything."

Forty-eight Governors Demand End to Federal Ban on Relief Publicity

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 11, 1951

Mr. SCHWABE Mr. Speaker, the following news item appeared in the October 2, 1951, edition of the Washington Evening Star. It certainly shows the attitude of the people back home as reflected through the expressed sentiments of their governors in their recent conclave, and I trust that the Congress will take notice of the demand of the people for publicity of the names of those who are on our relief rolls.

FORTY-EIGHT GOVERNORS DEMAND END TO FEDERAL BAN ON RELIEF PUBLICITY—AFTER STORMY SESSION WITH EWING, THEY VOTE STATES SHOULD DECIDE

GATLINBURG, TENN., October 2.—The Nation's governors voted unanimous approval today of a move to reserve to the States the right to decide whether their relief rolls shall be made public.

The action came on motion of Gov. Thomas E. Dewey, New York, Republican, after Gov. James F. Byrnes, South Carolina, Democrat, demanded in a stormy session with Federal Security Administrator Oscar Ewing that the governors act on the question. Georgia's Gov. Herman E. Talmadge was another critic of the secrecy rule.

Federal law now requires secrecy of relief rolls. The Senate has approved a measure to lift the secrecy ban, but the measure still is pending in the House.

LEE CHARGES EVASION

Governor Byrnes asked the forty-third annual Governors' Conference to go on record in favor of relief-roll publicity. Governor Talmadge said such publicity would reduce relief rolls by at least one-third.

But Mr. Ewing insisted that such publicity would do more harm than good.

The governors sailed into Mr. Ewing after Utah's Republican Gov. J. Bracken Lee had challenged them to discuss the real problems of inflation, taxation, communism, integrity in government, and the Korean war, instead of what he called the side issue of social security.

Governor Byrnes, a Democratic former Senator, Secretary of State, and Supreme Court Justice, told Mr. Ewing bluntly he believes Congress sought to pay more attention to what the governors want than to Mr. Ewing's recommendations.

QUEST FOR ADVICE

"The question is not what you recommend," he said; "but will this conference recommend repeal (of the secrecy provisions) and leave to the States the determination of whether there shall be publicity."

Amid cries of "yes, yes," Governor Lee reminded Mr. Ewing that he has said earlier he came to the conference to get advice from the State executives.

"Yes," Mr. Ewing snapped, "but I reserve for myself the decision whether I will take it or not."

Mr. Ewing told reporters "Indiana has lost beyond possible retrieving \$3,000,000 in Federal aid because its legislature failed in time to knock out a relief roll publicity provision for that State."

SAYS COURTS CAN SEE RECORDS

Governor Talmadge complained that the States can't find out, even through grand-jury action, about relief-roll chiselling.

"You are spending billions of dollars of the taxpayers' money and are doing it without the States even being able to find out about it through grand juries," he asserted.

Mr. Ewing said "Federal security records are always available to the courts."

Gov. Johnston Murray, Oklahoma Democrat, said he couldn't fire relief workers who connived to put persons on the rolls. Mr. Ewing replied he didn't have "much sympathy with civil-service provisions, but they are in the law."

SAYS ILLEGITIMACY IS ENCOURAGED

Governor Talmadge accused the Government of subsidizing and encouraging illegitimacy by refusing to permit Georgia to limit the number of illegitimate children in one family eligible for relief.

"We took the position that one illegitimate child can be an honest mistake," Governor Talmadge said, "but when there is more than one, then it has got to be a habit."

But he said the United States welfare agency refused to permit any such limitation.

Mr. Ewing said "The Government believed the illegitimate child should not be punished for the act of its parents."

By a vote of 25 to 10, the governors went on record in favor of States having the right to control their own civil-service standards rather than the Federal Government.

Our Emergency Economy

EXTENSION OF REMARKS

OF

HON. GEORGE W. MALONE

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Thursday, October 11, 1951

Mr. MALONE. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "Our Emergency Economy," published in the Erie (Pa.) Times of August 27, 1951.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

OUR EMERGENCY ECONOMY

Suppose, asks Senator GEORGE W. MALONE of Nevada, all threats of war came to an end? Truman administration officials would shudder at the thought.

They have thrived on one "emergency" after another, and would not know what to do with peace and normal, healthy American economy.

The prospect of bringing the shooting in Korea to an end left the Fair Dealers badly frightened men. They have busied themselves justifying spending as usual.

The Truman administration must have a war economy or an emergency economy in order to function.

On Saturday General Ridgway sent probably the toughest note ever written in modern times to Red negotiators in Korea and it

was general opinion in Washington that it is almost impossible to answer it.

Which means the peace talks may be further encumbered, on orders from Washington, while the war emergency continues.

The American economic system, as known for many years, was abandoned first by President Roosevelt and then by President Truman who ordered the current war under the guise of a police action.

It created the emergency he wanted. He has since bragged about the great boom, refused controls when they were needed and given him by Congress, and talks about present top employment—defense or emergency employment, whichever you prefer to call it.

The New Deal and Fair Deal have traded solely on the something-for-nothing philosophy but it has not panned out. It was politically successful but economically suicidal.

Says Senator MALONE:

"The Socialists have wanted from the start to discredit the American economic system. At the same time they have tried almost every trick in Adolph Hitler's bag in trying to regiment the American people."

"Some of this regimentation has slipped through, with the result that the hot breath of the bureaucrats is felt on the necks of Congress, demanding more and more power to tax and spend. These people who would regiment our lives and change our economic system are not willing for free enterprise to function."

Is it any wonder he asks what would happen if all threats of war came to an end?

Harold Stassen's Book, Man Was Meant To Be Free

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, October 11, 1951

Mr. THYE. Mr. President, a new book was released for distribution today. It is entitled "Man Was Meant To Be Free," and it contains a series of addresses and public statements by Harold E. Stassen, former Governor of Minnesota and now president of the University of Pennsylvania. This collection of addresses is remarkable for the breadth of understanding of our problems which is revealed in it. I believe that it is a major contribution at this time. For that reason, I ask unanimous consent that an article which appears in the Washington Daily News today, written by Charles Lucey of the Scripps-Howard staff, be printed in the Appendix of the Record:

There being no objection, the article was ordered to be printed in the Record, as follows:

NEW BOOK PUTS STASSEN IN SPOTLIGHT FOR 1952

(By Charles Lucey)

It is hardly a coincidence that a new Harold Stassen book, *Man Was Meant To Be Free*, appears just as the political talk is beginning to heat up on the 1952 Presidential election.

Save for some speeches and the recent congressional hearings, Mr. Stassen, now president of the University of Pennsylvania, has been all but forgotten politically since 1948. In that year he was the Man Who Might Have

Been President. He trimmed Tom Dewey and "Bob" Taft in the bellwether Wisconsin and Nebraska Presidential primaries and seemed to be on his way.

But something happened. Many say the turn came when Governor Stassen straddled and trimmed on the issues in trying to take delegates away from Senator Taft in Ohio. Then, in Oregon, Mr. Dewey edged him in a debate on communism and out-campaigned him generally. At the Philadelphia convention Harold Stassen was an also-ran.

Yet Mr. Stassen is resourceful far beyond most men in public life, he certainly never sees any personal defeat as more than temporary, and over the years he has enunciated a modern American philosophy that is always thoughtful and often bold and challenging.

INCISIVE STAND

The title of this book, edited by Mr. Stassen's close friend, Amos J. Peaslee, springs from the dominant theme expressed in an impressive series of Stassen articles and speeches since he keynoted the 1940 Republican convention. And although that speech was largely a lofty catalog of ideals with which none could disagree, most of the succeeding utterances take a clear incisive stand on the controversial issues of the day. The book was published by Doubleday & Co.

Harold Stassen reads the centralization of power that occurs when a government moves toward overcontrol of the political and economic life of its citizens. He meets this issue, to cite an example, in discussing the Universal Declaration of Human Rights, adopted in 1948 by the United Nations.

This declaration says everyone has a right to a standard of living adequate for the health and well-being of himself and his family—food, clothing, housing, medical care, social services, the right to security in event of unemployment, sickness, old age, etc.

Mr. Stassen points out that the United States Constitution has no such provisions, but that the Soviet constitution does have a very similar one. He argues:

FORCED LABOR

"The endeavor to label detailed economic dividends as rights of man is completely lacking in logic and unfortunately is tragic in consequence. Both experience and reason tell us that when tangible material returns are labeled as rights of man—in other words, when economic guarantees from the Government are mingled with basic law—the result is a corollary power of coercion over men by government that wipes out the true rights of man."

"The two articles from the Russian Constitution are not a coincidence. Forced labor and the loss of true human liberty is the opposite side of the coin of economic guaranty."

Newswise, the sharpest chapter in this book is entitled "The Coming Collapse of Communism." Mr. Stassen describes his personal experiences in countries bordering on Russia, in talking with men who daily risk death to flee Soviet oppression at home.

"It is my judgment, founded on a careful fitting together of reports and bits of information from public and private sources in a dozen countries . . . that there is serious trouble inside the Soviet Union, that it affects the Red army itself; that, if aided from the outside, it would burst forth in counterrevolution if . . . the Kremlin should begin a third world war."

SWINGS HARD

Mr. Stassen's political-economic thinking is a good half century removed from the 1890 isolationist-conservatism of some Republican leaders, but nobody could ever charge him with a New Dealism which sees the public treasury as the cure for all ills. He swings hard on both extremes throughout this book.

Mr. Stassen warns that the ultimate end of the "excess give-away approach" is increasing regulation and control. He tells his Republican Party that foreign policy should be based on "vigorous bipartisan participation in world affairs." And, urging the regular GOP organization to stop elbowing people aside and to broaden its base wherever it can, he says:

PROVOCATIVE READING

"It is understandable why many Republican organization leaders have that attitude, but we had better recognize that it completely prevents building the kind of broad-based political movement essential if there ever is to be victory over an entrenched administration with the tremendous power the Federal Government and Federal administration has at this time."

There is nothing stodgy about Harold Stassen and this book makes provocative reading all the way.

We Call Them Allies

EXTENSION OF REMARKS

OF

HON. GEORGE W. MALONE

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Thursday, October 11, 1951

Mr. MALONE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "We Call Them Allies," published in the Portland (Maine) Express of September 1, 1951.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WE CALL THEM ALLIES

On the subject of billions for defense—for Europe—Nevada's Republican Senator GEORGE W. MALONE reminds his colleagues, and the country, of certain interesting matters. We quote from a speech on the Senate floor by the Nevadan on Monday of this week.

"Both Britain and France have had with Russia separate and independent economic and military pacts which read startlingly like the North Atlantic Pact. . . .

"The one which was signed between Britain and Russia was signed by V. Molotov. . . . In this treaty. . . . article VI says:

"The high contracting parties agree to render one another all possible economic assistance after the war."

"That was after World War II. Now, to all intents and purposes, in defiance of America's efforts to stop them from trading with Russia, they are carrying out this treaty."

"Article VII reads:

"Each high contracting party undertakes not to conclude any alliance, and not to take part in any coalition directed against the other high contracting party."

"I should say that, if our interpretation of the North Atlantic Pact is correct, they violated that particular provision of the treaty, but it was laughed off by both Britain and France. . . . However, . . . Russia was calling them to account—for which I cannot blame Russia. . . .

"I want to refer to two paragraphs of the economic and military pact signed by France and Russia. . . . Articles V and VI read as follows:

"ART. V. The high contracting parties undertake not to conclude any alliance and

not to take part in any coalition directed against either of the high contracting parties."

"ART. VI. The high contracting parties agree to render each other every possible economic assistance after the war, with a view to facilitating and accelerating reconstruction of both countries, and in order to contribute to the cause of world prosperity."

"The treaties are in force today. There has been no indication of cancellation. . . .

"No one seems to take seriously, even now, the fact that both England and France have military pacts with Russia. We must take that fact into consideration."

"In 1945, when the United Nations was being organized, I stated that the world would be divided into spheres of influence. There were not five major nations. There were two major nations, and I predicted that the two major nations would divide up the world. That is what they are doing. Now we are taxing our people to arm the other nation within its sphere of influence."

Price Control Stupidity

EXTENSION OF REMARKS

OF

HON. THOMAS G. ABERNETHY

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 11, 1951

Mr. ABERNETHY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials from the Memphis Commercial Appeal:

PRICE CONTROL STUPIDITY

The stupidity of those in charge of price controls is demonstrated by the manner in which, through Office of Price Stabilization uncertainty, dilly-dallying and double talk, the cotton-textile industry has been brought to a virtual standstill.

Since January of this year the OPS has issued raw cotton and textile orders, reorders, countermands and counter-countermands. It has hinted at roll-backs, denied that there would be roll-backs, then announced that it is studying roll-backs.

The result has been that retailers have been ordering from hand to mouth, fearful that they will be caught with merchandise, the selling price of which may be less than they paid for it. The same is true of wholesalers, converters, and the mills themselves.

Where on January 1 of this year the mills were booking orders as much as 6 months ahead, were buying cottons to fill those orders and were operating at a high rate, today they are booking a bare 2 months ahead, have curtailed production and are hesitant about booking additional orders. Mill hands, lacking full employment, are leaving the textile areas, with the result that mills will be compelled to train new hands if and when the demand for textiles is revived.

More than that, the stagnation of the industry has dried up the demand for cotton just at the time that the producers are bringing their crop to market. Ordinarily mills buy at this time for their future needs. Now they are buying only as far ahead as they have orders. This lack of buying interest has compelled the producers to turn to the Government-loan program as an outlet for their cotton in order to stabilize the market and prevent losses because of the high cost of production.

Had the OPS had a determined pricing policy, one that was final, understandable, and based on facts and not political whims, these conditions would not exist.

Actually, with raw cotton production high, there is no need for price ceilings on either raw cotton or textiles.

Ceilings or no ceilings, however, the industry should be freed from the present pricing uncertainties and allowed to work and act in a normal, orderly manner.

Beef Control

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, October 11, 1951

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Beef Control," published in the St. Paul Pioneer-Press of October 8, 1951.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BEEF CONTROL

What emerges out of the complaints being made by the Middle West meat-packing industry and the countercomplaints of the Federal enforcement authorities is simply what was foreseen when the beef-price control was established. The controls are a failure and there is nothing in sight that will make them a success.

The packers cannot buy the beef they need for normal production operations at OPS prices. The beef is being bought, however, at over-the-ceiling prices and diverted to slaughterers on the east and west coasts, particularly the former. This is possible because of technical loopholes which the enforcers do not have the power to close.

The result is that beef disappears from the market in one part of the country and is being bought at inflated prices in other parts of the country. Prices are not being controlled. Inflation is not being checked. Ordinary channels of meat marketing and slaughtering are being disrupted at enormous costs to legitimate packers and their employees.

To continue this futile experiment under these conditions is fanaticism.

The enforcement officers believe that the administration of beef-price control could be saved by the restoration of beef-slaughtering quotas.

It is true that if the Federal Government were going to undertake a resolute effort to enforce beef-price controls, with a tremendous police organization to back it up, a system of slaughtering quotas would be a necessary integral part of this apparatus. In fact no price control of beef can be successful without them.

But it is also a fact that the Federal Government did not have enough power or means of enforcement even during the war to make meat-price controls work, and there is no prospect of any such effort now. Adding quotas to the present controls would merely drive the slaughtering of cattle deeper into the mire of black-marketeering on the local level, and the final result would be more and worse of what is now going on—high beef prices for those who can get it and no beef for the majority.

So far as keeping the price of beef down within reason is concerned, a moderate relaxation of tariff regulations would do the trick quickly and easily and cheaply, and

soon there would be ample supplies of beef for everyone at reasonable prices. This would not be palatable to some sections of the beef industry, but it would be wholesome and healthy for the industry as a whole and for everyone else into the bargain. Certainly as compared with the present disgraceful state of affairs in beef this would be a vast improvement.

Conditions in the Nation

EXTENSION OF REMARKS OF

HON. CLYDE R. HOEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, October 11, 1951

Mr. HOEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a beautiful and thought-provoking letter which I have just received from a mother and grandmother who lives high up in the mountains of western North Carolina. I feel sure that the sentiment which this letter breathes would be most helpful to our whole country, and will enable us to think more clearly about all the problems which confront the Nation.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

GNEISS, N C, October 7, 1951.

Senator CLYDE HOEY,

Washington, D. C.

DEAR MR. HOEY: You know far better than I the condition of the Nation and the world and what steps had best be taken to eliminate at least part of the troubles.

But it looks to me like we are being "bled white" while Russia calmly looks on.

Surely there is some honorable way to peace and hush this confusion.

Imagine my home far up in the cove on Leadford Branch in Macon County, not a house in sight, for almost endless hours not a sound of a human voice or humanity, unless a plane passes overhead—I've much time for meditation.

Sixty summers have passed over my head. My parents instilled into me the love of country and respect of law.

What must the rising generation think as they listen to news and comments over the radio of wickedness (spiritual and otherwise) in high places?

Are our young men having to bleed and die in Korea because of the sins of our Nation?

I have two nephews over in that area now.

On December 24, my son Samuel was aboard the carrier *Leyte*, CV-32. He now has shore duty.

In July my son Gilbert joined the Navy. Has finished boot at San Diego, Calif.

My son James has served nearly 3 years in the Army. Has married a Raleigh girl since entering service.

My oldest child, Edward, age 29, is a radio operator for the United Fruit Co.

The youngest son Richard, who will be 18 November 3, plans to enter Mount Berry College soon.

Yes, I have two daughters. One served as a link trainer in the past war—married a pilot. They are both in their senior year at Duke University. They have a baby girl over 2 years old.

The other daughter worked at Seymour-Johnson Air Base then for the Bell Bomber Air Plane at Marietta, Ga. After the war she went to work at Naval Air Base,

Norfolk. She married an ex-sailor who then and now works there. She continued her work there until July 1 year ago. They have now a fine young son.

The sum and substance of this long epistle is as a mother and grandmother I wish that the present and rising generation could have a chance to look clearly into the future, unhampered by war and fear of war, that abiding peace could come.

Is the book of Daniel being vividly fulfilled in our day by us?

"Blessed is the Nation whose God is the Lord"

"Woe unto the Nation that forgets God"

My troubled heart I've poured out to you. Don't take time to answer if you wish—but please do all in your power to save our Nation.

Hoping for abiding peace, I am.

Sincerely yours,

Mrs. FAY MASHBURN.

Secrecy Order Is Threat to All Our Basic Rights

EXTENSION OF REMARKS OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, October 11, 1951

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "Secrecy Order Is Threat to All Our Basic Rights," written by Carroll Binder, and published in the Minneapolis Sunday Tribune of October 7, 1951. I believe it is a very timely article.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SECRECY ORDER IS THREAT TO ALL OUR BASIC RIGHTS

(By Carroll Binder)

The anxious citizen has additional grounds for anxiety these days. He is told by his President that 95 percent of the Nation's secrets have been published by the newspapers and slick magazines. That is why, according to the President, all branches of the Government must have the right to withhold information which the Defense and State Departments already exercise.

Some newspapers and Members of Congress warn the citizen, however, that if the President's secrecy order remains in force governmental corruption and incompetency far worse than anything thus far exposed will flourish unexposed.

Reactions to these charges and counter-charges tend to be conditioned by the citizen's attitude toward newspapers and Mr. Truman.

Those who dislike the press tend to believe such charges as the President made Thursday and to accept the sort of secrecy he has ordered to take effect October 25. Those who dislike the President tend to believe he is trying to cover up administration shortcomings for partisan political benefit with these extended controls.

No patriotic citizen wants our enemies to have our military secrets but every alert citizen wants the fullest possible information about what goes on at home and abroad so that he may have a basis for sound decisions about public policy.

It is hard to weigh a statement such as the President made about national secrets. If he means 95 percent of all the things

some official has classified at some time as "restricted," "confidential," "secret," or "top secret" information ultimately has been published, that is not necessarily a cause for alarm.

Clippings from foreign newspapers sent to Washington by our Embassies abroad have been stamped with a secrecy label by officials who thought it would be damaging to let possible enemies know what sort of things people in Washington like to see. Much other material which could not possibly give substantial aid to the enemy bears a secrecy stamp.

If the President means that all but 5 percent of everything we know about how to make atomic weapons and guided missiles or wage bacterial warfare has been published, if he means that 95 percent of our military and diplomatic secrets are known, the national defense is indeed in a bad way. But how does he arrive at such a calculation? Who can compile and grade all the secrets of the world's greater air, sea, atomic, industrial, and financial power? Who can correctly figure that 95 percent of what is really vital to national defense no longer is secret?

It would take more than the Yale experts cited by the President to make such an evaluation sufficiently meaningful to justify the President's encroachments on the citizen's right to know.

The trouble with the President's order is that it gives dangerously wide powers of secrecy to a dangerously large number of officials with no clear guide by which they may govern their official acts. The President says his order should not be a cloak for withholding nonsecurity information. There is no authority, however, to which the question of what shall be classified must be submitted in advance of classification.

As the Committee for Economic Development points out, "a Government official is rarely commended for disclosure. He may, however, be reprimanded or otherwise disciplined for underclassification, that is, for failure to make material confidential or secret." The effect of such a procedure as the President has ordered is to make officials play it safe and put secrecy stamps on anything which anyone is likely to consider desirable to withhold from public knowledge.

The National Security Council is given broad review powers but, in the words of the Associated Press Managing Editor's Association, "the machinery and method by which this review is to be accomplished is not prescribed and no means is set forth by which an immediate review of classification decisions can be obtained."

Nor do citizens have means of discovering, for themselves or through proper representative agencies, "what information is being withheld or if decisions to withhold information have been wisely made. At no stage in the operation of the classification system is there provision by which a hearing may be given to those who desire to have the interests of information weighed against the interests of security."

That is setting up a straw man and knocking it down. The objection to the President's order is the extension of secrecy to nonmilitary information by authorizing a secrecy classification of anything officials consider "affecting the national security."

A secrecy-minded official can construe just about any type of information as "affecting the national security." That is why United States delegations in United Nations bodies dealing with pacts on newsgathering, censorship, and related matters objected to drafts which proposed to authorize censorship on outgoing news relating to "national security." Our representatives pointed out that "national security" includes not merely matters directly relating to national defense but also any economic or political information which a government having

wide powers in this field might regard as prejudicial to the security of the state. In practice that sometimes is interchangeable with "security of the administration."

Thus United States representatives fought hard to have such limitations upon the flow of news confined to news directly related to "national military security." When that proved too ambiguous, they succeeded in having the censorship limited to news relating "directly to national defense."

That is the term employed in article 7 of the draft convention on gathering and international transmission of news—a convention the United States unsuccessfully has sought to have adopted by the U N in the hope of thus lowering barriers to the free flow of news between peoples.

Now the United States is about to institute at home the inclusive sort of controls on news which it sought to deter other nations from adopting.

While newspapers and other media of information have a vital interest in the fullest possible freedom of information, every citizen has an equally vital interest in that basic human freedom. Free utterance, free listening, free printing and free reading are sacred rights of every man which must be defended by the whole citizenry and not regarded as the vested interest of any particular element or enterprise.

Freedoms unexercised may be freedoms forfeited, the businessmen and educators comprising the Committee for Economic Development point out in a study on national security and our individual freedom.

"Public apathy and the pressure for security can lead us along a dangerous road that ends in a garrison-police state. In such a state, the soldier and political policeman rise to power while the institutions of civilian society and of freedom shrink. In the name of security, channels of public information dry up, the press becomes a mere purveyor of official hand-outs. Cut off from significant information, editors, commentators and group leaders become less accurate in their judgments. The process of public discussion atrophies. Political parties decline. The power of Congress dwindles. Administration by civilian shrinks, relative to administration in uniform. The courts weaken. Cut off from information, the power of the citizen fades. Local plans are subordinated to central purposes. The free market is constricted. Labor is hedged in by special regulations. Consumers find their range of choice reduced. Decisions come to be made by an all-powerful government. All freedoms suffer."

There is nothing so insidious as encroachment, on freedom in a time of insecurity. There is nothing so hard to reestablish as the practice of freedom once it has been abandoned. Freedom itself, and the self-discipline necessary to freedom, are the best safeguards of security.

Tribute to Jess Larson, General Services Administrator

EXTENSION OF REMARKS OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Thursday, October 11, 1951

Mr. O'CONOR. Mr. President, it is always a pleasure to see recognition accorded to an individual who richly merits it—particularly when that individual is in high place in Government, where adverse, rather than favorable, comment is all too frequent.

In the Washington Evening Star of October 4, 1951, there appeared a strictly factual, but quite complimentary, article regarding Mr. Jess Larson, General Services Administrator, who recently was named Defense Materials Procurement Administrator.

Mr. Larson has held a number of important posts in Government—and always with distinction. He is really, as the title of the article puts it, a "Big Man Who Does Things in a Big Way."

Maryland business leaders were impressed with his grasp of Government problems and methods when he headed a group of Federal officials who came to Baltimore last year to consult with and to advise them as to the procedures to be followed by industries seeking war contracts.

I ask unanimous consent that the article from the Evening Star be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

BIG MAN WHO DOES THINGS IN A BIG WAY

(By Francis P. Douglas)

Jess Larson, one time "boy mayor" of Chickasha, Okla., has taken over one of the Nation's biggest jobs, that of Defense Materials Procurement Administrator. At the same time he still holds down the job of General Services Administrator, charged with looking after Government supplies, office buildings and other housekeeping duties for the Government.

His job of acquiring defense materials stretches to many points of the world. His decision on buying minerals may affect native employment in the steaming interior of the Belgian Congo. Recently he made a deal for the entire output of a Peruvian zinc mine. What he says about buying rubber—he has been the Nation's sole buyer of natural rubber since last December—is big news in Malaya.

The man who rides herd on the Nation's business got his start riding herd on his family's dairy animals. He had completed his first year at the University of Oklahoma Law School when his father became ill. Young Jess had to go back home to run the family dairy ranch and creamery enterprises at Chickasha.

When his father was able to resume management of the business, Mr. Larson was 24 and wanted to get married. The pay of the mayor of Chickasha had just been increased from \$3,000 a year to \$4,000, so Mr. Larson became a candidate.

Some supporters of those he defeated referred to him as the boy mayor—he was just 25 when he took the job. But officials of other Oklahoma cities thought enough of him to elect him president of the Oklahoma Municipal League.

He made another political race later which he will recall if you ask him about the reasons for his notably friendly relations with Congressmen. "Maybe I understand their problems," he answers. "You see, I ran for Congress once . . . and was beaten."

While he was mayor and later, he continued studying law and was admitted to the bar. Then he was given the job of managing the \$200,000,000 business of the Oklahoma Land Office as secretary to the commissioners.

When he got back to private practice it was for only a short time. In September 1940, the Oklahoma National Guard and Lieutenant Colonel Larson were inducted into Federal service.

He went overseas as commander of an artillery battalion in the Twenty-fourth Division. The outfit saw plenty of action. At

the bloody crossing of the Volturno River in Italy Mr. Larson was wounded so seriously he was evacuated to the United States.

Restored to duty, there came various Army assignments—good ones—but to Mr. Larson, now a colonel, the law still beckoned. In July 1946, he became assistant general counsel of the War Assets Administration. By the close of the next year he was WAA Administrator.

Remembering the scandals in surplus property disposal after World War I, newsmen kept a careful and expectant eye on WAA. Mr. Larson knew the dangers. "Unscrupulous operators," he said, "declared an open season on the Public Treasury and resorted to every known trick to obtain unfair advantage of their Government."

While administrator, Mr. Larson disposed of \$4,800,000,000 worth of World War II surplus. Law violations were kept to a minimum.

When the WAA job was winding up, Mr. Larson was made Federal Works Administrator to succeed Maj. Gen. Philip B. Fleming. A month later when FWA became the General Services Administration under a Hoover Commission reorganization plan, Mr. Larson became its first head.

GSA is a big business in itself, but additional jobs have been assigned Administrator Larson in this defense mobilization period: Buying for the stockpile, expanding aluminum production, buying rubber, breaking the machine-tool bottleneck, and other tasks. When the defense minerals and metals program began to lag, President Truman turned to Mr. Larson to fill the new job, Administrator of Defense Materials Procurement.

Mr. Larson occupies a cathedral-like office in the GSA Building. Its first occupant was Secretary of the Interior Franklin K. Lane in the Wilson era. It is a reproduction of a big chamber in Haddon Hall in England. The huge office makes Mr. Larson uncomfortable, for as GSA head he is responsible for housing Government agencies, and he is acutely conscious that employees are being crowded into less and less space.

Mr. Larson is more than 6 feet, black-haired, and moves fast. He was in Europe on business last August when his new job was decided on. He got back and began to organize for it. He told a staff meeting:

"We must build an organization able enough and big enough to do a good job. But let's not confuse this with empire-building."

He was sworn in on September 14. He started that day with a speech to a group of trade publication editors at breakfast. Questions kept him until about 9:30 o'clock. He reached his office at 9:45. Staff members eyed the clock nervously because Mr. Larson had to take a plane for New York at 10:30.

He was sworn in. He immediately appointed Howard I. Young as his deputy administrator. He issued DMPA regulation No. 1, which started operations. He had various directions to give his assistants. Then he left for the airport and made the plane. His staff sighed with relief. It didn't last long. Less than 2 hours later Mr. Larson was telephoning from New York. He had thought of other things to be done.

Airline Subsidies

EXTENSION OF REMARKS OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 10, 1951

Mr. ROONEY. Mr. Speaker, under the permission heretofore granted me, I include an editorial by the Washington

Daily News of September 28, 1951, concerning separation of hidden airline subsidies from so-called mail pay.

It is my hope that the Committee on Interstate and Foreign Commerce may report out the same excellent bill that they reported out last year, now reintroduced as H. R. 508, and that this bill may eventually be enacted. In that connection I invite the attention of the Members of the House to the following recommendation in the report of our Committee on Appropriations, House Report 685, made July 10, 1951:

It is recommended that legislation be enacted to separate airline subsidies from compensation for the cost of carrying air mail. The subsidy portion if any, should be paid through a separate appropriation for the Post Office Department.

The bill reported by the Committee on Interstate and Foreign Commerce last year, now reintroduced as H. R. 508 by the gentleman from Massachusetts [Mr. KENNEDY], and as H. R. 190 by the gentleman from Massachusetts [Mr. HESLTON], would adequately carry out this recommendation, and I hope that the House may take effective action.

The editorial reads as follows:

KNOW WHAT WE PAY

Senate approved of a bill to separate airline subsidies from the cost of transporting air mail was long overdue, altho the bill doesn't go far enough.

If the Government is to continue the policy of paying part of the bill for air transportation, the public is entitled to know what that policy is costing.

As long as airline subsidies are hidden in payments for air mail, taxpayers will never be rid of them.

This policy was established to help get air travel started. Isn't air travel started yet?

It is because this subsidy has been hidden behind bad governmental bookkeeping and the flying industry's double talk that the taxpayer has been milked to support mushrooming airlines whose services too often merely duplicated flights already being made by other lines. Such expansion is primarily for the purpose of getting on the profitable Federal subsidy gravy train. This usually has been accomplished by the ambitious new carrier yelling "monopoly" unless there were two or more airlines competing. This also has been true in international flying, even though the American carrier had a half dozen or more competing foreign lines running against it. It was still accused of being a "monopoly" simply because it got all the taxpayers' dough. When an enterprise is run by subsidy, on schedules and at fares set by government, the cry of monopoly is "bunk."

Taxpayers can't be expected to kick in forever. One of these days, if the time hasn't already arrived, the industry ought to be healthy enough to stand on its own feet.

But if, as the Senate Committee on Interstate and Foreign Commerce said, "the national defense of the country makes it advisable to augment civil aviation facilities and services beyond their natural economic level, this objective should be recognized as a proper security cost." In other words, if the taxpayer has to pick up the check, let him see the itemized bill.

The airlines subsidy has been a part of the annual and huge deficit of the Post Office Department. That deficit is big enough without throwing in something that by any standard of bookkeeping doesn't belong there.

Let's call things by their right names.

That's what the Senate bill attempts to do.

The House, which last year passed an even better bill, has no reason for not repeating itself promptly, now that the Senate has concurred in the principle.

United Mine Workers of America Brand Canada's Threat To Build the St. Lawrence Seaway as a Bluff

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 11, 1951

Mr. VAN ZANDT. Mr. Speaker, when Mr. Thomas Kennedy, vice president of the United Mine Workers of America, appeared before the House Committee on Public Works, October 9, he pulled no punches in unmasking the advocates of the St. Lawrence seaway, whom he stated are running a bluff when they warn that Canada will build the project itself if Congress does not approve House Joint Resolution 337, which seeks to revive the proposal after its defeat by the committee last July.

In the course of his remarks Vice President Kennedy had this to say about the proponents of the seaway measure:

In the latter part of September the Prime Minister of Canada met with the President of the United States. There oozed out of that meeting a statement that Canada would build the seaway itself, although the President indicated that he preferred that the seaway be built jointly. It appears to us that this meeting between the Prime Minister and the President was a very crude and clumsy stage-setting for the presentation of House Resolution 337. This resolution was presented several days after that White House conference. It seems to me that the intelligence of the American people was taken very lightly by those who staged this act. It is so transparent that even a child could see through it.

Out of these extracurricular activities, since your committee refused to report out the first resolution, a pattern has been laid out by the proponents of the seaway legislation which certainly does not mesh with our conception of representative government. After exhaustive hearings, this committee saw fit to vote adversely on the seaway resolution. The proponents had their day in court.

The proponents of this seaway resolution refused to invoke the rules and the parliamentary procedures necessary for reconsideration of this measure which was previously defeated in the committee. On the contrary, they elected to flaunt these rules and beat the devil about the bush by introducing a so-called new measure, slightly changed in details but not in principle. It is my humble judgment that upon this point the whole subject matter is out of order. Subterfuge and evasion should have no part in our deliberative bodies. This resolution is an assault on the legislative branch of government.

Every American should read Mr. Kennedy's statement before the House Committee on Public Works so that he will be familiar with the unethical parliamentary tactics that are being employed in an effort to foist the St. Lawrence seaway project on the American people.

Mr. Kennedy's remarks follow:

On behalf of the United Mine Workers of America, I appear before your honorable committee to reiterate our opposition to the St. Lawrence seaway project.

On April 18, 1951, I appeared before your committee and presented a statement in opposition to the seaway resolution then pend-

ing. I was interrogated at some length with respect to our position. I see nothing in the present resolution that changes the situation. The present Resolution No. 337 has to do with tolls and public power. It in no way affects the principles of our opposition to the suggested project. I, therefore, submit that if the committee deems it necessary, my statement of April 18, all of which is contained in part 2 of the hearings, be presented for use of the Committee on Public Works.

However, I think it important, at this time, to supplement my previous statement by analyzing some of the happenings that occurred subsequent to the action of your committee which did not report out the previous bill. Shortly after your committee acted adversely on this matter, certain Members of the House endeavored to have the House Foreign Relations Committee accept the St. Lawrence seaway as part of its foreign relations bill. It was properly ruled out and it was not accepted.

The Representatives who are back of this action evidently knew very little about parliamentary practices or procedures because it was clearly irregular and characteristic of the sharp practices indulged in by proponents of this measure. Later in the Senate some of the Senators tried to have the Senate Foreign Relations Committee accept it as part of the Senate foreign relations bill. It was ruled out by the chairman and subsequently the Committee on Foreign Relations by vote refused to accept it. It was then brought to the floor of the Senate and withdrawn by its proponents.

In the latter part of September the Prime Minister of Canada met with the President of the United States. There oozed out of that meeting a statement that Canada would build the seaway itself, although the President indicated that he preferred that the seaway be built jointly. It appears to us that this meeting between the Prime Minister and the President was a very crude and clumsy stage setting for the presentation of House Resolution 337. This resolution was presented several days after that White House conference. It seems to me that the intelligence of the American people was taken very lightly by those who staged this act. It is so transparent that even a child could see through it.

Out of these extra curricular activities, since your committee refused to report out the first resolution, a pattern has been laid out by the proponents of the seaway legislation which certainly does not mesh with our conception of representative government. After exhaustive hearings, this committee saw fit to vote adversely on the seaway resolution. The proponents had their day in court.

The proponents of this seaway resolution refused to invoke the rules and the parliamentary procedures necessary for reconsideration of this measure which was previously defeated in the committee. On the contrary, they elected to flaunt these rules and beat the devil about the bush by introducing a so-called new measure, slightly changed in details but not in principle. It is my humble judgment that upon this point the whole subject matter is out of order. Subterfuge and evasion should have no part in our deliberative bodies. This resolution is an assault on the legislative branch of government.

The proponents of this measure who engaged in these unethical activities displayed very poor sportsmanship and they not only trespassed upon legislative fundamentals, but conducted themselves in a manner which is at variance with our traditional form of representative government. Procedures of this type have no place in our democracy and I think that such tactics are menacing to our form of government and lean to being subversive of the regular procedures and decisions of our representative government.

The statement that Canada will build the seaway itself is doubtful and contains something of a veiled threat. If we received such a threat from any other government, the average Congressman would be inclined to resent it and tell them that this Nation would not be influenced by such tactics. In our judgment, Canada will not build the seaway by itself for the following reasons:

1 The tremendous outlay of money would be prohibitive for that nation.

2 Ontario and Quebec are the only two sections of Canada that would benefit substantially from the seaway and the other Provinces, including the Maritime Province, I understand, are not in favor of it.

3 The fact that at a point on the St. Lawrence River, midway between Gananoque and Alexandria Bay, the main channel of this river runs for many miles on the American side.

I am not an expert on international relations, territorial boundaries, or otherwise, but it is my impression that the main channel running on the American side could not be taken over by Canada without some arrangement between the Governments. After reading the testimony of previous hearings, I am under the impression that the United States intended to and would be required to do this work along the channels and locks located on the American side of the river.

Moreover, several power projects on other rivers in Ontario have been held up by the Ontario Power Authority and the statement has been made that they will be held in abeyance until they find out whether the American Government will put money into the seaway. If Canada cannot now undertake reasonable expenditures for these projects, how is it possible for Canada to expend the vast amounts necessary for the seaway? Canada will have to also find about \$1,000,000,000 for its new old-age-pension law that becomes effective January 1, 1952, and for other federal enterprises above and beyond present outlays.

Canada hopes for industrial expansion in Ontario and Quebec through the instrumentality of the seaway. Businessmen and bankers in Canada have given voice to these sentiments at meetings in Canada during the past several weeks. In common with other nations they hope we will pay the bill for their industrial growth and for the expenses of this expanded economy. For this reason I doubt that Canada will ever build the seaway.

However, if by chance, in the distant future Canada should start to build the seaway herself—so what? She will profit most, and we will be able to save for the taxpayers a great deal of money which, no doubt, would receive the acclaim of the citizens of our country. And I might add that should the seaway be built by Canada, we, the United States of America, a great sovereign nation—the greatest of all—could no doubt protect our interests as a nation and as a people.

In the new resolution public power is given some prominence. Our answer to this is, that if they want public power, they can very easily get it by building a number of coal-steam generating plants that can be erected more economically than this hydro-electric scheme. These plants could be decentralized and would not be fixed targets for bombs such as the seaway project would be.

I do not propose to go into the matter in any further detail. I have made these observations with the thought of restating my previous testimony. To the proponents of this measure I say that their activities and plans, with respect to the proposed regulations, do not measure up to my conception of the requirements of our representative form of government, nor to our democracy, and are destructive of the fundamental principles related to the presentation, the con-

sideration, and the consummation of legislation.

I express the hope that the committee will decide against this resolution and tell the proponents of the seaway project that they had their day in court and should now conduct themselves in conformity with the true principles of good sportsmanship, of good government, and that they should gracefully retire, and go way back and sit down.

Proposed Dam on the Verdigris River, Kans.

EXTENSION OF REMARKS OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, October 11, 1951

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the RECORD an article which appeared in the Kansas Herald, of Eureka, Kans., on August 23. This article raises the question of the wisdom of building a large and expensive flood-control dam on the Verdigris River in Kansas and suggests that a complete, basin-wide water conservation and flood-control plan, which would have much greater benefit, could be executed for a fraction of the cost of the dam.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TO SPEND \$75,000 PER SQUARE MILE TO CATCH SMALL PART OF RAINFALL—NEWLY DEVELOPED SYSTEM OF UPLAND RETARDING RESERVOIRS GIVES MORE PROTECTION AT LESS COST—LITTLE FLOOD PROTECTION IN TORONTO DAM

The Toronto Reservoir is one of two projects in Kansas scheduled for immediate construction. Following the July flood, the Corps of Engineers rushed in a request for \$3,000,000 as a starting appropriation. The project now is being considered by a conference committee of the Senate and House.

Kansas needs a solid plan of flood protection for its farms, roads, and industries. This first project merits a close examination of its costs and effectiveness, before the State begins a widespread program involving many millions of dollars.

This article will point out some of the main features of the Toronto project.

The Toronto Dam is located on the Verdigris River in southeastern Kansas, in the west side of Woodson County. The water that will drain into the reservoir originates in parts of Lyon, Chase, Greenwood, and Woodson Counties. The watershed area is about two-thirds hilly, Flint Hill pasture land; covered with native, tall prairie grasses. The balance of the land is cultivated and devoted to general livestock farming, principally cattle production.

Congress has authorized four dams in the Verdigris River and tributaries in Kansas. They are the Fall River (already built), the Toronto, the Neodesha, and the Elk City. The four were authorized in 1941, based on a 1939 survey.

SMALL CAPACITY

The flood-storage capacity of the Toronto Reservoir was authorized at 140,000 acre-feet, with an addition of 20,000 acre-feet for conservation storage. The drainage area above the dam is 750 square miles, so the reservoir has space for 187 acre-feet of flood-

water from each square mile in its watershed. (An acre-foot of water is an acre covered 1 foot deep.)

A 1-inch rain on a square mile of land, comprising 640 acres, produces 53 acre-feet of water. Hence the storage space in the Toronto Reservoir amounts to 3½ inches of runoff.

The major floods come after periods of heavy rains, when the ground is saturated, and nearly all of the rainfall runs off.

In case of an 8- or 10-inch rain, with the ground saturated, the runoff water would fill the Toronto Reservoir in about half a day, and all the rest of the water would go over the spillway of the dam.

In the recent July flood on the Verdigris, a heavy rain fell west of Madison at about 3 o'clock in the morning. The crest of the floodwater reached the Toronto Dam site by about 9 p. m. the same day; in less than 20 hours.

The facts show that the Toronto Dam offers very little flood protection.

NOT COMPARABLE TO FALL RIVER

The Fall River Reservoir has more than double the flood-storage capacity of the Toronto site, based on its watershed area. The Fall River Reservoir can store about an 8-inch runoff from its watershed of 673 square miles. In the recent July flood, when the Fall River Dam reduced the flood damage downstream, there was heavy rain on only part of its watershed.

TREMENDOUS COST OF CATCHING RUNOFF WATER

Calculations of the cost of catching floodwater in the Toronto Reservoir show that the total will be at least \$50,000 to \$75,000 for each square mile of the watershed above the dam, for only 3½ inches of runoff.

The original cost estimate of \$15,000,000 for a watershed of 750 square miles amounts to \$20,000 for each square mile upstream from the dam.

Costs have gone up two or three times since the first estimate was made, so \$20,000 to \$40,000 more must be added for each square mile.

In addition, it now is agreed by engineers and agricultural authorities, that some money must be spent on the land above the dam to keep silt out of reservoirs, and to prevent flood losses on the watershed. Experiences on a few projects show that this item will add \$10,000 or more per square mile.

The total then of catching the 3½ inches of run-off in the Toronto Reservoir will be at least \$50,000 to \$75,000 for each square mile in the area above the dam.

An indication of the great increase in prices is shown by the engineers under-estimate in the price of land in the Fall River project. The 1939 survey on which the four dams were authorized (p. 33 H. Doc. 440, of the 76th Cong.), shows that the total cost of land for the four reservoirs combined, Fall River, Neodesha, Toronto, and Elk City, is estimated at \$2,956,700. But the cost of the land (and some minor damages) in only one reservoir, the Fall River, actually cost \$2,243,000. So one dam has practically used the funds planned for the four dams, on one main item of cost.

NINETY-NINE PERCENT OF VALLEY UNPROTECTED BY SINGLE DAM

The Toronto Reservoir will inundate about 7,000 acres at flood stage, and is planned to give full flood protection to 15,000 acres downstream, to the head of the Neodesha Reservoir. After the inundated land is deducted, only 8,000 acres (12 square miles) net are benefited fully.

There are 1,160 square miles in the upper Verdigris Valley, of which 750 are above the Toronto Dam, and 410 square miles are downstream from the Toronto Dam and above the site of the Neodesha Dam. Out of the total

area in the upper valley that needs flood protection, the Toronto Dam provides a net benefit to only 12 square miles out of a total of 1,160 square miles. This is only 1 percent of the upper valley.

During the July floods, severe damage occurred upstream from the Fall River and Toronto Reservoirs. Farm crops were washed out, farmhouses and barns were washed completely away, and land was badly eroded in both the Fall River and Verdigris River and the creeks that emptied into them. This agricultural loss was near a million dollars. Damage to roads and bridges in Greenwood County alone was over \$300,000,000. Homes and business establishments in four towns were flooded.

In addition all main highways were blocked, and four truck wash-outs occurred on the three railroads in the county. Five people lost their lives in floodwaters. Business was at a standstill several days. This all took place above the sites of the two big reservoirs.

The Toronto Dam can give some protection for many miles downstream, and reduce the crest of floodwater. However it is just as true, that a system of smaller dams on the tributaries can give as much protection.

BEST FLOOD PROTECTION COMES FROM MANY RESERVOIRS

The great July flood in the Kaw River Basin proved that a few large dams on the main rivers were nearly useless in preventing a major flood. The rain that caused the damage fell downstream from the Kanopolis Dam, and downstream from the other proposed big dams that were supposed to prevent floods. The floodwater came from the small ravines and creeks along the side of the Kaw Valley. To have prevented the Kaw Valley flood, it would have been necessary to control the small streams along the valley.

Since about 1940, a new system of flood control has been developing. Its goal is to give flood protection to entire valleys, including both the upland and main valleys.

The first step is to store as much water on the land as possible, by means of good farm practices, in order to reduce runoff and prevent soil erosion.

The second step is to control the runoff water on the farm or in nearby ravines and creeks. Small retarding dams are used for this purpose. They are made with sufficient size to control floodwater on each small stream. These dams have open draw-down pipes that empty the water as fast as the ravines can carry the water without flooding. A complete system of these ponds regulates the stream's flow, and maintains a more uniform water supply on the rivers.

Congress appropriated money for a few demonstrations of this complete plan of flood control. One is located on the Washita River Valley in Oklahoma. After the project was in operation, a 15-inch rain fell May 9 and 10, 1950, in 36 hours. The retarding dams and other soil conservation practices handled the flood without damage to the land, and kept the streams down within their banks. Costs were less than \$10,000 per square mile on the Washita project.

A similar project in Saline County, Kans., prevented flood damage to the land during the recent July floods, and prevented overflow on the creek below the demonstration area.

The Toronto reservoir is located in the Flint Hill area where there are sites for retarding dams on nearly every square mile. At the present time State engineers are working on a pilot project to locate retarding dams on one creek valley of 56 square miles. They have found an average of two sites per square mile. These sites can store as much or more flood and conservation water as the Toronto site.

Plans are under way to survey all of the watershed above the Toronto and Fall River Reservoirs, in order to develop a complete

conservation and flood-control plan for the entire upper valleys. A few of the retarding dams will be constructed this summer. The Flint Hill area of Kansas, including about 15 counties, is very similar to the land in the Washita, Oklahoma project.

FEW DAMS OR MANY?

Kansas needs flood protection and a water conservation plan to help in times of drought, and to provide water for industrial uses and some irrigation.

Will Kansas choose a few big dams to benefit perhaps only 5 percent of its area, at a cost of \$50,000 to \$75,000 per square mile for catching runoff water (and on its best valley land)?

Or will Kansas choose a complete, basin-wide water and flood conservation plan, to help 95 percent of the State at a cost of about \$10,000 per square mile. This plan distributes the benefit of small dams over a wide area, and pays triple dividends by giving—

- 1 Upland flood protection
- 2 Upland soil conservation.
- 3 Bottom land flood protection.

There is no single cure-all for floods. Soil conservation, to store water in the ground, and widespread distribution of retarding dams, is the keystone in a sound control system. On the main streams, levees, bank stabilization, floodways, and channel improvements are needed. Every community should develop a program, not only to fit its own needs, but also to help plan an over-all program that will help its neighbors both upstream and downstream.

NOTE—After this article was written, the House Appropriations Committee in Washington, on August 20, announced that the Army engineers had underestimated flood-control projects 124 percent. The projects were costing over twice as much as the original estimates and the projects were not completed.

On this basis the Toronto project would cost over \$45,000 per square mile, to catch a small part of the runoff rainfall.

Harry's Horrors

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. REED of New York. Mr. Speaker, it was once said by Thomas Deke that—

This age thinks better of a gilded fool than of a threadbare saint in wisdom's school.

I hope this will not hold true in this age in which we are now living and enduring the type of corrupt administration of our national affairs that is coming to light each day. I am directing these remarks to the editorial which appeared in the Washington Times Herald of October 11, 1951, which, under leave to extend heretofore granted, I am inserting in the RECORD:

HARRY'S HORRORS

Four reverent Democrats have just been discovered beating the tax-deductible bushes for, of all things, a Harry S. Truman Memorial Library.

Every dollar put up for such a cheap dodge is, of course, a dollar that otherwise would go for taxes. Thus, the taxpayers once more are hooked by indirection to build at their

expense—for they must make up the loss—another politician's vanity case, now for Truman as for Roosevelt at Hyde Park.

The citizens' indignation is natural. But just the same we see merit in the idea of a Harry S. Truman Memorial Library and Museum. It has already been built by Truman, himself, after a manner of speaking, and it stands as a lesson and a warning to future generations. It is a lesson and a warning against the election of cheap and shoddy men to public office.

This Harry S. Truman Memorial Library of which we speak is, of course, the living record of Truman's ghastly career in office. Mme. Tussaud's waxworks contains no chamber of horrors to compare with it.

It has no rival except Roosevelt's own, and the principal problem is merely one of deciding which of Harry's horrors has been his worst so far.

Which blunder has exposed him most plainly for the small, scared, confused, and shiftily imposter in office that he is?

For instance, he has demonstrated that he does not understand communism in the Government of the United States, or else is willfully determined to conceal the truth.

Thus, his red-herring effort against the facts on the traitor, Alger Hiss, is surely a principal among what might be called the exhibits of Harry's horrors.

Then, as a rich and aromatic sample of his ignorance or worse toward international communism as a world force, there is that celebrated declaration that he likes old Joe Stalin. He might as well have said he considered Adolph Hitler a good-natured old German, Hitler not being even a German.

In the matter of fundamental dollar honesty, we have the whole series of party hacks caught up to their pudgy elbows in the public jam pots, with Truman asking what of it.

The candidates for "Harry's worst" could be listed by the yard. Yet one blunder does seem, more than any other, to give most plainly the measure of this man's wisdom and fitness for the job he holds.

This supreme blunder was the firing of General MacArthur.

Here was the ablest military commander of our time. MacArthur, more than any other, staved off tragedy in the Pacific from Pearl Harbor to Inchon, and at the moment of his dark-of-the-moon dismissal, was still holding out against the enemy despite the slack support of the cravens in Washington.

Why did Harry really fire MacArthur? Why did he deprive the United States of America of the professional services of such a man?

It was an act of pure fear and jealousy. It was the one move an intelligent man would have resisted above all others, if merely for reasons of good politics. But they just never taught Harry how to deal with men like MacArthur. You don't come up against that caliber in the Kansas City back rooms of Tom Pendergast.

Actually, the blunder was multiple. It not only deprived this country of the courage and intelligence of an authentic great citizen, at a time of urgent need, but brought also him back to the United States where the general has become a living reminder of Harry's stupidity.

Here MacArthur sits in civilian clothes when he might be serving his country at the work in which he is a proved and effective genius.

But note that the stream of decent Americans to his parlors in New York grows constantly, while the fires burn hotter around the little man in the White House. Harry's worst blunder, there can be no doubt, was in counseling with his bourbon-flavored fears to bring MacArthur home.

In Japan, MacArthur was a disembodied idea to most Americans. Here, in person, he is a living example of everything good that Truman is not.

Pentagon "Blue Room" Shameful Waste

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1

Mr. SHAFER. Mr. Speaker, I wish to call the attention of the House to a newspaper article which appeared in the September 28, Washington Evening Star, under the caption, "Pentagon's 'blue room' suite adds new color motif."

Ostensibly this article is a description of the office recently remodeled and redecorated for its occupancy by Assistant Army Secretary Earle D. Johnson, at a cost of some unrevealed thousands of dollars of the American taxpayers' money.

To me, however, this article is a description—one more description—of the reckless and criminal extravagance and profligacy of the administration and the "top brass" military tax-spenders.

It is one more evidence of their loss of all sense of proportion, of their fading comprehension of the toil, sweat, and sacrifice represented by the tax dollars, and of their lack of even an elemental sense of decency with respect to American men killed, wounded, frozen, and captured on the battlefields of Korea.

The newspaper article reads as follows:

A new color motif has come to the Pentagon in the form of a "blue room" for Assistant Secretary of the Army Earle D. Johnson.

Workmen have just about completed some 5 weeks of toil in carving out the spacious office suite.

The blue room actually consists of three large offices, plus an entrance lobby from which the Johnson entourage will be able to view an outer office through a beautiful archway, which is a rarity even in the Pentagon.

The main office is painted in what one painter called infantry blue, explaining that it is similar to the scarves worn by the famed ceremonial Third Infantry Regiment at Fort Myer. The outer rooms are done in a lighter tone of blue.

To bring about this miracle, workmen tore out several partitions and built new ones.

They have provided Mr. Johnson with a commodious dressing room, replete with built-in clothes chest and full-length hanging closet. Off this lies the bathroom with a full tile shower compartment.

Officials could not give an estimate of the cost of this operation, but the square footage is about the equivalent of that in a moderate two- or three-bedroom house. The main office dimensions are 80 by 22 feet.

It is located right off the Mall entrance, commanding a view of Memorial Bridge.

Said the Army, in answer to a reporter's query:

"The move is being made to bring Mr. Johnson physically closer to G-1 (personnel division) people with whom he does considerable work as Assistant Secretary in charge of Army manpower and personnel. Also it will make him more convenient to the office of Secretary of Defense personnel people."

Mr. Johnson now is located some 175 paces down the hall on the same floor.

It also was explained that Mr. Johnson's new location would be directly below that of his superior, Army Secretary Pace, thus cutting in one-fifth, the distance between those two offices.

The spokesman also maintained that the Assistant Secretary was not getting in his new offices a more elaborate lay-out than he was entitled to and added that others in similar positions had like suites.

Officials also disclosed that new offices soon will be provided for former Secretary of Defense George C. Marshall, who, as a five-star general, is entitled to office space along with several aides, and for Gen. Dwight D. Eisenhower when he makes trips here for conferences.

There are some 30,000 workers in the Pentagon. An official said an average of 83 square feet per person is provided the workers, but in some cases it has been necessary to reduce this to 50 square feet.

The new Johnson office reminded observers of the thousands of dollars spent on the security-tight Pentagon offices once built for the Joint Chiefs of Staff. They were abandoned before they were even occupied when the then Secretary of Defense, Louis Johnson, decided it would be a better arrangement for the top military planners to be located directly below his office.

The original Joint Chiefs' offices were planned before Mr. Johnson himself moved his offices from the Mall entrance to the river entrance, previously occupied by the Army Secretary and containing a private elevator from the basement.

While the Earle D. Johnson suite is a pretty elaborate affair, it does not contain the private kitchen and dining room provided for the Secretary of Defense.

I could not help but think, as I read that definition of "infantry blue," and of the built-in clothes closet in the Assistant Secretary's new offices, of infantrymen blue with cold in the rigorous fall and winter climate of Korea. And I was reminded of recently published newspaper reports of a GI writing home from Korea asking that warm winter clothing be sent him, because, he said, the Army has failed to issue sufficiently warm Army apparel.

I could not help but think, as I read of the expensive transfer of the Assistant Secretary's office to save 175 paces of interoffice travel, of dog-tired infantrymen in Korea marching endless miles under battle pack, and often under enemy gunfire.

Quite apart from the waste of taxpayers' money, of which this ornate new office is only a single example, I am sickened and revolted—as I know the great majority of Americans must be—by the shameless ostentation, the indecent and obsequious tribute to the pomp and circumstance of rank, implicit in this elaborate, plush extravagance, whilst men wallow and die in mud and filth in Korea.

I have personally visited the vaunted office of Hermann Goering in Berlin and other offices of the "top brass" of one-time Nazi Germany. The "top brass" of the Nazi regime enjoyed the splendor and the tinsel of rank and fame for a moment. It is a tragically disturbing thing to see evidences of a growing attachment in this administration and among the top military hierarchy of this country to the vulgar symbols and perquisites of rank.

This, I must remind the House, is the same administration and the same military organization to which this Congress has voted billions of dollars of appropriations this session—many billions more than the administration or the military can possibly spend this year.

The Congress has imposed all too few restrictions and controls upon the spending of these billions.

How many hundreds of times are we to be confronted with the accomplished fact of wasteful expenditures, small and large, like the expenditures involved in the new color motif of the Pentagon's "blue room" furnished, note well, for all Assistant Secretaries—with appropriately more elaborate facilities for those of higher rank.

Do you wonder that the American people are restive, resentful, deeply disturbed, and sick at heart?

They have reason to be—not alone over the extravagance, the shameless lack of good taste; not alone even over the tragic plight of American fighting men trapped in an "accordion war"; but, most of all, deeply disturbed and sick at heart over the multiplying evidences of moral decay and palsied leadership in high places.

God save the United States of America.

One Blood

EXTENSION OF REMARKS

OF

HON. PHIL J. WELCH

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 11, 1951

Mr. WELCH. Mr. Speaker, under unanimous consent, I include the following eulogy of one of my constituents in the Appendix of the Record:

ONE BLOOD

(By George S. Reuter, Jr., an ordained Southern Baptist deacon)

The late Wendell L. Willkie made a great contribution to the world by writing *One World*. In the long run, it is the only way out. *One Blood*, which includes President Truman's civil-rights program, is an essential part of the over-all program. We should not forget the work of the late Dr. Edward Byron Reuter in studying the race problems. As Christians, we look toward a single Heaven composed of all races—all one blood, hence we should practice the policy of one world—all one blood, while yet alive.

Dr. Reuter, who died May 28, 1946, was born near Holden, Mo., July 19, 1879 (according to the 1880 census). He was the son of Peter and Julia Ann (Sullivan) Reuter. The other children were: Charles Joseph, Pratt, Kans., building contractor, who died in Carlsbad, N. Mex. in 1936; Judge George S., stockman, farmer, banker, and political leader, who died October 30, 1948; Mary, who married Nelson Chapman and who died September 8, 1950; Ann, who married A. J. Merklin, St. Louis insurance broker, and who died January 3, 1939; and Katie, who married Paul Chittin, and who died in 1940.

After being graduated from Central Missouri State College in 1904, Dr. Reuter received A. B. and B. S. degrees from the University of Missouri in 1910, an A. M. degree from the same institution in 1911, and a Ph. D. degree from the University of Chicago in 1919. He taught in a number of colleges and universities. He was professor of sociology at the University of Iowa from 1921 to 1944, and he held a similar position at Fisk University from 1944 to 1946. He was president of the American Sociological Society in 1933, and president of the Sociological Research Association in

1939. He was the author of a number of books.

He married Miss Mildred Goodspeed on June 30, 1914. Both the widow and their son reside at Stanford University. The son, Donald G., who is continuing his father's work, and the writer are the only two Reuters of this generation.

As a final token, Dr. Reuter was buried on the campus of Fisk University at Nashville, Tenn. A tree, in front of the Social Science Building, where he had his office, marks the spot. He lived, taught, and died believing in one blood. Five years have passed. Are we doing our part to make this dream a reality?

Fifty-four Scholars

EXTENSION OF REMARKS

OF

HON. FRAZIER REAMS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 11, 1951

Mr. REAMS. Mr. Speaker, believing as I do that one of the most permanent of our investments in world-wide good will is the Fulbright scholarship plan, under unanimous consent, I place in the Appendix of the Record an editorial from the Toledo Blade of October 8, 1951, entitled "Fifty-four Scholars":

FIFTY-FOUR SCHOLARS

When the front pages are devoted so largely to reporting of military and diplomatic moves on the world chess board, it is sometimes comforting to reflect that in quiet, unheralded ways a great deal is being done to build up friendly, intelligent relations between different nations. Just the other day, for example, the Consul General of Austria in New York gave a reception for 54 young Americans who were en route to spend a year in Austrian universities.

These youngsters were Fulbright scholars. That is to say, their education in Austria is to be financed under the Fulbright Act of 1946 which allows Austria to pay for United States surplus property by granting scholarships to selected Americans in its universities. And Austria, as a matter of information, became in June 1950, the twenty-first nation to arrange similar agreements with the United States.

Naturally an exchange of young people, to be most effective in producing a mature view of world affairs, shouldn't be a one-way proposition. Nor is it. As Donald J. Shank of the Institute of International Education pointed out, nearly 300 Austrians have already been students in American universities since the end of the war, on United States Government grants and scholarships given by colleges, universities, and private organizations.

In the course of the past few weeks, four groups of Austrian students—including 112 university and 64 secondary-school students—arrived in New York to continue their studies in this country. They had been brought here by the National Catholic Welfare Conference, the American Field Service, the Brethren Service Committee, and the National Grange. Many of them were to spend a preliminary 6 weeks with American families to get used to our way of living.

The exchange of students between little Austria and ourselves is only one part of a larger program to promote international tolerance and sympathy through exposing young, fresh minds to different environments. It is a healing, catalytic force in a world that, in so many ways, seems unable to bridge the differences between peoples and ideas.

Cotton Outlook

EXTENSION OF REMARKS

OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. SMITH of Mississippi. Mr. Speaker, on Wednesday, October 10, a group of Cotton Belt farm leaders, representing the Belt-Wide Cotton Producers Association, conferred with Secretary of Agriculture Brannan in regard to the current cotton situation, and prospects for the 1952 crop.

Secretary Brannan was presented with the following summary of the current cotton outlook, as a background to this conference, which I include under unanimous consent:

Producers statements presented before the special subcommittee of the Senate Armed Forces Committee, Chairman JOHN STENNIS presiding, are presented as background for a review of the cotton situation before the Secretary of Agriculture.

The Memphis hearing highlighted the fact that the United States cotton industry represents one of the Nation's greatest military and economic assets in that it can expand in great volume in a very short time to meet the fiber needs of the country and its allies. All cotton producing countries of the world, including Russia and her satellites, are incapable of such expansion as was seen this year when American production rose by 70 percent in one season. The synthetic fiber producers cannot begin to approach such expansion either.

In discussing the supply and demand situation in cotton, it was brought out that the demand for United States cotton, in keeping with the mobilization tempo of the national economy and the rest of the free world can be expected not only to remain strong but may prove far stronger than the best official estimates would now indicate. The present projected demand of 16,000,000 bales leaving an estimated carryover next year of 3,200,000 bales does not allow for the inherent dangers faced by the Nation.

In the event that the international situation should seriously worsen, mill consumption might rise to 12,000,000 bales annually. The export market would rise too. Requirements for United States cotton might go to 18,000,000 bales or more which would reduce the projected carry-over to 1,000,000 bales. This would be a tragedy for the Nation. On the supply side, it was testified that because of the prospect of a banner crop this year of nearly 17,000,000 bales, it is assumed in many quarters that such production can be taken for granted. Actually, declining prices and rising costs, ever-present threats of weather damage, and increased difficulty of obtaining necessary labor and materials make such an assumption totally unwarranted.

In reviewing experience with cotton during World War II, it was brought out that although there were sufficient supplies of cotton, the grades and staples needed were not always on hand for prospective military and civilian requirements to produce both old and new fabrics. The country was faced with decreasing supplies of high-grade cotton and increasing amounts of low grades due to mill requirements of higher grades and producers having increasing amounts of low grades with the shortage of labor on the farm. The fact that the military is constantly drawing up more exacting clothing requirements must be recognized in the current situation. At the same time, the quartermaster and other buyers for the military forces should place their orders promptly

for cotton requirements and thus put the mills to work. Moreover, it should be recognized that the military will spend many dollars abroad this year in addition to normal trade. Facilities must be extended to provide the necessary credits to export the needed cotton.

It was testified that with respect to the 1951 crop the major problem encountered has been cost. The fact that the farmer overextended himself to produce the much-needed large crop made 1951 production the most expensive on record. An on-the-spot study of comparative direct costs in the Mississippi Delta indicates that the cost of producing a pound of cotton was 7 cents higher this year than last. This 45 percent direct cost increase came about largely by almost 70 percent higher labor costs for hoeing and picking—\$25 per acre for pre-harvest unskilled labor in 1951 (mostly chopping) as compared with \$14 in 1950, and \$50.22 per acre for picking in 1951 compared with \$35.69 in 1950. These costs, it was shown, do not include such substantial items as taxes, supervision, debt service, management, etc. High production costs, scarcity of labor coupled with shortages of materials and necessary utilization of marginal land, all combined to create more hazards in bringing in the 1951 crop than those normally assumed in a business risk, it was pointed out.

Regarding the stockpiling of cotton, testimony revealed that the high quality of the 1951 crop would strongly recommend stockpiling for military needs from this year's crop. Whereas the 1950 crop was regarded as deficient in quality, reports indicate this year's crop as the best quality in several decades. It was stated that for breaking strength, the right sparsity, fullness, and uniformity the present crop would prove excellent for stockpiling purposes.

With respect to price hardship encountered by the cotton farmer, it was stated that in marketing the 1950 crop the farmer had sold the bulk of his cotton at a price much lower than the ceiling. The latter part of his production could have been sold higher if price ceilings and export subsidies had not been imposed. Last year, it was testified, the American cotton farmer contributed to the national economy and the fight against inflation in that he sold his cotton for \$10 a bale less than the world price. Despite the fact that he was asked officially last year to produce a crop in 1951 of at least 16,000,000 bales, and responded to that appeal, the cotton farmer again faces penalty in that he is again going to take less than the world price and even less than the cost of production.

By an organized program and hard work, the farmers went all-out in producing this year's crop. No price promise was made. * * * It was recognized that producing the required cotton was a patriotic duty. At the same time, the farmer expected that his remuneration would be in line with hardships encountered in the production and greatly increased production cost. Farmers, fully realizing they faced an expensive year, nevertheless invested personal funds, borrowed and mortgaged to finance the 29,000,000-acre crop.

In reporting on the cotton-producer program for orderly marketing of the 1951 crop, it was testified that this program helps to maintain the quality pattern so that the kinds of cottons needed will be on hand. The orderly marketing program also helps to maintain supplies of strategically needed cotton by stabilizing market prices and thus reassuring the grower. Whereas uncertainty, confusion, and pessimism prevailed in the Cotton Belt when the first banner crop forecast was made, orderly marketing held out the prospect of helping growers out of financial difficulties and providing capital for 1952 production. If cotton were to be sold at loan levels, it was stated, resistance

to cotton would grow. Many farmers would be forced to turn to profitable alternative enterprises requiring less labor and less capital. Without orderly marketing, it was stated, prices this year could well be at loan levels when the grower is selling and then rise sharply later when inherent demand exerts itself. Nothing could hurt prospects more for continuing high production in the future than such a development.

With conditions remaining as they are—cotton prices, costs, labor, and policies—cotton growers estimate a reduction of 20 percent in cotton plantings in 1952 compared with 1951. This would mean production approximating eleven to fourteen million bales in 1952. Largest reductions would be in the Southeast, smaller but substantial downward shifts in Midsouth and smallest in Southwest and far West. If prices fall below present levels and costs continue to increase the production decrease would be even greater. Unfortunately, experiences in 1951 with the request for more than a 60 percent increase in production, the high prices at planting time and an 11-cents-per-pound drop in prices at the beginning of picking has caused much dissatisfaction and confusion among growers in the major cotton-producing counties.

If national security, domestic consumption, exports to friendly nations and reserves for future contingencies require more than eleven to fourteen million bales in 1952 then several specific steps should be taken to insure the obtaining of those supplies.

Cotton growers propose following actions:

1. That a stockpile of cotton be accumulated beginning now under provisions of the Defense Production Act of 1950. This proposal reflects the fact that having a stockpile of cotton would protect against future shortages of fibers. Having the stockpile at hand would make it unnecessary to set future acreage goals at such high levels as to result in untenable market-price risks to growers. The availability of large supplies of high-quality cotton in the 1951 crop prompts the suggestion that stockpiling be started immediately.

2. That Department of Agriculture intensify its most commendable efforts to obtain minimum requirements of machinery, fertilizers, insecticides, bale ties, tractor fuels and other supplies.

3. That failure of the 1951 program to obtain labor satisfactorily from outside sources (particularly Mexican Nationals) be recognized. That a lower-cost, and less-involved, program be developed in keeping with the tentative plans outlined to users of Mexican labor on October 8, 1951, by Labor Department and other administration officials.

4. That full recognition be given by the Department to the fact that requests for extremely large increases cause disproportionate increases in production costs. There appears to be no relief from upward-cost trends. Therefore, the Department must recognize that accompanying added risks to farmers and to those who finance farmers will act as a further deterrent to future production increase.

5. Unless the potential threat of lowering ceilings on textiles and the inevitable roll-back in cotton prices which accompany lower textile ceilings is eliminated then growers will have little incentive to help production at high levels. The Department should continue to keep a clear-view perspective of this problem and the hazards involved before the Office of Price Stabilization.

6. The Department should continue its excellent efforts to service growers in the orderly marketing of the 1951 crop. It must be recognized, however, that the voluntary grower marketing effort results in higher risks and financing costs than when the habitual marketing pattern was followed.

Growers must market in an orderly fashion because they have no alternative. They need the Department's full support in the undertaking.

7. The basis for cotton price supports should be shifted to low-middling $\frac{3}{8}$ -inch staple to reduce grower risks on large crops.

Cotton growers have demonstrated their willingness to meet fiber needs in an unprecedented fashion by their action in 1951. They did so at financial risks greatly in excess of those assumed by other segments of the economy in the preparedness program. Fiber needs can be met best and with less drain upon national resources from cotton fields. Yet, they cannot be met without specific assurances as to conditions which will be confronted at harvest as well as at planting time.

Permanent Crosses to Mark Graves of Veterans on the Pacific Islands

EXTENSION OF REMARKS

OF

HON. W. F. NORRELL

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 11, 1951

Mr. NORRELL. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I wish to include a letter which I have received from James A. O'Brien, director of the Territorial Council on Veterans' Affairs, Territory of Hawaii, and an editorial from the Honolulu Star Bulletin of September 29, 1951.

During the last war, at which time I served on the Subcommittee on War Department Appropriations, our committee received budget estimates for the construction of national cemeteries on Guam and other islands in the Pacific, as last resting places for our men whose next of kin did not request the return of the bodies to the continental United States. Objections were raised by Francis Case, then Congressman Francis Case, member of the House subcommittee, and by me, in the House committee, to the location of permanent national cemeteries in numerous areas of the Pacific. The chairman thereupon designated us, as a special committee, to see if an agreement might be worked out with the Memorial Division of the Quartermaster Corps. As the result of several conferences it was agreed that only one permanent national cemetery would be located in the Pacific area, in the Territory of Hawaii, which would be adequate in size to accommodate the bodies of all American dead remaining in the area, and as beautiful as could be made.

We wrote into our bill the location of the National Memorial Cemetery of the Pacific and provided ample funds to the Memorial Division for improvements to the grounds. Hawaii was chosen due to its natural beauty, climatic conditions, and relative accessibility and physical comfort facilities for the families of the dead who might have opportunity to visit the graves of their loved ones. Some 2 years ago I had the opportunity to attend the dedication of that cemetery, which seemed to me one of the most beautiful of its kind possible to be pro-

vided. More than a thousand wooden crosses then stood on that ground as evidence of the devotion in which we hold those who have given that last full measure.

Naturally since I had something to do with creating such a cemetery in Hawaii, I feel a keen interest in the cemetery. These crosses should be restored immediately, and if those in charge fail to take the necessary action to restore the crosses immediately, then Congress should pass a law requiring it.

The above-mentioned letter and editorial follow:

TERRITORY OF HAWAII,
TERRITORIAL COUNCIL ON
VETERANS' AFFAIRS.

Iolani Palace Grounds, Honolulu, T. H.

DEAR REPRESENTATIVE NORRELL. Many men from your State who made the supreme sacrifice during World War II have found their last resting place in the National Cemetery of the Pacific. Because of this we feel that you are close to us in our efforts to have permanent crosses decorate the graves of those who gave their lives so that others might live.

As you know, until recently the 13,000 graves were decorated with wooden crosses. The wooden crosses were installed by the Army as a temporary measure pending the complete installation of surface marble markers throughout the cemetery. Recently, the installation was completed and the Army carried out its previously announced orders of removing and destroying the crosses.

However, during the tenure of the crosses they bored into the hearts of the people of Hawaii and to the many, many relatives of the men buried there who came from the mainland to visit the resting place of their son, husband, or brother.

The cemetery, now, without the row upon row of white crosses and Stars of David looks bare and forlorn. It was a distinct shock to the people who visited the cemetery after the crosses were destroyed. To them, the crosses have become an integral part of the cemetery.

May we enlist your assistance in securing a permanent type cross, either of concrete or of some other lasting material, so that the cemetery may be restored to its former beauty and symbolism.

This we know necessitates congressional action. The veterans organizations and the people of the Territory and we know the relatives of the mainland men buried here, would appreciate anything that you can do.

We are enclosing an editorial from the Honolulu Star-Bulletin of September 29 that expresses some of the feeling of the people of the Territory.

Very truly yours,

JAMES A. O'BRIEN,
Director.

[From the Honolulu Star-Bulletin of
September 29, 1951]

THEY AWAIT THE VERDICT

The mute white crosses have been taken from the graves of the National Memorial Cemetery of the Pacific—but protests may restore them.

It took only 2 hours for the energetic task force of the Army to remove from Punchbowl more than 13,000 little wooden crosses. It will require more time to restore them—if they are to be restored.

But there is time for this task of restoration—those who sleep beneath the green turf in the ancient crater have no need for haste. They will wait, in patience, for the verdict.

All the hurry, all the ordered speed and discipline of their training, all the furious urgency of their attacks on the battlelines,

all the sudden anguish of their mortal wounds before they fell, are of the past.

For them the suns will rise and will set over that dedicated hill of sacrifice in long, unhurried procession. The gentle winds and the stars will keep them company, even if in a burst of organized effort as well timed and precise as the burst from a machine gun, the 13,000 white crosses came down in one unexpected afternoon.

In Washington, D. C., Delegate FARRINGTON has appropriately said that the wishes of the families of the men who lie in the Punchbowl graves should be consulted.

That can be done, and should be done. It should have been done, and thoroughly, sympathetically, before the order was given that tore the crosses from the ground.

To do it rightly, the families should have a clear picture of the alternatives—the graves with crosses and also with the flat stone marker, or the graves with only that flat, inconspicuous and unimpressive headstone.

And the families should know—many of them know already—that in our military cemeteries abroad the white crosses still stand

And these next of kin should feel that it is not a question of economy—our doing fitting honor to those who are buried in Punchbowl.

It is a question of giving to these heroes of our country the greatest possible evidence of respect and devotion we can give them.

It is a question also of developing this National Memorial Cemetery as one of our Nation's most impressive, most distinctive burial places.

It is a question of maintaining the physical facilities so that each Memorial Day the people of Hawaii can pay their distinctive tribute of leis and garlands, appropriately wreathed above the graves.

Yes, those who lie asleep in Punchbowl can await the verdict.

For them all mortal haste is ended. They lie quietly in the ultimate discipline of death, relying upon a grateful country to do them justice.

Tribute to Mr. Rozmarek

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 11, 1951

Mr. FLOOD Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article taken from the Wilkes-Barre Times-Leader, the Evening News on September 27, 1951, entitled "Tribute to Mr. Rozmarek":

TRIBUTE TO MR. ROZMAREK

It was not at all surprising to his native Wilkes-Barre to learn that Charles Rozmarek had been retained as president of the Polish National Alliance at the convention in Buffalo by an impressive majority. The combined votes of his two opponents were far below 50 percent of his total. Actually, he polled four times as many votes as his nearest rival. So it was scarcely a contest so far as he was concerned.

Mr. Rozmarek's popularity with the rank and file of the Polish National Alliance is understandable. Since he took office more than a decade ago, it has enjoyed its greatest growth despite the fact many fraternal bodies have been satisfied merely to hold their own. Assets have gone from \$25,000,000 to more than \$60,000,000, a gain of 140 percent, and membership at 330,000 is the high-

est in its history. The alliance is the fifth ranking American fraternal organization in certificate holders and total insurance. It operates 1,720 subordinate lodges in 32 States and is known for its cultural program and humanitarian activities as well as for its financial achievements.

Just as the alliance which was launched in Philadelphia in 1880 with fewer than a dozen members has gone a long way, so has Mr. Rozmarek since he first affiliated in 1917 and became its president in 1939 with headquarters in Chicago. By virtue of this office, he has become a world figure through his election to the presidency of the Polish National Congress, which speaks for 6,000,000 Americans of Polish extraction and has been occupied with the crusade for the liberation of Poland, among other things.

As he embarks on his fourth term of 4 years, Mr. Rozmarek is able to look back on a remarkable career although he still is in his prime and the years beckon alluringly ahead. The satisfaction that must be his can only be matched by the pride his home town takes in the eminence he has achieved.

Pulaski, in Death, Still Serves Freedom's Cause

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 11, 1951

Mr. FLOOD Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article taken from the Wilkes-Barre Times-Leader-The Evening News, of October 10, 1951, entitled "Pulaski, in Death, Still Serves Freedom's Cause":

PULASKI, IN DEATH, STILL SERVES FREEDOM'S CAUSE

Little did the world realize when Gen. Casimir Pulaski died on October 11, 1779, of wounds received in the Battle of Savannah that he would still be serving his beloved Poland and the cause of freedom 172 years later.

The spirit of the Polish nobleman who loved liberty more than life lives on with gratifying results for his countrymen, enslaved now as then by a Russian oppressor. When Pulaski shed his blood for America in the Revolution, he unwittingly performed his greatest service for Poland, for he bound the two countries with unbreakable ties.

Down through the corridors of time, Pulaski has marched at the head of millions of others with Polish blood in their veins and today they remind us of our obligations as well as the bonds of friendship that have withstood the ravages of two centuries.

When we speak of the relationship between the United States and Poland, we, of course, are not thinking of the puppet Communist regime that has usurped power in Warsaw with Soviet armed might. Rather, we refer to the real Poland and its brave sons and daughters who carry on in the finest tradition of their forebears.

Thanks to the warnings of such organizations as the Polish-American Congress, the United States today is fully aware of the Communist menace which overwhelmed Poland a decade ago and poses for a death thrust at America if and when possible. It is generally realized now that Poland's fate awaits us unless we are alert and strong to repulse this enemy of God and man. While Poland remains in subjugation, there can

be no guaranty of freedom anywhere on earth.

So the crusade in which Pulaski played a leading role on both sides of the Atlantic goes on as this community and the Nation as a whole prepare to pay tribute to his memory tomorrow on the anniversary of his unselfish sacrifice. God rest his noble soul and protect the country of his birth and the country of his adoption, both of which he served so magnificently in life and in death.

Articles From Rolla (Mo.) Weekly New Era

EXTENSION OF REMARKS

OF

HON. A. S. J. CARNAHAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 11, 1951

Mr. CARNAHAN Mr. Speaker, under permission to extend my remarks in the RECORD, I include two articles taken from the Rolla Weekly New Era, Rolla, Mo. One is entitled "Farmers Recommend No Drastic Changes in Agriculture Program." The other is an editorial from the same paper entitled "Unjust Criticism of Fine Programs."

FARMERS RECOMMEND NO DRASTIC CHANGES IN AGRICULTURE PROGRAM

(By Barney Miller)

Phelps County farmers recommended no drastic changes in the Department of Agriculture programs being conducted in Phelps County, according to a report of the Family Farm Policy Review which has been completed here.

But several recommendations were made to improve the work of the various United States Department of Agriculture groups in the county.

The various agencies, all of which are part of the Department of Agriculture, were called upon to go into various farm communities of the county and to explain their work in detail. Then, special committees were appointed, and these farmer-committees were asked to write down their criticisms and recommendations. These committee meetings were all held behind closed doors with only the farmers present. No Government official was around when the individual criticisms or recommendations were written. This entire report, from each of the various communities of the county, has been compiled into a county-wide report.

Agencies which come under the Department of Agriculture include the Extension Service, the Production and Marketing Administration, the Production Credit Administration, the Farmers Home Administration, the Forestry Service, the Vocational Agriculture Department, the Rural Electrification Administration, and others.

Each of these agency heads was asked to explain his program in detail. Committee-men who wrote the final report were John Staggs, Frank Gabel, Dorsey Black, G. E. Allison, Blevie M. Lorts, and Lawrence Branstetter.

The reports for each of the agencies included:

Extension Service (county agent): No major changes recommended and the program approved, but one farmer said he thought the program was poorly-managed at the State level. "I think having a county agent is a wonderful thing, but it is not handled properly in Missouri. I do not feel that the majority of the farmers are benefited by

them. In Iowa, the Extension Service is run entirely different and is more successful. Not just one or two farmers get the benefit. Missouri has poor direction at the State level," were his comments.

"There is good in Extension Service and it can do much good in the educational line," were other farmers' comments.

Production and Marketing Administration: No major changes recommended and program given general approval. One farmer commented, "FMA has helped us in selling our grains. We are not forced to sell when the market price is low. We are no longer at the mercy of speculators." Another declared, "Farmers should go ahead on their own as much as possible but soil conservation is now at a crucial stage and the agricultural conservation program should not be discontinued."

Forest Service: No major changes recommended and program given complete approval. One farmer said, "there would be no timber left if it were not for the Forest Service."

Farm Credit system: Program approved and expansion recommended. Farmers particularly want a short-loan agency, which is what the FPCA is.

Farm Home Administration: Recommended more funds for agency. "It has given veterans a chance to own their own farms," one man said. It is a supervised credit group, designed for lower-income farmers and those just starting.

Rural electrification: Program generally approved but considerable criticism. "The trouble with REA in Phelps County is at the local level," one farmer commented. Another said, "all of us who have REA are happy with it, but we really have to put up a fight to get it. There is too much red tape connected with getting hooked up with REA." "Local directors always give excuses for not giving better service," was another farmer's comment. Recommended changes include: (1) That members of the REA should be kept informed as to its operations and financial conditions; and (2) that the REA telephone system be extended.

The Family Farm Policy Review was called for by the Department of Agriculture throughout the United States to see if there were overlapping agencies and duplication. The entire county report, together with similar reports from other counties all over the country, will be sent to Washington, D. C., where the entire group of reports will be used to determine farm policy for the next 12 months.

UNJUST CRITICISM OF FINE PROGRAMS

There has been much in the public prints of late concerning the Department of Agriculture plan for a review among the farmers of the various department programs being conducted. The Department calls this a Family Farm Review and has been conducting it for the past several weeks in Phelps County and elsewhere across the country.

Much of that which has been written has been criticism—and most of it is unjust criticism, we feel. The whole plan, in a nutshell, is this: The Department of Agriculture, through its various county organizations and agencies, is going out into the field and asking the farmers their honest opinions regarding these programs, such as FMA, the Extension Service, the FHA, the Forestry Service, and others. The paid county officials go to Edgar Springs, let us say, and explain to the farmers in that community just how, for instance, the FMA works, just how the production credit plan works, how the farmers' home group works, and so on. Much of this the farmer, as the user of these agencies, already understands, but it is reviewed for him. Then he is asked to appoint a committee composed of farmers, and these committeemen are asked to

meet by themselves and actually evaluate the various programs. This evaluation is put in writing and turned in to the county officers, themselves. Any suggestions, criticisms, or warnings are written right into the farmers' report. That's the plan in a nutshell.

Now, what is wrong with that? What, we ask, is wrong with the county PMA chairman, for instance, going out into the various communities, explaining his program in brief, and then asking the farmers—meeting behind closed doors—to write down just what they think of it? What is wrong with it? What is wrong with the Government agencies "feeling the pulse"? What is wrong with the farmer having his day in court, so to speak?

Let's take it for granted that what happened in Phelps County happened in most other counties across the country. Here the farmers who were asked to express their sincere opinions and to put those opinions in writing were such substantial citizens as Frank Gabel, Dorsey Black, G. E. Allison, Blevie Lorts, and Lawrence Branstetter. What, we ask, is wrong with men of that caliber telling the various Government agencies how they can best serve the farmer?

We feel that the criticism of this administration program is merely another phase of the constant carping and criticism that some of those outside the Government are leveling at the efforts of the present Democratic administration to aid the farmer. The farmer has learned to depend on many of these Government agencies. He has learned that most of them are managed by farmers right in his own community, and that they are there to serve him. These agencies are the very lifeblood of the program which the Democratic administration over the past 20 years has used to bring the farmer out of the poor house and make him a self-respecting citizen once again.

Those who are criticizing it now were criticizing it 20 years ago. And they'll probably be doing the same 20 years from now, too. And they'll still be on the outside looking in.

A Tribute to Christopher Columbus

EXTENSION OF REMARKS

OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 11, 1951

Mr. ZABLOCKI. Mr. Speaker, I wish to take a few moments to pay tribute to the memory of Christopher Columbus, an undaunted dreamer and brave voyager to whom the world owes a vast debt.

During the immediate centuries preceding the birth of Christ, Greek mathematicians and astronomers came to the conclusion that the earth was a sphere. They came to this conclusion through the means of mathematical computations. But it took almost 2,000 years before a man was found who would prove this theory.

The man who proved it was a Genoese voyager named Christopher Columbus. He was a man obsessed with an idea; the challenging, gnawing notion that he could reach the Orient by sailing west, through an unknown and unmeasured ocean.

For years he walked and lived with that dream, trying in vain to obtain the aid necessary for its realization. He journeyed from one court in Europe to

another, seeking a sponsor who would furnish him with ships, and with the funds necessary to underwrite the venture.

After 10 years he succeeded, and set out with a handful of men in search for a short route to the Orient. Although he never reached his original destination, he proved that the world was round, discovered the New World, and opened a new era of exploration and discovery in the history of the western civilization.

Christopher Columbus Day, which we are commemorating, is not a mere tribute to the past. It is a dynamic challenge to the present and to the future.

During the recent years, our Nation has entered into new fields, and reached for new goals. We have maintained that it is possible for the people of our country, led by a liberal government, to increase the prosperity and welfare of our population, to do away with much of the poverty, sickness and discrimination which blemish our national scene, and to prevent the recurrence of depression and of widespread unemployment. Further, we propose the idea, in the point 4 program, that it is possible for us, without in any way harming our own interests, to aid the peoples of the underdeveloped areas of the world to improve their lot. And, finally, we have been trying to establish the fact that the nations of the world can work together through the medium of an international organization for mutual benefit, mutual defense against aggressors, and for the establishment and maintenance of world peace.

There are people today who feel that these objectives are but fruitless dreams, just as there were people who felt, four and one-half centuries ago, that Christopher Columbus' proposal was unrealistic and impractical. Faced with such skepticism, I think that we should take an example from Christopher Columbus' unyielding perseverance and determination, which enabled him to realize his ambition, and which benefited the whole humanity. I am convinced that, if we consecrate ourselves to the attainment of our goals, we will succeed, and our victory will result in the betterment of our society, our Nation, and our civilization.

Five Hundredth Birthday Year of Christopher Columbus

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 11, 1951

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article taken from the Wilkes-Barre Record of September 28, 1951, entitled "Five Hundredth Birthday Year of Christopher Columbus":

FIVE HUNDREDTH BIRTHDAY YEAR OF CHRISTOPHER COLUMBUS

Many nations in this hemisphere will mark Columbus Day, October 12, this year more

ceremoniously than usual. According to the leading biographers, Christopher Columbus was born between August 26 and October 31, 1451. So the celebration this year will take on the significance that goes with the rounding out of 5 centuries since Columbus was born, according to the best available information. There are no birth records.

The Dominican Republic is making this year an occasion to press an appeal for United States support of a Columbus memorial project. The memorial, a lighthouse, in the shape of a recumbent cross a half-mile long, is being erected in Ciudad Trujillo at an estimated cost of \$10,000,000 by the 21 Republics of the Americas. Funds for this are being contributed by the republics, but to date, the United States has not taken steps to meet its contribution quota, according to the Columbus Lighthouse Committee.

The Columbus Memorial Lighthouse, when completed, possibly in 1954, will contain a museum of historical Columbus treasures, a library and a section for each of the 21 nations in addition to the tomb. It is being built on the site of the first permanent white community—now known as Ciudad Trujillo—from where the migration of men to many parts of the New World was undertaken. From this "Cradle of the Americas" fanned out Cortez, Ponce de Leon, Pizarro, Balboa and a host of other adventurers.

On October 12 the Library of Congress will observe the five hundredth birthday (it might be the five hundred and fifth) of the man who started it all—this business of being Americans and not Europeans. Since the exact date of Columbus' birth is unknown (it is generally believed to be some time in 1451, though some scholars insist on 1446), the Library has picked October 12, the date of the "great discovery," as a fitting time-honored on which to hang their observance of his birthday.

The Library's observance will take the form of a special exhibit of rare maps, atlases and charts. The exhibit will include an atlas published in 1480. Columbus may have used this very copy in 1492. Also copies of Juan de la Cosa's map of America, drawn in 1506, and a copy of Martin Waldseemüller's map of 1507, which shows, first time on any map, America as a separate continent. The map's use of the name "America" was also the first time the great new land mass was so designated.

Ceiling Prices

EXTENSION OF REMARKS OF

HON. WILLIAM H. AYRES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 11, 1951

Mr. AYRES. Mr. Speaker, I think all of the Members are aware of the many inequities occurring in the various agencies of Government which are attempting to control our economy. Many small businesses are losing their skilled personnel because the red tape cannot be cut fast enough to act on their various cases.

Mr. C. Blake McDowell is one of the foremost authorities on newspaper operations in this country. The letter from him printed below is self-explanatory:

BROUSE, McDOWELL,
MAY, BIERCKE & WORTMAN,
Akron, Ohio, October 9, 1951.

The Honorable WILLIAM H. AYRES,
Representative in Congress, House
Office Building, Washington, D. C.

MY DEAR CONGRESSMAN AYRES: I have noticed recently that there is a movement in

Congress to attempt to change the price stabilization so that all communities where products are manufactured will be upon the same Nation-wide ceiling price.

For example, if a manufacturing establishment is manufacturing newsprint in the United States, irrespective of the location in which it is manufactured, it shall be sold at the same ceiling price.

This kind of a fixed-ceiling price cannot possibly be equitable, as newsprint in Texas and in the extreme South can be manufactured at a lower cost than newsprint manufactured in Maine, New Hampshire, Vermont, New York, Minnesota, and Wisconsin. These small northern mills are far removed from the source of supply; to wit, wood. Therefore, the cost of production of newsprint is much greater than it is in the southern mills.

If a ceiling price is fixed at, say \$116 per ton, including freight, for newsprint manufactured in the United States, there will be at least 200,000 tons less newsprint manufactured in the United States, as every one of the small mills in the above States would immediately cease to operate and convert their mills to some other paper products, such as tissue, toweling, or kraft paper.

Newsprint is a critical material and if the production in the United States is cut 200,000 tons the newspapers now being supplied will be forced to buy the same in the open market at prices two or three times the Canadian price per ton, or will be forced to cut the size of the newspaper and their circulation or quit entirely.

Another item that is critical in the country is sulfite. Sulfite is required to make newsprint. At the present time a fixed price has been set for the sale of sulfite manufactured in the United States at \$132.50 per ton, including freight.

The Norfolk Newsprint Mill, purchased by Knight Newspapers, Inc., produces sulfite for its own use and approximately 260 tons per month additional which must be sold, and during the months of July, August, and September of this year has been sold at the ceiling price of \$132.50 per ton, including freight.

Unbleached sulfite to be manufactured in the United States in the northern mills costs from \$150 to \$180 per ton, and to sell the same at \$132.50 per ton, with freight included, means a loss to all of these small mills of at least \$50 per ton.

You can see, therefore, that the small northern mill on the St. Lawrence River, in New York, owned by Knight Newspapers, Inc., sustains a loss under the present ceiling price of from \$12,000 to \$13,000 per month on sulfite alone.

We have applied for an increased price to at least cover cost, plus freight, so that we will at least be able to recover the cost—not asking for a profit. Unbleached sulfite is sold on the spot market in Canada and other foreign countries at anywhere from \$185 to \$200 per ton. Why, therefore, penalize the American manufacturer on a critical material, and force the American purchasers of sulfite to buy from the foreign mills and pay an excessive price?

You can see from the foregoing that if industry price is set and it is not an amount sufficient to permit these small concerns to live, they will quit manufacturing. For example, the two critical materials about which I am addressing you; to wit, newsprint and sulfite (there may be other manufactured products in the same class).

Therefore, my suggestion is that if the Capehart amendment is modified or changed, or even though it is not modified or changed, legislation should be passed authorizing the Price Stabilization Board to fix a ceiling price, but add an exception: substantially as follows:

"The Price Stabilization Board, however, shall, upon application of any manufacturer, authorize an increase in the ceiling price at

least to cost of manufacture, plus freight, for any article manufactured by any person or company where the ceiling price as fixed is under the cost to the applicant."

You may ask, Why do you manufacture more sulfite than is required for your own use?

1. It takes about 50 persons to make the sulfite.

2. Sulfite can be made by working 3 days per week, but no concern can hold its employees by working them 3 days per week.

3. If they do not work, therefore, there will be no sulfite and, as a result, no newsprint.

4. If we work them 5 or 6 days per week, there is an additional 260 tons of unbleached sulfite produced, which must be sold almost immediately, as it quickly deteriorates.

5. Furthermore, when there is such a tremendous demand for sulfite, it is the duty of the company to make the additional sulfite to help supply the demand.

I am sending a copy of this letter to Senators TAFT, BRICKER, and CAPEHART, and Representatives SPENCE, WOLCOTT, and RAYBURN, but I think you should interest the Senators and Representatives from all of the States where these small mills are located, and there are a number of them in the northern part of the United States, and I know that the cost of making newsprint in these small mills is anywhere from \$150 to \$180 per ton; and I further know that all of them will quit making newsprint and quit making sulfite immediately upon a fixed ceiling price being established with no right to ever have relief.

Respectfully yours,

C BLAKE McDOWELL.

(Knight Newspapers, Inc., The Detroit Free Press, the Chicago Daily News, the Miami Herald, the Akron Beacon Journal.)

The Fogarty Resolution: Statement Supporting Its Passage

EXTENSION OF REMARKS OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 11, 1951

Mr. FLOOD. Mr. Speaker, the world is engaged in a struggle between two ways of life. We in America who believe in freedom must be consistent in that belief and consistent in its application. There is no other way to win the friendship and trust of those vast numbers of people who are now undecided as to what course to take. Great numbers of peoples in the world are emerging from bondage. They need a fresh and inspiring leadership. They want facts, not words.

We have an opportunity in the Fogarty resolution of presenting powerful proof that we stand actively behind the belief that democracy can become a living reality. This resolution simply and emphatically expresses the sense of the Congress that the Republic of Ireland should embrace the entire territory of Ireland unless a clear majority of all the people of Ireland, in a free plebiscite, determined and declared to the contrary. By adopting this resolution we will strengthen the cause of freedom the world over.

Ireland must take its proper place in the world. Elimination of the partition would mean that Ireland would immediately become a member of the Atlantic Pact and by joining the Atlantic Pact a united Ireland would provide the northern pivot for the defense of Western Europe. Ireland as a geographical unit is important; it is a major strategic approach to Europe.

Not only geographically, but racially, economically and historically unification is a more natural condition for Ireland. Partition cannot be justified—it is a man-drawn, unnatural line created some 30 years ago to satisfy the whims of British politicians. The English now favor unification but their Government, in matters outside England proper, lags behind the times. Here lies a dynamic opportunity for two great nations to solve a problem with justice and honor.

If the people of Ireland were given a chance to vote on having a unified nation, they would vote overwhelmingly against partition, for on this issue the Irish are united. Is it right that a people so united should be denied the principle of self determination? Is it right that one people should be cut into subdivisions so that the economy of the country is split? Neither Ireland, nor any other nation, can maintain its national unity when it is divided into unnatural physical components. Division in any country tends to weaken that nation. To use induced division as a technique for conquest was Hitler's philosophy—now it is Stalin's philosophy. This forced and unnatural division of Ireland now plays into the hands of the Kremlin.

The issue of partition has become an international question. It has become a test as to how well and how soon the Western World can resolve those old problems which stand in the way of real progress. As long as the British hold on to the six northern counties of Ulster, a wrong persists. As long as we fail to exert every ounce of pressure—in support of freedom and a united Ireland, we acquiesce in that wrong. Our complacency on the issue of a divided Ireland can hardly be calculated to help win the confidence and support of the enslaved peoples of Eastern Europe and Asia. It will instead link us with a decadent imperialism—an imperialism of which they want no part. Inaction of this sort is disastrous for the cause of freedom. A stand-pat attitude will not suffice.

The relationship of the people of Ireland, not only historically but today, is very close to America. They have a deep and abiding faith in our Government and particularly in the Congress of the United States. This faith is based upon the knowledge that our Government has always associated itself with the principle of national freedom. We did so in Israel; we did so in India; we did so in Burma. Shall we, the free people of the United States, who have a reputation for protecting the rights of small nations—shall we permit this injustice to Ireland to continue by our silence, by our failure to make known our stand?

Lewis Cass, the Last Jeffersonian

EXTENSION OF REMARKS

OF

HON. BLAIR MOODY

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Thursday, October 11, 1951

Mr. MOODY. Mr. President, the seat I hold in the Senate today once was held by Lewis Cass, a New England pioneer who grew up with the Northwest Territory. Few American statesmen have rivaled Cass in the multiplicity of his public duties as soldier, territorial governor, Secretary of War, Minister to France, senatorial leader, presidential nominee, and Secretary of State. He was a firm believer in American democracy and in local sovereignty. He tried to save this Nation from Civil War.

Frank B. Woodford, an editorial writer of the Detroit Free Press, has written a scholarly and vivid biography of Lewis Cass, which critics and historians universally praise. Mr. Woodford had access to the unique resources of the Clements Library of the University of Michigan, and his work contains much that increases our understanding of an important man in an important era.

In the belief that Mr. Woodford's biography of "Lewis Cass, the Last Jeffersonian," will interest many of my colleagues, I ask unanimous consent to have printed in the Appendix a typical newspaper review, which appeared in the New York Herald Tribune. It is but one of many tributes the book has received.

There being no objection, the review was ordered to be printed in the Record, as follows:

CASS OF THE OLD NORTHWEST

(Lewis Cass, the Last Jeffersonian, by Frank B. Woodford, 380 pp. New Brunswick: Rutgers University Press. \$5)

REVIEWED BY AVERY CRAVEN

The career of Lewis Cass was so intimately connected with the development of the early Old Northwest that a biography of the man is almost a history of the region. Though born in New Hampshire and educated at Exeter Academy, he early migrated to Ohio which was still in the territorial stage. Three years after his shingle was out he was a member of the Ohio legislature, and a few months later United States Marshal for the State.

From that point forward Cass grew and prospered with the region. As a brigadier general in the Ohio militia he took part in the War of 1812 and came out a hero in spite of having been with Hull at the surrender of Detroit. He was still in uniform when President Madison named him Governor of Michigan Territory. For the next 18 years he held that office, handling Indian problems, exploring the wilderness and revealing its matchless mineral resources, and encouraging the development of social-economic institutions of every sort. As Woodford asserts, Cass, almost single-handed, builded an empire.

Such achievements in the growing West brought national recognition. Jackson made him Secretary of War and then Minister to France. Here he attracted wide attention by opposing England's right of search in checking the slave trade and returned home to find himself being talked of as a possible presidential candidate. Michigan sent him

to the Senate, and Texas and the Mexican War gave him the chance to develop the doctrine of popular sovereignty as the best solution of the troublesome problem of slavery in the territories. That gave him the Democratic nomination in 1848.

With defeat, Cass became one of the elder statesmen alongside of Benton, Clay, and Webster—men who took middle-ground in the sectional controversy and urged compromise. Like them he felt that the preservation of the national parties was the best way to keep the Nation united. He hated slavery, but he loved the Union enough to grant it constitutional rights. He remained a staunch Democrat and soon found himself called a dough-face and deserted even in his beloved Michigan.

There is little that is new in Woodford's book but it is far better written than its predecessors. Some of his background is a bit out of date, but his estimates are sound and his general appraisal of Cass entirely satisfactory. He has done a much-needed job in calling attention to one who has been largely neglected for the simple reason that he took conservative ground in a day when radicals were taking control.

Employment of the Physically Handicapped

EXTENSION OF REMARKS

OF

HON. J. PERCY PRIEST

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 11, 1951

Mr. PRIEST. Mr. Speaker, under permission to extend my remarks I include a speech made by the gentleman from Massachusetts [Mr. McCormack] on Monday, October 8, 1951, at the Hotel Statler, Washington, D. C., at a luncheon under the joint sponsorship of the Washington Variety Club and the American Federation of the Physically Handicapped, Inc.

This luncheon was the seventh annual national kick-off luncheon commemorating the National Employ the Physically Handicapped Week.

I also include in my remarks an editorial appearing in the Washington Star of October 7, 1951, and an article appearing in the New York Times of October 7, 1951, written by Howard A. Rusk, M. D.

ADDRESS OF HON. JOHN MCCORMACK

Of all the social programs designed to promote the most effective utilization of American manpower, I know of no project more worth while than our efforts to stimulate employment of the physically handicapped.

In the not too far distant past that small but important segment of our society consisting of physically handicapped persons was looked upon as a social problem, and the persons who constituted this class were neglected or forgotten in the formulation of plans for social and industrial improvement.

During the past 10 years, however, and especially since our social conscience was stirred by the return of handicapped veterans from World War II, the American people have become acutely aware of the existence of the physically handicapped among us and the necessity of incorporating them into our daily life as useful and productive members of society.

In the beginning the program designed to aid the physically handicapped was to some

extent colored by the impression that help and assistance to these persons was solely a charitable and humanitarian requirement. With the inception of an annual Employ the Physically Handicapped Week, however, American business and industry have come to learn that the skills and aptitudes of our handicapped citizens have a definite and important place in our entire scheme of manpower utilization.

It has been discovered after examination and trial that properly trained physically handicapped persons, regardless of the nature of their impediment, are susceptible to training and adaptation in a whole host of job skills for the performance of which they are peculiarly qualified.

In addition, from an economic viewpoint, it has been discovered, somewhat belatedly, that training and utilization of these persons in skills for which they are adapted is a sound and lasting investment in human integration. By employment of the physically handicapped in jobs within the area of their competence, we have not only created a new and productive segment of industrial workers, but in addition, we have salvaged a substantial number of citizens from the social scrap heap, speaking descriptively, and, at the same time, converted a liability subsidized by public financial assistance into a group of persons independently enabled to contribute to the economic welfare of themselves and their community.

It has been further discovered that the physically handicapped worker, by reason of his exaggerated consciousness of competitive disadvantages can be converted into the best and most reliable type of American workman. Our American employers who have had the foresight to employ physically handicapped workers report almost without exception that such employment represents the soundest business investment and opportunity. Their reports are substantiated by official Government statistics which reflect that, among the physically handicapped labor force as a group, there is greater stability and less turn-over, a lower industrial accident rate, less absenteeism, and a corresponding equality or advantage in production in comparison with nondisabled workers as a whole.

As a Member of the Congress, I am happy that the legislative branch of the Federal Government has given a decided impetus to our social efforts in behalf of the physically handicapped citizenry of America. Convinced of the desirability of any program designed to benefit this group, laws have been enacted providing for the utmost assistance in the vocational rehabilitation of the physically handicapped veterans. Complementary programs have been authorized through the channels of the Labor Department and the Federal Security Administration. Much more is to be done.

In full cooperation with State and local agencies the Federal Government has materially aided in instilling in the minds of American businessmen a sense of responsibility to physically handicapped workers whose eagerness to work is matched with their competence to perform the jobs to which they are adapted.

I consider it a privilege and honor to add my personal endorsement to the Seventh National Employ the Physically Handicapped Week. I wish to take this occasion to pay high tribute to the American Federation of the Physically Handicapped, because it is through the consistent efforts of that organization that America is well on the way toward the discharge of one of its most pressing human and social responsibilities.

Not in the sense of extending the hand of charity, therefore, but rather in the sense of providing well-deserved opportunity, let us hope that American business, American industry, and American Government will

continue to create, uncover, and make available American jobs at American scales of wages for Americans who are physically handicapped.

In closing my remarks, I desire to pay my respects to one of the finest men I have ever met, Paul A. Strachan, cochairman of this splendid luncheon, the 1951 national kickoff luncheon of National Employ the Physically Handicapped Week.

All handicapped persons throughout America are indebted to Paul Strachan for his determination throughout the years in fighting their battle and in the progress that has been made, particularly during the past 15 years.

I pay Paul Strachan a tribute he richly deserves.

[From the Washington Star of October 7, 1951]

EMPLOYING THE HANDICAPPED

Congress has designated the week beginning today as National Employ the Physically Handicapped Week, and Federal and local committees are mobilizing rehabilitated workers for the defense campaign especially but for ordinary industrial and commercial routines also. The Nation cannot afford to be wasteful of any of its human resources. Handicapped persons should be trained in useful skills and, when they have been so trained, they should be placed in jobs where those skills can be exercised effectively. This is a duty recognized by the Federal Government and by many State governments and municipalities. It is supported by two considerations worthy of mention here and now.

One, of course, is that of the instinct of sympathy which the fortunate naturally feel toward their handicapped neighbors. A blind person, for example, is entitled to the help of the community in which he belongs. But few Americans so afflicted want to be favored simply because they are handicapped. They wish to be employed on equal terms with their fellows. The various rehabilitation programs aid them in qualifying and the results frequently are remarkable.

Perhaps the principle of natural compensation is involved in such cases. The blindness of Homer and the blindness of Milton yielded *The Odyssey* and *"Paradise Lost"* under the influence of their acceptance of the challenge of their handicap. Deaf Beethoven wrote beautiful music. Melancholy Dante brought forth *The Divine Comedy*. Lame Scott and Byron, maimed Cervantes and Nelson, hunchbacked Aesop and Steinmetz, paralyzed Heine and Pascal, consumptive Keats and Stevenson, migraine-tortured De Quincey, Coleridge and Darwin, lonely Hans Christian Andersen and Lewis Carroll—each of these immortals sublimated his suffering, and the common welfare was the guinea. The annals of humanity are replete with personalities made richer by adversity to the profit of millions.

And the end is not yet. The handicapped men and women of our own time are motivated by the same dream of triumphing over circumstance, and they deserve full opportunity to show what they can do. Particularly now, when manpower is needed in the struggle to preserve our free civilization against totalitarianism in its latest threatening form, employing the handicapped is a privilege as well as a duty. History confirms this view, and the prevailing emergency illumines it.

[From the New York Times of October 7, 1951]

NEEDED MANPOWER IS SEEN IN PHYSICALLY HANDICAPPED—MEANS OF INCREASING REHABILITATION SOUGHT AS NATION FACES WORKER SHORTAGE

(By Howard A. Rusk, M. D.)

When the 1949 National Employ the Physically Handicapped Week was observed, 60

columns of "help wanted" advertising appeared in that Sunday's issue of the New York Times. Two weeks ago there were 135 columns.

Two years ago 3,500,000 persons were unemployed and the handicapped among them had particular difficulty in finding jobs. Repeated objective studies had shown they make good, safe, reliable and productive employees, but industry as a whole shied away from hiring the handicapped, because of prejudice and a lack of understanding. Today, however, the situation is different. We have fewer than 1,600,000 unemployed persons and the handicapped are in great demand.

In his third quarterly report to the President, last Sunday, Charles E. Wilson, Director of Defense Mobilization, said, "Few, almost no, lags in defense production have yet occurred because of manpower shortages." He warned, however, "In the planning of manpower programs, Government and industry must prepare for the more widespread shortages that are in prospect as we enter into the period of mass production of military goods."

Both the Nation's several million disabled citizens and our thousands of industries should be proud of Mr. Wilson's statement that our defense mobilization program has not lagged because of manpower shortages. The several hundred thousand handicapped persons who have found employment since the outbreak of hostilities in Korea have played an important role in filling the Nation's manpower needs. Industry is to be commended for its broadened concepts and the realization that the handicapped have far more ability than disability.

VALUE OF CAMPAIGN SHOWN

It is true that a large degree of industry's willingness to employ an increased number of handicapped persons has resulted from the fact that nonhandicapped workers have not been readily available. Much, however, has resulted from the increased understanding by industry of the handicapped's ability to produce that has been created by the annual campaigns of the President's Committee on National Employ the Physically Handicapped Week, headed by Admiral Ross T. McIntire.

In the fiscal year that ended in June, 277,000 handicapped workers were placed in jobs through the joint efforts of the Federal-State public employment services. This was an increase of 100,000 over the 177,000 placements made the previous year. Several hundred other thousands of handicapped workers found jobs by themselves or with the aid of voluntary agencies.

Speaking at the annual meeting of the National Society for Crippled Children and Adults in Chicago on Thursday, Dr. Theodore G. Klumpp, president of Winthrop-Stearns, Inc., reported that 7,200,000 persons must be added to the Armed Forces and defense industries by the end of 1952 if we are to meet our mobilization objectives. Of this number, he said, 3,000,000 could be obtained by shifting workers from nondefense to defense industries and 1,800,000 others could be gained by normal additions to the labor force. This leaves a deficit of 2,400,000 additional workers.

Dr. Klumpp estimated that of this 2,400,000 deficit, 900,000 could be recruited from the ranks of women and by returning older and retired workers to industry. This still leaves a deficit of 1,500,000 workers, a group equal to the population of Detroit.

WIDER REHABILITATION STUDIED

The only potential source of workers to fill this gap, Dr. Klumpp asserted, is from the estimated 2,000,000 persons with severe, static physical disabilities who could become employable if they had proper rehabilitation services and were selectively placed in

the proper type of work. Dr. Klumpp heads a special task force on the handicapped under the Office of Defense Mobilization to study methods of rehabilitating more handicapped persons and placing them in jobs in support of the mobilization program. The report and recommendations of the task force, he said, will be made within the next few weeks.

Owing to the increased demand for workers resulting from the intensification of our defense mobilization program, the problem today is not so much finding jobs for handicapped persons, but finding handicapped persons to fill vital defense jobs. With modern rehabilitation services, there are hundreds of thousands of successfully employed handicapped persons who would have been classified as unemployable a few years ago. They are the persons who have been responsible in no small measure for Mr. Wilson's optimistic report of last Sunday.

The retooling phase of our mobilization program is largely completed and within the next few months our efforts will be centered on the mass production of defense materiel. As Mr. Wilson warned, this will require increased numbers of workers. The only sources of such workers are the handicapped and aged who are not now at work but who could become employable if given rehabilitation services. This year's National Employ the Physically Handicapped Week slogan sums up the situation clearly and crisply—"America Needs Us All."

The Christian in Politics

EXTENSION OF REMARKS OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 11, 1951

Mr. McDONOUGH. Mr. Speaker, recently there appeared a new book, the author of which is a former colleague of many of the Members of this body. He represented the Twelfth California District in the Seventy-fifth, Seventy-sixth, Seventy-seventh, Seventy-eighth, and Seventy-ninth Congresses. I refer to the Honorable Jerry Voorhis. The title of his book is "The Christian in Politics." The book and the subject commend themselves to all legislators and to all interested in good government.

In the October 1951 issue of Social Order there appears a review of this book by one of our present colleagues, the Honorable CLAUDE I. BAKEWELL, of the Eleventh Missouri District. The gentleman from Missouri sits on a different side of the aisle than did the gentleman from California. That has not, however, prevented him from giving sympathetic treatment to the book. The review from Social Order follows:

THE CHRISTIAN IN POLITICS

(By Jerry Voorhis, Associated Press, New York, 1951, 136 pages)

The Christian in Politics is a challenge to Christians to enter into politics aggressively and wholeheartedly. It is also an indictment of the political smugness and complacency of the people who take for granted that America is a Christian nation and that it will always continue to be such.

The book is a particular call to young Christians to enter politics. The author, an experienced and seasoned politician, gives a practical study on how to enter politics and how to win an election. After reading the book one can use "politician" as a name of honor and not in its usual depreciatory sense. The author points out that the first essential for one who has political ambitions is "to like people and know how to get along with them." While liking and getting along with people might sound like a pleasant vocation, nevertheless this path in politics is not strewn with roses. Mr. Voorhis speaks from the heart and from experience when he warns of the abuse and malignment inevitably cast at the holder of public office who must live in the veritable goldfish bowl.

The author is not satisfied that the Christian voter merely goes to the polls. He insists that it is a duty for Christians to make their influence felt in the political life of America. If one is not actively engaged in politics nor sufficiently interested to seek public office, the author points out how effective one can be politically by taking part in his labor union, farm organization, or any other civic enterprise. While the author urges all Christians to participate actively in politics, nevertheless his wrath is directed at those pseudo-Christian politicians who politicalize their religion or assume that their position on each issue is correct merely because they are Christians, though perhaps merely ostensibly Christians.

The book places politics on a high level, in fact, almost on an idealistic level. "Serving the cause of democracy is serving the cause of Christ."

One might question the extent to which the writer would have the churches take positive stands on political issues. The author correctly contends that the churches take a positive stand on political issues in fulfillment of their responsibility to the welfare of human beings. This is undoubtedly academically true, but as a practical matter the question will always arise as to what issues summon the responsibility of the churches and particularly how far they should go. The author properly points out that unemployment, soil conservation, housing, and old-age pensions are Christian political issues in which the churches should concern themselves. Is he willing to go further and include Federal aid to education, medicine, and the other basic needs of the individual? It appears that the churches themselves are divided on these issues, and there is considerable dissension within the hierarchy and the laity on many of these issues. In the opinion of many, the churches are treading on dangerous ground by espousing too many of the so-called Christian political issues. The author of the book, however, doesn't seem to think that the churches have gone far enough in speaking out on political issues. He wants more political activity from within the churches.

On specific issues the author deprecates extremes and states that the perfect Christian order would be much different from either capitalism or communism.

In conclusion, the book is a wholesome and practical education in politics. It is a clarion call from the political parties for Christians, particularly young Christians, to participate actively in politics. It stresses the need for good, honest, Christian candidates for public office and properly places the blame for the mediocrity of candidates where it belongs—on an indifferent electorate.

CLAUDE I. BAKEWELL,

Member of Congress, House of Representatives, Washington, D. C.

Enforcement of 160-Acre Limitation of the Reclamation Law

EXTENSION OF REMARKS OF

HON. JOHN F. SHELLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 11, 1951

Mr. SHELLEY. Mr. Speaker, Mr. M. C. (Sam) Hermann, quartermaster adjutant of the Department of California, Veterans of Foreign Wars, has prepared a very illuminating statement on the 160-acre limitation issue as now embodied in reclamation law. As you know, a determined effort is now being made by the corporation interests to circumvent the principle of the 160-acre limitation. Sam Hermann has for years been a leader in the fight which the Veterans of Foreign Wars, and particularly the Department of California under his leadership, have been waging to preserve the principle. The corporate farm interests in California have continually intrigued to subvert the law and to deprive family farmers of the benefits of reclamation water. The issue is now being fought again in connection with the Kings River and Tulare Lake project in the State. Sam Hermann is again fighting to protect the rights of veterans and other small landholders. His statement follows:

STATEMENT BY M. C. HERMANN, QUARTERMASTER-ADJUTANT, DEPARTMENT OF CALIFORNIA, VETERANS OF FOREIGN WARS OF THE UNITED STATES

The 160-acre water limitation of the 50-year-old National Reclamation Law is in danger again. I appeal to the many friends of this great law to alert themselves once more, and to insist again publicly and to the proper officials that it be enforced strictly in accord with its original purpose to settle families on land, and that it be preserved from impending attacks.

During the very 10 days when the people of Central Valley were rejoicing over completion of the first great unit of their project, and the Governor of the State of California was dedicating it "to the happiness of our people," two Members of Congress, speaking within an area of huge landholdings in the valley itself, denounced the historic 160-acre limitation that is part of the law that made the project possible and threatened to undertake its emasculatation, if not outright repeal.

According to press reports, one of them called this great bulwark of equity and the family farm erected first by President Theodore Roosevelt, an impractical law, a demagogic law. Another Congressman speaking at the same occasion offered, if necessary, to introduce a bill to throw a cloak of legality over the phony doctrine of supplemental water that enemies of reclamation law have always used as a rallying cry. He seemed to think, by some quirk of the mind, that if you bring water to land that has a little water, but not enough, it isn't reclamation. The founders of reclamation weren't confused by this kind of argument at all, and they applied the limitation to all water that the Federal Government supplied to thirsty land, deliberately and purposefully. The purposes of the Congressman who is now considering trying to amend the

law are equally clear. If he has his way, then thousands of families of veterans and other qualified persons will be denied farm homes, that reclamation law intends they should have, so that a few excess landowners can get the lion's share of the water that the public supplies.

I regret that the Water Resources Policy Commission unintentionally provided the cover behind which the attack on the 160-acre water limitation labeled "supplemental water" is going to be made. The intentions of the Commission in making recommendation 44 about supplemental water are plainly of the best. The Commission is devoted wholeheartedly to the principle of acreage limitation and simply hoped it might have found a more flexible device to secure enforcement. But the technique it suggests is loose and ill-advised and already is being laid hold of, not by the friends of acreage limitation who share its belief in the principle, but by its avowed enemies.

According to the press, one of the Congressmen said cynically that the 160-acre law can be circumvented. The press report did not say whether or not he explained just how the 160-acre water limitation is to be circumvented. But maybe another recent news report from the valley tells that.

A valley newspaper carried the flat headline assertion that "Paying lump sum on piece flat to void 160-acre rule." It was talking about the Kings River and Tulare Lake projects in Central Valley, and it said: "If the single-payment principle is approved by both parties (the United States and the water-users' districts), it would mean no acreage limitations in the Kings River service area, a goal long sought by the KRWA (Kings River Water Association)."

If the Bureau of Reclamation, representing the people of the United States, does what the excess landowners want and permits them to buy their way out of the major purpose of reclamation law—to help people make homes on the land—then the law will be emasculated as surely as if Congress had repealed it, instead—as is the fact—of refusing to repeal it every time it has been tried since 1944.

I cannot believe that the Bureau of Reclamation will scuttle its own law the way the excess landowners evidently hope they will. The Veterans of Foreign Wars of the United States are adamant against any yielding to pressures or to wiles. Our national encampment at Cleveland declared in 1947 when the 160-acre limitation was under open attack: "That we protest any administrative relaxation of the 160-acre water limitation under pressure, whether it be a weakening of the law by acquiescing in mere 'technical compliance,' or by interpreting it to permit publicly financed water for '320 acres to man and wife,' which is an obvious distortion of the original intention of Congress, and an injustice to those veterans and others for whom acreage limitation was intended to create opportunities to farm." We stand on the same ground today, and our opposition covers any and all devices, new or old, that excess landowners may think up to try to take the 160-acre water limitation position from the flank or the rear, when they find that they cannot take it in the open and from the front. I take this means of warning the officials of the Department of the Interior and all friends of reclamation everywhere, what it is that the excess landowners are trying to do now, by the trick of offering to pay water charges in a single sum.

It is not hard to see why excess landowners on the Kings River and Tulare Lake project want to get out from under the 160-acre water limitation. In Tulare Lake alone about 25 corporations own nearly 55 percent of a 300-square-mile district, and 102 indi-

viduals own about another 35 percent. So about 127 corporations and individuals own about 90 percent of the entire 300 square miles in excess holdings under the reclamation law. Public documents report some holdings on Tulare Lake bed of 12,000, 16,000, and 19,000 acres each. Naturally these landowners would like to buy up all the water the public will supply them with, even if it means that other people who want it will not get it. If they are allowed to have their way, they will gain in increased land values all that the water will cost them.

So far as I have been able to find out, there isn't a real farm home in that entire Tulare Lake district. If the Bureau of Reclamation falls for that trick of the big landowners in the Kings River Water Association called lump-sum payment, there never will be any homes there. We want more homes on Kings River and the law says there should be. We want the purposes of the law carried out, not, as the Congressman said and the large landowners hope for, "circumvented."

I think it is time that the holders of excess lands and their public representatives face the fact that the people of the United States approve of acreage limitation. Congress rejected their attempts to repeal the 160-acre limitation in 1944 and again in 1947. In California and all around the Kings River and Tulare Lake project itself, the water users have been approving contracts containing acreage limitation during the past 3 or 4 years, by secret ballot and by vote of around 9 to 1. The public record tells the excess landholders that the great organizations of veterans, of labor, of Protestants, Catholics, and Jews concerned with healthy rural life and a good society have all set their faces against tampering with acreage limitations. Isn't it time to accept this great reclamation law as the will of the people and quit trying to circumvent it? I could go even further. The free world is in crisis. Wherever people abroad have not solved their land problems, there is unrest. Our own Nation is trying to draw the fires of this unrest by helping these nations to solve their land problem. In this way we try to bring them to our side, to join them solidly with the free world. How can we help our friends abroad if, instead of enforcing the national law that was intended to solve them, we create more land problems of our own by ignoring and undermining it.

I invite all organizations and individuals who are devoted to the aims of the 160-acre water limitation to join with me and with organized veterans to reaffirm their faith publicly, and to advise public officers of the Department of the Interior that they have support in resisting all efforts to break down and circumvent the law.

Question of the Week

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. BENDER. Mr. Speaker, now that the Russians have exploded their second atom bomb, it might be a good time to ask, "Whatever became of our civil defense?"

Christopher Columbus

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 11, 1951

Mr. RODINO. Mr. Speaker, it was 459 years ago that an event took place which changed the entire history of the world. A Genoese navigator pierced the curtain of mystery which up until that time had confined fifteenth-century civilization to about one-half of the expanse of the globe. In these days of uncertainty—when the curtain to be pierced is one fabricated of iron—it is fitting that we should pause for a brief time to reflect upon the truly wonderful accomplishments of Christopher Columbus.

The year 1492 was not a cheerful one in western Europe. Christian civilization seemed to be shrinking in area and dividing up into hostile factions—even as today. The Ottoman Turks had snuffed out the last remnants of the Byzantine Empire, had overrun many of the Balkan countries, and soon would be threatening Austria. Emperor Frederick III had been driven into retirement by the Hungarians. In England, the War of the Roses was at an end but the House of Tudor was on shaky foundations. Such was the state of world affairs at the time Columbus was preparing for his great expedition which was to lift the horizons of the world and give new hope and life to a weary and jaded Europe. Within a few years of the announcement of the discovery of the New World an astounding change came over Europe. Columbus by his faith in divine guidance did much to conquer the skepticism and lassitude of his world.

Since that time other vast contributions have been made by Italian immigrants to the physical and social development of the United States; many of them have profoundly affected the destiny of our country. It is a commonplace that the Italians in this country have built the railways, roads, and bridges. Every industry in the United States today feels their impact.

Through the years, Italian immigrants in the United States have taken an active and patriotic part in the civil and military activities of the country. They have, in great numbers, entered every form of business and professional life. There have been judges, legislators, and teachers of Italian origin. During the last half-century literally thousands of Americans of Italian origin have held public office in the United States and served with distinction. Others have been teachers, musicians, and artists. Many had distinguished records in both World Wars. An estimated 845,000 men and women of Italian descent were in the United States Armed Forces in World War II. Twenty out of the 500 Congressional Medals of Honor in the last war went to American boys of Italian lineage.

Everybody knows that Cristoforo Colombo—the first American—discovered America; that Giovanni Cabota first explored its mainland; that Amerigo Vespucci provided its name. But how many Americans know that it was an Italian, Filippo Mazzei, who was among the first men in the American Colonies to urge publicly that the enslaving yoke of England should be thrown off. Mazzei was intimately acquainted with Jefferson, Washington, Franklin, Patrick Henry, and other famous revolutionary patriots. He came to Virginia in 1773 at the invitation of Jefferson and Franklin. There, under the pen name of Furlioso, he wrote articles in Italian exposing the tyranny of the English rule. Jefferson translated them into English and circulated them among the Colonies.

In one of these articles, published in Pickney's Virginia Gazette in 1774, Mazzei penned the phrase:

All men are by nature created free and independent . . . it is necessary that all men be equal to each other in natural rights.

Jefferson later incorporated this phrase into the Declaration of Independence in the form of the immortal "all men are created equal."

Today we find this creed challenged by the threat of totalitarian aggression and the free peoples of the world uniting to meet the danger. On September of this year another traveler came from the Old World to the New to explore unknown horizons. Premier Alcide de Gasperi, head of the Italian Government since 1945 and prime mover of the Italian Communists' defeat in the 1948 elections, arrived on these shores to ask Congress for revision of the Italian Peace Treaty. He urged modification of its military and economic restrictions, to enable Italy to participate fully as a member of the North Atlantic Treaty Organization. He also asked that increased industrial orders be placed in Italy and that assistance be given to facilitate the emigration of the country's surplus population. The United States, Britain, and France responded by calling on the Soviet Union to revise the harsh peace treaty and bring Italy, the birthplace of Christopher Columbus, into the United Nations.

No one can predict what lies over the horizon. But if we face the future with the same faith and determination that Columbus displayed in exploring the unknown nearly 500 years ago, surely the free world can set sail with confidence despite the perils confronting it.

A Black Market in Meat

EXTENSION OF REMARKS OF

HON. BLAIR MOODY

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Thursday, October 11, 1951

Mr. MOODY. Mr. President, I ask unanimous consent to have printed in

the Appendix of the Record an editorial entitled "Halting a Black Market," published in the St. Louis Post-Dispatch of October 1, 1951, relating to the threat of a black market in meat.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

HALTING A BLACK MARKET

Perhaps the most significant result of the Office of Price Stabilization's check of the Nation's slaughterhouses is the discovery that a black market in meat may be in the making.

OPS enforcement employees learned that several car and trailer loads of ungraded and unmarked beef had been shipped from Wichita, Kans., to several eastern cities. The investigation is continuing in an effort to determine just how widespread the activities of the Wichita firm have been.

President Truman predicted just such an occurrence when he reluctantly signed the new economic-controls legislation in August. One of the worst provisions of the law, he said, was the Butler-Hope amendment wiping out slaughter quotas on beef and thus encouraging the return of the black markets.

Nearly every available OPS employee was used in the recent slaughterhouse inspection. Obviously the agency can't continue to operate on that basis. When enforcement relaxes because of lack of personnel, chances are favorable for black-market operations. The real solution is to improve the law so as to make enforcement easier. Congress should eliminate the Butler-Hope amendment.

Forty-fifth Division Association Resolutions

EXTENSION OF REMARKS

OF

HON. TOM STEED

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 11, 1951

Mr. STEED. Mr. Speaker, under leave to extend my remarks, I include herewith four resolutions adopted by the Forty-fifth Infantry Division Association, more popularly known as the Thunderbird Division, which held its sixth annual convention in Washington on October 5 and 6, 1951.

In peacetime this division is known as the Oklahoma National Guard. It was recalled to active duty September 1, 1950, and is now on duty in Japan. While primarily an Oklahoma division, it has drawn its personnel from every State in the Union and numbers citizens of every State among its heroes of World War II.

Oklahomans are proud of this gallant fighting division and of the tens of thousands of Americans who have made their contribution to its unexcelled record of valor in defense of this Nation.

The resolutions follow:

RESOLUTION FOR THE CONGRESS

We are mindful that we have accumulated, in the civilization which we enjoy today, great benefits derived from specific human values gained and achieved by the suffering and endurance of our forefathers, and that they did not fall to us without great sacrifice. These human values are expressed very distinctly in the Declaration of Independ-

ence and in our Constitution and its Bill of Rights.

We submit that it is more righteous to preserve and protect these great human values than it is to compromise them or lose them by complacency.

We are mindful that millions of people in the world today pray for peace, not only in Korea but also in the future course of the conflict between the free countries of the west and the Soviet Union and her satellites. We fully subscribe to the justification for the sacrifices now being made in Korea because it demonstrates the integrity of the United States and our allies and it serves as a warning to future aggressors.

We submit that our desire for peace must be founded on our determination to preserve intact the human values for which our forefathers fought and died.

We, therefore, urge the Congress of the United States to support adequate preparedness in order that the United States may achieve a military position which will permit it to take the diplomatic offensive with the backing of sufficient forces in being to give validity to its foreign policy rather than as we have done in the past—to speak hopefully but often futilely because of an improvident military policy.

RESOLUTION FOR THE SECRETARY OF DEFENSE

Congress has recently passed Public Law 51, known as the universal military training and service bill. Under this law a commission was set up to draw plans for a universal training system effective as universal service is phased out and the reduction of over-all military strength is permissible.

We commend Congress on the passage of this act so long advocated by veterans' organizations and others who have been concerned in adequate provisions for national security.

Approximately 511 days of actual combat in a period of 2 years in the recent war has made clear to the members of this association that in spite of the great contributions of other services and other means, decision in war depends on men on the ground.

We have seen the great and unequal burden which men on the ground carry in war and the unequal casualties which he must suffer and the unequal hardships he must endure.

We, therefore, urge the Secretary of Defense to so apportion the troop strength to be trained by the various services so that those trained for the Army will be in sufficient numbers so that the Army can undertake its missions in any future war without being exposed to the almost disastrous shortages of infantrymen that occurred in World War II.

RESOLUTION FOR THE CONGRESS

We have noted that appropriate bills have been introduced in the Congress providing that the infantry soldier serving in front-line units will receive additional pay for hazardous duty. We commend those Members of Congress sponsoring such legislation but we deplore the lack of concern displayed by those Members responsible for preventing these measures from being submitted to a vote.

Our 511 days of actual combat in 2 years during World War II and our more than 28,000 battle casualties will not let us forget the heavy burden carried by the infantryman. In World War II, 30 percent of the Army, including the Army Air Forces, were infantrymen. This 30 percent suffered over 70 percent of the battle casualties, including the Army Air Forces. In the face of these facts is it in any sense logical to give extra pay to flyers while denying it to the infantryman whose burden is so much heavier? Does the flyer remain exposed to enemy action 24 hours a day for periods as long

as 3 and 4 months? Is the flyer exposed to rain, snow, jungle, desert, muck, and mud? Does the flyer in Korea risk his life and endure hardships in any way comparable to the infantryman?

We, therefore, urge the Congress to take immediate action to authorize hazardous-duty pay, as sealed in the Career Compensation Act of 1949, for all infantrymen assigned to infantry battalions in combat and to selected infantrymen at regimental level.

**RESOLUTION FOR THE SECRETARY OF THE ARMY
AND THE CHIEF OF STAFF**

During World War II, the Forty-fifth Infantry Division took part in four major amphibious operations. It stood in the path of the enemy break-through at Salerno and turned back the Germans who were determined to liquidate that beachhead. It drove into the mountains of central Italy in the Cassino-Venafro districts in actions of high gallantry. In a 4-day battle it stopped the main attack of Kesselring on the Anzio Beachhead in an action which Kesselring himself labeled "The epic of heroism of American arms." It absorbed this major blow by five German divisions and destroyed the German forces which for 4 days beat against it. It later fought gallant actions in France and Germany. In total the division was in combat for 511 days—more days of fighting than any other division in the European area.

This division, in comparison with all other divisions which have received Presidential citations, is entitled to such an award. Recommendations have been submitted.

We ask and urge you to personally review these recommendations and do justice to the Forty-fifth Infantry Division by recommending this belated reward, which it has earned on more than one field of battle.

**Independence of Grand Juries Should Be
Preserved**

EXTENSION OF REMARKS

OF

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 11, 1951

Mr. HILLINGS. Mr. Speaker, today my colleague the gentleman from New York [Mr. KEATING], and I have introduced legislation to authorize in certain cases the appointment of special counsel and investigators to assist grand juries in the exercise of their powers. It will also prevent the discharge of Federal grand juries by the court once notice is given that an inquiry has been undertaken.

It is essential that Federal grand juries should be autonomous in that they should be empowered to make and conduct such investigations as they in their judgment may deem necessary. Recent developments in the case of a Federal grand jury in San Francisco indicate that there is some doubt as to the investigatory powers of Federal grand juries. There is evidence that efforts may have been made to make Federal grand juries subservient to the wishes of the Attorney General's office.

In order to preserve the independence of the judiciary and its component parts, it is essential that the executive branch of the Government exercise no control over the rights of grand juries to con-

duct investigations. This legislation will strengthen the powers and independence of the Federal grand-jury system. It is particularly important that the independence of the Federal grand juries be maintained in view of the numerous disclosures of corruption in various levels of government which will require thorough and honest investigation by Federal grand juries throughout the Nation.

Such legislation has been requested by the Association of Grand Jurors of the City and County of San Francisco and other similar organizations.

We shall urge the House Committee on the Judiciary to consider this legislation at the earliest opportunity. The questionable circumstances of Federal grand-jury operation in San Francisco stresses the need for immediate action in this regard.

The following is the text of the bill that we have introduced:

A bill to authorize in certain cases the appointment of special counsel and investigators to assist grand juries in the exercise of their powers

Be it enacted, etc., That the analysis of chapter 215 of title 18, United States Code, is amended by inserting immediately after item 3328, the following new item:

"3329 Powers of grand jury, special counsel and investigators, limitations on discharge, signing of certain indictments, charge"

SEC 2 Title 18, United States Code, is further amended by inserting immediately following section 3328 a new section as follows

"§ 3329 Powers of grand jury, special counsel and investigators, limitations on discharge, signing of certain indictments, charge

"(a) Any grand jury impaneled before a district court may inquire at the instance of the court or an attorney for the Government, or at its own instance, whether a crime cognizable by the court has been committed

"(b) Any grand jury undertaking an inquiry upon its own initiative shall be entitled to the services of a special counsel and special investigators, not exceeding in number, who shall be appointed by the court before which any such grand jury was impaneled with the approval and upon the request of 12 or more jurors. Any such special counsel shall be entitled to compensation at the rate of \$, and any such special investigators shall be entitled to compensation at the rate of \$ per day for each day engaged in investigating or presenting evidence in connection with such inquiry. Such compensation shall be paid by the United States marshal on the voucher of the foreman of the jury out of any funds available for the payment of fees to grand and petit jurors.

"(c) Whenever a grand jury shall give notice to the court that it wishes to undertake an inquiry, such grand jury shall not be discharged by the court prior to such time as the court shall receive notice that such inquiry has been completed. The notice provided for in this subsection shall be given in writing signed by 12 or more members of the grand jury.

"(d) Upon the completion of any inquiry undertaken by a grand jury upon its own initiative, the grand jury may prepare one or more indictments upon the concurrence of 12 or more jurors and return such indictment or indictments to the judge in open court. Any such indictment shall be signed by the foreman and by the special counsel, if one shall have been appointed pursuant to subsection (b).

"(e) The district judge, on empanelment of a grand jury, shall charge the grand jury of its rights under this section."

An article recently appeared in *Fortnight* magazine on October 1, 1951, reciting some of the facts surrounding the questionable situation in San Francisco. The article follows:

ROUND-UP

A number of profound and thoughtful Americans have expressed alarm and deep concern recently over symptoms of what they variously term "the flight from honor," "a growing insensitiveness to evil," "the issue of decency in public life against indecency." These words cannot be dismissed as politics for they are voiced from both sides of the political fence—ominous warnings of a malignant sickness upon the American spirit.

Herbert Hoover, a distinguished American who has lived honorably in the public service long enough to have acquired much stature, in his most recent public comment, put it this way. "Our dangers are that we may commit suicide from within by complacency with evil . . . here at home"

What was "the old reactionary" talking about at an Iowa picnic? To cope with evil there are corps of cops, courts, and commissions by the dozen. There are officeholders, appointive and elective, and an army of able civil-service careerists.

AUTHORITY

These legions, to the ordinary citizen, are almost overwhelming in their robes, uniforms, and with their gleaming badges of authority.

But it was rediscovered in San Francisco quite recently that there is yet another body—separate and apart from all this established authority—concerned with evil doing, but detached from the temptations of those accustomed to being sustained in position and power.

This agency, the institution of the grand jury, thoughtfully provided for by pioneers in the democratic process, was beginning to emerge last fortnight in San Francisco and elsewhere as a mighty force for public decency, though it has been right here all along.

More than a year ago, July 10, 1950, by law and old legal tradition, a new Federal grand jury was sworn in in San Francisco, a routine every 4 months. Twenty-three citizens of good reputation were chosen for this public duty and, but for reasons of ill health or grim personal circumstances, no one was excused.

ROUTINE

There was nothing out of the ordinary in the swearing in of this new grand jury in July 1950. Its membership was a cross section of a democratic citizenry, decently ordinary, just as juries ought to be.

There was oath-taking, instruction from a black-robed judge, and once a week, at first, the jury met to hear certain evidence and, upon advice and direction from the United States attorney assigned to it, indictments were returned.

For the most part, this process was proscribed and commonplace. Indictment for theft of Government pension and veterans' benefit checks were most frequent, though a jury of private citizens seemed hardly necessary to assess wrongdoing in such a plain and simple act.

Richard E. Seward was chosen foreman of this grand jury, a conservative business and professional man. Seward, an investment counsel, a member of the Montgomery Street brief-case set, has offices in San Francisco's towering Russ Building, a home in Piedmont across the bay, and by long custom he has confined his politics to voting regularly and for the best man in his judgment, Republican or Democrat.

ZAMLOCK CASE

During the course of its routine duty doing, some aspects of a previously tried Federal case came to the jury's attention, the so-called Archer Zamlock case, a most sordid affair involving a prominent San Francisco attorney, subsequently convicted, and a notorious trafficker in narcotics, Paul J. Steffen, who pleaded guilty.

In pronouncing sentence in this case, Federal Judge Waties Waring, a visiting jurist from the East, elaborating unusually, had this to say: "This case has many collateral facets to it, which could not be investigated or fully looked into in the trial of this case. * * * I feel, however, that some of the matters that were aired in this trial are quite worthy of being investigated further. They cry aloud for scrutiny and investigation by the proper investigational departments of the United States Government, grand jury or United States attorney or FBI or whatever department is determined should take it over."

From the jury's initial interest in collateral facets of the Zamlock case, the honeymoon between the Seward grand jury and the United States attorney's office chilled. The then United States attorney, Frank Hennessy, since retired, displayed a strange reluctance to pursue the collateral facets of the Zamlock case and referred to Judge Waring disparagingly as a talking judge, implying there was nothing to these grave suspicions.

FACTS

Despite lack of enthusiasm and support from Mr. Hennessy, the Seward grand jury found itself knee deep in the slough of collateral facets. Assistant United States Attorneys Joseph Karesch and Charles O'Gara, however, were carefully diligent and most helpful.

The jury's trial took a curious course, involving the local office of the Bureau of Internal Revenue. The need for investigative help from the FBI was manifest and was sought, but was not forthcoming. United States Attorney Hennessy was less than helpful.

It is incidentally noteworthy that two of Zamlock's former law partners, James Martin MacInnis and Vincent Hallinan, somehow were involved. These two had previously defended Harry Bridges, Soviet Russia's west coast water-front advocate, and had been cited for contempt for their conduct in this case before the court. Both attorneys have frequently charged that the Government was out to get them for their selfless efforts in behalf of civil liberties.

PLOT

If such a plot ever existed, United States Attorney Hennessy seemed not to have been in on it, for press clippings indicate his extreme distaste for further pursuit of the curious collateral facets of the Zamlock case.

The jury's transcript of testimony, now deeply involved in affairs of the Revenue Bureau, measured 1,000 pages or more. Help from the FBI in checking out the statements of various witnesses had been sought months before, but still was not forthcoming. In a resolution of the jury seeking an extension of its tenure, the need of help from the FBI was emphasized and their term was extended by Federal Judge Michael J. Roche. But that was not enough for Mr. Hennessy or the Department of Justice in Washington.

The jury's foreman was a most patient, abiding man. The conservative, methodical procedure of finance was his habit, but grand jury service can try men's souls. Apparently, his was tried.

THE RUNAROUND

The original reference to collateral facets of the case in the Judge Waring sentencing of Zamlock and Steffen had mentioned the FBI. Subsequently, repeated requests for this at-

tention had been made by the jury. Letters and finally a Government teletype message under the signature of Mr. Hennessy had been dispatched to Washington, without result, and then a telegram from Jury Foreman Seward was ignored.

His telegram unanswered. Foreman Seward decided upon more direct action. On March 27, he telephoned Washington and reached Assistant Attorney General James McInerney, in charge of the Criminal Division, insisted upon the FBI investigation and outlined the jury's difficulties in pursuit of their sworn duty. McInerney promised attention and referred Seward to two of his agents in San Francisco at the time on the Tokyo Rose case.

These two men reviewed the jury's study and agreed to recommend FBI attention. This investigation, first sought in November 1953, began April 3, 1951.

WILD WEDNESDAY

Meanwhile, the income-tax matters and the Revenue Bureau aspect of the case had been turned over to another Federal grand jury, the Taylor jury. This body heard the case from young O'Gara, but had barely picked up the ball when a most surprising thing happened. The press referred to this day, May 16, as wild Wednesday.

Federal Judge Louis E. Goodman summoned the Taylor jury before him and summarily halted their investigation into income-tax matters, terming its action a most serious affront to the laws of the United States.

Judge Goodman went even further in his lecture to the Taylor jury, ruling that a Federal grand jury was not an investigative body and was restricted in its interest to those matters brought before it by the court or the United States attorney's office. Too, the judge scolded young Attorney O'Gara for even presenting the income-tax matter to the new jury without instruction to do so from his boss, the new United States attorney and San Francisco politico, Chauncey Tramutolo.

THE TECHNICAL GAME

Judge Goodman's findings failed to square with many a higher court ruling defining the broad and historic function of the grand jury. On this point, as recently as 1942, Justice Frankfurter decided a case in which the power of a hold-over grand jury to indict for an income-tax violation was challenged. The Justice ruled the court cannot restrict a grand jury's broad investigative powers and added, "So to hold is to make the grand jury a pawn in a technical game instead of respecting it as a great historical instrument of lay inquiry into criminal wrongdoings."

Meanwhile, the Seward holdover jury was in recess awaiting the report from the FBI on the complicated matters still before it. On June 5 a preliminary report was forthcoming from the investigation bureau. It was heard, and the body adjourned to meet again by court order on July 3 to hear the full report.

When the jury met that day they didn't know a loaded gun was pointed at their head, that Federal Judge Edward P. Murphy was taking aim. And, as events proved, his aim was good. The blitz on the grand-jury system seemed complete when Judge Murphy pulled the trigger that day and announced that he intended to dismiss the Seward grand jury, following the Independence Day holiday, as it had been around too long and had failed to complete work and even impugned its honest intent.

THE AX

Judge Murphy made good his threat, on schedule, despite the protest of 23 puzzled jurors, whose work couldn't have been completed earlier because of the disinclination of the United States attorney in San Francisco and the Department of Justice in Washington to provide them with the tools to look

into collateral facets of the now-famous Zamlock case.

Judge Murphy then proceeded to direct the new grand jury, just being sworn in, to keep in line, pointing out that the court called the jury and the court could fire the whole body if it conducted itself in the manner of the late Seward grand jury.

To the San Francisco News this looked like intimidation, while the Chronicle editorialized that Judge Murphy's action was right and proper. The Hearst papers, the Examiner and the Call-Bulletin, kept out of the Murphy decision editorially, but distinguished themselves in covering the affairs of the grand juries trying to do a job on the ugly implications of conduct in the Bureau of Internal Revenue dug up by the Seward grand jury.

But this seemingly high-handed action of the Federal district court in San Francisco did not go unnoticed.

Reporter Dick Hyer, covering the story in its beginning for the Chronicle and in its final, feverish stage for the Call-Bulletin, tripped to Washington to cover the appearance under summons of Assistant United States Attorney Charles O'Gara before the Senate Finance Committee. The committee, debating billions in a new Federal income tax bill, wanted to hear from O'Gara, who had sparkplugged the tax investigations before the Seward and Taylor grand juries.

THE FILL-IN

The committee listened to O'Gara for 2 hours and 20 minutes instead of the scheduled half hour. Earlier, Hyer reported, the Department of Justice sought to thwart the O'Gara appearance before the committee, seeking instead to have them hear the Chief Assistant from the United States Attorney's San Francisco office, Robert McMillan.

O'Gara, back in San Francisco, apparently was very much in Mr. Tramutolo's dog house. He was immediately taken off criminal cases and placed in the civil action department. "Just routine," said his boss.

Meanwhile, Senator RICHARD NIXON, Republican, California, heard from home, as did Senator WILLIAM KNOWLAND and Congressmen HAVENNER and SHELLEY. The Association of Grand Jurors of the City and County of San Francisco passed unanimously a resolution asking the legislators to write into law a full definition of grand jury powers, as implied in many historic decisions, but frequently distorted and denied under local judicial ruling.

THE BILL

Senator Nixon has gone to work on this measure.

And it was noted last fortnight that judicial opinion and attitude in San Francisco, like the weather, changes quickly.

Judge Murphy, seeming to sense the shift in popular sentiment toward the institution of the good old grand jury, issued a strong statement. The grand jury, in his most recent opinion, was a mighty fine thing, with power to investigate unlimited and worthy of help from any agency of the Government, the United States attorney, the court, the FBI, where and when it needed it.

Can Kiwanians Get Mad and Stay Mad?

EXTENSION OF REMARKS

OF

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 11, 1951

Mr. HILLINGS. Mr. Speaker, Mr. Ben Dean, past president, Kiwanis International, has written a vigorous editorial

which recently appeared in the October 1951 issue of Kiwanis magazine. Mr. Dean points out the fact that one of the great objectives of Kiwanis is to promote economy, efficiency, and integrity in Government at all levels. His vigorous editorial suggests a course of action for the furthering of this objective.

As a member of the Arcadia, Calif., Kiwanis Club, I was deeply impressed by this fine editorial, and I recommend it to all my colleagues.

The editorial follows:

CAN KIWANIS GET MAD AND STAY MAD?

These are times that cry out for Nation-wide public indignation at the low state of morals in public office.

What is needed is a new organization called Public Indignation, Inc., and every Kiwanian should be a charter member.

Holders of high public office and their political appointees have interpreted the 1948 election, when only half the people voted, as a national indifference to venality among elected officials.

Thus we are subjected to the nauseating spectacle of deep freezers and mink coats and influence peddlers and political judgments.

Thus we see administration officials ridiculing and obstructing congressional committees who bring the Hissés and other Communists to trial, who expose the slimy trail of RFC loans, who unearth the underworld connections of Costellos and other racketeers and dope merchants with law-enforcement agencies.

There are signs here and there that the people are disturbed. A senatorial committee, over bitter opposition, seeks to set up a code of conduct for public officials. Herbert Hoover, a wise and incorruptible elder statesman, catches the ear of the Nation with a timely speech on honor in public office.

Time magazine gives wide currency to a Cleveland Press editorial entitled "Can't We Tell Right From Wrong?" and the St. Louis Globe-Democrat stirs the conscience of its readers with an editorial, "Low Estate of Public Morals."

Yet unremoved and unrebuked are those who have debased the moral fabric of our Nation.

Where lies the blame? With us, the people. We make the Government. With our votes, or our failure to vote, we elect the public officials. A repetition in 1952 of the 1948 election when only 50 percent voted may well seal the fate of the American Republic.

Can Kiwanians get mad—and stay mad?

Or have we, who claim to be community leaders, lost, as so large a segment of the people seems to have lost, the capacity for a sustained sense of outrage at the base and shoddy in public service?

The fourth objective of Kiwanis International for the current year is: Promote economy, efficiency, and integrity in government at all levels.

Did you get that? Integrity.

This is the official policy of Kiwanis International.

Newspapers and others have a right to ask, as did the Chicago Tribune recently, Do we mean what we say; are we willing to back up high-sounding principles with action?

Few organizations in America have the seasoned leadership, the established facilities, the public prestige to implement a program of public indignation as does Kiwanis International.

To date the editorials and speeches and sermons condemning the low state of public morals have been simply unorganized protest against a condition that cries out for remedy.

The time is ripe for some organization of decency to crystallize the protest, and who better than Kiwanis?

Let every Kiwanis Club pass a resolution with teeth in it, and send a copy to the White House, to its congressional representatives, to the governor of its State, and the mayor of its city, and see that it is publicized.

Let every club schedule soon a program in which a competent speaker explores the low state of morals in public office and the causes and remedies.

Let every club develop among its own membership able speakers who will appear before other community groups to arouse the indignation of the community.

Let every club make it a major objective for the next 12 months to keep alive this public indignation.

Kiwanis has the power and the influence to mold a public opinion that could sweep the country and develop an indignation that would force the removal of the base and unfit.

There never was a clearer mandate for Kiwanis International to use its great influence to enforce its historic ideals of good citizenship.

Can Kiwanians get mad—and stay mad?

Nation's Safety Inspiration

EXTENSION OF REMARKS

OF

HON. AUGUSTINE B. KELLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 11, 1951

Mr. KELLEY of Pennsylvania. Mr. Speaker, last week's National First Aid and Mine Rescue Contest, held in Columbus, Ohio, was such an outstanding event, and so important to all of us, that it merits official recognition by the Congress. I am, therefore, inserting a brief summary in the RECORD at this time.

Sponsored by the United States Bureau of Mines, producing companies, and organizations of mine workers, this meet brought together 70 teams from 10 coal-producing States. Known as the "greatest safety show on earth," it served as an accident-prevention inspiration not only to coal-industry management and labor, but also to everyone else interested in making our Nation a safer place to work, and to live.

The Honorable Frank J. Lausche, Governor of Ohio, attended the contest and remarked that such an impressive exhibition should make all industrial workers more conscious of safety practices. The Honorable Millard Caldwell, Federal Defense Administrator, had this to say of the contest:

It is a timely demonstration of skilled teamwork which must be developed by civil defense rescue teams throughout the Nation. Such trained teams will save many thousands of lives in the event of an atomic attack on our cities.

Winners of the first aid event were: Philadelphia & Reading Coal & Iron Co., Maple Hill Colliery, Pottsville, Pa., first; Republic Steel Corp., Indianola Mine, Indianola, Pa., second; and Consolidation Coal Co. of Kentucky, mine No. 214, Jenkins, Ky., third.

The mine rescue championship was won by the United Mine Workers of America, District 16, Kitzmiller, Md., with the U. S. Steel Co. Robeno Mine,

Uniontown, Pa., second, and Consolidation Coal Co. of Kentucky, Clover Splint Mine, Clossplint, Ky., third.

The Hanna Coal Co. Dun Glen No. 11 Mine, Dun Glen, Ohio, was winner of the combination first aid and mine rescue event, in which that team had no competition.

Members of these teams and their sponsors deserve the Nation's congratulations, as do all the other men who took part in the safety meet. Today they are all back on the job with a renewed determination to carry out the principal objective of the contest—the promotion of safety in mining.

Mr. J. J. Forbes, Chief of the Health and Safety Division of the Bureau of Mines, was chairman of this highly successful affair. He was assisted by other Bureau experts, by members of State mining departments, and by representatives of the mine operators and unions. To them we owe a vote of thanks for their efforts in calling America's attention to the value of safety practices and of first aid and rescue training.

Problems Confronting Banks and Bank Supervisors

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Friday, October 12, 1951

Mr. SPARKMAN. Mr. President, at a recent meeting of the National Association of Supervisors of State Banks in St. Louis, Mo., the Secretary of the Treasury, Hon. John W. Snyder, delivered an address which high-lighted the problems presently confronting not only bank supervisors, but also the banks themselves.

Mr. Snyder points out that the banking industry holds a front-line position in the fight to preserve a stable economy. He advises that they exercise care in their lending and investment policies and urges that they work steadily to increase their ratios of capital to risk assets.

The Secretary's talk is so timely and his suggestions so germane to the welfare of our national economy that I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

RESPONSIBILITY AND OPPORTUNITY

I was very pleased to be asked by your president to speak on this program, for it gives me a chance to visit with you again and to talk over matters of mutual interest. I recall with great pleasure the many happy associations I have had with your group in past years, and especially the last meeting I attended in Reno, Nev., 2 years ago. I always find a friendly informality about your meetings, which strikes me as perhaps one of the reasons why you are able to get so many things done.

This fiftieth annual meeting of your association marks a full half century in which your group has devoted itself to promoting the ideals of better banking. Over this long

period you have played a substantial role in the development of more efficient, more uniform, and sounder banking practices, to which our banking structure owes much of its present strength.

I appreciate especially the part you have played in welding our dual banking system into a smooth-working unit, through the coordination of your thinking and policies with those of the Federal authorities, especially with the Comptroller's office, which is part of the Treasury. Today, when the international emergency has placed an increased strain on the Nation's economy, this sharing of common aims and common policies in the banking field will contribute much to the over-all success of our defense effort.

As a nation we are facing today the most crucial threat that has yet confronted us. Upon the way we unite to meet this threat depends the very existence of our Nation and the freedoms we cherish. The stakes are high, and we can afford no delusions as to the aims of the aggressors who seek to engulf the world, and principally us, with a flood tide of communism—a tide designed to wipe out the ideas and ideals which have inspired the life of our Nation and which stand as a beacon of hope to other freedom-loving nations.

To insure a successful outcome of our great defense effort we must all share in the responsibilities which are ours, as groups and as individuals, in preserving our democracy. Not only the selected few who are asked to risk their lives on the battlefield, but all of us on the home front, must be willing to assume an increased responsibility in developing our national strength.

Closely paralleling the importance of the task of building a powerful military establishment to forestall threats to our national security, is that of building a sound economy to combat threats to our economic security.

Those who are able to contribute to the actual strengthening of our economy may well feel that they are fighting shoulder to shoulder with their sons at the front in the war against Communist aggression.

In this effort it is not enough that we strive to keep our economy strong and stable during the years of the defense program alone. It is highly important that we build the foundation now for a continued healthy economy after the security of our Nation is assured.

In the fight to preserve a stable economy, the banking industry holds a front line position. As the principal suppliers of credit, the banking industry has a grave responsibility to shape its loan and investment policies toward assuring the financial soundness of our national economy.

A primary requisite now is to hold unnecessary borrowing to a minimum. As the defense effort broadens—and it is expanding rapidly now—the volume of bank loans needed for defense uses may be expected to rise. It is essential that our defense industries be provided with the necessary capital. But as defense loans increase, loans for less essential civilian purposes must be reduced if we are to avoid the inflationary consequences of an overexpansion of bank credit.

You are no doubt aware that total bank loans in the 12 months ended June 30 showed the largest increase ever recorded for a comparable period—an increase of \$12,000,000,000 in a single year. Some of this borrowing was basically of a speculative nature.

As experience has demonstrated, when prices are rising and business profits are high there is often a tendency to assume that those trends will continue. Both borrowers and lenders are inclined to evaluate the high profits as if they are more or less permanent. Under such conditions, nearly everyone wants to borrow money in order to buy something, build something, or expand his business. This human tendency has undoubtedly been responsible for a substantial part of

the great loan expansion of the past year. When everyone has the urge to borrow, there is probably more than usual danger that bad loans will get into bank portfolios, since lenders are likewise affected to some extent by the same overoptimism.

The buying boom of the past year has brought new problems in appraising the soundness of loan collateral. This responsibility of the banking system is made much more difficult this year by the many uncertainties in the present business outlook. The conflict between deflationary factors in some parts of the civilian economy, and inflationary forces arising from the defense program, creates an unusual variety of risks. Inventory losses may be suffered by some businesses, where demand has suddenly fallen off or prices have dropped sharply, while other businesses may reap unusual profits. Under such circumstances, an unusually careful selection of loans and a diversification of risks is clearly called for.

The responsibility of bank supervisors is increased by the fact that bank capital in relation to risk assets is lower than at any previous time in the past two decades. The proportion of capital accounts to risk assets last December 30, for all insured commercial banks, averaged less than 18 percent. This compares with a prewar figure of over 27 percent in 1939.

I have spoken of some of the increasing responsibilities which are falling on the banking system in assuring the effective functioning of our great defense effort. You, as bank supervisors, can do much to bring to the many bankers with whom you come in contact the vital importance of their participation in this effort. Moreover, you can point out to them how they, by accepting their responsibilities, not only have an opportunity to serve their Nation but at the same time have unusual opportunities for strengthening the future security of their own banking institutions.

The present financial situation offers an opportunity seldom equaled for improving a bank's loan position.

Secondly, conditions have become more favorable for building up bank capital, both through retention of earnings and through sale of capital stock. Bank operations recently have profited from the high demand for loans, and banks generally are now in a very favorable position for building up capital funds. Gross earnings of all insured commercial banks have been climbing since 1938. They amounted to over 8 percent of capital accounts last year, a figure exceeded only during the war years.

Capital accounts have, in fact, been expanding steadily since before the war, but the increase has not kept pace with the rise in risk assets. Last year, capital accounts of insured commercial banks increased by \$632,000,000, the major part coming from additions to surplus. But risk assets in the same period rose by more than \$11,000,000,000.

Deposit insurance should not be regarded as a substitute for adequate capital. The fact that the present low capital ratio is close to those at the top of two major speculative credit booms should warn the banking system of the need for rebuilding capital accounts.

A third opportunity for banks today lies in the better prospect of encouraging savings during this period of full employment and high incomes. Department of Commerce estimates indicate that personal savings in the second quarter of this year increased by a greater amount than in any quarter since 1945. While this may have reflected an unusual situation, there is little doubt that savings are easier to accumulate today than they are likely to be in more normal times.

Our defense bond campaign this fall, with its Nation-wide advertising program, is doing a great deal to make people

savings conscious. Our objective, as you know, has been not merely to sell savings bonds, but to promote the habit of thrift. The tremendous increase in all forms of personal savings during the past 10 years, I believe, has reflected in part the effectiveness of this program.

In our present campaign, we are stressing the fact that a period of high economic activity like this, when incomes are high and nearly everyone has a job, presents a golden opportunity to every individual to accumulate a financial reserve.

The development of a habit of systematic saving contributes to economic stability in both booms and recessions.

There is one other matter in which banks might well take better advantage of their present opportunities. That is in developing a better trained personnel. To raise the level of understanding of banking and financial matters among bank employees, I believe, would not only be worth money to the individual bank, but would benefit the entire banking industry.

Bank supervisors can have considerable influence toward such improvement. Excellent work is being done today in providing advanced training by such institutions as the American Institute of Banking, the Rutgers Graduate School of Banking, the University of Wisconsin School of Banking, the Pacific School of Banking, as well as by various others. An increase in demand for such facilities would undoubtedly give rise to many more schools throughout the country designed to meet the special needs of bank employees.

Modern day banking calls for a working knowledge of many aspects of economics as well as finance and business. Probably no one problem is giving our bankers more concern today than the related problems of inflation and deflation, particularly in view of their importance in bankers' decisions on investment and loan programs.

For instance, today, on the one hand, we read in the papers that commodity prices have fallen; that warehouses are bulging with inventories; that retail buying has fallen off; that stores are having difficulty moving their stocks; that lack of demand has caused cutbacks in consumer goods production; and that these and other indications point to a deflationary situation.

On the other hand, we are warned that the situation is actually inflationary, and that the important thing is to look ahead to shortages of consumer goods when the defense program gets fully under way.

The surprising thing is that both of these statements are largely true. When consumers and distributors over-bought last fall and early this year, in fear of imminent shortages, they overlooked two important things, the length of the tooling-up period required for defense production, and the immense productive power of American factories. The prices that were forced too high are now being adjusted, and the goods that were bought in excess of needs are being digested, while consumer buying lags.

But the underlying inflationary forces are already making themselves felt. Despite all the talk about current deflationary pressures, the broad wholesale price index of the United States Department of Labor—made up of nearly 900 commodities—has declined no more than 4 percent from its extreme peak, and has shown practically no further decline since July. Very definite and positive inflationary forces account for this firmness in the price index.

Personal income is steadily rising, while the production of civilian goods, to be bought with this income, is affected by increasing restrictions on the use of critical materials needed for defense. Rapidly expanding defense expenditures have shifted the Federal budget heavily to the deficit side, even on a cash basis. Bank credit, after leveling out for several months, has again

started to expand. Business loans, real estate loans, and other loans of weekly reporting member banks, in recent weeks, have all reached new record high levels.

The effect of these pressures on prices and living costs may be held back for a time, however, while present excess supplies of various consumer goods are being liquidated. But the most intensive phase of our rearmament effort lies ahead of us. In the coming months we will inevitably see an increasing impact of military production on the civilian economy—a situation in which inflation thrives. Under the existing revenue tax law, not including the tax bill being considered by the Congress, a budget deficit of about \$10,000,000,000 is indicated for the current fiscal year. In the following year, with current tax rates, the deficit may be twice this figure, or more, under the present schedule for defense expenditures.

A Government deficit, of course, means that excess funds are being added to the spending stream. If the individual funds are spent, prices will be bid up, and another round of inflation will get under way. If the money is saved, price advances may be forestalled, and the funds will be available for spending later over a more extended period.

During this defense emergency, we can do much toward maintaining sound and stable conditions by avoiding the many potential sources of inflation in the civilian economy. In the efforts of your organization to maintain a sound banking system, I know you will keep in mind the importance of the various operations of State banks in the economic welfare of this country.

I know that you will take advantage of the many opportunities you have for bringing about a better understanding of the role that banking and bankers can play in our great defense effort. When people throughout the Nation share in a united effort toward a common goal, past experience tells us that the goal will be reached. In this light, we have every reason to look forward with confidence to success in maintaining a stable and prosperous economy.

Our Future Military Policy

EXTENSION OF REMARKS OF

HON. BRIEN McMAHON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Friday, October 12, 1951

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "Threat and Promise," published in the Christian Century, under date of October 3, 1951.

There being no objection, the editorial was ordered to be printed in the Record, as follows.

THREAT AND PROMISE

On September 18 Senator BRIEN McMAHON delivered a speech which was by all odds the most important so far made during this session of Congress. It was important not only because of what it contained but equally because of what lay behind it. For Senator McMAHON is chairman of the Joint Congressional Committee on Atomic Energy. As such, he undoubtedly knows more about

the actual state of the present atomic-arms race than any other Member of Congress. His speech was a carefully prepared address which, it can be assumed, had been checked by the Atomic Energy Commission. In it he made a series of challenging proposals regarding future military policy. Yet his speech has received surprisingly little attention from Congress, from the press, or from the American people.

Senator McMAHON's speech followed several weeks of flamboyant announcements regarding America's possession of new and revolutionary weapons. Beginning with President Truman's reference at San Francisco, one Senator and Representative after another had taken up the refrain that the United States now has fantastic means of dealing death and destruction to any enemy. Whether the purpose was to scare the Russians or to reassure our European allies or just help pass a \$60,000,000,000 defense appropriation bill, we don't know. Evidently, however, the AEC and the Armed Forces had become embarrassed by this loose talk. Assertions that this country has fantastic weapons which, in the words of Senator O'MAHONEY, can "conquer the atmosphere," sounded too much like the sort of thing Hitler used to indulge in. The men who might be called on to make good on the tall talk wanted a more responsible report to the Nation.

I

So Senator McMAHON stepped into the picture. He told the Senate—and the world—some of the real facts, not in terms of a Buck Rogers fantasy but in a sober summarization of the stage now reached in atomic weapons production. With that as a base from which to draw conclusions, he went ahead to propose, as within the scope of immediate possibility, a drastic, indeed a fundamental, revision in the military policy of the United States and its allies.

According to Senator McMAHON, the AEC is now reaching mass production of atomic weapons. Russia is employing more persons in this field than we are, and has atomic power capable of bombing from 20 to 30 American cities. But we can now produce atomic bombs "numbered in thousands or tens of thousands." We can make an atomic weapon "at a cost of \$20 or \$30" with the same explosive force "which costs literally thousands of dollars to produce by ordinary means." We can blast an enemy in a single day with as much destruction as fell on Germany during the entire 6 years of World War II. We can make inconceivably destructive bombs "at less than the cost of a single tank." By shifting our military policy to mass production of these now available atomic weapons and, instead of drafting mass armies, training the specialized forces required to use such weapons, we can save from \$30,000,000,000 to \$40,000,000,000 a year on our defense budget and at the same time provide greater military strength.

What this undoubtedly means is that the problem of manufacturing breeding piles of fissionable material has been solved. Readers of the Christian Century will remember how the atomic scientists, Squires and Daniel, who contributed a series of articles published in May and June 1949, told how, if the theoretical possibility of such breeding was ever realized, our atomic plants could go on indefinitely using uranium-plutonium energy without diminishing the available supply. The McMAHON speech can only mean that the AEC has now reached this goal.

Such attention as Congress and the press have given to Senator McMAHON's speech has centered largely on his proposals for a new military spending policy—appropriate \$6,000,000,000 instead of the present \$1,000,000,000 a year for atomic weapon production

in order to save \$30,000,000,000 or \$40,000,000,000 on the over-all defense budget. That is natural, for this year's defense appropriations have warned every thoughtful citizen how rapidly military demands are carrying the Nation toward financial ruin. Last year the regular defense budget was for \$35,000,000,000, and that seemed a staggering amount. This year it is for \$60,000,000,000, and that does not include supplemental items which will bring the total to at least \$75,000,000,000. Next year, it is generally predicted in Washington, the defense appropriation will go above \$100,000,000,000. "At the rate we are moving," Senator McMAHON told the Senate, "I can see ahead only two ultimate destinations: military safety at the price of economic disaster or economic safety at the price of military disaster."

II

The Senate's reaction to the McMAHON speech has been about what might be expected. Knowing the truth of the financial warning, yet feeling unable to do anything about it under present world conditions, Senators have asked the Pentagon, Can the McMAHON promise of increased military security at half the present cost be relied on? No answer has come as yet. When an answer does come we expect that it will either deny the effectiveness of the proposed atomic defense or will take refuge in an alleged need for secrecy which will keep the facts from the public. For if the McMAHON description of the state of atomic weapon production should be admitted to be correct, the Pentagon would thereby (1) cut itself off from half its present funds; (2) leave hundreds of high-ranking officers without jobs; and (3) admit that it must change the entire conception of a defense program on which it is now raising and training defense forces.

However, the proposal to swing into mass production of atomic weapons was only half the McMAHON speech. And the shocking fact is that nobody seems to be paying much attention to the other half. The first half contained a threat of atomic destruction awaiting any attacker—at a bargain price. This at least won a play in the press. The second half held out a promise—general disarmament and an assuring security at the price of careful diplomacy and a rise to a higher level of international cooperation. The threat has registered; the promise is in danger of being lost to view.

Senator McMAHON's promise, we take it, is in large measure a reaction to our recent diplomacy. It is based on his belief that piling up force is not enough; that the extension of military alliances gives no assurance for the future. It does not challenge the assumptions of "military security." Senator McMAHON is no pacifist; he is working within the limitations imposed by a public opinion which demands military security. But he does not see that security in terms of the last war. He sees it within an entirely new framework—the framework of the atomic age—and he believes that with it there should go hand in hand an alternative of international accommodation and peace. He believes that it is time to strip the Communists, with their phony Stockholm appeal, of the immense propaganda advantage they enjoy in appearing as the devotees of peace.

So in the second half of his speech Senator McMAHON renewed the proposals he made in the Senate resolution he introduced in the previous session of Congress. Push the production of atomic weapons? Yes; at six times the present pace. But at the same time send the United States delegation to the General Assembly of the United Nations, which opens at Paris in November, under instructions to stop the mad arms race "by speeding agreement upon effective and en-

¹ A condensation of Senator McMAHON's speech will be published next week in the Christian Century.

forceable disarmament and control, covering conventional armaments, biological and chemical agents, and atomic and hydrogen bombs." Back this with a promise that, if and when this disarmament is attained, we will "make available to the United Nations . . . a substantial portion of all money saved for a period of 5 years . . . [for] peaceful development of atomic energy, technical assistance to underdeveloped areas, and general economic aid and assistance to all war-ravaged countries."

There is nothing here about the United States going to Paris to insist on sticking to the outdated Baruch plan for atomic control. What the McMahon proposal calls for is a new start from the ground up. It would combine conventional and atomic weapons in one disarmament plan. It would take recent Russian offers of international inspection and control as a sign that the Kremlin is really ready to negotiate. It would count on rallying the support of all our allies, who now view the diplomacy and armament policies of this country with much misgiving.

A year ago, the original McMahon proposal was derided as fantastic. There is nothing fantastic about this. Its steps are clearer than anything coming out of the Pentagon, the State Department or the White House these days. Here they are in summary:

1 Develop the atomic arms of the United States to the maximum of their power

2. Save the Nation from financial catastrophe by junking or reducing to a minimum the conventional forces of past wars and training specialized forces for atomic war.

3 Free the American way of life from the prospect of being throttled by the tyranny of a garrison state

4 Offer the world genuine, inclusive disarmament

5 Hold out the promise to all the world, if this genuine, internationally inspected and certified disarmament becomes a reality, of constructive help to end human want on a scale never before known.

III

Senator McMAHON has made his speech. He has introduced in the Senate his resolution to give it substance. Representative CARL T. DUNHAM, of North Carolina, vice chairman of the Joint Atomic Energy Committee, has introduced the same resolution in the House. The question now up to the American people is this: Shall this be allowed to sink into obscurity and be forgotten? Only desultory interest was shown in the McMahon proposal of a year ago. Now, however, the Nation is much farther along the road to a financial crash or world war III. Is there not enough moral energy within the Nation to see that this year the McMahon proposal is not stabbed to death in the Pentagon or smothered in the committees of Congress?

Here, it seems to us, is a moment at which the Christian churchmen of America should go into action. Let them begin by writing to Senator McMAHON (Senate Office Building, Washington, D. C.) for the full text of his speech. Study and discuss it in local groups. Find out where the other Senators and Representatives stand on it. Keep after the local press, radio commentators, forums, service clubs and the like until they give it serious consideration on its merits. Press for instructions for the United States delegation soon to leave for Paris which will make acceptance by the U. N. Assembly a top item on the American participation. If met with a brush-off now, start pushing for action by the platform committees at next year's national party conventions.

Senator McMAHON has given the churchmen of America a new chance and method by which to do something positive for peace. Let's not miss it.

Activities of the El Kahir Chanters, of Cedar Rapids, Iowa

EXTENSION OF REMARKS

OF

HON. BOURKE B. HICKENLOOPER

OF IOWA

IN THE SENATE OF THE UNITED STATES

Friday, October 12, 1951

Mr. HICKENLOOPER. Mr. President, over the country various organizations are rendering unselfish, patriotic service. One such group in my home town is an organization called the El Kahir Chanters, an organization of businessmen, insurance men, farmers, mechanics, and others who belong to El Kahir Shrine, and who sing because they enjoy it. They spend most of their time going to hospitals and other institutions to entertain those who cannot get out.

A little story was written about their activities. I ask unanimous consent to have it printed in the Appendix of the RECORD, together with an editorial about what they are doing, published recently in the Cedar Rapids Gazette, of Cedar Rapids, Iowa.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

THE EL KAHIR CHANTERS, OF CEDAR RAPIDS, IOWA

The Shrine Chanters of El Kahir Temple, AAOONS, Cedar Rapids, Iowa, were organized during the summer of 1948. They were formed to sing for the various functions of El Kahir Temple. The group is made up of businessmen, professional men, bankers, insurance men, farmers, mechanics, and other vocations. Some of the 30 member chorus come from as far as 35 miles away for concerts and weekly practice sessions.

As the object of the National Shrine organization is to help others less fortunate than themselves through the medium of their crippled children's hospitals, so the El Kahir Chanters believe that they can help others by their singing. They started by singing at a Christmas program at the Iowa School for the Blind at Vinton, Iowa, during the Christmas season of 1949. This has become an annual affair. These children, hampered as they are by the lack of eyesight, must get their entertainment from their hearing. That the chanters were successful may be attested by excerpts from two letters received by Noble Orville Rennie, the chanters' director, from Mr. D. W. Overbeay, superintendent of the school. He writes, "The children are still talking about the excellent music program which you and your chanters presented," and "We want you to know how very much we appreciated the excellent concert which your fine chanters presented. This, as you know, is one of the real high lights of our school and is an event every one of our boys and girls looks forward to."

The same season the chanters also sang for the Christmas program at the State Tuberculosis Sanatorium at Oakdale, Iowa. This has also become an annual concert for the group. Another letter, this time from Dr. W. M. Spear, superintendent, "The patients at Oakdale feel very indebted to your group for the fine program . . . We realize that to make such a trip in your full dress, and especially in such inclement weather, was not easy. We know that you are all busy men and it was a sacrifice of time to fill this engagement."

The chanters have also visited the Children's Hospital at Iowa City, Iowa, and during the National Shrine convention in Chicago in 1949 they sang at the Shriners' Hospital at Oak Park, Ill.

This year, April 3, 1951, the group journeyed to Toledo, Iowa, to the State juvenile home. These children are from broken homes and appreciative of everything done for them. With a letter from the superintendent came some 20 letters from the children of the school. These were explained by the superintendent as follows: "Out of a clear sky, and with no suggestions from anyone, I received a large number of letters written to me or to the chanters from the girls and boys in the various cottages. I am sending them to you 'in the rough'; they are just as they came to me from the children, they have not been corrected or rewritten on pre-entable stationery. These letters in simple language will convey to you and the Chanters a better idea of how much the youngsters appreciated your coming to the juvenile home and singing for us." One of these letters from a little girl on common notebook paper is representative. It reads in part—"I am writing you telling how much I enjoyed your program. It was very nice. I hope that all of you can come back. I thought the Lord's Prayer was very nicely sung. What I liked was when you joked with us. I hope you can come back. You are always welcome."

In addition to singing for misfortunates, the chanters and the Shrine band present an annual concert on Palm Sunday afternoon in Cedar Rapids for the public. There is no charge or collection at this concert which averages an attendance of 2,500 people.

The chanters also participate in the union Holy Week services held by the Cedar Rapids and Marion Council of Churches. They have sung during the last 4 years at the Good Friday services. Edwin B. Zeller, general secretary of the YMCA in Cedar Rapids, writes, "I want to thank you sincerely for the contribution the chanters made to the Good Friday program of the union Holy Week services. We shall point to the Friday music as one of the high spots of the week's services."

The group has also sung for Masonic and church organizations in and around Cedar Rapids. The Mount Vernon, Iowa, newspaper, the Hawkeye-Record, June 7, 1951, stated before a concert, "When the El Kahir Shrine Chanters present a concert at Mount Vernon Methodist Church next Wednesday, the local people will hear a group of men from all walks of life who sing because they enjoy it. Singing is their hobby." After the concert the same people printed: "Many commented favorably not only upon the fine quality of singing and directorship but also upon arrangements and on the enthusiasm of the personnel. It was evident that these men enjoyed doing the combined choral numbers and were appreciative of their individual members who appeared."

The work of the chanters may be summed up by part of an editorial which appeared in the Cedar Rapids Gazette, May 5, 1951, written by a staff member, "A good example of the many civic-minded groups and organizations doing an excellent work for others in this vicinity is the El Kahir Chanters. It is obvious they go to some sacrifice to bring good singing to others . . . Yes, it may take a little sacrifice sometimes to bring happiness to others, but doesn't a thing like that make any sacrifice worth while? The chanters and groups like them think so."

The chanters also appeared on the official program banquet at the Central States Shrine Association held in Denver September 29, 1951, and were highly praised by all representatives attending for their fine work.

[From the Cedar Rapids (Iowa) Gazette of May 5, 1951]

THE EL KAHR CHANTERS

A good example of the many civic-minded groups and organizations doing an excellent work for others in this vicinity is the El Kahr Chanters.

This 30-member chorus pays an annual visit to the State sanatorium at Oakdale, the hospital for crippled children at Iowa City, the State home for juveniles at Toledo, and the State school for the blind at Vinton, in addition to fulfilling many engagements in and about Cedar Rapids.

Since the members, some from as far as 35 miles away, practice faithfully every Monday night under the direction of Orville Rennie, it is obvious they go to some sacrifice to bring good singing to others. But members will attest that letters like those from some 20 children at Toledo following a recent program there make it all worth while.

A visit from a group like the Chanters means much to these children and their feeling is summed up in the letter of one little girl which reads in part: "I am writing you telling how much I enjoyed your program. It was very nice. I hope that all of you can come back. I thought the Lord's Prayer was very nicely rendered. What I liked was when you joked with us. I hope you can come back. You are always welcome."

Yes, it may take a little sacrifice sometimes to bring happiness to others. But doesn't a letter like that make any sacrifice worth while? The Chanters and groups like them think so.

National Employ the Physically Handicapped Week—Statement by Secretary of State and Others

EXTENSION OF REMARKS OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Friday, October 12, 1951

Mr. SPARKMAN. Mr. President, October 7 to 13 is National Employ the Physically Handicapped Week. It has been so declared. There have been various statements made regarding it, and I shall ask unanimous consent to have printed in the Appendix of the Record a joint statement issued by the Federal Associate Members of the President's Committee regarding this subject, and also to have likewise printed in connection with National Employ the Physically Handicapped Week an extract from the current issue of the Alabama Legionnaire, which is the official publication of the American Legion in Alabama.

A short time ago I inserted in the CONGRESSIONAL RECORD an extract from the Birmingham News telling of the winning by two blind veterans in Alabama of a very substantial prize which was given by the American Legion or some other organization, which I believe was sponsored by the American Legion. In letters they told of the manner in which they had overcome their physical handicaps; and in this issue of the Alabama Legionnaire those letters are printed.

One of the veterans, Charles Boswell, was at one time an outstanding football star on the University of Alabama football team. He lost the sight of both his

eyes during the war. He tells his story of rehabilitation. He has been, since he lost his sight, the blind golf champion of the United States. He plays an excellent golf game, even though he has no sight whatsoever.

I think the story of these two boys, Charles A. Boswell and Lewis A. Moore, constitutes one of the most inspiring things I have ever read.

For that reason, Mr. President, I ask unanimous consent that along with the joint statement to which I referred with reference to National Employ the Physically Handicapped Week, these letters be printed.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

JOINT STATEMENT, 1951

The seventh annual observance of National Employ the Physically Handicapped Week, October 7-13, should be a period of thoughtful reflection for all those concerned with manpower. Government, industry, and business have made great progress these past 7 years in placing handicapped workers on jobs suited to their abilities. Our past successes should point the way for even greater use of handicapped workers in the difficult months and years that lie ahead.

The Federal and State governments, through the employment service and the rehabilitation programs for veterans and civilians, have in the past provided the framework within which employers could seek and find qualified handicapped workers. As an employer the Government itself has made real and effective efforts to fill available jobs with people with disabilities, including a great many disabled veterans.

This is not an academic matter—not in an economy geared to the present defense mobilization requirements. The President and the Congress have called for the greatest possible use of handicapped workers and for the rehabilitation and training of those who are not now in the labor force. The governors of our States and Territories and the mayors of our cities have enlisted the interest of civilian leaders in this year-round program.

As Federal associate members of the President's Committee we promise additional efforts on our own part to increase the use of qualified handicapped workers in the Government. We ask all our countrymen, particularly business and professional men, to inform themselves better on this subject so that they too may benefit from employing the handicapped. Truly, America needs all of us.

Dean Acheson, Secretary of State; John W. Snyder, Secretary of the Treasury; Robert A. Lovett, Secretary of Defense; Charles F. Brannan, Secretary of Agriculture; Charles Sawyer, Secretary of Commerce; Maurice J. Tobin, Secretary of Labor; Oscar R. Ewing, Federal Security Administrator; Robert Ramspeck, Chairman, United States Civil Service Commission; Carl R. Gray, Jr., Administrator of Veterans Affairs; Jack O. Gorrie, Chairman, National Security Resources Board.

[From the Alabama Legionnaire]

HOW I OVERCAME MY PHYSICAL HANDICAP

Charles A. Boswell, Birmingham, and Lewis A. Moore, Gadsden, have been declared two of the four winners in the Nation-wide contest sponsored by the American Legion in its Operation Comeback, a contest of letters for handicapped veterans. Both Boswell and Moore were blinded in World War II. Both will receive awards of \$1,000 and expense-paid trips to the Legion's Miami con-

vention. Another Alabamian, Charles J. DeLong, Montgomery, was a \$50-award winner. There were 586 entries. Boswell's and Moore's winning contributions follow:

(By Lewis A. Moore)

"I entered the United States Army in 1939 at the age of 16 while still a high-school student. When World War II broke out I was stationed in the Philippines. I fought in the Battles of Corregidor and Bataan. I was taken prisoner at the fall of Bataan in April 1942. The next 10 days were spent on the Bataan death march. Six of these were without food.

"The following 2½ years were spent in a series of Japanese prison camps. Here the food consisted of rice and sweet potato vines. I was forced to work exceedingly hard building bridges, planting rice, and burying the dead. The lack of food was surpassed only by the lack of medicine and sanitation. My bed was Mother Earth and my bathroom was a slit trench which I helped dig. After 6 months the terrible prison conditions took their toll on my health. First came the dreaded malnutritional disease, dry beriberi, in my feet and my legs. The terrific shock of this killed most of the nerves in my eyes, causing an extremely limited vision. In September 1944, I escaped during a massacre of American prisoners and made my way back to a hospital in New Guinea.

"Upon returning to the United States I was sent to Valley Forge General Hospital where tests showed my vision to be 20/200. From here I was sent to the rehabilitation center for war blinded soldiers at Avon, Conn. I was given extensive training in insurance here before being discharged in March 1946. I started to work in the general insurance business and a grateful Government gave me every assistance. It furnished me with reader service for 2 years, a sound scribe, magnifying glasses and any aid which I could use to overcome my handicap. The Veterans' Administration gave me 2 years on-the-job training and 1 year self-proprietor training.

"I could not possibly have attained the success which I have had had it not been for the assistance of the Veterans' Administration and my wife whom I met while in service and who is also a disabled veteran. After 5 years my vision has dropped to 20/400; however, I have advanced as far in 5 years as most insurance men do in 20. I have built a medium-sized general insurance agency which represents 15 large fire and casualty companies and which give me an annual net income of ten to twelve thousand dollars.

I am vice president of a group insurance company, a director of a life insurance company, a director of the Alabama Association of Insurance Agents and I helped organize and am a director in a fire insurance company. I also hold membership in the following social organizations: Blinded Veterans' Association, the Moose Lodge, church (which I attend every Sunday), the Veterans of Foreign Wars and the American Legion, Post 213, which another veteran and I organized and in which I have served as an officer three times."

(By Charles A. Boswell)

"Shortly before the Battle of the Bulge, the tank in which I was carrying supplies to my company, was struck by shell. As I climbed out, another shell exploded, filling my chest and face with fragments, and blinding me. On reaching the States 4 months later, I learned I would never see again.

"Thus ended all my dreams for the future, for I had entered the Army so soon after college that I had been unable to begin a career. I had played football and baseball at college, and had planned a career in professional baseball. Now I had no means

with which to provide for my wife, small daughter, and the baby we were expecting. "The next few weeks were the darkest of my life. I had always been active, independent, and self-reliant. How could I adjust myself to a world of inactivity, pity, and despondency? Just as my spirits reached their lowest ebb, I began the rehabilitation program at Valley Forge Hospital. Trained men taught me to type, to read and write Braille, to walk through traffic unaided, and helped me regain my self-confidence and self-reliance.

"At this time, I was introduced to golf, a game that was to play an important part in my rehabilitation. Golf was one sport I had never tried, and I had no illusions about the ability of a blind man to play it. But from my first swing of a driver, I realized I had found the answer for my love of competitive sports.

"After Valley Forge, at Avon, Conn., I underwent a more intensive program. Because of my love for, and knowledge of, sports, I decided to enter the sporting-goods field, and took training courses in that line.

"Getting home at last to my family, I began the arduous task of convincing the world that a blind man can hold a job. Finally I was given a chance to sell sporting goods for a department store. There my knowledge of athletics and the training I had received, earned me a promotion to manager of the expanding department. Now I handle all invoices, correspondence, go to market to buy merchandise, keep a close check on inventory, wait on customers, and know the prices of all items in stock.

"After 7 years of blindness, I feel that my rehabilitation is complete. Neither my wife nor I have let my blindness keep us from living a normal life. We dance, attend movies, play cards, and golf together. I have won five national and one international golf tournaments in the past 5 years and my golf has taken me from Maine and Canada to California. I am also active in Lions Club, sight conservation, church and Cub Scout work, and frequently make speeches at schools and clubs. In 1949 I was selected Hero of the Year by the National Disabled Veterans Association.

"I have found that blindness is not a handicap, it's just an inconvenience."

Activities of Allapattah Lions Club in Improving Relationship Between the United States and the People of Yugoslavia

EXTENSION OF REMARKS OF

HON. GEORGE A. SMATHERS

OF FLORIDA

IN THE SENATE OF THE UNITED STATES
Friday, October 12, 1951

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article which appeared in the September 23, 1951, issue of the Miami Herald.

This article tells the story of how a group of men in the Allapattah Lions Club have scored a 10 strike in improving the relationship between the United States and the people of Yugoslavia. It shows how easily, and yet how effectively, all Americans, regardless of their station in life, can help improve the understanding between ourselves and the other nations of the world. In this article we see what was done by the

thoughtfulness of a group of men who were willing to take the time and trouble to send to a group of Yugoslavians some basketballs and equipment, along with the rules of how to play the game of basketball.

I know that all Senators will enjoy reading what can be done, and I recommend this act of the Allapattah Lions Club to the civic organizations within all the States.

There being no objection, the article was ordered to be printed in the Record, as follows:

ALLAPATTAH LIONS KICK FIELD GOAL FOR UNCLE SAM

(By Jack Anderson)

The State Department can give a nod to the Allapattah Lions Club for lending a hand to this country's effort to win friends and influence allies—particularly in the Yugoslav department.

With a load of sweaters, shoes, and basketballs, the Lions have gained Uncle Sam solid support among a group of young athletes in the city of Pancevo, near Yugoslavia's capital of Belgrade.

It all came about this way:

Back in April, one of the Lions, James Rice, director of public school attendance, got a letter from one Mikovich Milan, of Pancevo.

In labored but understandable English, Milan explained he got Rice's name out of an American directory of basketball referees. The book had in some way gotten into a package sent from America to a friend of Milan's.

"As you are the basketball workman in your country," the letter said, "or you were it in the time when became this book, I thought it best to write to you."

"We play basketball in Yugoslavia only after the Second World War and it is, as in America, the play of students and pupils. But, we have a misfortune."

"Our industry doesn't produce all the necessities for the basketball or we haven't enough. Therefore, I please you, if you have possibilities, send me any books about the ways of training the basketball, especially the basketball shoes or ball."

The letter went on to ask about life in America in general and basketball in particular.

Mr. Rice took the matter up with fellow Lions and they got busy corraling eight pairs of new basketball shoes, two new basketballs, several rule books, a lot of used pairs of shoes, and 10 used basketball uniforms—the uniforms donated by several high schools.

He sent a letter to Milan telling him the equipment was on its way and tossing in information about the schools here and the American way of life.

Recently Rice got a letter from Milan. In halting English the young Yugoslav managed to convey that he and his basketball playing friends received the equipment with a joy that must have been felt in Belgrade.

"When I wrote to you, an unknown man in the world," Milan said, "I wrote with a great wish, but not also with great hope. In my happiness there was no place for doubt. The dreams became a reality."

"Your letter, especially the style of it—friendly and humane, assured me that there are still true men in the world who can understand others in all parts of the world."

"I cannot tell you what cheered us most. Such basketballs we have never seen in our lives. Every match we ever had before we received your packages, we had to play with irregular balls because we had no others. Only the Red Star team—the best in Yugoslavia—have shoes similar to the ones you sent."

Milan went on to report that the same day they received the equipment they "gave a

surprise" in a match with one of the best teams from Belgrade.

His team had left on the uniforms the names of the Miami schools which had donated them as "our sign of gratitude to the men who sent us these gifts."

He added that he was sending a photograph of the team in full regalia. And he thanked Rice for sending him a Croatian-English dictionary to help the team read those basketball rules.

The Strength of Free Men

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, October 12, 1951

Mr. WILEY. Mr. President, Hon. Richard C. Patterson, Jr., the chief of our mission to Switzerland, recently delivered an important and stirring address to the students and faculty of Union College, Barbourville, Ky., at the fall matriculation convocation.

Union College, under the leadership of President Conway Boatman, is rendering a distinguished service and is contributing abundantly to stalwart leadership in business and public life. I ask unanimous consent that the excellent remarks of Minister Patterson be printed in the Appendix of the Record.

There being no objection, the address was ordered to be printed in the Record, as follows:

THE STRENGTH OF FREEMEN

(Convocation address of Richard C. Patterson, Jr., United States Minister to Switzerland, Union College September 24, 1951)

President Boatman, members of the faculty, Governor Sampson, students of Union College, after a flight of 22 hours in this small world of ours, I find myself in these beautiful mountains of Kentucky. I feel at home among mountains in Switzerland, mountains form our landscape. We live among them, on them, with them. The Swiss mountains, like your mountains, are the homeland of free and united men.

When Daniel Boone and David Crockett walked these hills, they relied on their own strength and their neighbors' cooperation to shape an environment for their free lives in the bounty of nature. They worked in harmony with nature and the only limits to their daily living were set by their own efforts and imaginations. Among mountains, a man has to stand on his own feet and produce his living by his own effort and ingenuity.

In your careers you will find the truth of this pioneering experience. The boundaries of your lives will be established by your own selves—by the energy which you put forth, by the purposes which you set for yourselves to achieve, by the persistent pursuit of your goals.

FREEDOM AND EDUCATION

I am also excited to be here at the opening of a new academic year. I feel at home in an academic community. Since I am a university trustee, I know some of the problems of operating an educational institution for the benefit of its students. But I am primarily concerned with the spirit of leadership and loyalty which a college creates for the entire community—its respect for the past, its participation in the present, its obligation to the future. September 1951

is an autumn of gravest importance in the history of our world: the issue of human freedom is at stake, the outcome of the issue will affect the kind of world in which you students will live, and it will shape your careers.

In 1919 I served at the Paris Peace Conference on the staff of Woodrow Wilson. He used to say that he believed that a universality was the compass of the human spirit pointing steadily to the lodestar of truth. I share with my former chief the drive toward the good and the useful which the college cherishes.

You stand today on the threshold of high expectations. In a few weeks some of you will suffer from the occupational hazards of college life—the need for money to pay your bills, the need for grades to keep you off probation; and that greatest of all needs of college students—time to sleep. But even amid these distractions, stand steadfast in your search for truth. Issues in history beyond your personal fate are at stake.

You are freemen, despite the fact that you live for these 4 years in a community of discipline. Like your Kentucky forefathers, by your own efforts, you can achieve high purposes under the wise and sympathetic comradeship of these scholars who compose your distinguished and well-known faculty. You are free now—this autumn—to choose to be something, and to commit yourselves to the pursuit of the values of the free world.

STAMINA

The strenuous world into which you will be graduated demands physical stamina, high professional competence, and deep spiritual consecration.

Union College stands for this trinity of fundamental virtues.

May I say this to you: Have a good time in college—certainly—but direct your major energies to the major objectives. Don't let the sideshows crowd out the main tent. Put your life behind values and purposes that count in a free world.

At this time, neither you nor your country can afford the waste of a single human life. Certainly none of you can afford it. And our country demands the best each one of us can contribute in the toughest struggle of men and ideas that this scarred world of ours has ever witnessed. I urge you, therefore, to prepare yourselves in these days for the supreme task of great American citizenship in a common world of freemen.

SECOND WIND

In support of this needed stamina in the modern world, don't forget you possess within yourselves a second wind. If you want to get more work done in 1 day than you have been doing in 2, have sublime faith in your second wind. It has been demonstrated that you have within you layers of energy which you rarely tap. We work a while, putting forth physical or mental effort, and become tired. Our impulse, then, is to give way to fatigue. But if we have the courage to keep on, we are free in our wills to break through into a new layer of endurance. We go on again with renewed vitality, with lessened fatigue, with a fresh sense of well-being. This is the second wind in practice. Have faith in it and use it. Few of us ever reach the limit of our capacity for effort. William James used to say that we have barely scraped the surface of our physical and mental resources.

Many of us are afraid to put forth added effort, these new and difficult efforts, because of the fear of breakdown. One of the great specialists in America says that in his practice he has never known a case of nervous breakdown brought on by intellectual overwork. Breakdown comes from the wrong attitude toward work. It comes from hating and dreading what we have to do, instead of doing it. General Marshall calls it fight-

ing the problem. We are worn out not by what we do, but by what we fail to do and what we worry about. Have sublime faith in your second wind—and keep going.

WILLIAM TELL PLAY

One Sunday this summer, I motored through the Swiss Alps to the beautiful town of Interlaken, which snuggles at the foot of the Jungfrau. I went to see a presentation of Friedrich Schiller's drama, *William Tell*. Every year the people of Interlaken present this great play in a natural out-of-doors theater on the mountainside. The actors are the people, the citizens of the community—the local dentist, the local mason, the housewife. These citizens were reenacting the history of their own past. They were participants in the drama of their own freedom.

You will remember from your reading of Schiller's play that Walter Furst said:

"So must we trust in God and ourselves in meeting the problems of freedom."

Looking from the tower which the townsmen were building under the whip of their overlords, William Tell exclaimed:

"What hands build up, hands may well pull down." Then, pointing from the uncompleted tower being built by man, to the mountains, he said:

"But there! There stands a house not built of mortal hands, the house of freedom and the house of God." Mountains make free men.

And the Baron of Attinghausen adds:

"Hold fast together—firm and true. Be not one world of freedom stranger to another! Set instant watches on your heights that league may answer league and rise in mutual aid. A nation to be free must be united! Be united—united—united."

SETTING

Walking down the mountain from the *William Tell* play, I suddenly paused. There, framed by gigantic sister mountains stood the Jungfrau—head held high out of the clouds. To understand and fully appreciate the Jungfrau it must, like any other thing of beauty—like any real value—be seen in its own setting. It is like a great diamond shining by virtue of its cutting and its setting, like a picture showing best when it is best hung, like a magnificent tree in a meadow not hidden in a forest, like a refreshing shower in a parched land. So it is with freedom; its beauty is in its setting, and the setting of freedom is strength and cooperation. So it is with what you say; its value is determined largely by who you are, and when, where, and how you say it, quite as much as by the contents of the sentence itself. In a heated discussion, the man who will keep still until everybody gets through and then expresses his opinion quietly, puts tremendous force behind what he says. A word set in its perspective shines like a jewel. You must study a people in its setting, its culture, its history, its resources. You must counsel a student in terms of his background, his goals, his interests, his abilities.

The *William Tell* play gave me these three ideas:

First. That people must participate in history—their own history—past—as well as the history of freedom—present.

Second. That man working with Nature produces a culture, by the quality of his ideas, character, and craftsmanship.

Third. That everything to be really understood must be studied in its setting—in its real and functional relationships, in terms of the purposes it means to achieve.

As the Swiss actors in the *William Tell* drama held up their swords in collective strength, I knew—as I have known since I was a GI—that every man is a defender of his country, that every man is a craftsman in the workshop of his country, and that every man, as Jefferson said, "Should be a builder in the workshop of liberty." Public order

supported by the strength of citizens is a condition of freedom.

UNION AND FREEDOM

As I motored back to Bern from seeing Schiller's play, I thought about the citizens of the Swiss community of Interlaken. They were reliving history, the universal story of freedom. They were modern participants in the great epic of freedom. And I thought: Here is a universal story—past becomes prologue in the forward movement of the world of freemen united in hand and spirit. We are reliving the struggle for freedom today. You and I are participants in the drama—student, professor, diplomat, businessman, and others.

The United States and Switzerland understand the language of union and freedom. We are free peoples. We have shown how free peoples under God can use their own material and spiritual resources for the benefit of mankind. And the keystone of both forms of government is the liberty of the individual. Our President tells us that some things have not changed since we signed the Declaration of Independence. One thing is the cost of freedom. Freedom is still expensive. He also says there is another way that our situation today is like that of 1776. Once more we are engaged in launching a new idea. In 1776 we launched a new kind of national government to insure freedom. Today we are creating a new kind of international organization—the United Nations.

The ideas of freedom and equality and self-government were opposed by the vested interests and reactionaries in 1776. And today the United Nations is being opposed by the same interests. We succeeded in 1776, and we will succeed today with the U. N., but it won't be without a struggle of the first magnitude. Bear in mind that in dealing with Communists one must lay aside the finesse and indirection of diplomatic language.

GOVERNMENT SERVICE

On Monday morning following my trip to Interlaken, I was back in my office. My staff of over 200 people was busy at work. The staff is an intricate organization. It includes economists, lawyers, political analysts, and the experts who compose the permanent Foreign Service. It includes file clerks who keep the records, translators, press readers, stenographers who take dictation, accountants who keep the books, messengers, gardeners who tend the flowers in true Swiss style. Each person has his role to play. He performs a specialized task requiring particular competence. He plays on a team.

Each specialist has his part in dealing with problems. Let me refer to just one. If you look at the watch on your wrist, you will see one of our problems and one of your problems. What questions arise in this problem? How can you buy the best watch at the best price? To what extent shall the tariffs protect the American watch industry? How are the details of the watch industry handled in international trade—the payments of dollars by American business to Swiss industry, the purchase of steel for mainsprings from Sweden? This individuality means freedom. This protection to American industry means freedom of citizens to develop their own strengths in their own way. The protections which are provided by the Government are the protections for free and strong men.

Switzerland is not rich in natural resources. For that reason it has been compelled to develop the skill and efficiency of its people. The quality of its people outweighs the scarcity of its resources. The free spirit, imaginative competence, and expert craftsmanship of a people have made Switzerland a happy, prosperous, strong, free, and united people.

I draw a final universal lesson from these Swiss characteristics. The real wealth of a people lies in its craftsmanship, its competence, the loyalties in its heart, the wisdom

in its mind, the skill demonstrated by its hands

The Government service requires the same qualities—high professional competence expressed within a functionally organized operation. These are the same qualities required in any community of citizens. The Government needs experts; competent personnel to carry out sound policies. It also needs alert and capable citizens at work on the main streets of our cities and villages. Our specialized work in Government can only be successful to the extent that it is supported and nourished by constructive public opinion.

Good government requires good people—citizens in the service of the free world.

COMPLICATED WORLD

But this is easy, you say. All we need are good people and a free world and everything will be all right. That is the assumption, but how can we have assurance that we can achieve this goal? A little while ago, Stuart Chase sat down with a group of distinguished social scientists to see if they could state a fundamental law regarding social integration and peace. They wanted to formulate a law like Boyle's law in physics, or Newton's law of gravitation. What did they do? At the end of the day they came up with this statement: "Everything is more complicated than it seems."

As you grow older you will appreciate that seasoned observation. You will learn its real meaning here on this campus. Achievement is neither simple nor easy.

But because everything is more complicated than it seems, is just the reason all of us should devote ourselves to the cultivation of the professional and spiritual qualities which this world requires in its new setting—one world sustained by the strength of freemen and conducted so as to bless them with life, liberty, and the pursuit of happiness.

As the Baron of Attinghausen said: "Hold fast together—firm and true. Be not one world of freedom stranger to another. * * * A nation to be free must be united. Be united, united, united." So I say to you students, this is our proclamation to the world in the autumn of 1951.

CONCLUSION

President Boatman, members of the faculty, and students for whom this institution exists, may fellowship on these mountains and in this community of citizens and scholars enable you to press forward with strength the frontiers of one stable, prosperous, and peaceful world of freemen.

Is the Medal of Honor Being Cheapened?

EXTENSION OF REMARKS OF

HON. WILLIAM BENTON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Friday, October 12, 1951

Mr. BENTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "Is the Medal of Honor Being Cheapened?" written by Mr. Harold G. Stagg, and published in the current issue of the American Legion magazine.

While I cannot pretend to be an expert on this subject, Mr. Stagg, who is now the editor of Army Times, here in Washington, is generally regarded as a leading expert on veterans' and military affairs. He is a constituent of mine with a long record of journalistic accomplishment in Connecticut.

Because of the high regard in which Americans hold the Congressional Medal of Honor the article should be of interest to the public as well as to the Members of Congress.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IS THE MEDAL OF HONOR BEING CHEAPENED?

(By Harold G. Stagg)

CONGRESS ONCE RECALLED 911 MEDALS OF HONOR IN ORDER TO MAINTAIN ITS POSITION AS THE NATION'S GREATEST AWARD—BUT DOES THE ARMY'S WAY OF HANDLING IT MATCH THE UNDERLYING SPIRIT OF THIS MOST CHERISHED MEDAL?

Is the Medal of Honor losing its meaning as the true symbol of America's most glorious military traditions?

It is a sad commentary on the state of today's world that war heroes—living and dead—have become so numerous that a Nation's highest decoration for valor sometimes is valued by the public at a dime a dozen.

Is heroism fast becoming a glut on the market?

This tragic and questionable evaluation is apparent from the "who cares?" attitude evidenced in Washington and elsewhere recently when three veterans of the war in Korea were decorated with the coveted medal by President Truman in ceremonies at the White House. A busy Washington and a busy Nation passed them by with hardly a fleeting glance.

Radio- and television-network officials brquely refused to consider even arranging an appearance before the microphone or TV cameras for the youngest of the trio. Life magazine snapped a few pictures which it subsequently featured. The Saturday Evening Post shrugged its editorial shoulders. Time magazine couldn't be bothered. The daily newspapers—here and there—printed a few paragraphs and published pictures taken in the White House and let it go at that.

Once, in 1917 the Congress so feared that the Medal of Honor was being cheapened that it turned Indian giver and had the names of 911 men who had been awarded the medal in bygone days stricken from the Army's Medal of Honor list. A board of five retired general officers had decided that the awards had not been properly made for distinguished service as defined in a 1916 act of Congress.

Do we want that to happen again?

Already there is a suspicion in many quarters that the Army too frequently uses the Medal of Honor—not simply as a deserved reward for unusual acts of heroism—but as a general morale builder. There is equal suspicion that it is not proving too successful in that field.

Since the Korean war began, the Medal of Honor has been awarded 23 times (as of June 21 last). At first, President Truman conferred the awards—either upon the heroes themselves, or posthumously upon their next of kin.

Last June Gen Omar N Bradley, top-ranking Army general and Chairman of the Joint Chiefs of Staff, passed out 11 medals after the Army had carefully rationed out to newspapers—one at a time—details of the heroic exploits which led to the awards. One award went posthumously to the first Negro to win the Medal of Honor since the Spanish-American War.

When the United States entered upon World War II 10 years ago, the Medal of Honor was the true symbol—as it is today—of the fighter who distinguishes himself conspicuously by gallantry or intrepidity, at the risk of life, above and beyond the call of duty. Only 95 Army Medals of Honor had been awarded for heroic deeds performed in World War I as compared with 1,200 in the Civil War.

Thereafter, with 10,000,000 men under arms in World War II—with heroic deeds of great intrepidity taking place in all four corners of the world—the Medal of Honor again began to be bestowed on a mass production basis—not because its meaning had been cheapened, but because valorous deeds meriting the medal were occurring with greater frequency.

On one occasion—April 23, 1945—President Truman bestowed the Medal of Honor upon 28 soldiers, the largest group award in history. On another occasion, May 21, 1945, a joint session of Congress was held to commemorate the award of the medal to the one hundredth World War II infantryman—Tech Sgt Jake W. Lindsey.

Since that time, the Nation has scarcely paused in its routine to take notice of subsequent awards—no matter how heroic the deeds involved—no matter whether the award was posthumous or otherwise.

Has mass heroism put the Medal of Honor on an assembly-line basis?

The Medal of Honor carries with it little except glory—and the munificent sum of \$2 a month extra pay for enlisted men. Honorably discharged medal winners—if they are alive at 65 and make application—receive a special pension of \$10 a month for life. Nothing more.

"He who possesses the Medal of Honor is the holder of the highest military award for bravery that can be given to any individual in the United States of America," says the Army.

"This symbol of bronze, wreathed in green enamel and held by a white starred ribbon of blue silk, bestows upon the man who has won it a great privilege—that of sharing in the company of the few heroes who have been honored by the award of the same medal he wears."

Unhappily and seldom remembered, a large percentage of Medal of Honor winners have no opportunity for "sharing in the company" of other heroes—the award too often is made posthumously.

The Medal of Honor—in peace or war—is indeed the highest decoration which can be given by any of the armed services—Army, Navy, or Air Force. Since it first came into being in 1861 it has been awarded to 3,054 Army men—less the 911 forgotten heroes whose names were stricken from the list—723 Navy men, 194 marines, and 1 Coast Guard man.

Great heroes—such as those deserving of a nation's highest award—are a product of war. And, as wars come upon us with greater and greater frequency, and as millions of men are committed to gallant combat, heroic deeds become more and more commonplace. Thus, a steady flow of heroism from the battlefields begins to dilute the great honor.

But Medals of Honor are neither so diluted, nor so commonplace, nor so cheaply come by, that America should ignore them or pay their wearers only brief and passing attention. Yet the curtain is beginning to rise on such a stage of affairs.

Today, there is distressing evidence that after 5 years of unrelenting war in one decade, the Medal of Honor—still the only official symbol of the ultimate in military glory in America—is losing much of its meaning insofar as many members of the armed services are concerned.

It is a tragedy of our times that great deeds of heroism, coming one upon the heels of another, are having a tendency to devalue the medal in the public mind.

This was sadly illustrated by the case of Sgt John A. Pittman, late of Company C, Twenty-third Infantry Regiment, Second Division, one of the trio of medal winners recently decorated by President Truman.

Sergeant Pittman was the first GI awarded the medal for smothering a hand grenade with his body to come out of the Korean war alive. Only one World War II soldier awarded the medal for a similar act lived to

tell it. (A more recent medal was given posthumously to a Negro GI who gave his life smothering a grenade in Korea.)

With scarcely a pat on the back from his superiors, 22-year-old Sergeant Pittman—in a beat-up old uniform and badly stained blouse—was released from the station hospital at Fort Campbell, Ky., for his trip to Washington and the White House ceremonies. A shocked but friendly newspaperman took him in hand and saw that he was outfitted properly.

A shy and unassuming hero if there ever was one, Sergeant Pittman twice shielded his men from enemy grenades—once with his poncho, once with his body. The Army says his intrepid and selfless act saved several of his men from death.

Yet, radio and television officials, and most of the important magazines, could find no glamour worth the telling in Sergeant Pittman's exploits.

On the eve of his momentous visit to the White House to receive the medal from President Truman, Sergeant Pittman and his Mississippi farm parents were quartered in a downtown Washington hotel of somewhat ancient vintage.

It had been a long day. The sergeant's parents—Mr. and Mrs. Edgar Wiley Pittman, of Tallula, Miss.—had arrived that morning and enjoyed an hour's nap before the Army caught up with them. Then the Pittmans were put on display by the Army for the benefit of newsmen.

Capt. Robert A. Lehman, a suave Army engineer, was assigned to watch over the sergeant and escort the family to dinner. One or two newsmen moved in and out of the rather plain Willard Hotel room the Army had reserved. The beer that went on the Army's check was drunk by a couple of well-wishers. Mr. Pittman gave it up 7 or 8 years ago. Mrs. Pittman didn't bother looking at it.

Sergeant Pittman sat nervously in a straight chair answering questions—killing time until Captain Lehman arrived to take them to dinner. Already the captain was an hour and a half late.

The telephone rang. It was the captain calling from the lobby.

Everyone went downstairs. The captain was nowhere to be seen so the Pittmans sat in the long lobby corridor, more lonely than they ever could have been on their Mississippi farm. No one paid them the slightest attention.

One of the newspapermen finally flushed Captain Lehman out of a telephone booth.

As the dinner setting, the captain chose the swank Carlton Hotel—plush and forbiddingly formal hostelry where all State functions are held while the White House is being renovated. The dinner orchestra whined a soft melody as the Pittmans—escorted by Captain Lehman and another sergeant—entered the dining room.

Snowy white linen reflected light from the gleaming chandeliers. Bustling waiters poured bubbling champagne into long-stemmed glasses ringing the Pittman's table. The United States Army was doing it up brown.

The newsmen sat at an adjoining table.

"I'd better make the most of that medal ceremony tomorrow," one of them remarked. "The President—much less the country—won't remember it or him a year from now. Name me one World War II Medal of Honor winner? You can't, can you? Well, few people can."

Captain Lehman dominated the desultory conversation. His highest award—the good conduct medal—stood out in bas-relief upon his tunic but was dwarfed by Sergeant Pittman's combat infantryman's badge.

The other sergeant—the captain's driver—tossed his fellow soldier. The parents sipped the bubbling champagne slowly and

warily. They were as ill at ease as fish out of water.

The tinsel was obvious. There was an artificial air about everything around the Pittmans. The fuss and bother seemed too much for Mississippi farmers; yet too little for a Medal of Honor winner. One could almost hear the vaillant sergeant later describing it to friends as phony.

But, of course, he didn't. He felt strange and unsure of himself. And he must have compared a GI's muttered thanks for a beer bought, a cigarette given, or a life saved, with the handshaking, the pats on the back, the "good going, sergeant" flung at him in Washington.

Everyone seemed to be glad when dinner was over. The captain, in cultured accents befitting the splendor of Washington's No. 1 hotel, ordered *creme de menthe frappée*. Their opalescent greenness drew the attention of Mr. and Mrs. Pittman. Their sergeant son looked expectantly toward the door. He wanted to get his parents back to their hotel room and wanted to hit the sack himself. He was still carrying around pieces of grenade fragments and he was tired.

The conversation at the table became more animated. Sergeant Pittman's parents wanted a souvenir to take back to Mississippi. The efficient captain held a brief conversation with the captain of the waiters. An agreement was reached and the Pittmans—father, mother, and heroic son—left the Carlton Hotel proudly carrying an oversized dinner menu and the personal autograph of the captain of waiters.

The day was done.

The White House ceremonies next day were impressive and friendly—but all too brief, all too quickly forgotten.

Today, Sergeant Pittman is back in the Fort Campbell Hospital—his physical wounds a grim reminder of his heroism; his mental wounds an ironic reminder of his glory, his name not even a hazy memory in the public mind; his deed buried in the Army's file of Medal of Honor statistics.

The Medal of Honor was created first in 1861 to distinguish enlisted men of the Army and voluntary forces who "shall most distinguish themselves by their gallantry in action, and other soldierlike qualities."

In later years, officers were made eligible and the Army began taking steps to limit the award to men performing conspicuous acts of gallantry during actual conflict.

After 1862, Medals of Honor were awarded quite freely. Then, in 1897, Army regulations were revised to require "incontestable evidence" of a heroic deed and to require that the deed itself must be one clearly distinguishing the individual for intrepidity judged by a standard of "extraordinary merit."

Burial of Marine Sgt. Paul Moose in Isle, Minn.

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, October 12, 1951

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have a transcript of a radio broadcast by Mr. George Grim, of Station WCCO, on September 2, printed in the Appendix of the Record. It is a tribute to the people of the town of Isle, on Mille Lacs Lake, Minn., who deserve commendation and tribute for their dedication to democratic prin-

ciples. This represents the real America.

Mr. President, I make the request to have this article printed in the Record because some time ago we heard of a rather unfortunate incident which took place in our country when certain persons refused burial in a cemetery of a young man of Indian blood. This community in Minnesota reversed the pattern set in the other case, and gave great tribute to a Marine Corps veteran who lost his life in Korea. The entire community paid tribute to his memory and his valiant service to his country.

There being no objection, the broadcast was ordered to be printed in the Record, as follows:

RADIO BROADCAST BY GEORGE GRIM OVER WCCO

The following is a transcript of George Grim's radio broadcast over WCCO given on Sunday, September 2 at 10:15 p. m.:

"Good evening.

"This is a story to make each of us proud.

"This is the real American story of what happened when the body of an American Indian—killed in action in Korea—came home to a little town on the shores of Mille Lacs Lake in Minnesota. It is the story of a community of understanding and of brotherhood.

"Paul Moose grew up in that community. He was the son of Mr. and Mrs. Alex Moose. The Chippewas were his ancestors and he was proud of that heritage.

"Paul went to school in Isle. He would have been class of 1951. But he was strong, had a longing to see far-away places. He also wanted to prove, by himself, that he knew his duty as an American.

"Paul Moose enlisted in the Marines, trained, went overseas to Korea. The class of 1951—last June's class at Isle High School—dedicated their yearbook to Paul. They were proud of him. He became a sergeant of Marines.

"Then, last September, in the hottest part of a battlefield, Sgt. Paul Moose was killed in action. He had not yet reached his twenty-first birthday, but had given his life for what he believed to be the fight for freedom.

"The news of his death, received by his parents, soon was a community sorrow in Isle. And, last Tuesday, his body came home for burial. With it, came a military escort, Corp. Joe R. Noel. He brought Paul Moose home to Isle and to his people.

"On last Friday afternoon, not a store was open in Isle, a town of 700 people. Nobody wanted to do anything but pay respects to Paul. Not a church in the community was large enough to hold these understanding people. The funeral services were held in the local movie theater.

"Four hundred people gathered, a hundred of them Indians, to pay their respects to the first boy from the Isle area killed in Korea. The men of the American Legion acted as pallbearers, the superintendent of schools, the postmaster, a real-estate man, a carpenter, a county commissioner. Mayor Fladebo was surprised that outsiders were interested.

"Why should we be doing anything less," he said.

"A few words were spoken by the wife of Pastor Auerbach, for he is in the Pacific, a chaplain. The Auerbach son is in service.

"This is a challenge to all of us," she said. "A challenge to prove our own worth, our own determination to fight for our freedom."

"Outside, on the stilled main streets of Isle, 63 automobiles were lined behind a hearse. Ready to lead the procession to the cemetery, a Minnesota highway patrol car. The simple ceremony ended, the body of Sgt. Paul Moose was carried to the motorcade.

"It's only a mile to the cemetery. I asked the superintendent of schools what was the name of that cemetery. He hesitated.

"Don't think it has one," he said. 'It's just where we bury our dead and come to remember them.'

"In the procession was Herbert Nyquist, who runs a food store. For 32 years he has been the closest friend in town of the Indians, buying furs and rice from them, selling them groceries, carrying them on credit during the ends of a lean winter. Grocer Nyquist speaks Chippewa.

"The services at the grave were short. After the townspeople left, Nyquist and the Indians conducted a short ceremony of tribal tradition.

"Nobody in Isle has thought of much else this week end. Just of Paul Moose, the Indian, the boy they liked when he went to their school, the boy who gave his life in Korea for them.

"But how did all this look to a soldier who doesn't live in Isle? I asked the young corporal who accompanied the body to write down how he felt. Just as he wrote the words, I read them:

"I arrived at Isle, Minn., at 2 p. m. from Oakland, Calif., Army Base, escorting Sgt. Paul Moose. As I got to Isle, the American Legion was waiting to show the respect of the people. They had their colors on hand, color guards, and an honor guard.

"The people were not concerned with Paul's race. In fact, not once did I ever hear anybody mention it.

"Paul was given a complete military funeral. Everyone, from the funeral home to the people at the cemetery, were good to Paul.

"I myself talked to some of the people in business about Paul. All spoke well of him. They all seemed to know him. Paul was an Indian boy who gave his life for his country. He was placed to rest in the Isle cemetery.

"All business was closed to show respect.

"I would like to thank the American Legion of Isle and the people of Isle for their kindness, their courtesy, to Paul, and what they did for him.

"I met Paul's father and mother at the train station. I was treated well—as good as anyone—by them.

"The people of Isle and the men of the American Legion all showed respect for their boy."

"The pencilled report was signed: 'Cpl Joe R Noel escort.'

"In wonderful simplicity, the community of Isle, Minn., has written a story of understanding. Their very wonder at our interest in what they did for Paul Moose is the measure of that understanding.

"He was one of us," they say simply.

"You cannot add more.

"You can only hope that this understanding exists in a thousand—10,000 Isles all over America. This is what we must have—not the shame of that bigotry in the cemetery in Sioux City—a story already used by the Russians to prove that our brotherhood is only a word and not a fact.

"This is the story the world should hear.

"I have only one voice, one radio station.

"But I wanted you to know what happened in Isle, Minn., when Sgt. Paul Moose, marine, killed in action in Korea, came home to his people.

"Who were they?

"Everyone in town.

"Can you hear this without feeling indebted to boys like Paul, to people like the folks in Isle, Minn.?

"I can only say, in humility,

"For a few moments, we saw a light of such beauty that no man could face it without a prayer of thanks in his heart."

"Good night."

A Cesspool of Corruption

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 11, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, it is news when Doris Fleeson, the New Deal apologist, devotes a column in the Star to point out that the lid is off cesspool of corruption.

Mr. Speaker, to Senator WILLIAMS, of Delaware, an accolade for his persistent efforts to expose corruption in the Internal Revenue Bureau. He has established himself as a Senate leader whose voice must be heard in the councils of the Republican Party.

I include at this point the article by Miss Fleeson:

LID OFF CESSPOOL OF CORRUPTION—DELAWARE'S SENATOR WILLIAMS SPENT 4 YEARS INVESTIGATING JUGGLING OF TAX ACCOUNTS BY INTERNAL REVENUE BUREAU

(By Doris Fleeson)

Four years ago an unimportant little crook in the Internal Revenue district of Delaware tampered with the tax account of a moderately successful grain merchant. When the Bureau began then to press the merchant for taxes he knew he had paid, he became annoyed. When his own investigation disclosed monkey business in the Bureau he decided he would discuss it with the Bureau's boss.

He had no trouble reaching the then Internal Revenue Commissioner George J. Schoeneman, because the merchant had just been elected to the Senate. Senator JOHN J. WILLIAMS recalls very clearly, however, that Mr. Schoeneman was not impressed.

For that boredom, the Truman administration is now paying a heavy price. The lid is off a widening cesspool of corruption in the most sensitive agency in Government, vital centers of Democratic political power are involved, the name of a Truman secretary, Matthew Connelly, has bobbed up in testimony and the end is nowhere near in sight.

Senator WILLIAMS persisted until he had cleaned up the Delaware situation which involved the juggling of 400 tax accounts. The country didn't notice it but a Delaware Democrat employed in the rich New York tax district did. He decided to risk some disclosures to the steadily persistent honest Senator from his own State who did not appear afflicted with headinitis but got results. As the results began to get attention, the Bureau's many other honest employees began to offer the Senator their cooperation.

Not all the red faces resulting from Senator WILLIAMS' remorseless pressure for a clean-up are in the executive branch.

The naming of collectors of internal revenue, like Federal judgeships, is a senatorial prerogative. Startled by current disclosures, Senator RUSSELL, of Georgia, a discreet man, permitted himself to exclaim that if the Georgia collector proved false, he would himself feel culpable.

In particular, the Senate Finance Committee which has jurisdiction over revenue matters, including collector nominations, remained noticeably quiescent as the "Delaware David"—a member of Finance—repeatedly took his disclosures to the floor. This committee prides itself on its austere conservatism and its dominant figures—Chairman GEORGE, Senators BYRD, JOHNSON

of Colorado, Democrats; Senators MILLIKIN, TAFT, BUTLER, Republicans—virtuously scorn the Fair Deal.

But like Mr. Schoeneman, they were slow to take seriously the unimpressive Senator with the squeaky voice from the small State of Delaware.

They have agreed on their mea culpa. They have now adopted a rule that before any collector of internal revenue can be confirmed he must be called before the committee and a full understanding reached with him that it's a full-time job whose duties do not—in spite of Mr. Finnegan, of St. Louis—include keeping people happy.

Senator WILLIAMS approves of that but he's not quite finished with the current crop, in large part because he'd like to see the honest ones completely cleared. He has called for full biographies and reports on the whole lot. He thinks perhaps some kind of public pat on the back for the innocent might help restore public confidence in the Bureau. Believe it or not, he hasn't introduced a resolution for a Williams subcommittee to do it, either.

Conditions in Albania

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Friday, October 12, 1951

Mr. SPARKMAN. Mr. President, Mr. Hugh Grant, who formerly was secretary to Senator Hugo Black, when Justice Black was a Member of this body, and still later Minister of the United States to Albania until it was overrun by Italy, and yet later Minister to Siam, made an address recently before the Baptist Brotherhood in Augusta, Ga., in which he told something about Albania and its hopes of coming out from behind the iron curtain. An account of his address is published in an Augusta, Ga., newspaper, and I ask that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BAPTIST BROTHERHOOD IS TOLD OF ALBANIA'S KING BY GRANT

The First Baptist Brotherhood last night heard Hugh G. Grant, former United States Minister to Albania and Thailand, tell of his recent meeting with His Majesty, King Zog, of Albania, in Washington and of the terrible plight of the Albanian people under Russian iron curtain rule.

Mr. Grant made an earnest plea for a study and appraisal of the present situation of Albania by the American public. He said Albania was a trusted friend of America, but had been largely bypassed in the tug of war that the United States is carrying on with the encroaching Soviet Communists in Europe.

HEADED LEGATION

Mr. Grant was in charge of the American Legation in Albania for 4 years immediately prior to World War II and was there when Mussolini's Fascist legions attacked the little country and took it over in April 1939. He remained there until after war broke out in Europe, when he closed the American Legation since Italy had taken over everything.

Cason Bruker, president of the First Baptist Brotherhood, presided at the meeting

which had an attendance of more than 100. Jack Calloway was master of ceremonies as program chairman. Dr. Warren A. Huyck, pastor of the church, pronounced the invocation, and Warlon Symms introduced the speaker.

DESCRIBES GEOGRAPHY

Mr. Grant described the geography, history, and religion of Albania, and told of the cordial and friendly attitude toward America of His Majesty, King Zog, Albanian political leaders, and the people throughout the country.

Everywhere he traveled in Albania, he said, he found deep gratitude for the friendly interest in Albania shown by the late President Woodrow Wilson at the Paris Peace Conference in 1919. Some 50,000 Albanians residing in the United States have cemented these ties of friendship.

The speaker paid high tribute to King Zog, who is making his first visit to this country. The King is in exile in Egypt. Mr. Grant said the King was a natural leader, astute, courageous, friendly, and intensely loyal to the cause of Albanian independence.

The King told Mr. Grant in Washington that his aim is to see Albania completely free from foreign domination in order that she may take her place among the freedom-loving nations of the world, and that he would leave it to a vote of the Albanian people to decide what form of government they want once they are free of the present Russian yoke which has brought starvation and misery for a large part of the population.

RUSSIANS VULNERABLE

King Zog also told Mr. Grant that he believes the Russians are very vulnerable in Albania, especially since only a small number of Albanians are supporting the Soviet regime and most of these through fear and compulsion.

The Russians are in Albania with several thousand soldiers and technicians because Albania is a place of great strategic importance from a military standpoint. It is the western gateway to the whole Balkan area with its fine harbors and it is also an important factor in the control of the Mediterranean because of its location near the point where the Adriatic Sea flows into the Mediterranean.

The Russians are reported to be building a great submarine base on the island of Valona just off the coast of Albania.

Following the address, moving pictures of Albania which were made by members of the American Legation stay were shown.

Taxpayers Shocked by Internal Revenue Bureau Disclosures

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 11, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks I am including an article by Mr. Gould Lincoln that appeared in the Star last night:

THE POLITICAL MILL

(By Gould Lincoln)

TAXPAYERS ARE SHOCKED BY BUREAU DISCLOSURES—FRAUD AND BRIBERY IN COLLECTIONS TO BE MAJOR ELECTION ISSUE

The American taxpayers who are called on today to turn over to the Internal Revenue Bureau some \$50,000,000,000 a year, are blinking their eyes in amazement over what

is being turned up in the offices of half a dozen collectors. To be more exact, in the offices in Boston, where a recently deposed collector, Denis W. Delaney, is under indictment on charges of bribery and false certification of tax payments; in New York, San Francisco, St. Louis, Newark, and Detroit. Not only are they amazed, they are angry.

These revelations, many of them growing out of investigations by a subcommittee of the House Ways and Means Committee, headed by Representative King of California, Democrat, threaten to be even more devastating as a campaign issue next year than the disclosures of the use of political influence used in recent years to obtain loans from the Reconstruction Finance Corporation. The end of the inquiries by the House committee is not yet in sight, either.

The recent testimony given before the committee by James P. Finnegan, internal revenue collector in St. Louis until he resigned last spring, particularly is enlightening. A grand jury is looking into the operation of the St. Louis office under Mr. Finnegan.

Replies come as shock

His replies to some of the questions by the committeemen come as something more than a shock. For example, he testified that he averaged "2, 3, or 4 hours a day" in the collector's office—handling a job that was paying him \$10,000 a year; that he was informed when he took the job that he could spend as much or as little time as was necessary in the office; that he could continue his private practice of law while he was collector; and that of the 64 collectors scattered over the country he did not believe more than 15 were tax experts. Mr. Finnegan freely admitted he was no tax expert—that he was just an "administrator." He also admitted that his private law practice brought him \$30,000 to \$35,000 a year.

This particular collector was a crony of the late "Bob" Hannegan, also of St. Louis, who was successively Commissioner of Internal Revenue, chairman of the Democratic National Committee—he ran the 1944 campaign for the late Franklin D. Roosevelt—and Postmaster General. Mr. Finnegan played football as a young man on the same team with Mr. Hannegan. He contended that it was quite natural that Mr. Hannegan, when the latter was Commissioner of Internal Revenue, should want him as collector in St. Louis, and he took the job on Hannegan's invitation. From Mr. Finnegan's description, it was a political job. He was a kind of public-relations man and job dispenser. He liked, he said, to give jobs to people.

Had sought to resign

Mr. Finnegan also testified that in 1949 and in 1950 he had sought to resign as collector in St. Louis and had taken it up with Matthew J. Connelly, secretary to the President, and with President Truman himself, and had been told not to resign. Secretary of the Treasury Snyder, however, told the House committee that he had advised Mr. Finnegan in October 1950 to resign "because of general rumors around St. Louis." Mr. Finnegan did not, however, resign until some 7 months later. Mr. Snyder, who, like President Truman and Mr. Finnegan, is from Missouri, said he knew nothing of Mr. Finnegan's reported talks with the President and Mr. Connelly.

Mr. Finnegan's sources of revenue—from his law clients, which netted him about \$105,000 in 3 years—have not yet been fully disclosed. The House committee is still working on that end of its investigation. He did not appear as an attorney of record, but acted as counsel, he said, in an advisory capacity.

The administration is now busying itself, according to Mr. Snyder, in an attempt to clean up the mess that has been uncovered

in the tax collectors' offices. One thing appears certain however, and that is, the members of the House Ways and Means Committee are intent on seeing that the collectors give full time to their jobs—and do not practice law on the side; also, they will insist that all collectors know something about the tax laws.

Demobilization of Armed Forces After World War II

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, October 12, 1951

Mr. HUMPHREY. Mr. President, within recent months the question of demobilization of our Armed Forces of World War II has taken on ever-increasing importance. It has been the subject of sharp controversy. On September 8, 1951, the Minneapolis Morning Tribune carried an excellent editorial on this controversial issue. I ask unanimous consent that this editorial, entitled "Let's Look at Record on Demobilization," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the Appendix of the RECORD, as follows:

LET'S LOOK AT RECORD ON DEMOBILIZATION

The version of what happened to the military might of the United States at the end of World War II offered by Gen. Douglas MacArthur at Cleveland Thursday night may be good demagoguery but it is bad history.

MacArthur accused our political and military leaders of dissipating the armed strength of the United States with reckless haste after World War II. They deliberately disarmed in the face of threatening communism, MacArthur charged.

MacArthur would have done a greater service to the cause of national defense and to the American people if he had told plainly what really happened after the Japanese surrender and warned against a repetition.

It was the American people and their representatives in Congress who dissipated the Nation's armed strength at a time when it should have been kept intact for the safeguarding of the free world. Leaders of both parties in Congress bowed to the overwhelming demand of parents, wives, and friends to get members of the Armed Forces home from overseas without delay. The President and the heads of the Defense Establishment were unable to resist pressures which shocked those who grasped the significance of this national debacle.

The Tribune feels warranted in setting the record straight because it was one of the few newspapers which, in the months following the Japanese surrender, pointed out the grave dangers of the precipitate demobilization then going on.

Perhaps General MacArthur was trying at the same time to prevent this reckless dissipation of our means of winning the peace, but we have not come across any evidence of his doing so.

The pressure on Congress and the Defense Establishment to get the men home without regard to consequences was strongest then from the men under MacArthur's command. The slogan, "no boats, no votes," which terrorized Members of Congress into demanding that the soldiers be brought home re-

gardless of consequences, appeared most frequently on letters bearing the postmarks of Army post offices in MacArthur's command.

The mimeographed and chain letters demanding that the troops be brought home which poured into newspaper offices in those days came principally from the Pacific.

More than 18,000 soldiers in MacArthur's command signed a pledge "not to vote for any Senator or Representative now in office who does not in the next 25 days take some tangible action to get us home." The soldiers' newspapers in MacArthur's command gave great impetus to this pressure.

MacArthur had a lot of other grave problems on his hands those days. Had he attempted to buck the tide he probably could not have persuaded the men under his command, their friends, and relatives, or Members of Congress that our Armed Forces should be kept strong until the peace had been won.

But that is no warrant for fostering in American minds the delusion that their costly military weakness was the fault of a few men in Washington rather than their own. The only way to make sure that the American people do not make such a dangerous mistake again, if unhappily they should ever again be engaged in global war, is to make clear the responsibility for the past mistake.

Cordova, Walker County, Ala., Is a Good Location for a Pulp and Paper Mill

EXTENSION OF REMARKS

OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. ELLIOTT. Mr. Speaker, the need for the immediate expansion of the wood-pulp and paper-making industries of the United States is apparent.

Recently published reports point up the present shortage of newsprint, and that shortage daily threatens to become more acute.

The Seventh Congressional District of Alabama, which I have the privilege to represent in the Congress, has great natural resources. Among the nine congressional districts of Alabama, it ranks third in the number of acres of timberlands. Its 2,400,000 acres of forests cover approximately 63 percent of its total land surface.

The William B. Bankhead National Forest, partially located in the Seventh District counties of Winston and Franklin, provide a readily apparent and wonderful example, as do thousands of privately owned tracts, of the timber and pulpwood production possibilities of the entire district.

The Seventh Congressional District possesses many appealing advantages for the location of a pulp and paper mill. Included among them are:

First. Vast existing pulpwood resources.

Second. A mild climate, and a high average annual rainfall, which together, insure rapid growth of pulp timber through a long growing season each year.

Third. Hundreds of millions of tons of high-grade coal to meet any sustained fuel requirements, now, or in the future.

Fourth. An ample supply of skilled, semiskilled, and unskilled labor that believes in doing a day's work for a day's pay.

In addition to these natural locational advantages, Cordova, Walker County, Ala., possesses the following special advantages for a pulp paper mill:

First. Cordova, Ala., is located on the navigable Mulberry Fork of the Warrior River, which provides an ample supply of industrial water, a fundamental necessity in the pulp paper-making process.

Second. This river is navigable the year around, with a 9-foot channel, maintained by the Corps of United States Engineers. Cordova is located some 10 miles downstream—west—of the head of navigation on the river. The quantity of available water is indicated by the fact that the Alabama Power Co. at its steam generating plants, a few miles down river from Cordova, extracts many millions of gallons of water daily to run through its condensers.

Third. In addition, natural gas, if needed, is available at Cordova from the lines of the Southern Natural Gas Co.

Fourth. Electric power needs, primary or supplementary, is readily available through the electric system of the Alabama Power Co., whose steam generators at Corgas, Ala., have a capacity of 325,000 kilowatts.

My remarks have been induced by a brochure recently prepared by the industrial development department of the St. Louis-San Francisco Railway Co., setting forth the locational advantages of a site at Cordova, Ala., on its rail lines, for a pulp and paper mill. The written information contained in the brochure follows.

SUGGESTED LOCATION FOR A PULP AND PAPER MILL IN WALKER COUNTY, ALA., NEAR CORDOVA

The proposed site is near Cordova, Ala., which is located in Walker County about 30 miles northwest of Birmingham. It is situated on the west bank of the Mulberry fork of the Warrior River, 428 miles by river from Mobile and about 10 miles downstream from the head of navigation on the river. Jasper, the county seat of Walker County, is about 9 miles from Cordova.

The elevation of Cordova varies from 400 to 500 feet above sea level. The health conditions in the area are excellent.

The average rainfall approximates 63 inches and the mean annual temperature is 63° F. The average growing season is about 215 days per annum.

Population 1950 census

1950 Census	City of Cordova	Walker County
Total population.....	3,147	61,005
Males.....	1,536	32,081
Females.....	1,591	31,820
Whites.....	2,912	57,209
Negroes.....	188	6,802

The site suggested herein is located on the east side of the Warrior River near the town of Cordova and adjacent to the tracks of the St. Louis-San Francisco Railway Co. (Frisco).

It consists of approximately 650 acres, under the control of Mr. C. S. Blasey, 2229½ First Avenue North, Birmingham, Ala., who is liquidating agent of the Old Black Diamond Coal Co. All or any part of this property is available.

This property has not been used for mining purposes. Most of it is now under cultivation. The improvements thereon consist of four 5-room houses, one 3-room house and a barn and two 4-room houses. All improvements and acreage are assessed on the tax records at Jasper at \$5,410.

It is particularly fitting that the site is located in a bend of the river which will allow the water intake from the north side of the site and effluent disposal on the south side of the site, with a minimum of pipeline pumping.

The topography of the area is such that a minimum of preparation will be necessary, and the soil is such that grading and filling can be accomplished at nominal expense.

The building site is well above any known flood water on the river. The county officials have indicated they will be glad to cooperate if necessary in rerouting and hard-surfacing the county road that extends through the site. The river at this site is bridged to the Cordova side of the river furnishing highway access from that direction as well as from the east.

PULPWOOD RESOURCES

Since the availability of pulpwood is one of the most important requisites for a successful pulp and paper mill, this report will treat with the subject in what we consider a conservative manner, and the data contained herein is only that applicable to all or part of nine counties, contiguous to the proposed site. This arbitrary area was chosen because it appears there will be no conflict in wood procurement with existing mills nor with proposed mills. The nearest mill to this site is at Tuscaloosa, Ala., which is about 50 air miles, and the theoretical breaking point for satisfactory wood procurement should, we believe, not be nearer than 25 miles to the existing mill.

In view of the fact that rail lines serving this site traverse portions of northwest Alabama and northeast Mississippi, which are heavily wooded in pine, the areas, even though they are not included in the summary herewith, would be able to supply quite large amounts of pulpwood on an economical basis. It appears that a mill of capacity sufficiently large to be economical could easily secure all of its pulpwood requirements within the area treated in this report. If a very large mill were proposed for this site, it would be in the interest of conservatism to secure the advice of a reputable forest surveyor to determine positively the existence and the availability of pulpwood in all the area from which pulpwood would likely be procured currently and in the future.

The data which follows is considered to be reliable and conservative, as its source is the Federal and State forestry services.

County	Available to proposed site		Thousands of acres allocated to proposed site	
	Total acres	Percent	Total	Wooded
Blount.....	410,000	100	410	213.1
Cullman.....	476,000	100	476	219.0
Marion.....	475,000	100	475	291.5
Walker.....	518,000	100	518	362.6
Winston.....	405,000	100	405	300.0
Franklin.....	412,000	50	206	125.9
Jefferson.....	714,000	50	357	261.0
Lawrence.....	438,000	60	263	120.0
Morgan.....	368,000	50	184	64.0
Total.....			3,291	1,961.0

Based on the Forest Service's survey of this area and allowing for the recent excess drain over reproduction because of the war,

the following estimate of available acreage and stand of timber is considered conservative:

Forest condition	Pine	Pine hard-wood	Upland hardwoods	Bottomland hardwoods	All types
	<i>Acres</i>	<i>Acres</i>	<i>Acres</i>	<i>Acres</i>	<i>Acres</i>
Old growth					
Uncut	43,800	14,800	24,800	3,200	86,600
Partly cut	88,000	27,700	43,400	3,600	133,300
Total, old growth	131,800	42,500	68,200	6,800	219,600
Second growth sawlog					
Uncut	433,500	136,500	51,700	13,700	635,400
Partly cut	154,700	60,400	24,800	9,100	249,000
Under sawlog size	258,600	283,800	219,500	18,400	780,300
Reproduction	24,000	16,300	25,700	2,000	68,000
Total, second growth	871,000	497,000	321,700	43,200	1,733,500
Clear cut	6,000	450	425	425	7,000
Total, all conditions	960,000	539,950	390,025	50,425	1,901,000

Thousands of cords (1945) stand

Species group	Sound trees, sawlog size		Sound trees under sawlog size	Cull trees	All classes of material
	Sawlog material	Upper stems			
Pines	6,000	952	2,755	455	10,162
Hardwoods					
Soft textured	614	341	674	645	2,274
Firm textured	1,195	674	2,808	2,304	7,017
Total hardwoods	1,809	1,015	3,482	2,949	9,291
Total all species	7,809	1,967	6,237	3,440	19,453

The forester in charge of the Bankhead National Forest (178,000 acres) north of Jasper, has estimated that the natural reproduction rate of pines in the area is at the rate of one-half cord per acre per annum. Based on his experience with managed timberlands, he estimated a pine reproduction rate of three-fourths to one cord per acre per annum, depending on the length of time in which good practice has been effective.

WATER

The proposed site is located on the Mulberry Fork of the Warrior River.

The water in this stream is of a quality seldom found in volume sufficient for large industrial needs. It is soft, very low in mineral content, and carries no organic or inorganic stain.

The drainage area of this site covers 1,900 square miles of mountainous country and the water is from a sandstone formation that is above the limestone formation of central Alabama and above the iron deposits.

A 9-foot channel is maintained and this river is navigable from the proposed site to Empire, 9 miles upstream. This channel depth is largely controlled by locks and dams 16 miles downstream at Gorgas. The Alabama Power steam plants, at that point, extract 250,000,000 gallons of water per day on the upstream side of the locks, which is run through their condensers. Since a 9-foot channel is maintained and the river is navigable to the suggested site, we estimate there is sufficient quantity of water at all times to supply a plant as proposed.

CLIMATE

This area does not experience extremes of either heat or cold and the weather will in no wise contribute to absenteeism or work stoppages. Out-of-doors work can be accomplished the year around without interruption, except for occasional rains.

Since the maximum and minimum seasonal temperatures are reached without drastic day-to-day variations, the operatives will not be affected adversely in the efficient performance of their daily tasks. This is especially important in a 24-hour operation.

FUELS

The important requisite of a reliable and economical source of fuel is amply fulfilled at this site. The plant site suggested for consideration in this report is located within the great Warrior Coal Field of Alabama and some of the largest mines in the State are located within 1 to 25 miles of the actual plant site and, of course, will afford an opportunity for considerable economy to a paper mill located at this site.

The actual coal analysis of the Walker County coals are recorded in the Bureau of Mines—and all of it is adequately set forth as ample steam-coal minerals, with the analyses ranging from 11,500 to 18,000 British thermal units.

Natural gas. In addition to the immediate availability of coal, natural gas from the lines of the Southern Natural Gas Co. is also available at Cordova. This alternative source of fuel places the user in the enviable position of being able to install facilities for the use of both powdered coal and natural gas, and thus be able to change from one to the other according to the dictates of economy and current availability.

Electric power: It is assumed that electricity will be produced at the plant, but it is probable that some kind of interchange agreement with the system of the Alabama Power Co. would be advantageous to insure continuity of supply. The power company's generating facilities at Gorgas are rated at 325,000 kilowatts.

TAXES

Alabama's tax laws are fixed by legislative enactment and are not subject to revision at the discretion of local tax officials.

The maximum limit of assessed value, as fixed by law in Alabama, is 60 percent of the reasonable cash value. The accepted practice is to assess property at from 40 percent to 45 percent of its reasonable cash value. Everyone in Alabama follows the accepted practice procedure, and that explains the use of the term "accepted."

There is some latitude in the term "reasonable cash value." For instance, a piece of property costing \$8,000 in 1927 was pur-

chased for \$5,500 in 1932. It is presently assessed for \$2,400. The assessed value is thus seen to be 43½ percent of the last purchase price (when a depression was in full swing) excluding improvements and betterments, and 30 percent of the original cost. Since our tax officials make every effort to equalize taxes, and since they are elected to office, there is very noticeable attitude of fairness and cooperation on their part, toward the taxpayer. The assessed-rate difference and the base latitude apply to both corporations and individuals alike.

For the purpose of this analysis we have assumed an assessed value of 40 percent of the reasonable cash value. It is our opinion that this represents the maximum tax cost to be expected and that the actual cost of local taxes will be less than those shown in the resulting estimates.

Alabama laws offer certain exemptions from property taxes to new manufacturing plants. Land is not exempted, and 70 percent of the rate, which is earmarked for schools, is not exempt. The exemption runs for a period up to 10 years under the law. We have, therefore, based our calculation on the first year, with exemptions, and the eleventh year without exemptions.

The larger manufacturing plants in Alabama are usually located outside the corporate limits of the communities from which the labor supply is drawn. The suggested site is so located.

Corporation permit tax: The rate is graduated from \$5 for a capital investment up to and including \$1,000 to \$100 for a capital investment of \$50,000 or more. It is an annual tax and, in the case of this analysis would amount to \$100.

Corporation franchise tax: This tax is an annual tax. The law as written specifies a rate of \$2 per \$1,000 of capital employed in Alabama by a foreign (out of State) corporation. We are advised by the State commissioner of revenue that a court order is now the basis of determining this tax, and that the order directs him to calculate the true value of the tangible property, as reflected by the assessment returns from the county officials and then apply the \$2 rate. This reduces the tax but complicates the explanation. The following is the actual procedure:

The tangible property assessments include land, buildings, improvements, appurtenances, machinery, equipment, and inventory over 12 months old (parts, supplies, etc.). This assessed at 40 percent of the reasonable cash value and reported to the commissioner of revenue at Montgomery. The commissioner's office assumes that the assessment represents 60 percent of the reasonable cash value and calculates such reasonable cash value by the simple process of multiplying by one hundred-sixtieths. Thus one hundred-sixtieths of 40 percent produces a figure which is only 66⅔ percent of the actual reasonable cash value. This method eliminates cash, accounts receivable and raw materials, goods in process and finished goods (if held less than 12 months) from the calculation, as well as 33⅓ percent of the tangible property in use. The \$2 per \$1,000 rate is then applied.

Property tax: The tax on tangible property is an annual one. The elements considered in arriving at the base are: land, buildings, improvements, appurtenances, machinery, equipment, and inventory over 12 months old (parts, supplies, etc.). Cash and accounts receivable are excluded as well as raw materials, goods-in-process, and finished goods, if held in the inventory for less than 12 months. The base amount is assessed at say 40 percent of its reasonable cash value and the tax rate is then applied. At the site under consideration the rate is \$2.10 per \$100 of assessed value. This is the tax to which exemptions apply.

Unemployment tax: This is an annual tax based on payroll payments. Alabama is one

of the States which uses the experience-rating method of arriving at a base rate. The system involves a straight 3 percent payment for the first 3 years (until experience has been had) and can fall as low as 0.8 percent if justified by experience. Both the 3 percent rate and the lower rates include 0.3 percent for Federal unemployment tax.

State income tax: Alabama's State income tax is based on net income after all other taxes. It is an annual tax and the rate is 3 percent.

Incorporation expense: The original (one time only) annual costs of a corporation, under the laws of Alabama, are illustrated in the following table. We have arbitrarily assumed three different amounts of capital investment, for comparative purposes.

Item of incorporation expense (paid only once)	Original capital of—		
	\$5,000	\$250,000	\$25,000,000
Charter fee (\$1 per \$1,000)	\$5.00	\$250.00	\$25,000.00
Examination of certificate fee	2.50	2.50	2.50
Admission of certificate fee	2.50	2.50	2.50
Recording of certificate (approximately)	5.00	5.00	5.00
	15.00	260.00	25,010.00
ITEM OF ANNUAL CORPORATION			
Permit fee (graduated \$10-\$100)	10.00	100.00	100.00
Franchise tax (\$2 per \$1,000)	10.00	500.00	50,000.00
	20.00	600.00	50,100.00

TRANSPORTATION

Rail: The suggested site is served by the St. Louis-San Francisco Railway Co. (Frisco

line) and the Illinois Central Railroad, the latter line being granted operating rights over the St. Louis-San Francisco Railway Co. (Frisco line) from Jasper to Birmingham, Ala.

The Frisco operates in 9 States and extends from Pensacola and Mobile north to Birmingham, Memphis, St. Louis, Kansas City, Oklahoma City, Dallas, and Fort Worth, connecting with all lines at these gateways. Thus, the proposed site has direct mainline connections to all principal markets.

Freight rates: The scale of rates applicable to movement of pulpwood for single line haul to the proposed site will be as per the attached mileage scale. Joint line rates will be a combination of each participating line local factor rates based on distances shown in the statement over the junction point.

At the present time there are no published rates on woodpulp from the proposed site. By using the existing formula for rates from this site as was used from other Alabama producing points a resultant rate to Philadelphia, Pa. as example, would be 67 cents per hundredweight, minimum weight 50,000 pounds, for all rail movement.

The rate on woodpulp from this site to Mobile would be 40 cents per hundredweight, minimum weight 50,000 pounds. Steamship rate from Mobile to Philadelphia is 52 cents per hundredweight, minimum weight 36,000 pounds or 48 cents per hundredweight, minimum weight 70,000 pounds. There must also be added to the above steamship rate wharfage and handling charges at Mobile in the amount of 94 cents per ton of 2,000 pounds.

Highway: United States Highway No. 78 and five paved State roads serve the area.

Air: The site is less than an hour's drive from Birmingham where air service is provided by Eastern, Capital, and Delta Air Lines.

Pulpwood (Roanoke Rapids scale)

[Rates in cents per cord of 128 cubic feet, minimum 12 cords]

Communists Objectives Have Always Been Consistent

EXTENSION OF REMARKS

OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 10, 1951

Mr. KERSTEN of Wisconsin. Mr. Speaker, many of those who are attempting to justify our kind of treatment of the Soviet Union during World War II and in the years immediately following now propagate the idea that it was only an honest and natural error. The idea is given out that there was no way of knowing that Stalin would not live up to any of his agreements or that the Communists were not honestly intending to cooperate with the rest of the world in insuring world peace.

Those who are supposed to be well versed in world affairs have no right to make this excuse. A study of the Com-

munist movement would show to them that the Communists have consistently and relentlessly pursued their objectives—only their tactics have changed. And these objectives have been openly stated on numerous occasions since the fall of the validly elected Russian Government in November 1917.

As long ago as 1922, Father Edmund Walsh, S. J., noted authority on communism and regent of the Georgetown School of Foreign Service, demonstrated the proper technique in dealing with the Communists. At that time he was a part of the American Relief Administration which went to Russia to help relieve the starving people of Russia. When all their supplies and equipment were in Russia and ready to be distributed to the people the local Communist leaders told Father Walsh that they would select the people to help him in distributing the food.

Father Walsh immediately contacted high authorities in Moscow and flatly stated that unless their relief administration was allowed to distribute relief in their own way and to select their own

help they would not distribute any but would remove all their supplies from Russia immediately.

Thereupon the authorities stated that the order of the local Communists was in error and would be rescinded. Father Walsh, however, insisted that an order to the local Communists be issued to desist from interference and then after this was done the food kitchens would be reopened, but not before. The officials thereupon complied with Father Walsh's demands.

If Father Walsh had not been insistent on his demand to distribute the food relief as he saw fit, obviously the entire relief program would have deteriorated into a political weapon in the hands of the Communists. So it was highly important that Father Walsh insisted on maintaining his position rather than compromising with the Communists.

Father Walsh, a student of communism these many years, in his recent book *Total Empire* clearly states that Soviet objectives have never changed. He states:

The plain truth of the matter is that Soviet policy is the most logical and consistent political phenomenon that emerged from World War I or prevailed after World War II. That is why the Russian revolution has advanced to the points of longitude and latitude where it now stands on the map of Europe and Asia. The vacillations, the empiricism, the half measures, the weakness, and compromises were all on the other side of the table—at least, until recently.

* * * No government in history has been so frank and circumstantial in spelling out and publicizing its basic policy and its ultimate intentions. Candor leaves but one conclusion: the tragedy of unpreparedness lay not in our stars but in ourselves (p. 177).

In another portion of the book Father Walsh gives his views of those who believe that cooperation with communism is possible. He states:

In view of this declared intent and in the face of facts developing over the years in consonance with such established principles culminating in the Korean war, he who still clings to the hope of converting world communism to harmonious cooperation with the United Nations is a hopeless idealist, and, if a statesman, he is a reckless and dangerous leader. He will end in the frustration which engulfed Mr. Benes and Mr. Masaryk and made Czechoslovakia a house of bondage (p. 239).

Those who believe that cooperation with the Soviet Union in the United Nations would be possible after World War II should have read what Lenin stated in *Left-Wing Communism, an Infantile Disorder*:

You must work inside them—bourgeois-democratic institutions—otherwise you run the risk of becoming mere babblers * * * The conclusion which follows from this is absolutely incontrovertible; it has been proved that participation in a bourgeois-democratic parliament even a few weeks before the victory, not only does no harm to the revolutionary proletariat, but actually makes it easier for it to prove to the backward masses why such parliaments deserve to be dispersed; it facilitates success in dispersing them and facilitates the process whereby bourgeois parliamentarism becomes politically obsolete. To refuse to take this experience into account and at the same time

to claim affiliation to the Communist International, which must work out its tactics internationally, is to commit the greatest blunder and actually to retreat from internationalism in deeds while accepting it in words

Why our diplomatic officials could not have adopted the common-sense methods of Father Walsh in their dealings with the Soviet Union after World War II must remain a mystery for all of us.

I include herewith an article by William Henry Chamberlin from the Wall Street Journal of August 28, 1950:

UNLOADED GUN—THE EXPLANATION THAT THEY DIDN'T KNOW IT WAS LOADED DOESN'T EXCUSE THOSE WHO PLAYED WITH THE KRIEMLIN

(By William Henry Chamberlin)

"Didn't know it was loaded" is the familiar stock excuse when someone accidentally shoots a friend with a lethal weapon. It is never a very good excuse, and it is no better in public affairs than in private.

For there is a distinct "didn't know it was loaded" flavor about the explanations and attempted justifications of the Yalta agreement which are now being offered by high public officials and commentators. Implicit in these explanations is the assumption that the Soviet dictatorship, up to February 1945 had behaved in such a manner as to warrant high expectations that it would be a willing, cooperative partner in building a brave new world of peace, justice, and freedom.

Now it is understandable and pardonable if the average American and British citizen believed this. The man in the street cannot be expected to be an expert on history and international affairs. It was deliberate governmental policy, in the interest of wartime unity, to suppress, so far as possible, knowledge of the less agreeable sides of Soviet life. This policy greatly affected the character of books which were published, of newspaper reports, of radio broadcasts.

HOPE FOR WORLD PEACE WISHLIFUL THINKING

It was, of course, pleasant to believe that a world of peace and harmony and relaxation would be the reward for the sufferings and sacrifices of the war. One can scarcely blame the ordinary citizen for cherishing this hope; especially when he was assured over and over again, on the highest authority, that this fair prospect would certainly be realized.

What is not pardonable, what, in retrospect, seems scarcely comprehensible, is the blind wishful thinking of the men in higher policy-making posts. Surely the Soviet record in international affairs before the war and during the war was available to these men.

And it was not a reassuring record. There was the repeated identification in the most authoritative of writings of Lenin and Stalin, of the Soviet regime in Russia with the success of the movement for world revolution. There was the starving to death of millions of Soviet peasants in order to force on the remainder an undesired system of collective farming. There was the liquidation of the kulaks as a class, the deliberate planned social and economic extermination of perhaps a million peasant families, singled out for persecution because they were a little better off than their neighbors, there was the growth of a gigantic slave-labor system.

It was scarcely probable that a Government which used such ruthless methods in dealing with its own people would be gentler in respecting the rights and liberties of people outside its own frontiers, once its armies started to march across those frontiers. Nor was the record of the Soviet Government in the war years any better.

SOVIET WAR RECORD

The outbreak of the war was precipitated by the signing of the Hitler-Stalin pact of

August 23, 1939, a pact which made Stalin a full accomplice in all Hitler's aggressive schemes in Eastern Europe and gave him a share of the human and territorial spoils in Poland and the Baltic States.

It was, or should have been, well known to responsible Government officials that the Soviet annexation of eastern Poland and the Baltic States was accompanied by mass deportations on a scale unknown in modern European history, and under circumstances of extreme barbarity. Subsequent Polish investigations led to the conclusion that about 300,000 of the 1,250,000 Poles deported from the eastern provinces of that country perished as a result of overwork, malnutrition, shocking sanitary conditions in the deportation trains, and the forced-labor camps.

The overwhelming circumstantial evidence that the Soviet Government was responsible for the slaughter of thousands of Polish officer prisoners whose graves were found in the Katyn Forest, near Smolensk, in the spring of 1943, was no secret to men in the higher diplomatic posts—unless they deliberately wanted to be deceived. The State Department archives of this period have not been opened. But it is known that some fairly sharp communications were dispatched to Moscow (invariably without success) on such subjects as the treatment of Polish deportees in Russia and the failure of the Red Army to support, or assist American and British air aid to the gallant Polish uprising in Warsaw against the Germans.

THE MISUNDERSTOOD DEMOCRACY

Yet, with all this mountain of evidence pointing to the probability of a highly charged and explosive situation developing with the Soviet Union after the war, the men responsible for directing American foreign policy persisted in giving the American people soothing syrup about the Soviet regime as a great misunderstood democracy. At Yalta and elsewhere they made concessions to the Soviet regime which were immoral in themselves and most disastrous for American interests in the Far East and in Eastern Europe. We are still stumbling over the remains of these past blunders. It is not without significance that it is always Communists and Communist sympathizers who want to "get back to Yalta and Potsdam."

The plea, "We didn't know it was loaded," will not get the men of Yalta, in the actual and figurative sense of that term, an acquittal at the bar of history. The course of events since the end of the war would have been much more favorable if the western statesmen had returned, with interest, the attitude of profound mistrust which Stalin consistently maintained toward them.

It's Not Safe for a Congressman to Write the Bureau of Reclamation

EXTENSION OF REMARKS

OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 27, 1951

Mr. POULSON. Mr. Speaker, the duties of a Congressman are many and arduous these days, and he should not have to bear the additional burden of worrying constantly about the political machinations of hired hands in Government departments upon which he must depend for information and guidance.

On August 16 of this year, my colleague on the House Interior Committee, Representative WILLIAM H. HARRISON of

Wyoming, wrote a letter to the Bureau of Reclamation requesting information about a sewerage system in the town of Mills, Wyo. This system was formerly owned by the Bureau, and was transferred to the municipality of Mills under Public Law 832 of the Eighty-first Congress.

The nature of the information requested and the entire contents of Representative HARRISON's letter are not important here. The letter is available to any one who wishes to read it. What is important is the fact that the letter was not answered, although it was promptly received by the Bureau, as evidence will show.

Nearly 2 months later, in October, Representative HARRISON did receive a reply. What occurred during the 2-month interval is a disgraceful example of how the Interior Department and the Bureau of Reclamation take every opportunity to enhance their own political fortunes, with a total disregard for their sworn duty.

This is what happened after the Bureau received Representative HARRISON's letter:

It was turned over to Robert R. Rose, Jr., recently appointed Assistant Secretary of the Interior Department, who supposedly is to direct the departmental activities in mines and mining. The question: Representative HARRISON asked, and the information he desired, had nothing whatever to do with mines and mining.

But they had to do with a town in Wyoming. And Mr. Rose is from Casper, Wyo.

On September 18 of this year, another colleague of mine on the Interior Committee, Representative JOHN P. SAYLOR of Pennsylvania, said on page A5659 of the CONGRESSIONAL RECORD:

Here I think is a good place to mention Robert R. Rose, of Casper, Wyo. He recently was appointed Assistant Secretary of the Interior, supposedly to direct the mining activities of the Department. Rose is a good Democrat. He has political ambitions. Wyoming's lone Congressman, WILLIAM H. HARRISON, is a Republican. Oscar Chapman doesn't like Republicans, he doesn't like Republican Congressmen especially, and he knew that Rose could get a lot of good publicity as an Assistant Secretary, dealing with mining and metals in this time of emergency.

The point is obvious. Rose is being built up to oppose HARRISON in the election next year. Oscar Chapman is watching for every opportunity to help him. So is Reclamation Commissioner Michael Straus, who operates the largest political propaganda machine in the Government.

When Representative HARRISON's letter regarding Mills, Wyo., was received by the Bureau it provided an opportunity, even if it was a small one, to help the Rose publicity campaign.

Mr. Rose was making a western trip, and when he got to Casper he looked into the Mills sewerage system. Meanwhile, Representative HARRISON was waiting for the information he needed in order to conduct the duties of his office.

While in Casper, Mr. Rose conferred with J. F. Mahoney, a friend and attorney, and when he returned to Washing-

ton he wrote Mr. Mahoney a letter. It is dated October 2, 1951, and it reveals the entire scheme to give Mr. Rose every opportunity to cash in on Wyoming affairs at the expense of Representative HARRISON.

Let me quote from Mr. Rose's letter to Mr. Mahoney:

I have had discussions with Michael W. Straus, Commissioner of Reclamation, with regard to this matter and he assures me that, in the event there remains any further negotiation, the Government and the city of Mills will have such time as is necessary to consummate an agreement and that therefore the deadline previously set out for final determination of this matter will be extended for a reasonable length of time so that the matter will finally be determined according to the best interests of the Government and the people of Mills, Wyo.

Please call upon me if I can be of any further assistance to you in connection with this matter.

Mr. Rose is an Assistant Secretary for Mines and Mining. He has nothing to do with sewerage systems except as they apply to the direct operations of the entire Interior Department.

The arrogance of the Bureau of Reclamation is almost unbelievable. Under date of October 10, Representative HARRISON received a short and impertinent letter from the Bureau of Reclamation. It was signed by G. W. Lineweaver, Acting Commissioner.

All Mr. Lineweaver did was enclose a copy of Mr. Rose's letter to Mr. Mahoney.

It is a sad commentary on the integrity of the Interior Department when a Congressman cannot write a letter seeking legitimate information without risking his own standards of service to his constituents.

Many of us have long known how unscrupulous the Bureau of Reclamation is, and we have learned to be cautious in dealing with it. The case of Representative HARRISON's letter is, I believe, an excellent example of how the Bureau and the Interior Department have achieved a new low record in failing to serve the Government, the Congress, and the people.

It is not safe for a Congressman to write them, even in the line of duty.

Chiang Kai-shek's Return Awaited in China

EXTENSION OF REMARKS OF

HON. CHARLES J. KERSTEN

OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, October 10, 1951

Mr. KERSTEN of Wisconsin. Mr. Speaker, Mao Tse-tung is by no means firmly in the saddle in China. There still exists an excellent possibility for overthrowing him and ridding communism from control in China. Chiang Kai-shek still has his army around which the people can rally in the overthrow of the Communist regime. I include herewith the sixth in a series of articles by Everett S. Allen, which appeared in

the New Bedford Standard-Times, on July 1, 1951:

NINETY PERCENT OF CHINESE INDIFFERENT TO POLITICS; MOST OF OTHERS WOULD WELCOME RETURN OF CHIANG

(By Everett S. Allen)

Fewer than 4,500,000 of China's 400,000,000 population are Communists. Ninety percent of the nation's people are indifferent to politics; of the remaining 10 percent, a majority would welcome Chiang Kai-shek back on the mainland as a rallying point for an overthrow of communism.

Supporters of Chiang, who maintain this point of view, feel the generalissimo has been much maligned and betrayed by the Western World. Always, the first major question which their critics pose is, Why did Chiang's American-equipped Nationalist Army go down in defeat before the Communists and withdraw to Formosa?

Withdrawal of American and British support—at a time when Chiang felt he most had a right to expect it—was a principal reason his forces withdrew from the mainland. That support, worth 100 divisions in the field, was eased from beneath the Nationalists as the West watched eagerly what it visualized as the new era of agrarian reform in China—the coming of a great renaissance for the people. When the West left Chiang, he lost face in the eyes of his country and found himself in a very awkward position.

THREE DRASTIC STEPS

The Nationalist Government had been assured, during World War II, of economic, political, and military aid, not only from the west, but from Russia. Therefore, counting on this assistance, Chiang had taken certain drastic steps, including

1. Acceptance of the Chinese Communists' offer to fight side by side against the Japanese. The Communists, then numbering no more than 100,000, had been completely routed by the Nationalists and confined to northwest China. Only World War II delayed the final mop-up.

2. Voluntary overextension of China's economy, at the certain risk of inflation at the war's end. This was done to permit an all-out national war effort.

3. Adoption by the Nationalist Army of American systems and equipment, at the suggestion of the United States.

The war's end found the Nationalists staggering down to the wire at V-J day, depleted and exhausted—a tired, drained government. Moreover, although a strong national unity had developed during the war, it decreased into apathy as victory came in sight.

Chinese Communists found themselves armed, trained, and equipped and their propaganda of promises for a better life fell on the eager ears of a confused and war-weary peasantry. While Nationalist strength depleted, the Communists grew stronger. And Russia turned over to them the arms of the Japanese Kwantung Imperial Army, excellent equipment, obtained from the surrender of Manchuria.

INFLATION MUSHROOMS

Inflation mushroomed, some of Chiang's best aides bungled their jobs at a time when even miracles would not have been sufficient. Russia not only refused to aid the Nationalists but poured assistance over the border into Manchuria to Chinese Communists.

The Nationalists requested Russians leave Chinese soil. Ultimately, they did, but when one of Chiang's best armies was sent to recapture Manchuria, it was annihilated by well-trained, well-equipped Communists in previously occupied and prepared positions.

When American and British support was withdrawn from the Nationalists, it also meant the United States no longer sent critical items, without which the Nationalist-adopted American military equipment was

hamstrung. Chiang was starved for tools with which to carry on a war.

General Marshall in 1946 attempted an impossible coalition of Nationalist and Communist governments. While Chiang, influenced by American economic restrictions, froze his army and maintained a cease-fire, the Communists to the north infiltrated strategic areas unopposed. When negotiations collapsed, as both Chiang and Mao knew they would, the Communists rolled forward in a massive assault.

The Nationalists still gave a good account of themselves, according to the best figures available, they accounted for 1,500,000 Communist casualties. The Government's retirement to Formosa was neither a rout nor a disintegration, as it often has been described for the pacification of Western diplomats who have wondered since if they might have been wrong.

SEES WRITING ON WALL

When the Communists crossed the Yangtze River, the last natural barrier at which the Nationalists might conceivably have made a major stand, three-fourths of Chiang's troops had been liquidated. It was obvious to Chiang that it might take months or years for the West to discover the true nature of the Communist regime; by that time, if he persisted in active fighting, there might be no Nationalist army left.

He felt it was better to withdraw the troops he had to a safe retreat and use them as the training corps for rebuilding a new army when the time came. His selection of Formosa, 100 miles off the coast was a sound choice. It not only would require a major military operation to take it, but economically, it is far better off than any other area in the Far East, having rice, sugar, camphor, and quinine for export, and being self-sufficient. Chiang decided it was wise to save what he had in men and equipment than to deplete them entirely, and this was inevitable if he kept fighting, since the Western supply had stopped.

It is doubtful if the Communists ever had more than one-fourth of the intelligentsia's support. Even in 1946, when the Nationalists were vilified by both east and west, three-fourths of the literate, thinking Chinese recognized the Nationalist principles of government as superior to those proposed by the Communists.

Since 1946, the Communists have been losing that 25-percent figure rapidly through disillusionment. It now is doubtful whether 5 percent of those persons capable of expressing an intelligent opinion (an estimated 5,000,000) would back communism.

SMALL MEMBERSHIP

There is, of course, a sharp differentiation between party members and those who favor communism. Actual membership figures indicate nothing because it is party policy to keep the membership small, closely knit and easily manageable. There have been two or three purges within the party, aimed at liquidating particularly those persons who joined from 1946 to 1948 and who, therefore, were suspected of being opportunists. Although indoctrination and brain reform are basic parts of the party program, its authorities do not encourage expansion of the membership.

Chiang's supporters say, "If Mao rates him as the Chinese Communists' No. 1 enemy, why should the West rate him any less?" Even with the purge and bandit suppression, it is estimated that at least 1,000,000 guerrilla and local militia troops on the mainland would join him to fight the Communists.

Chiang's photo appeared in the suggestion box of a Communist North China factory. An instruction film distributed by the Mao government offered a view of Chiang, at which the audience was supposed to hiss. Instead, they cheered, at the risk of their lives, and the scene was soon deleted from the film.

Although Communist terrorist activities certainly are cutting inroads into these groups which might conceivably rally around Chiang, the widespread purging and iron-glove tactics are having the opposite result as well. Three thousand labor conscripts, who had been working under Chinese Communist compulsion to complete the Ningming-Channankwan section of the Hunan-Kwangsi railway revolted June 2 and after killing approximately 50 Communist guards, joined the guerrillas active in the Enning area in southwestern Kwangsi, according to a Nanning report.

TIME FAVORS CHIANG, TOO

Time, particularly as long as the Korean war lasts, favors Chiang as well as Mao. The war means increasing demands for men and food upon the already overburdened citizenry. Time means more purging and persistent accent on the fact the Korean war is not popular with the Chinese, whether they be Communist or anti-Communist.

Chiang also feels the time has not yet come for offensive action by his Nationalists. Although his army is under wraps at the request of President Truman, the generalissimo has never surrendered any power of decision. He is free to alter the policy of inactivity whenever he chooses, but thus far has been content to abide by wishes of the United States and of the United Nations.

General opinion is that he is not ready for an attack on the mainland, because of insufficient supplies and transport, which are being built up. It is likely first phase of the effort, expanding from a major bridgehead, would aim at retaking South China, which is not nearly as well organized under the Communist regime as are the north and northwest areas.

Pro-Chiang circles think his mainland support would mushroom once his landing was established, and that, since he is conscious of vacillations in his own prestige, the scope of such support might surprise even the generalissimo.

The Fact That We Have Been Able To Go Forward With Our Military-Preparedness Program, With Aid to Our Allies, Fight a Devastating War, Produce the Necessary Supply of Civilian Goods, All at the Same Time, Is Ample Evidence, if Indeed, We Need It, That Our Free-Enterprise System and the Spirit of the American People Is Strong Enough To Withstand Any Crisis That Might Confront Us, Now or in the Future

EXTENSION OF REMARKS OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 11, 1951

Mr. ELLIOTT. Mr. Speaker, under leave to extend my remarks, I include a speech which I made to the Automobile Dealers Association of Alabama, at Biloxi, Miss., on Monday, October 1, 1951. The speech follows.

Mr. President, Mr. Broadway, and friends of the Automobile Dealers Association of Alabama, I first want to acknowledge the compliment which you paid me when you asked me to address this convention meeting of your fine association.

It is always good to get away from Washington, and I particularly appreciate the opportunity to do so at this time, when I can again mingle with my fellow Alabamians and discuss with them some of the problems of the difficult period we are going through. Perhaps, as we discuss these problems we can develop ideas that will be helpful toward their solution.

You are good business men and women and good citizens, or you otherwise would not occupy the position you hold today, as the connecting links between the great aggregations of industrial know-how, engineering skill, and abilities that characterize present-day manufacturers of automobiles, and the public which depends upon you for advice, consultation, and direction about the proper selection and use of its automotive products.

As such good citizens, occupying a key position in the economic life of our free-enterprise system, you are entitled to know what the policies of your Government are, insofar as those policies have been formulated. As a matter of fact, if the policies of our Government are to be successfully carried out and finally accomplished, it will be because you, as integral pillars of our democratic way of life, understand those policies, express yourselves intelligently in their formulation, and then see that they are carried out.

None of us will ever forget the elation and thanksgiving that swept the width and breadth of this country in 1945, when we came to the close of the greatest war mankind had ever fought. American ingenuity, American manufacturing capacity and skill, American labor, the American farmer, the finest Armed Force that any nation has ever organized, all working as a team, brought that great war to a successful military conclusion, and America stood in a position of world leadership, towering above the crumbled edifices of falling empires and political systems, facing the future with few forebodings, but with an over-all feeling of confidence in her ability to discharge those new obligations which had been thrust upon her broad shoulders.

Now it is true enough that at that time the picture was not altogether one of sweetness and light. There were the distant thunders of a gathering cloud, but we confidently expected that it would move away as had similar clouds of the past.

The American people have in the main been an idealistic people. They have not encroached upon their neighbor's holdings in the family of nations. So, at the end of World War II, we went about trying to build a stable peace, thinking that we could at least depend upon our allies of World War II, the Russians, not to throw too much sand into the machinery of the United Nations. In this assumption we were grossly mistaken. The realization of this mistake dawned on us about 1948.

We adopted the fragmentary beginnings of a "get-tough policy" with Russia in early 1949 and from that date we saw her block or attempt to block every move that we considered worth while in building a peaceful world.

Finally, the specter of Godless communism provided the motivating force for the North Koreans to roll across the thirty-eighth parallel and begin what historians may yet describe as the opening military action of world war III. The people of this Nation reacted immediately to the threat and on June 27, 1950, our Government moved troops across the 90 miles of water that separates Korea from our Japanese base. At that time we all felt a thrill that our people were intent enough on preserving the peace of the world that they were willing to make the sacrifices which war entails in order to say to Russian communism, "Thou shalt not pass."

The South Koreans, aided by our armies, and by such units as were furnished by our partners of the United Nations, whipped the North Koreans and then the Communists

nudged the yellow hordes of Mao's puppets across the Yalu River and the war was greatly intensified.

By that time, we realized more than ever the dangers inherent in the world situation, and it became apparent that Russian strategy for the time being, at least, was to play the game of war in the Kremlin, as a game of chess, shifting her satellites into the fray and tying down American productive capacity, American energy, and American military manpower, without using the Russian armed forces themselves. Russia was saving her own, against the day when our strength would be primarily involved in a war with her stooges, at which time she could envelop Western Europe to pick up, almost without a struggle, the steel capacity, the coal, the billions of barrels of oil of Western Europe and the Near East, and finally the industrial know-how of 20,000,000 or so skilled workers, without a fight.

The American people did some calculating on their own about that time and decided that we would not become engaged in an all-out war with Russian satellites, but instead we would prepare and prepare against the day when it might become necessary to face the Russians themselves head-on.

There were characters, strong characters, men of noble impulse, in the unfolding acts of this drama, who urged that we immediately spread the war to China and take whatever consequences might follow. Other strong characters, no doubt of no less noble purpose, insisted that we should withdraw from the flame of the conflict on our flanks and concentrate upon the defenses of our own shores.

Out of the welter of this debate was born the policy which said to the world that the American people would protect their interests wherever located. America would discharge her responsibilities of world leadership. The sleeping giant was awake.

General Eisenhower was dispatched to Western Europe to build an army among her disheartened and discordant peoples. We began to furnish military equipment and aid of all kinds. New hope was kindled. Today Western Europe is flexing her muscles. Tomorrow her strength will be a part and parcel of the defensive power of Democratic peoples everywhere. Then the question arose of whether or not we would furnish aid in exchange for bases in the nations whose forms of government were not to our liking. The result was the policy evolved of furnishing aid to Yugoslavia, and to Spain, in exchange for commitments that will aid us in the defense of Western Europe, if we have to defend it, which God forbid.

Why do we regard Western Europe as being the great prize in this battle between communism and democracy? Simply because Western Europe's 70,000,000 tons of steel-making capacity added to the 40,000,000 tons of Soviet Russia would give communism the ability to produce as much steel as we in this Nation can now produce.

It hurts me a great deal to hear people say that our efforts in Korea have been a failure. They have not failed. There, at the remotest outpost of our system of defenses we have bought the time to prepare this country, industrially and militarily, for the greater responsibilities that may lie ahead. At the same time, our effort is making America strong so that we may speak to Russia in the only language that Russia understands, the growl of strength.

The impact of these and related things which come to our minds is tremendous on our civilian economy, but the fact that we have been able to go forward with our military preparedness program, with aid to our allies, and with our civilian supply of goods at the same time is an evidence, if indeed we need any, that our free-enterprise system and the spirit of our American people is strong enough to withstand any crisis, that might confront us now or in the future.

In the early days of the Korean war, many of our American people, remembering the shortages of World War II, became jittery and overbought their immediate needs, forcing prices up, out of all proportion to the situation of supply that prevailed and in the period from the beginning of the Korean war to February 1951, we had an across-the-board inflation of a staggering 10 percent. The ingenuity of the American people came into play. The industrial and agricultural plant of the Nation was expanded to produce not only the hardware, clothing, and food needed by our military machine, but to meet civilian requirements as well. The result was that inventories of goods on hand reached a peak greater than anyone thought possible, and the inflationary spiral was slowed almost to a stop.

But now, my friends, our industrial expansion for defense purposes has begun to eat into the supplies of many of our raw materials, and shortages are beginning to appear, particularly in steel, the result of which is a warning sign to us that for at least the next 2 or 3 years we are going to have to get along with less and less steel for civilian purposes. A large part of the steel that we would like to put into the new and beautiful models of the American automobile must be diverted to building guns and tanks, airplanes, atom bombs, new steel mills, new aluminum factories, new atomic energy plants, and for other related purposes.

And, my friends, the danger of inflation is not over. We cannot have, we must not have, runaway inflation. Inflation has already crippled the purchasing power of our dollar too much. The preservation of our free enterprise system and the liberties which it permits every individual must be preserved. In my judgment, future months will make it mandatory that our price, wage, and salary structure be more tightly controlled than at present.

In the year 1950, only 8 percent of our total national production went into our security program. In 1951 the program is taking about 15 percent of our production. Next year it will take about 20 percent.

A year ago military supplies were being furnished the Government at the rate \$500,000,000 per month. Today, those supplies are rolling in at the rate of \$1,500,000,000 each month, but we should keep in mind that orders for military supplies and equipment of all kinds are going out at the rate of \$4,000,000,000 per month, and as the gap between the \$1,500,000,000 of deliveries and the \$4,000,000,000 of orders, per month, is closed, inflationary pressures of every kind will grow more intense.

Some of the shortages that are giving us trouble right now, in addition to steel, are copper, nickel, sulfur and other miscellaneous minerals. Canada furnishes this country 80 percent of its newsprint, but sulfur is required to make newsprint. Now, Canada says, "Sell us more sulfur or get less newsprint." The situation is becoming such that some of the larger newspapers in the country are clearly beginning to talk about their plans for private rationing of advertising in their papers.

If we are to hold the dike against inflation, it seems to me that we must do these things:

1. We must practice the most rigid economies possible in the operation of governments at all levels—local, State, and Federal. This must be an economy in which our highest powers of discrimination and good judgment are used. We must insist that the military purchase as much of its requirements as it is able to do through competitive bidding, so as to hold costs down. Governmental reorganization at all levels, so as to effect the greatest possible economies should be a constant concern of those of us engaged in Government policy making. With a present national debt of \$260,000,000,000 there is no place for waste or extravagance.

2. As a people, sorely burdened with many pressing problems, and facing the uncertainties that day to day beset us, and realizing that one of our greatest sources of strength is the confidence which the common man has in his Government and his institutions, we must condemn graft, corruption and crime, whether organized or unorganized, wherever it may appear. In this temple of our mighty effort there is no place for the money changers, the influence peddlers, the black marketer, the "deep freeze" boys or the "mink coat" girls.

3. We must be mindful of the problems of smaller businesses, so as to keep them functioning, and contributing their part in our great effort, seeing at all times, insofar as it is possible to do so, that there is substantial justice done them in the matters of loans, priorities, allocations of scarce raw materials and procurement contracts and subcontracts. The recently enacted small-defense-plants legislation, of which I was privileged to be one of the sponsors in the House of Representatives is, I believe, a step in the right direction.

4. I would be less than fair to you if I did not say that in my opinion it is of the utmost importance that we balance our budget. When we failed in World War II to adopt a policy of pay-as-you-go we saddled ourselves with a \$250,000,000,000 debt. As far as I am concerned that is enough debt to pass on to our children and their children. It will require unremitting sacrifice on the part of all of us to pay as we go this time. Certainly, short of an all-out war, we should be willing to make that sacrifice. We are not doing it today.

5. Last, but not least, we must realize that a solidly informed public opinion is in itself, the equivalent of several divisions of trained troops. I have supreme confidence that given all the facts, the American people, in their combined wisdom, will reach a substantially correct conclusion. Unbiased, straight-from-the-shoulder information on the price-control program, for instance, will do more to beget cooperation and compliance, than will an army of enforcement agents, when the public is not informed. Lack of good information prepares the ground for the growth of seeds of dishonesty and doubt. I think that it is in this field that our Government shows a considerable weakness, whereas in this field, in any democracy, the government should be strongest. A democracy depends on an enlightened public opinion, undergirded by public schools and colleges of all types, which admit, without fear, favor, social standing, or the lack of it, this world's goods, or the lack of them, the free development of the individual as far as his abilities will carry him. When we weaken or destroy the sources of pure undistilled facts, we open the back door to communism, and the anarchy that follows.

And now, for the foreseeable future, barring the outbreak of an all-out war, I will call a few shots as I see them.

The present great need for iron ores will increase, with the result that we will call more and more heavily on available supplies from Labrador and South America. The most efficient utilization of these ores suggests that we build the St. Lawrence seaway at the earliest possible date, and that we lose no time in improving the Warrior and Tombigbee Rivers, so as to weld a closer connection between the steel center of Birmingham and the great port of Mobile.

The growing realization on the part of all our people of the possibility of the destruction of large segments of our industrial capacity makes it necessary, whether we like it or not, that industry disperse itself into areas where the danger of destruction is lessened. Alabama stands to benefit from this necessity, provided it is willing to spend the necessary time, energy, and money required to advertise to industry everywhere

the inherent locational advantages we possess.

We can expect business to continue to grow and expand for at least another year. Deflation is not now in sight.

During this period the pace of business will be dominated by defense spending. Hence, businessmen at all levels should carefully acquaint themselves with the projected defense spending timetable, and with the rules and regulations that pertain thereto.

Commercial building is daily being drastically cut and will gradually sink to a level of only about 25 percent of what it was last year, before it starts rising again.

The rubber-supply picture is much better, tires may even become cheaper. However, octane ratings in auto gasoline will probably suffer some cuts.

The newsprint industry in this country will grow.

Neither the wage scales or the productive capacity of America will ever revert to the pre-Korean war levels, but as for now, better put your order in early if you plan to buy a new car next year.

Thank you.

Function of the Freight Forwarder in the Transportation Pattern

EXTENSION OF REMARKS OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES
Monday, October 15, 1951

Mr. O'CONOR. Mr. President, the function of the freight forwarder in the transportation pattern is one not understood too generally today. On October 4, an address on the subject which would be of interest to businessmen of the country was made before the Brooklyn Traffic Club, by Mr. Charles R. Seal, Director of the Bureau of Water Carriers and Freight Forwarders of the Interstate Commerce Commission.

Mr. Seal is recognized as an authority in the field of transportation, and I ask unanimous consent that his address before the Brooklyn Traffic Club be inserted in the Appendix of the Record so that it may be given the national prominence that it deserves.

There being no objection, the address was ordered to be printed in the Record, as follows:

The duties of the Bureau of the Interstate Commerce Commission with which I happen to be associated relate not only to freight forwarders but to all of the classes of carriers in varying respects. In addition to the administrative activities at Washington, they include field compliance work to detect and prevent violations of the act, which I am happy to say in most instances are inadvertent.

This being the club's freight forwarder night, however, it seems appropriate that what I have to say should pertain to freight forwarding. But I am a little bothered by a comment that Will Rogers once made, to the effect that everybody is ignorant but about different things. I am sure the freight forwarder representatives here know much more about the business of freight forwarding than I know, and that the shippers know as well as or better than I why they use the services of freight forwarders. So it seems that my chief difficulty is to try to avoid if I can the impression that my

particular ignorance pertains to freight forwarding. But perhaps I can discuss briefly some general aspects of freight forwarding and of our administrative problems back in Washington that if not too interesting at least I hope will not be too boring.

Why do shippers use freight forwarder service when it means no saving to them as a rule in shipping costs?

The answer I believe is that the freight forwarder provides expeditious, safe, and supervised through service. That is, the shipper gets expedited and safe carload or truckload service at no cost over the less-carload or less-truckload services which do not have these virtues in the same degree. Freight forwarding is competitive with trucking but less so with the railroads, and so far as the railroads are concerned it converts nonprofit or low-profit LCL traffic into profitable carload traffic by increasing the per-car volume and reducing handling costs and claims for loss and damage.

The House and Senate conferees who reported the freight forwarder bill as it was passed in 1942 and became part IV of the Interstate Commerce Act stated that "forwarding operations should be encouraged as the most practicable available means toward securing an integration and coordination of the transportation facilities of the Nation insofar as the handling of less-carload or less-truckload freight is concerned." That freight forwarders have served a shipper need is indicated by the growth of their industry, to which I shall briefly refer later.

This need for a type of service adapted to small-lot shipments pressed itself upon shippers long before the advent of the freight forwarder. Service bearing similarities to that of the present-day forwarder had its beginning in this country even before the Civil War, through the organization by merchants of what were known as fast freight lines for the transportation of package freight in consolidated consignments.

The organization of these freight lines was the result of a lack of adequate arrangements by the railroads for the carriage of through interchange freight, and even some of the railroads regarded the freight lines as a necessary complement to the railroad service. Later the railroads organized their own fast-freight lines for the handling of merchandise freight, and somewhere toward the beginning of the present century the independent freight forwarder came into existence. Freight forwarders later were able tremendously to expand their operations by the development of motor transportation.

Today freight forwarders are one of the four major classes of transportation agencies which have been subjected to Federal regulation by the ICC. In 1937 there were about 20 recognized freight forwarders. In operation and their gross revenues amounted to less than 50 percent of the revenues of the railroads from their less-carload traffic. Now there are 98 regulated forwarders and their revenues in the calendar year 1950 were approximately 81 percent of the less-carload revenues of the railroads.

This indicates the public-interest aspect of freight forwarding, and it was the increasing effect of freight forwarding upon the public interest that led to enactment of the Federal regulatory statute in 1942. I am satisfied that this statute, though possibly imperfect in some of its provisions, has been of benefit not only to the shipping public but to the freight-forwarding industry itself.

And this leads me to some brief references to the provisions and requirements of the statute and the status of freight forwarders under it.

The statute contains a definition of freight-forwarder service, and no one may lawfully

engage in service that falls within that definition without first obtaining a permit from the Commission authorizing it to do so. The test for obtaining a permit is that the proposed service shall be consistent with the public interest and that the applicant is ready, able, and willing to perform it. This test is much less severe than that required to obtain a motor or water common-carrier certificate of public convenience and necessity, or even a contract carrier permit. And Congress seems to have intentionally made it so. It provided in the law for instance that—

"(d) The Commission shall not deny authority to engage in the whole or any part of the proposed service covered by any application made under this section solely on the ground that such service will be in competition with the service subject to this part performed by any other freight forwarder or freight forwarders."

The reason for this provision was explained on the floor of the House by one of the managers of the forwarder bill, who stated that it "is predicated upon the essential nature of forwarder service as a shipper service, so far as the actual carriers are concerned. Without such a provision, there might be a tendency to deny legitimate operations on the ground that the existing forwarder service was adequate. The committee was of the opinion that if the advantages of freight-forwarder service are as great as are claimed for it, then the greatest opportunity should be given to persons to go into the business and to make it available to the public to the greatest extent possible."

This provision relating to the granting of forwarder operating permits has brought some difficult questions to the Commission for decision, and some pretty positive disagreements by competing forwarders with the issuance of permits in some instances. Forwarders, like other carriers, are severely conscious of competition and just as vigorous to protect their business.

It has seemed to me sometimes that those advocating their views to the Commission were firmly of the belief that there could not possibly be but one side to the matter—their own. But we at the Commission, occupying a neutral and middle position, must try to see and weigh both sides or every side of a controversial question. And in our situation there must be two sides to every such question.

Sometimes there may be more than two sides to a question and an advocate may inadvertently establish and prove a point that he hadn't thought of or wanted to prove.

But the controversial nature of our work makes it intensely interesting, and we try to exercise the best judgment that we can on the merits of each matter as we see them, although we make mistakes as does everyone.

And now briefly as to the status of forwarders as carriers. As you know the forwarder, although it is a common carrier, functions as an intermediary between the owner of the goods and the underlying common carriers by rail, motor, or water whose facilities it must utilize. Because of this intermediary relationship a forwarder may not do everything that other carriers may do. For example, it may not act as a connecting carrier and interchange freight with other types of carriers or with other freight forwarders.

As I read and understand the law and the decisions of the Commission, once a freight forwarder receives a shipment in its service it must be the transportation agency thence to ultimate destination, and it must issue a bill of lading and be responsible for

the shipment to that destination. This means that a forwarder may not lawfully accept and transport a shipment unless its permit authorizes operations by it from the point of receipt to the destination of the shipment.

As I have said, the development of motor transportation contributed greatly to the expansion of freight-forwarder service. Forwarder traffic is handled in consolidated carloads or truckloads between terminal points known as on-line or concentration break-bulk points. Motor transportation enabled the forwarders to extend their service to distant so-called off-line points, which in general are the smaller cities and towns. Shipments to and from such points are handled by motor carriers in what is known as assembly service to the concentration points and distribution service from the break-bulk points. Thus, merchants in the smaller communities are provided with forwarder service that they otherwise would not have and without which they would be at a competitive disadvantage as compared with the larger centers.

The forwarders are able to utilize the services of motor carriers for this purpose by reason of a provision of the statute which permits forwarders and motor carriers to enter into contracts for compensation to the motor carrier at less than its published LTL rates, except for distances of 450 miles and greater. If the forwarders had to pay the published LTL rates for service from and to off-line points, it seems likely and to have been the view of Congress—that their ability to serve such points would be greatly restricted. The number of such contracts in force probably runs into the tens of thousands.

And finally a word about shippers' cooperatives. As I said earlier, these were the forerunner of the independent freight forwarder. In recent years there has been a revival and tremendous expansion of these associations, which are exempt from regulation when operated on a nonprofit basis. Many of them clearly are bona fide and nonprofit. Others have appeared not to be truly nonprofit, but where the Commission has attempted to apply regulation to such operations, it has been overturned by the courts. I wish to emphasize, however, that the Commission has no desire whatever to interfere with those cooperative operations which clearly fall within the intent of Congress that they shall be exempt.

Gold Trading

EXTENSION OF REMARKS OF

HON. PAT McCARRAN

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Monday, October 15, 1951

Mr. McCARRAN. Mr. President, only a few moments ago I discussed the question of gold and the price of gold, stating that it should be fixed at a higher figure. I placed in the *Record* an article from the pen of one of the most able reporters in America, if not the most able, Mr. Fulton Lewis, Jr. I ask unanimous consent at this time to place in the *Record* another article written by Mr. Fulton Lewis on the same subject, which appeared in the *Washington Times-Herald* of Sunday, September 16, 1951.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WASHINGTON REPORT

(By Fulton Lewis, Jr.)

On one or two occasions I've touched the subject of gold trading, and for my pains Government experts cuffed me around in print.

I said there was a black market in gold in Europe and England, involving United States Government people. Denials got pretty shrill until Treasury Department and military intelligence agents blundered into a couple of gold black-market rings and were forced to lock up several smugglers and traders. I haven't heard a word from my critics since.

Actually, the real grab bag in gold profits is strictly legal, according to the way the Truman administration and British Socialists play it. In fact, the British use the Fort Knox, Ky., gold hoard like an accordion, and as you might guess they don't lose in the process. It's a simple poker game with gold chips and what looks like a stacked deck.

British colonial possessions gouge out a log of gold from the ground that is promptly turned over to the Socialist government. During, and for a short period after the end of World War II, the British sold us \$6,020,000 worth of this gold at \$35 an ounce, the pegged United States price. This gave the British a good profit plus a lot of American dollars for trading in European monetary circles. The dollar has done better than the pound sterling—and still does.

The minute the administration started pouring billions into Britain in the form of European recovery program money the British quit selling gold to the United States. They didn't need to any more: they were getting hand-out dollars instead. Besides, the price of gold in Europe and Russia went up from \$35 an ounce to \$57 and even \$75.

In fact, the gold-selling business got so good for the British that the Socialist government started buying back gold from the United States, naturally at \$35 an ounce. During ERP days it purchased a total of \$1,120,181,000 worth of gold from us.

Not satisfied with this killing in the gold trade, British buyers speeded up their purchases, hauling back to the island from Fort Knox an additional \$1,857,452,000 worth since the end of ERP this year.

At present the British are buying gold at the highest rate in history. It's running at about \$600,000,000 a quarter. And the British aren't buying it to stick back into the ground. They're selling it, not to us but wherever the Socialists can get a good price for \$35 an ounce United States gold. One of those places is the Soviet Union.

In addition to buying from the United States, the British have increased their own gold mining production in all colonial possessions. So their production of the last 5 years—at least equal to the \$6,000,000,000 worth sold to us during the war and immediately thereafter—has been sold somewhere else—not to the United States of America. Even with United States gold purchases British gold reserves are now less than \$3,000,000,000, which means that the Socialist government has dumped almost \$8,000,000,000 worth of gold into European and Soviet exchange markets in the last 2 or 3 years.

All of this might seem like a painless way to keep the British Government afloat, since few of us ever have to dig down in our pockets and hand over a gold sovereign to our British cousins in person. But this gold chip poker game has a rigged hand.

With the profit from gold bought at \$35 an ounce and sold at a minimum of \$57 an ounce the British can buy more United

States gold or reach into European trade markets for raw materials and manufactured goods. It wouldn't be so bad if she did all of her buying in countries that are riding on our backs economically. But instead, the British carry on a brisk trade with iron-curtain countries with bargain-basement gold from Fort Knox. All this helps explain why the British announced they could get along a spell without any more ERP cash from the United States of America. They had found a new till to tap.

Action of Republic of Panama in Denying Charters to Certain Merchant Vessels

EXTENSION OF REMARKS

OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Monday, October 15, 1951

Mr. O'CONOR. Mr. President, an editorial in the Washington Post of yesterday discusses the recent action of the Republic of Panama in denying charters to merchant vessels under its registry which have been carrying strategic merchandise to the Communists, particularly in Korea and China.

This is a matter in which the disclosures of the Senate Subcommittee on Export Controls and Policies found unusually favorable response and I am happy to pay tribute to the Panama authorities who have thus set an example to many other of the nations opposed to communism in taking steps toward denying to the Communist countries the supplies without which their aggression cannot be pressed.

I ask unanimous consent that the editorial from the Washington Post be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PANAMA'S BLOW TO THE REDS

Panama's action in cracking down on merchant vessels which have been carrying the Panamanian flag into Communist harbors was long overdue. The use of Panama's colors by non-Panamanian concerns seeking to get around trade restrictions elsewhere was a subterfuge that reflected on Panama itself. The trick had threatened hemispheric solidarity at a time when unanimity of western action against the Chinese and North Korean aggressors was essential.

The O'Connor subcommittee of the Senate Commerce Committee found that two-thirds of the ships which called at Communist ports in the Far East since the first of this year were under Panamanian registry. Yet it was regarded as virtually certain that none of these ships actually was owned by Panamanians. Inquiry showed that while these vessels were registered under names indicating Panamanian control, ownership in many cases actually could be traced to European or Asiatic countries. Senator O'Connor said that while no direct link with United States firms had been found, it was rumored that some of the anonymous organizers of cover-up firms were American citizens or were aliens residing in the United States.

It was obvious, of course, that Panama did not have the merchant marine or the resources to engage in the Far East trade to the extent indicated by the number of vessels under its flag. Panama has had an abnormally large merchant fleet for years, because of inducements offered to world shipping. There are few governmental controls in normal times and taxes are far cheaper than in most countries. As a result, the little Central American country has risen to tenth place among maritime nations in size of merchant fleet registered in its name. The set-up was a handy one for firms desiring to do business with the Reds under assumed identities.

When Panama's action was called to the Senate committee's findings, officials there promised to act. They have carried out their pledge faithfully. The government has issued an order prohibiting ships of Panamanian registry not only from entering waters controlled by the Communists but from anchoring in nearby waters, either. Shipment of war material to any port or area where they are likely to find their way to the Chinese Reds or North Koreans also is forbidden. That this is not just a paper crackdown is evident from the fact that punitive action already has been taken against more than a score of ships and more actions are pending in several cases under investigation. All of this is reassuring to the United States and to the United Nations, for it means the plugging of a serious loophole in the barrier against aid from western sources to our enemies in Korea. Panama has dealt the Red aggressors a blow that really hurts.

Stop Water Where It Falls—Part I

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Elmer T. Peterson:

STOP WATER WHERE IT FALLS

(By Elmer T. Peterson)

There may be some folks who think that it isn't necessary to worry about floods if you don't live on the banks of a large river.

Nothing could be further from the truth. The truth is that from 80 to 85 percent of all agricultural flood damage is done on the tributary watersheds, away from large rivers—above the places on those rivers where it may be planned to have big reservoirs.

This is the finding of engineers of the United States Department of Agriculture, which nobody disputes.

First let's consider a few simple matters. Floods consist of water in motion. Flood prevention (or control) means preventing water from getting into motion.

Water in motion is more spectacular when it comes at the rate of 100,000 cubic feet a second, makes a lot of sound and fury, and washes away houses and barns and pigs and cattle. But much more damage is done, by small rivulets and gullies where the damage attracts no attention on the part of the public. It is done up on the watershed, around Hennessy, McAlester, Konawa, Shattuck, Stilwell, Duncan, at the forks of the creek, and in the draws, and on the slopes.

It is done, not only by destroying crops and livestock, but by washing away our most valuable property—the soil. And that can't be replaced. Every time you see a muddy stream, big or small, you know that this soil is getting away.

It is natural to try to do something spectacular, so it will make a big impression on the minds of people who are too busy to stop and think this problem through. So some would have the people believe that the 15 percent damage is worse than the 85 percent damage.

Floods are unnecessary. They are not an uncontrollable "act of God," like earthquakes or tornadoes. Floods are caused mainly by man's folly. Nature had her own flood controls before mankind messed things up.

Recent experiments by the United States Soil Conservation Service show that where there is a good growth of natural grass, 3.3 inches of water soaked into the soil in 1 hour. Where the grass was removed, leaving only the sod, as in the case of burning, only 0.65 inches soaked into the ground in 1 hour. In other words, the difference between grass and no grass is 2.65 inches in 1 hour. As you know, that much rain in 1 hour is a cloudburst, and it produces a bad flood.

When land is cultivated, here is what took place. A cultivated field with 2½ tons of straw per acre soaked in 3.5 inches of rain in 1 hour. The same kind of field without cover, soaked in only 0.49 inches of rain in 1 hour. The difference was 3 inches, which, again, is enough to produce a bad flood.

Sometimes you hear men question the soil conservation method of preventing floods, saying that there always have been destructive floods, washing away the soil, and always will be. However a little reflection shows that they are mostly wrong, except for localities like Arizona and southern Utah, where there are extremes of wet and dry, but mostly dry. Here the vegetation is sparse and the occasional flash floods have caused the greatest example of erosion on earth—the Grand Canyon.

In the regions of reasonably good rainfall, nature, when left to itself, automatically prevents this by building up a vast sponge of vegetation on the earth's surface, so experts tell us that nature normally builds soil at the rate of one inch in 500 years or such a matter, by producing an accumulation of organic matter. If there had been a constant process of flood and erosion in humid regions for the past 50,000,000 years, as some folks say, there would now be no fertile soil, for everything would have been washed down to bedrock. Taking the world as a whole, then, floods and erosion are abnormal, not normal. You can figure that out for yourself.

Now, as a matter of fact, man has not only caused destruction by laying the topsoil open to erosion and floods; on the other hand he has proved that by being intelligent and far-sighted, he can actually improve on nature's way.

In my opinion the most important job of flood-control work in the United States and probably in the whole world, is under way on the Washita Valley, in Oklahoma. After nearly 3 years of work, handicapped by small appropriations, enough actual results have been produced to prove beyond question that the Washita Valley method of flood control, through conservation treatment, is far more efficient, and better in every way, than the other methods.

Facts and statistics may sound dry and uninteresting, but when they carry such important implications, we can't afford to ignore them.

In July 1948, the Cloud Creek sector of the Washita Valley program, involving 5,000 acres of creek watershed, was finished and dedi-

cated in the presence of about 10,000 people, including the Governor, Senators, and Congressmen. The following May it received its baptism, consisting of a 4.6-inch cloudburst falling within a few hours. Other creeks in that area got the same kind of a deluge and they overflowed, sending destructive floods into the Washita, where the flood was very bad, doing great damage in the Anadarko area.

The surface treatment on the Cloud Creek watershed had done its work so well, however, that it absorbed the cloudburst like a sponge. The small detention reservoirs—glorified farm ponds—had very little to do, containing only a small amount of water after the downpour. Not one bucket of water flowed out of the treated part of the creek.

The most amazing exhibit of the superiority of the agricultural flood-control method, however, was furnished last May by the treated part of the West Owl Creek watershed, south of Purcell. It was hit by one of the heaviest cloudbursts ever seen in the Middle West.

The United States Weather Bureau has no station in that immediate area, but the official reading at Purcell was 15.5 inches. I was told by responsible Government authority, immediately after the storm, that this was likewise the estimate for West Owl Creek, some distance south. However, other Government men estimated 13 to 13.5 inches for the 36-hour period, so let's accept the smallest estimate, 13 inches. I was given official figures as to absorption and impoundment of water immediately after the storm. Then I was given revised figures, which show impoundment capacity, by reservoirs, of 5.22 inches of run-off. Louis P. Merrill, regional director of the United States Soil Conservation Service at Fort Worth, says in a letter to me, that "if the rainfall on the watershed of structure 4 amounted to 13.5 inches, the soil absorbed 3.03 inches." He also said that during the peak of the storm there was 3.47 inches discharge from the drop inlet and 1.78 inches of run-off through the spillway. However, the most significant fact, as reported by State Conservator Harry Chambers, when I traveled with him over the area immediately after the storm, was that West Owl Creek did not overflow its banks until it had flowed 1 mile below the last structure, and by that time it had received an increasingly large volume of run-off from its watershed. By the time the stream reached Paoli, in that terrific downpour, it had increased to a bad flood stage. This has caused some confusion among those who overlook the main part of this operation, which is that even in a 100-year cloudburst—one that happens only once in a century by the law of averages—the conservation methods kept the water within the creek banks. It is obvious that if this were done all over the Washita watershed, there would be no floods on the river, even if the extremely heavy downpour should occur over the entire watershed—something that has never been known to occur. (Such cloudbursts are always local in character, seldom spreading over a radius of more than 25 or 30 miles.)

Now, here's the pay-off. There are other official calculations showing that if the entire watershed above Denison Dam had permitted only 1.31 inches of run-off into Lake Texoma, the flood pool would have filled up and water would have started to run over the dam, so its flood-control function would have failed for any run-off in excess of 1.31 inches. The little dams alone took care of 4 to 5 inches of run-off, which they call a 25-year flood. Denison Dam couldn't begin to handle it, if extended over the entire watershed.

When the cloudburst hit the West Owl Creek area there was another spot of heavy downpour—on the watershed above Grand Lake and Fort Gibson, in eastern Oklahoma. The difference in that the rainfall in the same 36-hour period on the Fort Gibson watershed was 9.79 inches or about three-fourths of what fell on Owl Creek.

The Fort Gibson Dam lies about 50 miles downstream from the huge Grand River Dam.

The Army engineers were quoted on May 12 as saying that the river overflowed the Grand River Dam and also the Fort Gibson Dam at the rate of 140,000 cubic feet a second, and this current went on into the Arkansas River and contributed materially to a very destructive flood in the bottoms, as shown in pictures. This is nothing new. The same thing happened in 1943 when Grand River contributed half of the Arkansas River flood water which drowned 19 persons and did \$127,000,000 worth of damage. The water just flowed over the dam and did the same damage as though it were not there.

Now let us look at Denison.

Its cost, including power installation, purchase of inundated land, relocation, auxiliary structures, was \$61,595,000. It contains 18,290,000 cubic yards, including concrete and steel, making the total cost \$3.30 per cubic yard. The flood pool is 2,690,000 acre-feet. The total watershed area is 38,291 square miles. Using these factors we find that a net runoff of 1.31 inches would fill up the flood pool from lowest level and start running over the dam with the same volume as though the dam were not there. So the people along the Red River banks, in Arkansas and Louisiana, for whose benefit the flood control function of this dam was set up, would be in the same shape as were the people along the Arkansas River in 1943.

Taking the Mill Creek watershed of the Washita Valley agricultural flood-control project as typical, we find the average cost of building the small dam is 27 cents per cubic yard—less than one-tenth the proportionate cost of the Denison Dam. Whether it would take more or less total yardage for the entire job has not yet been calculated, but probably about the same, for Dr. N. E. Winters, eminent soil conservationist, when he was in Oklahoma, repeatedly said that he would take half of the cost of the Denison Dam and do such a complete job of conservation and small-dam building that he would stop all floods on the Red and Washita Rivers. Remember that this includes surface treatment as well as dam building.

Summing up at this point, we see that the small detention dams of the agricultural flood-control project can be built proportionately for less than one-tenth the cost of the big dam, volume for volume, and that they will impound three or four times as much runoff water, in proportion to area.

I am not trying to tell you what to think, but there are the figures, and you can draw your own conclusions.

The only contrary argument on this point runs something like this: "Oh, well, that may be all right for a creek watershed, but thus far you have no engineering proof that it will work on a big river watershed."

The answer is this. According to arithmetic we know that the whole is equal to the sum of its parts. If flood conditions are prevented on all the tributaries of a river, where would the water come from to produce a flood in the river? And now, don't we have the engineering data to prove that the little dams are far more efficient than the big ones? That is saying nothing of all the other features of the agricultural flood-control method.

There are at least seven additional features, each one very important, which make

the agricultural flood-control method superior.

1. Watershed insoak. The agricultural program uses terraces, regrassing, strip cropping, reforestation, chisel plows, and other types of land use that produce a vast sponge, to stop and soak in water where it falls, exactly as Mother Nature did before the plow came—sometimes better. This sponge action worked so beautifully in the West Owl Creek watershed last May that this part of the treatment took up about as much as was impounded from runoff by the little dams. And, as I have said before, these little dams took care of three or four times as much runoff proportionately as could be impounded by Denison Dam. The soil along West Owl Creek looks like the average—some sandy and some tight, so I see no reason why other watersheds shouldn't do as well. Just to show what a remarkable change can be made by use of conservation practices, the Red Plains Demonstration Farm near Guthrie had several sloping plots, all of the same type of soil. Once when about 2 inches of rain fell in 1 hour, a bare plot shed 98 percent of its water, while the same kind of plot with sweet clover shed only 2 percent. This explains why plowed or bare ground promotes floods, while good farming stops floods.

A. D. Bull of Woodward, a soil conservation official, has recently invented a device called an infiltrometer which accurately measures the amount of water that soaks into the ground under various conditions. He finds that the "plow pan" or "plow sole" that exists about 4 inches under the surface when a moldboard plow is used, keeps moisture from soaking into the ground, so he has investigated various ways of overcoming this state of affairs. With ordinary tillage, in one field, he found that the soil absorbed water at the rate of only three-tenths inch per hour. When a chisel plow was used, breaking the plow sole to a depth of 8 inches, it soaked up 250 percent more, or seventy-five hundredths inch per hour. When sweet clover was planted, it not only broke up the plow sole but penetrated several feet in the ground, so that the insoak was 8.2 inches in 1 hour, or 1,066 percent more. As I mentioned in the beginning of this talk, such a rapid rate of insoak would take care of a cloudburst, or 3 inches per hour—enough to produce a bad flood when the runoff takes place on ordinary plowed land. In another experiment he found that breaking the plow sole produced the tremendous insoak of 9 inches per hour.

So you can see from these random examples that the science of causing water to soak directly into the soil is in its infancy, and we are learning some amazing facts. I could cite many more if I had time.

Stop Water Where It Falls—Part II

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the Record, I include the following address by Elmer T. Peterson:

This insoak, for one thing, brings great increase in crops, for water is stored away in wet periods and is drawn upon in dry periods.

A. W. Erickson, who has spent his life studying the growing habits of wheat, bases his crop predictions on borings. It is the subsoil water—4, 6, or even 7 feet down that makes a good crop.

2. Restoration of high water table. Lester Velle, in Collier's and Reader's Digest 2 years ago, gave a frightening picture of how the national water table is falling so that in the average area it is 100 feet lower than when nature had her own way. This is extremely serious, not only to farmers but to big and little cities. Wells and springs have played out. Restoration of the ground water is the next big step in the general conservation movement. There must be a widespread insoak all over the watershed, which is the only thing that produces a high-water table. Nature's own primitive way was to retard water, first using it to nourish vegetable and tree life, then causing it to seep down through porous material until it found seams and veins which produced underground water and springs that gushed out of the slopes. These springs fed creeks and rivers, which had been kept clean of sediment by nature's own vast filter beds. Any old-timer will tell you that 50 years ago the two Canadian rivers and other prairie streams were clear, comparatively narrow and deep, and carried water all year, so the fishing was good. Now these same rivers are shallow and clogged with silt. They are either dry sand flats or torrents of muddy water.

3. Irrigation by clear water. The insoak and raising of the water table, produced by proper watershed treatment, makes irrigation feasible. Three years ago I attended the National Reclamation Association conference at Phoenix, and, with Senator Bob KERR I visited the biggest irrigated farm in the area—3,000 acres, owned by John Jacobs. The foreman, a highly intelligent and well-informed man, told us they were digging big wells, costing \$20,000 apiece, to a depth of 700 feet, to get clear water, and were glad to stand the extra expense of pumping it that high, because this furnished silt-free water, whereas the ordinary ditch water from the big reservoirs was muddy, and filled up the ditches with silt. The first empire in recorded history, according to the Encyclopedia Britannica, was made possible by irrigation. That was Babylonia, in the region of the Garden of Eden, along the Tigris and Euphrates, which flow roughly parallel, somewhat like the two forks of the Canadian. This same encyclopedia says that the empire perished because the irrigation canals and ditches filled up with silt. Dr. W. C. Lowdermilk, of the United States Soil Conservation Service, found at least 90 of these silt-filled canals. In this connection I would like to say, in regard to the Washita project, that farmers who have the detention ponds are free to use the water for irrigation, and where proper conservation methods are used, the soil doesn't wash down into them, so the pond water is clear.

4. Prevention of Siltation. When water stops flowing, it drops its silt. The Washita Valley program stops siltation while the downstream reservoir produces siltation, not only in the reservoir but far above, in the tributary river channels. During the first few years the fishing may be good, as in Lake Texoma. But the siltation from the Washita River is proceeding so fast that the Federal fish hatchery expert at Tishomingo says that fishing is doomed. The first place the fish desert is where a stream flows into the reservoir. The citizens of Tishomingo and Madill thought they would have great prosperity as resort towns, but now, after just a few years of siltation, the people are so alarmed that they held mass meetings last summer to see what could be done. And

they found nothing could be done. Bob Armstrong, civic leader at Tishomingo, told me that the river channel there, in 4 years, had filled up 20 feet, and the delta had spread out into the lake over several hundred acres. Places that were 12 feet deep out there are only 4 feet deep now. Fishing is no good at Tishomingo because silt chokes out the vegetable life upon which all aquatic life ultimately depends, and it ruins the spawning beds, found mostly in the mouths of inflowing streams. J. N. Darling, former chief of the United States Biological Survey, emphatically opposes all big dams in the prairie States, for this and other reasons. Incidentally, I was talking with a man from Washington State on the train the other day and he said that the big dams on the Columbia River are ruining the vast salmon industry because of siltation and the interruption of their spawning habits.

Lake siltation is bad, and will fill up most of these reservoirs in a generation or two, but river siltation in the long run is far worse. According to the Army engineers' own blueprints, the backwater effects of the big dams extend 100 river miles up the Washita, and on the South Canadian to the town of Calvin. That means sedimentation of channel, spreading of floodwaters over wider and wider zones of the valley and ruination of thousands of acres of our best and most fertile bottomlands which now produce as many as five crops of alfalfa per year. I talked with leading citizens of Pauls Valley last May. They are 140 river miles upstream from Denison Dam, but they already see great increase in siltation of bottomlands, and in May that city had its worst flood in history, doing more than \$5,000,000 worth of damage, with loss of 2 lives. Right near there I saw fields that used to produce big alfalfa crops which had been choked out by sand, and now have nothing but Johnson grass, other weeds, and general mess.

Dr. Harold Munger, of Kansas State Agricultural College, has made a special study of stream siltation covering many years, and he says that in the average prairie river silt is dropped and deposited even if the slope is as much as 1 foot in 100. On the Washita, between Denison Dam and Pauls Valley, the slope is only half an inch in a hundred feet. As you know, the slower a stream, the faster it deposits its silt content, and when the stream is stopped altogether by a dam, it drops all of its load. There are many variables in siltation, such as character of the soil, width and depth of stream, location of storm center, amount of debris in the channel, etc. The slope itself becomes a variable because it constantly decreases upstream as the sediment is deposited at or near the mouth.

Dr. Munger goes further and makes this extremely significant statement: "When a dam is built, the new channel bottom tends to be parallel to the old one, and higher than the old one to the extent of the height of the dam."

If this is true, there will be no upstream limit to the backwater effect of siltation, assuming that the present gradient is fairly uniform from the dam to the uppermost tributary.

I realize that this sounds a bit technical, so I will state the case in another way: It took millions of years for the prairie streams to establish and stabilize their bottoms, by a process of scour and fill. The gradient or slope is based on average conditions as to the type of land. So when a new channel bottom is established by the filling up of the old one, due to the dam, the new bottom follows the same hydraulic laws as the old; therefore, it reproduces the old gradient

above the old one, to the extent of the height of the dam.

What does this mean in realistic, practical terms? It means that if Dr. Munger's findings are correct, every major stream valley in Oklahoma, whose gradient is less than 1 foot per hundred, that has a downstream dam, will be ruined, and the effects will be felt away up on the small tributaries. By this I mean that the flood plains will be increasingly clogged with silt, and the water will be spread out more and more, depositing silt in a wider and wider zone, and indefinitely upstream, up the watershed. So the big dams actually increase floods instead of controlling them.

You don't have to take my word for siltation of lakes. In a public speech at Stigler, more than a year ago, Col. Edward G. Daly, head of the Army engineers in Oklahoma, said that the proposed Eufaula Dam, which is expected to cost \$130,000,000, is "definitely intended as a silt trap," and its effective life will be over in 50 years.

5 Saving of rich bottomlands According to A & M economists, we now have only three acres per person of fertile land in the United States. If we had only two acres we would have to quit using meat and live on cereals, as most Asiatics do, because it takes seven pounds of high protein grain to make one pound of meat, poultry, eggs, milk, etc. We are losing our best land at the rate of 500,000 acres a year because of erosion. We can't afford to lose any more. Yet the permanent flooding by means of downstream reservoirs is rapidly taking our best land out of cultivation by millions of acres.

One of the proposed dams is Keystone, near Tulsa. Research revealed that 40 percent of all the livestock coming into the Tulsa stockyards is produced in the area that is to be permanently flooded. Other farm and industrial items are in proportion. Since each three acres of good land has the potential of supporting one person it means that the building of the proposed Eufaula Dam, to cover about 100,000 acres, will notify 30,000 people that they are no longer wanted in Oklahoma. This may not be directly evident, but in the long run that is exactly what it means.

6 Flood control is mainly needed upstream. I have already mentioned the fact that according to the engineers of the United States Department of Agriculture, 80 to 85 percent of all agricultural flood damage occurs above the big dam sites. Let's be practical and realistic about this. One instance out of hundreds or even thousands will illustrate. The Colvert Bros. ranch in the Mill Creek valley, southeast of Sulphur, lost 1,000 bales of alfalfa by flood in 1949. In 1950 the valley was hit by the May downpour and the Colvert ranch reported 6 inches of rain, but no damage to that alfalfa field. Then, of course we must remember the shed when it is not properly treated. Remember also that the damage at the Colvert ranch occurred on the watershed of Lake Texoma, and that \$61,000,000 dam didn't save a single bale of alfalfa.

7. Saving the soil. This phase alone is worth far more than any possible protection given below the big dams. The soil is saved when we protect the watershed by investing in regrassing, strip cropping, contour furrowing, terracing, and the building of small, inexpensive ponds.

In conclusion, I wish to say that every material statement I have made is supported by competent engineering authority and by Government statistical records.

The greatest job of all is to save our soil. When we save the soil we also save water, for saving the soil means slowing water down to a walk. It means soaking the water into the ground instead letting it flow over

the surface. Already one-third of our topsoil has been washed into the ocean. We can't afford to lose any more. To save the soil we have to stop the water where it falls.

There is some tendency to say, "Well, why can't we have both watershed control and big dams?" As I see it, there are two main answers: 1. The facts and figures show that the watershed program beats the big dams at their own game by impounding and absorbing far more runoff than the big dams can possibly accommodate. 2. Defense of the big dams means accepting their bad features—inundation of hundreds of thousands of acres of our best lands, siltation of tributary rivers with consequently worse and worse floods; vast expense to the taxpayer; failure to do the extremely vital tasks that I have mentioned as essential to a sound water and soil conservation policy. Perhaps you think I am over-enthusiastic in taking this point of view, but I am only calling the plays as I see them—you be the judge of appeals.

Floods are unnecessary. They can be stopped. They have been stopped wherever the right methods have been used on the watersheds.

The place to stop floods is right here in your own back yards in the fields next to this town, on the uplands. When you stop such floods, you help people down on the lower parts of the big river, but you help yourselves far more.

Shortage of Nurses in Tuberculosis Hospitals and Services

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES
Monday, October 15, 1951

Mr. LEHMAN. Mr. President, Dr. Leonard A. Scheele, Surgeon General of the Public Health Service, made a statement last week concerning the acute shortage of nurses in the tuberculosis hospitals and services of the country. The situation as described by Dr. Scheele is a very critical one. This statement, in my opinion, dramatizes the vital need for more health personnel in all the health fields and demonstrates why S. 337, the bill the Senate recommittees recently to the Labor and Public Welfare Committee should have been passed and must be passed.

I ask unanimous consent that the press release from the Federal Security Agency containing the statement by Dr. Scheele be printed in the Appendix of the RECORD.

There being no objection, the press release was ordered to be printed in the RECORD, as follows:

Many tuberculosis patients are receiving inadequate hospital care because of a serious shortage of nurses in the Nation's tuberculosis hospitals and services, Dr. Leonard A. Scheele, Surgeon General of the Public Health Service, Federal Security Agency, said today.

"The situation is extremely acute," he said. "There are approximately 320,000 civilian nurses employed in all types of services today, but there is room for 65,000 more."

The problem in tuberculosis hospitals is due in part to the Nation-wide shortage of nurses, which has resulted in stiff competition for their services, but it is due also to unfavorable working conditions in many tuberculosis hospitals, Dr. Scheele said.

In many cases, he said, inadequate patient care can be traced to inferior hospital facilities, unsatisfactory personnel policies, and insufficient personnel and patient education.

Dr. Scheele pointed out that there is only one professional nurse for each 10.6 tuberculosis patients, whereas in general hospitals there is 1 professional nurse for each 2.5 patients.

"Now that treatment for the disease includes not only rest, but extensive chemotherapy and surgery, almost as many nurses are needed in tuberculosis as in general hospitals," he said.

Dr. Scheele called attention today to the appearance of new information relating to patient care and nursing deficits in a number of the Nation's tuberculosis hospitals. The causes underlying the current situation are discussed in an article in the October 5 issue of Public Health Reports, which is being distributed this week.

The article, Nursing in Tuberculosis Hospitals, is based on a survey of more than 45 tuberculosis hospitals in 12 States and the District of Columbia. The survey was made at the request of the State health department or hospitals concerned. It was conducted by Martha B. Naylor, nurse officer in the Division of Chronic Disease and Tuberculosis, Public Health Service.

In one hospital studied, there was a 65-percent deficit in nursing care for each 24-hour day. In 1 region surveyed, only 2 of 10 hospitals provided as many or more hours of nursing care as the recommended minimum.

Mrs. Naylor observes that patient care and nursing staffs in the hospitals surveyed suffer from many of the following conditions:

1. The inconvenient, rambling manner in which so many sanatoria are constructed;
2. Nonexistent and frequently antiquated hand-washing facilities;
3. Inconsistent isolation techniques for safeguarding against the spread of the tubercle bacilli, which are among the most difficult of organisms to destroy;
4. Lack of personnel- and patient-education programs on communicable-disease precautions;
5. Lack of individual patient care;
5. Low pay, long hours, short or broken vacations;
7. Absence of pre-employment physical examinations and tuberculin tests for nurses;
8. Inferior living quarters;
9. Lack of educational opportunities in tuberculosis nursing.

The need for nurses today is greater than in any previous year, Mrs. Naylor reports, primarily because of such developments as scientific progress in health fields; recognition of the need for better patient care; expansion of public-health services; greater use of nurses in industry, spread of medical prepayment plans; population growths and increasing numbers of older people, and an all-time high standard of living.

Mrs. Naylor concludes her report with six recommendations to help tuberculosis hospital administrators plan to meet nursing needs. They are:

1. Increase nursing services to provide patients with proper care;
2. Improve the safety, efficiency, and attractiveness of physical facilities for the care of tuberculous patients;
3. Provide nurses with a safe working environment by teaching them communicable disease precautions;

4. Improve personnel policies until they compare more favorably with those in general hospitals;

5. Provide sound educational opportunities in tuberculosis nursing, and

6. Devote more attention to the over-all care of the patient through cooperative planning on a community-wide basis.

The Korean War

EXTENSION OF REMARKS

OF

HON. HENRY C. DWORSHAK

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Monday, October 15, 1951

Mr. DWORSHAK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from a constituent dealing with the Korean war.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

SANDPOINT, IDAHO, October 10, 1951.

HON. HENRY C. DWORSHAK,
Senate Office Building,
Washington, D. C.

DEAR SENATOR DWORSHAK: I and many of the people to whom I talk are perturbed by announcement about a week ago that American casualties were more than a thousand in a week—bringing near the 100,000 mark our losses in more than a year of Korean fighting. This morning's news was that the Reds suffered losses of about 80,000 for the August 25–October 5 period, which seems to be perfectly satisfactory with Generals Ridgway and Van Fleet. However, the same dispatch said that although our losses were unannounced, they would probably be 10,000 to 15,000 because Red losses in the past "usually worked out about five to eight times as many as the Allies."

This was a particular shock, because the Pentagon at various times led us to believe we were doing quite well by maintaining a 20-to-1 casualty ratio. I personally never talked to anyone who thought even a 20-to-1 ratio was verging on victory in fighting orientals; the 8-to-1 ratio is sickening because these same people can't figure out why our Government is so uncertain as to why it is in Korea now or what its goal is.

For whatever it may be worth, I'd like to tell you, sir, that the undeclared war and more especially its conduct are a No. 1 topic of conversation. My work now takes me to three other cities and puts me in contact with businessmen, laborers, and people in all walks of life. It is amazing to find that on this war issue their thinking is in the same channels—and unless the people of western Montana, northern Idaho, and eastern Washington are a breed apart from the rest of the Nation—then the horde of commentators and columnists who live in Washington's rarefied air better take to the road and find out what is going on in the country.

With but one single exception—a woman who feels the administration is responsible for her husband having a good job at the moment—I have not talked to a single soul who has real confidence in the way the Korean war is now being conducted. They—and I—don't understand the devious ways of our so-called diplomacy. They are entirely in favor of peace talks looking to a possible armistice, but not at the expense of a Commie build-up to sacrifice more Ameri-

can lives. They are unable to understand why, as soon as General MacArthur was fired, the trend has been to do the very things he advocated—but at so gradual a rate that the connection wouldn't be too noticeable.

Nearly everyone I talk to expresses the view that the administration is deliberately prolonging the war for political advantage. Horrible as this thought is, it ought to occur to some of the Washington brass that the people generally are the ones who are making the sacrifices of sons and brothers—and they are not concerned whether either of our political parties profits from the general conduct of the war.

We may have differences of opinion on deep freezes, mink coats, telephone calls to the RFC, and some of the other facets of current political life, but I sincerely believe that the average citizen now regards this Korean war as something that needs settlement, regardless of how either Democrats or Republicans might be affected. And that settlement, unless it should be the unlikely one of an armistice that means something, should call for the all-out effort of the United States with but one thing—victory—in view.

If Mr. Gordon Dean knew what he was talking about the other day when he said that this Nation has weapons with which it could win a war, then why aren't we using them? The newspapers and the radio no longer maintain any administration or State Department fictions about who we are fighting. It's a war and it's against the "Chinese Reds." North Koreans haven't been mentioned in so long that only the long-memory would know who they are.

I would like to repeat that, with one exception, every single person I have talked with in recent months thinks the United States should get into that war to win it, using every available means at our command, including atomic weapons. It must be sorry solace to parents who have just received word that a son was wounded or killed or missing in combat to pick up a paper and read that we've got the weapons to win the war but that we're not using them.

This letter, Senator, undoubtedly has an undertone of bitterness. I served in the Pacific in World War II. I now have a son who is in combat in Korea and another will become 19 and eligible for service this month. So that there can be no question of a "sour grapes" attitude, let me say that I voluntarily enlisted in the last war at an age when I could easily have stayed at home. My boy in Korea enlisted voluntarily. We think the United States is wonderful and I hope that we all have had ingrained a feeling that in our democracy we have something worth fighting for. But I don't feel—and neither does anyone else I have talked to—that we should fight communism as we are now in Korea. We ought to fight that war to win, or else get out. And to the military planners who say that we can't afford to risk this because we're not ready, may I point out that we weren't ready at Pearl Harbor. Maybe one of the veterans of the First Marine Division who went ashore at Guadalcanal when we were at the height of our unreadiness could give the Pentagon brass a good answer as to how to work that out.

I think the simple way of saying the one thing which is most on my mind, Senator, is this: If you never lifted a finger in Washington during your term to do anything else than to help mobilize official opinion that a decision should be made between either withdrawing from Korea or else fighting an honest-to-goodness war against communism, then you would be successful and have the heartfelt gratitude of your constituents.

Respectfully,

JIM PARSONS.

Release of Members of the Inactive and Volunteer Reserve

EXTENSION OF REMARKS

OF

HON. WILLIAM H. AYRES

OF OH.

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. AYRES. Mr. Speaker, today the House passed H. R. 5426 which will correct many inequities in the reserve program in the future. However, as has been pointed out, this bill in no way relieves the present situation.

Since becoming a Member of this body I do not think it unpatriotic for me to say that the one thing I am proudest of is that through my office we have been instrumental in getting some 400 inactive reservists returned to their families. My only regret is that all of the men who have been used merely as cheap labor have not been released.

I have received absolutely no consideration for H. R. 5337, introduced on September 13, 1951. This bill met with overwhelming approval of thousands of reservists who wrote me expressing their views. In my humble opinion, if the Defense Department, and particularly Mrs. Anna Rosenberg, understood the hardship the inactive reservists have been subjected to, this bill would be given immediate consideration. I am confident that if it were brought to the floor of the House for a vote it would pass by an overwhelming majority.

In the event there are those of you who are not familiar with the bill, I have included it with my remarks, and it is printed below:

H. R. 5337

A bill to provide for the release of certain members of the Inactive and Volunteer Reserve serving on active duty with the Armed Forces of the United States

Be it enacted, etc., That (a) effective November 30, 1951, each member of the Inactive or Volunteer Reserve who has been or shall be involuntarily ordered to active duty with the Armed Forces of the United States shall, unless sooner released under regulations prescribed by the Secretary of the military department concerned, be released from active duty when he has been credited with 50 points as provided in subsection (b) if he makes application for release to the Secretary of the branch of service in which he is serving. Any member released pursuant to the preceding sentence shall not thereafter be ordered to active duty for periods in excess of 30 days without his consent except in time of war or national emergency hereafter declared by Congress.

(b) Each such member shall be credited with 1 point for each month he shall have actively served with the Armed Forces of the United States after September 30, 1940, and shall be credited with 10 points for (1) his spouse, if any, (2) each of his children, if any, and (3) each of his other dependents, if any.

(c) For the purposes of this act (1) the term "children" means legitimate and illegitimate children, legally adopted children, stepchildren, foster children, and any other persons who are supported in good faith by such member in a relationship similar to that

of parent and child, but shall not include any person 18 years of age or over unless such person is physically or mentally handicapped, and (2) the term "dependent", when used with respect to any such member, means any person who is a United States citizen or who lives in the United States or its Territories or possessions, and whose support such member has assumed in good faith, but such term shall not include any person 18 years of age or over unless such person is physically or mentally handicapped. In the consideration of a dependency claim, any payments or allowances which are payable by the United States to the dependents of members of the Inactive or Volunteer Reserve serving on active duty with the Armed Forces of the United States shall be taken into consideration, but the fact that such payments or allowances are payable shall not be deemed conclusively to remove the grounds for the dependency claim.

Americans of Italian Birth

EXTENSION OF REMARKS

OF

HON. HUGH J. ADDONIZIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. ADDONIZIO. Mr. Speaker, many good things come from Italy, but the most valuable export is people, some of the best of whom have come to our own land of opportunity and progress. It is fitting that we should recall some of them on this five hundredth anniversary of the birth of the best known of them all, the Genoese navigator Cristoforo Colombo, whom we commonly call in this country, Christopher Columbus.

"On, on, into the West," he cried:
 "I know and will not be denied
 The world is round; by the western gate
 The riches of the Indies wait.
 Lift sail, my men, the hour has come
 For shipwreck or millennium
 Lift sail, my men, the hours is here
 To probe the secret of the sphere."

The story of this great admiral—his simple faith, heroic persistence and final success, greater far than he knew—has been often told and may well be repeated. But if Columbus could know, he would want to hear the achievements of his fellow Italians in the years since he showed the way to the New World. Many Italian-born patriots and heroes have come to these western shores, men who have contributed much to the development of freedom and of prosperity—fit fellows of the bold admiral of the ocean sea.

It is general knowledge that in our country today it is not unusual for Americans of Italian birth or descent to hold high positions in the world of music, art, commerce, science, education, and government. We are accustomed to governors, mayors, judges, and legislators with Italian names. But there is sometimes an idea that these are late arrivals. It is not too well known that Italians also did their part in the early exploration and development of America.

There was Enrico Tonti, who accompanied LaSalle in his explorations. Tonti was the son of a distinguished Neapolitan banker who invented the tontine system of insurance. Through the Great Lakes and up and down the Mississippi Tonti traveled, building forts and treating with the Indians. Other well-known early Italian explorers include Amerigo Vespucci, from whom America gets its name, John Cabot, and Giovanni Verrazano.

Filippo Mazzei, born at Poggio-a-Calano, Italy, a physician by profession, settled in Virginia in 1773 and became a friend of Thomas Jefferson, who translated some of Mazzei's patriotic anti-British writings into English. The Declaration of Independence itself reflects expressions from these writings. Under Jefferson's friendly interest Mazzei started important agricultural experiments, which were interrupted by the Revolution, at which time he was sent to Europe as the agent of Virginia to raise money for the war.

Francesco Vigo, born in Mondovì, Piedmont, Italy, came to America in 1775 and became a fur trader and "merchant prince" of the Mississippi Valley. When the expedition of George Rogers Clark, in the Revolutionary War, seemed ready to fail for lack of supplies, Vigo put his fortune at the disposal of the Revolutionary cause and made possible the success of Clark's campaign against the English in the west.

William Paca, Governor of Maryland and signer of the Declaration of Independence, was of Italian descent and related to Pope Leo XIII, according to the traditions of the family.

Of course, we can name only a few of the many. They did not all come to America; most of them stayed in Italy. We are accustomed to credit Italy with great artists and musicians, but to think of science as an American specialty; but Volta, Galvani, and Marconi were all Italians, as, going further back, was Galileo, who introduced the "scientific method," called by Prof. A. N. Whitehead, "the most intimate change in outlook which the human race had yet encountered."

America has been quick to appreciate these things, as someone has well remarked:

The Italian arriving in America by way of New York, its main gateway, is greeted at Battery Park by Verrazano in bronze, at Washington Square by Garibaldi, at Columbus Circle by Columbus, at Broadway and Sixty-third Street by Dante, and at Seventy-third Street by Verdi. Thus he is reminded that he comes not without spiritual credentials to the land discovered by a fellow countryman over 400 years ago.

If Columbus could have come to life last month and made the trip with Premier de Gasperi, flying through the air, making the Atlantic crossing in hours instead of weeks, and viewing the great cities of the New World, how astonished he would have been. And if he could have added a few words of his own to the message which the Premier brought in his address to Congress, what would

Columbus have said, and what would be our response? I am sure he would have added his word for a revision of the Italian peace treaty. He would urge as the Premier did that we be realistic and treat Italy in the light of her present attitude and the free world's needs and not on the basis of the repudiated past. The forward-looking Columbus discovered a New World over here; if we too are forward-looking, we may discover a new world of freedom developing in his native land. We may be able to aid such development. We may in part repay our debt to Columbus.

The Real Meaning of Floods—Part I

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Elmer T. Peterson to Friends of the Land and St. Louis Farm Club, St. Louis, October 11, 1951:

THE REAL MEANING OF FLOODS

Though it may have a Druidical flavor, I think it might be a fine thing if the St. Louis Chamber of Commerce would hold one meeting each year on Eads Bridge and spend an hour in meditation and prayer while watching the wealth of its tributary territory flow down the Mississippi—the lifeblood in the form of mud which amounts to one cubic mile annually. Likewise if the Kansas City chambers would do the same on a bridge across the Missouri, the Topeka chamber on the Kaw, the Oklahoma City Chamber on the Canadian, and so on throughout the Mississippi Valley, there might come a new and highly fruitful vision of the facts of life—one that is tragically needed.

What is the real meaning—the life meaning—of the recent floods?

Most urban dwellers have amazingly dim appreciation of the significance of rich topsoil sliding down our big and little streams, hour after hour, week after week, year after year, but Louis Bromfield, standing on the banks of the Raccoon River in Des Moines, once said "I did not see just muddy water—I saw factories, homes, schools, churches, railroads, office buildings—all going down the river."

In flood time the river dumps an extra tonnage of that rich topsoil on our front porches and in our factory warehouses, making a sickening mess. Most of us think of it only as a filthy nuisance, not realizing that when kept on its right place it is the most precious material thing we have—even more important than gold or blue-chip stocks or machine tools—the source of roses and honey and bread and delicious steaks. King Midas learned, the hard way, that he couldn't eat gold. That topsoil, in its right place, is the very elixir of life. It ultimately produces food, with vitamins, hormones, enzymes, molds, spores, chlorophyll, precious trace elements, antibiotics like penicillin and aureomycin—a bewildering concourse of treasure. Mother Nature's topsoil is her industrial laboratory. In a process whose significance is barely dawning on the people she brews all

the elusive but basic substances that enable us to live. The science of hydroponics—the artificial propagation of vegetables without soil—is a pale, enemic, and deficient imitation. Nothing ultimately can take the place of outdoors topsoil. Modern research in isotopes and an infinite number of hydrocarbons, carbohydrates, and other organic compounds, with almost daily discoveries of substances like cortisone and the products of endocrine and sex gland secretions, only emphasize the fact that nature's outdoor workshop has been producing these substances for millions of years, by means of an interlocking network with millions of combinations in the topsoil and vegetable and animal organisms that grow out of the soil in a magnificent and orderly life cycle. Mother Nature's creative process, as neatly stated by Dr. William A. Albrecht of your State university, chiefly necessitates water, air, and sunshine. Photosynthesis is a basic necessity. When other elements are needed, they come from her own infinite warehouse. No artificial process can support great populations. Mother Nature is one woman who always has the last word.

What is the dollar meaning of the recent floods?

In a recent television feature the National Association of Manufacturers declared that 16,000,000 tons of mud were deposited in the Kansas City bottoms during the July flood. This mud, in the right place, is commercially worth a minimum of \$2 a ton, according to a contractor friend. But only a small fraction of the topsoil coming down the rivers stopped in those bottoms. Most of it went on past St. Louis, down into the Gulf of Mexico—a treasure lost forever. It is safe to say that even if you count the static value of the mud, at least \$32,000,000 worth was left, all its value nullified, on those bottoms, and several hundred million dollars' worth went on down the Mississippi.

The static value, however, is not the real value, for topsoil, in its right place, is industrial capital, in that it continues to produce, year after year, decade after decade, indefinitely, our most vital and essential wealth, far more important than money or steel-and-concrete structures. The topsoil in that single flood was worth \$1,000,000,000 or more likely several billion dollars in terms of future production.

The visible damage done to packing houses, railroad yards, warehouses and industrial installations was tragic and deplorable, but really trivial compared with the loss of topsoil. As a matter of obvious and realistic fact, such establishments cannot even exist with the maintenance of that topsoil for the oncoming generations.

If present trends continue, historians of 100 years hence will say that one of the most conspicuous policies of many American politicians as of the year 1951, was sheer stupidity. That policy is that of trying to control floods in the plowland areas by imprisoning huge bodies of muddy water—a thieving fluid loaded with the most precious riches of the upland slopes—behind high midstream dams. It is a plain parallel of locking the barn door after the horse is stolen.

That is the spectacular way—one that can be easily sold to people who never see or conceive of floods except as huge, spectacular torrents,—but in the farm belt it is as obsolete and unscientific as the horse-and-buggy. Its formula of ancient folklore persists, like the concept that lightning is something that travels zigzag around acute angles, or the profound mathematical axiom that 13 is an unlucky number.

Medical science demonstrates that cancer and all other diseases are most effectively

defeated in their incipient stages. Every other science follows analogous patterns. All but one. Flood engineering, with one exception which I shall mention, still clings to the primitive and unscientific concept that you must let a flood reach its most dangerous theater of operation before trying to stop it. The psychology is that of the movie hero whose entrance is postponed to the very last few seconds in his effort to rescue the heroine. It is good showmanship, and how unthinking people love it. In fact many politicians positively demand it, even to the extent of refusing to let the Government take the scientific method.

I am not against all big dams. I have visited many of them, including the Arrow Rock Reservoir near Boise, Idaho. This is a most admirable project, but it resembles the proposed Eufaula Reservoir in Oklahoma about like an elephant resembles a goldfish. It is located on a sharp gradient, in a mountain area protected almost entirely by rock, forest, and vegetation. It receives clear water from mountain streams. Its level fluctuates enormously, depending upon rainy seasons or irrigation demands. Only the most naive engineer would infer that if a big dam is practical at Arrow Rock, it would also work at Eufaula, Okla. There is no rational resemblance between the two projects. Even the Army engineers have publicly admitted that the Eufaula Reservoir is "definitely intended as a silt trap" and that its usefulness will be over in 50 years. An eminent Oklahoma geologist says that the average big reservoir in the prairie plowlands will fill up with silt in 50 years. Before it fills up, it will have done infinitely more damage in another way, but I am getting ahead of my story.

By the time the average flood in the Mississippi valley has reached a site chosen for a huge reservoir, it has already done four times as much damage as it could below that site. Engineers of the United States Department of Agriculture (hereafter called USDA) have conducted research showing that from 80 to 85 percent of all agricultural flood damage is done on the tributary watersheds, leaving 15 or 20 percent possible damage on main streams. Bear in mind always that agricultural damage ultimately is what chiefly counts. Since these figures are officially documented, I could rest here and my case would be proved to any impartial jury. But I want to clinch the argument with additional facts that may astonish some of you.

Please remember this vital point:

The big-dam promoters rely on just one theory to demonstrate alleged superiority of the last-minute-rescue form of flood control; that is the theory that huge dams impound more runoff water than any other method. Impoundment. Keep that word in mind. The theory is completely false, for actual engineering figures prove that the small detention dams of the Washita Valley agricultural flood control program in Oklahoma impound far more water than the big dams in the same area. And the Washita pattern can be applied anywhere in the farm belt.

In other words, the little dams beat the big dams at their own game—the only game the big-damers know—containment of water in surface reservoirs. Please remember this if you forget everything else I say tonight.

Here are the figures that demonstrate what I mean. Before the Oklahoma City hearing of the inter-agency basin committees for the White, Red, and Arkansas Rivers, the engineers of the USDA and the Army corps submitted estimates on flood control for the Little Washita, a creek tributary of the

Big Washita. Here are the comparative figures:

	Army	USDA
Number of reservoirs.....	1	34
Drainage area, square miles.....	195	190
Flood storage, acre-feet.....	52,000	50,100
Recreation, permanent pool, acres.....	1,950	2,100
Flood, pool, acres.....	3,650	5,100
Bottoms inundated, acres.....	14,850	11,000
Bottoms protected, acres.....	3,371	8,080
Cost, proposed plans, complete.....	\$6,000,000	\$1,983,000

¹ Only waste land would be used for USDA program. The richest bottom lands would be inundated in the Army program.

In every respect, therefore, the small-dam system is better than the big-dam system.

Incidentally, the fact that the Army engineers are now aggressively moving into the creek watershed sphere finally disposes of an argument they have previously made.

Up to the present they have said, "Oh, well, the USDA system might work on a creek watershed, but not on a big one." Of course, this always was a meaningless argument, since we know by simple arithmetic that the whole is nothing more nor less than the sum of all its parts. If you stop floods on all the creeks, where would you get water for a flood on the river? It is significant that the Army engineers have gradually moved upstream until now they are trying to compete with the USDA system. It would also take longer to complete, since the USDA program works with simpler implements. If you want flood control in a hurry (and don't forget that impoundment) take the USDA route.

The recent disastrous experience in Kansas, where I lived for 24 years, showed that the worst floods came from an aggregation of creek floods. More on this point later.

Going on from the Little Washita demonstration, we see that, according to the general trend, the bigger the dam, the less it is able to impound runoff water.

A typical small detention dam in the Mill Creek watershed under the USDA program in Oklahoma is engineered to impound 5.22 inches, while the huge Denison Reservoir, fed by Mill Creek, could not impound more than 1.31 inches of its proportionate runoff, so the little dam is four times as efficient as the big one. Yet the big-damers stubbornly continue to insist, against plain facts, that the big dams are necessary for impoundment of runoff.

Actual performance make a sorry showing for the big dams. During the Kansas flood the army engineers blurted out this significant remark: "When 12 inches of rainfall within 48 hours none of our dams can contain it." That is true of their own program. That excessive runoff cannot be contained by the big dams is proved by many examples, such as Bonneville, promoted as a multiple-purpose dam, including alleged flood control. Below that dam, at Vanport, occurred one of the worst floods in history, drowning 40 persons and doing \$200,000,000 worth of damage. In 1943 the Pensacola or Grand Lake Reservoir overflowed and contributed half of the torrent which devastated the Arkansas Valley, drowning 19 persons and doing \$127,000,000 worth of damage. It was this top half of the flood, of course, which did the damage, for if the dam had actually contained the Grand River flood according to advance promotion there would have been only high water on the Arkansas. Again in 1950, the same dam permitted a huge torrent to flow over it because of lack of impoundment capacity, and it contributed materially to another bad Arkansas River flood. Before reaching the Arkansas River it encountered the newly completed Fort Gibson Dam, and didn't even

hesitate. Here are pictures that show what happened.

The vast and expensive TVA structures are urged as models for this part of the country. But as soon as the last TVA structure was finished, Chattanooga set up a terrific clamor for a multi-million-dollar local flood-control program. I could go on and on, indefinitely showing the failure of the huge structures, which simply can't contain the bigger floods.

In contrast with this dismal record of failure we have the actual performance of the little dams, augmented by surface treatment in the Washita Valley program. I mentioned this in an editorial in the Saturday Evening Post for August 4. Incidentally, one of the most aggressive big-dam promoters in Kansas rushed into print with an attempted refutation of the statistical data used in this editorial, but I had all the official documents, weather maps and other data to substantiate my points. I have been on the firing line for at least 10 years, using extensive statistical data, and have not yet met successful refutation.

The facts are that in May 1950, not less than 13 inches of rain fell on the conservation-and-detention-dam treated area of West Owl Creek, Okla., in a 36-hour period, and the technicians did their work so well that the creek stayed within its banks until it had flowed a mile past the last structure. By that time it had received runoff from the nontreated slopes.

There are three principle factors in this flood control. First is the capacity of the small detention reservoirs, which is this area run from 4 to 5 inches of runoff. Second is the absorptive power or insoak produced by surface treatment—terracing, regrassing, contour furrowing, reforestation, and the like. This varies with the soil type, but in some cases is even higher than the reservoir capacity. Third is the draw-down valve, which permits the water to run at a safe rate down the stream as soon as it tops the permanent pool, or lower reservoir capacity. It was the combination of the three which produced the remarkable record of West Owl Creek. The system performed even better on a 4,000-acre subwatershed of Barnitz Creek in May 1951, when 13 inches fell within a few hours—well within 1 day—and a similar result was recorded.

The largest watershed thus far treated is that of Sandstone Creek near the western edge of Oklahoma, which contains more than 65,000 acres. It has 24 detention dams, about the same number of gully plugs, and surface treatment. On May 16, 1951, a storm that in other years would have produced a disastrous flooding of the lower valley, hit this area. The nearest official gage showed 4.57 inches, and unofficial gages showed from 3 to 6 inches. According to a local soil-conservation official, similar downpours in previous years caused the creek to create a flood half a mile wide, but in this case the water did not even come up to the draw-down valves.

The Real Meaning of Floods—Part II

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the

Record, I include the following address by Elmer T. Peterson to Friends of the Land and St. Louis Farm Club, St. Louis, October 11, 1951:

In 1949 the Cloud Creek watershed received 4.6 inches in 4 hours. The water did not even reach the draw-down valves, because the insoak produced by surface treatment had taken care of almost all the precipitation, so not a bucket of water escaped from this area, though neighboring creeks, in the same cloudburst area, went on wild rampages, causing a bad flood on the Washita.

In 1949 the Colvert Herford ranch in the Mill Creek area lost 1,000 bales of alfalfa in one flood. By May 10, 1950, the USDA program had been completed, then came the big flood which centered on West Owl Creek in that general area. I called the ranch and they said there had been 6 inches of rain, but no damage.

Here we have five subwatershed projects, all of which had severe tests, and every one performed perfectly. The USDA program on the Washita Valley has performed 100 percent efficiently. It went through the May 1950 cloudburst with flying colors, while at the same time the newly completed Army engineer dam at Fort Gibson, Okla., with far less rainfall, was pouring water into the lower Grand River and Arkansas, producing a bad flood at the rate of 400,000 cubic feet a second, according to an Army engineer quote in our newspapers.

The only trouble, of course, is that the Washita program thus far has reached only a fraction of the total valley, because the skimpy appropriations are cut down. This year the appropriation was cut from \$1,070,000 to \$625,000 at the very time the big dam promoters were clamoring for hundreds of millions. If one-half the appropriations demanded for the big dams were spent on the USDA program, we would have perfect flood control and I have plenty of figures to prove it.

The draw-down valve function of the United States Department of Agriculture small detention reservoirs is analogous to the dry-dam system used in the Miami Conservancy District in Ohio, where dams bear this inscription: "The dams of the Miami Conservancy District are for flood-prevention purposes. Their use for power development or for storage would be a menace to the cities below." The Miami dams are virtually emptied after every flood to receive the next inundation. In the typical huge multiple-purpose dam a relatively small percentage of capacity is allocated to flood impoundment. Theoretically the flood-pool capacity should be lowered at least 30 to 40 percent. Actually, however, the reservoir is kept practically full because sportsmen and power generation and irrigation or water-supply interests demand it. Sportsmen don't want to see their boathouses and docks up on a hill, or the margins of the lake messed up with mosquito-breeding mud flats. Here is another point of superiority for the small dam. The typical United States Department of Agriculture flood pool holds about 65 percent of total capacity and the permanent pool, up to draw-down valve, about 35 percent. There is no one to prevent the lowering of the water level to the draw-down valve, whereas the people demand a high level on the big artificial lakes.

Up to this time I have contended that the huge dams are highly inefficient for flood control, compared with the small ones, which have taken care of a 100-year flood, so someone may say:

"Well, even if they are inefficient, maybe we should have them anyhow, as added precaution, say in case of a 1,000-year flood."

I propose to show that the huge dams are worse than that. They are positively harmful. They actually cause floods. This fact causes me to be amazed when a few soil conservationists, apparently not fully informed, defend or condone big dams in the prairie plowland areas.

There is an inexorable scientific law, described and applied in geology textbooks, which should be heeded by everyone who deals with soil and water conservation and flood control. Failure to heed this law can only lead to disaster.

The geologists have condensed and applied it in this axiom: "The history of a lake is the history of its death."

That is because of siltation, a natural process which has changed the whole course of world empires.

If you read the Encyclopedia Britannica you will see that Babylonia, the first great empire or recorded history, depended for its basic prosperity upon irrigation canals, using the water of the Tigris and Euphrates, and that its economic death was caused by siltation of its irrigation canals about 90 of which have been discovered by Dr. W. C. Lowdermilk.

Utica, in a later century, was once the greatest city on earth, located at the mouth of the Mejerda River—the pride of the vast Carthaginian empire. The plow era caused the erosion of a once enormously productive watershed and the silt produced a delta. Now the only thing left of Utica is a pitiful little array of stones, mostly buried in a desert 12 miles from the mouth of the river.

These are examples that could be multiplied many times.

Our existing natural lakes are well protected by watershed cover, but even they will eventually fill up. In the plowlands any artificial lake created in the midst of a major stream is doomed to an early death, as described in brochure No. 521 of the USDA on Sedimentation of Reservoirs. The classic example is a water-supply reservoir at Osborne, Kans., which filled up in 1 year. Old Lake Altus in Oklahoma filled up in 14 years. After 10 years, Lake Texoma, also in Oklahoma, shows tremendous siltation, and the communities of Madill and Tishomingo have held mass meetings to try to find out what to do. Unfortunately they can do nothing but furnish an example to communities everywhere in the plowlands. Already they say the mouth of the Washita is clogged with 20 feet of additional silt since the dam was built and the sedimentation extends far out into the lake.

Each year, using the formula of the best hydraulic engineers, Washita Valley erosion amounts to a pile 1,000 feet long, 1,000 feet wide, and 700 feet high. This is based on the standard rule of 2 acre-feet for every square mile of watershed per year. The United States Geological Survey shows that Rush Creek, a tributary, carried siltation of 11 acre-feet per square mile per year.

This silt is first deposited at the mouth, in the classic delta pattern, but immediately it constitutes a secondary dam which starts a chain reaction upstream called backwater sedimentation. I have in my hand the blueprints of the Army engineers forecasting backwater sedimentation in the Washita to a point 100 river-miles upstream. That confession is bad enough, but they have greatly underestimated this effect. According to Dr. Harold Munger, of Kansas State Agricultural College, a highly reputed hydraulic engineer and authority on siltation of prairie streams, such siltation builds a new river bed upstream which tends to be parallel to the old bed, at a height equal to the height of the dam. In other words, the backwater sedimentation in anything less than a 1 percent gradient (which he uses as

a maximum) will extend indefinitely upstream. Since the Washita River has an average gradient of only half an inch in a hundred feet, you can imagine what this means.

The actual results uphold Dr. Munger's formula, for already the backwater sedimentation, since the building of the dam about 10 years ago, has completely changed the character of the Washita channel and flood plain as far upstream as Chickasha, more than 200 miles upstream from the mouth. R. C. Longmire, president of the Washita Valley Association, says that this ghastly damage is due to the presence of the big dam. He has ample substantiation, but I must hurry on. A typical section of the river now is five times as wide as the channel was 10 years ago, and the water now wanders crazily over the flood plain to such an extent that last year I saw at Pauls Valley where the river had cut back of the town and emptied into its own tributary—Rush Creek. That was at least 10 river-miles upstream from the normal confluence. This great zone of bottoms was once the prize alfalfa-growing area of the State, producing as many as six crops a year. Now it is being cut to pieces. A former State senator is bringing suit against the Federal Government, alleging that his fine bottom-land farm about a dozen miles upstream from the lake, has been ruined by reason of the dam. I walked over this farm and took many photographs which I have with me.

In Missouri you have already seen a revolt of farmers above the Alton Dam, alleging that their farms are being flooded by reason of the dam below their farms. I am informed that the supreme court of Missouri, about 2 years ago, in the Bagnell Dam case, held that the dam was responsible for similar upstream damage, caused by backwater sedimentation. The suit in Oklahoma will be followed by many more. There is almost no limit to the damages incurred by the Government in building these silt-trapping dams. If the whole Mississippi Valley is to become a series of chains of artificial lakes, as forecast by General Pick, the damage and complications defy the imagination.

You may have read about the flood on the Neosho River at Miami, Okla., near the confluence of the Neosho and Spring Rivers, which feed Grand Lake. One man was drowned and the property damage was \$5,000,000. Since the Army engineers said that the flood stage at Miami was 28 feet higher than the corresponding level at the dam, you can easily see that there was a bottleneck at the head of the lake. I visited that critical point shortly after the flood, slogging around in the mud which was everywhere.

At one point 2 inches were deposited on an old blacktop road during that one flood. I have pictures. Assuming that the backwater sedimentation process and detritation occurred on this very muddy river, as it does everywhere else, I am satisfied that the flood at Miami was caused by the presence of the artificial lake.

The town of Waurika, Okla., had six floods during the past summer, so I also made a personal inspection of this area. I found enormous acceleration in backwater sedimentation on the Red River since the building of the dam. Waurika is about 12 miles up Beaver Creek, which empties into Red River. Beaver Creek's mouth is about 100 feet wide, but the present water channel of the Red River there is only about 50 feet wide. The river bed is almost half a mile wide, and piled high with silt. Obviously the flood coming down Beaver Creek was unable to get away fast enough through this bottleneck, so it backed up six times into Waurika—a phenomenon that had never occurred before the building of the dam.

The State engineer of New Mexico, in an official report, says that millions of tons of silt, about 20,000 acre-feet, are transported annually by the Rio Grande into the Elephant Butte Reservoir. Now there is a silt bed 60 miles long and 35 feet maximum depth, formed because of the dam. This gives an idea of what is taking place wherever muddy water is trapped by artificial obstructions. Wherever land is plowed, erosion and siltation are hastened.

It is therefore plain that instead of controlling floods, the big dams are causing worse and worse floods, as river beds are filled with silt and backwater sedimentation increases.

Now I come to a more pleasant phase of this discussion—the constructive side which shows the tremendously beneficial results of the USDA program on the Washita watershed under the Soil Conservation Service.

In addition to the impoundment capacity of the small detention dams, mentioned a few minutes ago, there are at least six other points of superiority.

1. Insoak by sponge action of vegetation, contour plowing, and other conservation practices. By means of an infiltrometer, an instrument he invented, A. D. Bull, of Oklahoma, has measured this insoak under varying conditions, and found that by proper handling he could secure as much as 9 inches absorption in 1 hour.

If this sounds incredible, remember that Mother Nature, in the jungle areas of Cherapunji, India, takes care of an average of 429 inches of rainfall a year, whereas the Grand Canyon, which is the biggest gully—the biggest job of erosion—in the world, is located in an area of low rainfall.

On Malabar Farm, Louis Bromfield greatly increased insoak by use of a chisel plow so that he had plenty of water in the 1946 drought year when neighbors hauled water. I am convinced from my own research and actual experience on my Kansas wheat farm that this item alone will work wonders. Mr. Bull utilizes this as one of his techniques.

2. Restoration of high water table, which depends absolutely upon watershed insoak. All conservationists know that the water table is now alarmingly low. Insoak revives old springs, creates an even flow of streams, replenishes wells, brings back good fishing, and brings other blessings. Storage of ground water is the next big step in conservation.

3. Irrigation by clear water. Canal and ditch irrigation from surface reservoirs or muddy streams is bound to fail, as it did in Babylonia. Mother nature again has the last word. Her own filter beds do the work.

4. Prevention of siltation. This can be achieved only by conservation methods. Obviously the big dams can't stop siltation, but increase it. Building silt traps above the big reservoirs is only a temporary stop-gap for these, too, will quickly become useless unless the surface is treated over the whole watershed.

5. Saving of rich bottomlands. The big reservoirs inundate millions of acres of our best land. They drive people off the land. The Washita program increases production and keeps people on the soil. Only waste land is used for the small reservoirs. I have time to give only one of hundreds of instances I could name to prove my point. The site of the proposed Tuttle Creek Reservoir north of Manhattan, Kans., would destroy 55,000 acres of the best land in the State—an area which annually produces more than \$6,000,000 worth of crops, to say nothing of the fine homes, churches, schools, and other institutions. To inundate this area and scatter these fine citizens would be a crime comparable to the destruction of Lidice. Yet you people of Missouri are told that Tuttle Creek Dam is essential to the protection of your

cities. That is a ridiculous falsehood completely disproved by the facts presented.

6. Saving the soil. Soil, after all, is the most precious asset of all. The big dam promoters do not even pretend to do this job.

So we come back to the first episode in this story—the dumping of rich topsoil on the bottoms of Kansas City.

There is nothing in the big dam program which promises to halt this rape of the soil. Piling it up behind huge dams is obviously a stupid performance. The only rational method is to stop water where it falls and keep the soil in its proper place. That will solve the flood problem, and it will save the soil for posterity.

The Case for the Bonneville-Central Valley Intertie

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. ENGLE. Mr. Speaker, I wish to include in the RECORD two recent articles concerning the Bonneville-California transmission line intertie. One article, written by State Senator Richard L. Neuberger, of Oregon, appeared in the October issue of the magazine *Frontier*. The other is an editorial from the *Portland Oregonian*, of September 28. The *Oregonian*, as you know, is one of the outstanding Pacific coast newspapers. Without concurring in any of the characterizations of the public officials in the Northwest, I think Mr. Neuberger's article explains the basic issues and therefore should be of interest to everyone concerned in finding a way to remedy the power shortage in the Northwest. The editorial entitled "California Power Tie Needed" accurately states: "The agreement proposed for the interconnection would have prevented the delivery of any power to California except that capacity not needed in good water periods."

I believe when the facts are fully known to the people of the Pacific coast States, they will be in favor of the construction of the intertie. It has been approved and recommended by the engineers of four Federal agencies—the Federal Power Commission, the Defense Electric Power Administration, the Bureau of Reclamation, and the Bonneville Power Administration. The article and the editorial follow:

[From *Frontier* of October 1951]

THE CASE FOR INTERTIE—HOW PROVINCIAL POLITICS BLOCK CALIFORNIA'S USE OF BONNEVILLE POWER NOW GOING TO WASTE

(By Richard L. Neuberger)

PORTLAND, OREG.—California and the Pacific Northwest are as much sisters under their skins as the Colonel's Lady and Judy O'Grady. Yet a galaxy of politicians in the Northwest are finding it to their personal interest to keep the two great regions hostile and apart.

The specific occasion for this stirring up of rivalry has been a proposal by the Bonneville Power Administration that its system

be connected with Shasta Dam by 119 miles of transmission line extending southward from Klamath Falls, Oreg.

Yells of outrage are rising from Gov. Douglas McKay, of Oregon, and Congressman Russell V. Mack, of Washington, to cite only two in politics who consider provincialism a good vote-getting technique. "They're trying to give our power away!" cry these and assorted other leaders of the people. One might think that the wires would extend not to a sister State of the Union but to Leningrad, Russia.

Only three daily papers in the Northwest have been affirmatively friendly to Intertie. They are the Oregonian of Portland, the Union-Bulletin of Walla Walla, and the Tribune of Lewiston, Idaho. A handful of others are undecided. The rest are bitterly hostile. In the case of Republican papers, this betrays a markedly split personality. While these papers rooted and tooted for Earl Warren to be Vice President of the United States in 1948, they now are determined that not a single horsepower of northwestern hydroelectricity shall light a bulb or turn a factory wheel in Earl Warren's State.

At the risk of his political fortunes, Dr. Paul Raver, the Bonneville Administrator, has been defending Intertie. This is a long, slow process but most observers believe he ultimately will come out on top. Logic and facts can be obscured by invective only over a limited period of time.

Nor is California quite as unpopular in the Northwest as some politicians seem to believe. A strong plea for a Coastwise alliance might prove more potent than efforts to split California off economically from its Pacific neighbors.

What are the reasons for "Intertie," as the project is formally known?

Bonneville is a run-of-the-river dam. This means that it has no storage facilities. The Columbia's massive volume foams constantly through its spillways. But between midnight and dawn the Northwest has no need for all the power which Bonneville can produce. Why not transmit this surplus energy to California, where pumping for irrigation requires power 24 hours around the clock?

There is a further reason for this. California and the Northwest work in unison climatically. California rivers are at their peak in spring. By summer stream beds often are gaunt and dry. But this is when the Columbia rises to its maximum flow. Its origins lurk in the British Columbia sub-Arctic, where snowfields and glaciers melt at least two or three months later than in the Sierra Nevada Range.

WASTE OF PRECIOUS POWER

Thus Bonneville spins out its fullest capacity at a time when California is most in need of energy. Bonneville engineers estimate that 400,000,000 kilowatt-hours might be transmitted to California during a normal year without in any way depriving farms, homes or industries of power in the Northwest.

This would result in the saving in California of 850,000 barrels of oil now used to generate power with steam turbines. In addition, surplus power from Bonneville would enable Shasta Dam, a storage structure, to impound water that otherwise might have to be used immediately in California. This storage released through Shasta generators would be able to produce many thousands of kilowatts of prime power at a later time in the year.

During off-peak hours at Bonneville, the penstocks are closed and the Columbia's icy surge pours uselessly over the lip of the spillways. It is a pretty sight. Spray rises in the mountain air. The roar sounds like

massed artillery. But no power is produced. The glacial runoff is pouring untapped to the sea. Yet there stands the huge dam, built with money contributed by taxpayers in Oregon and California and New Hampshire. Why should the dam be comparatively idle in the long hours of the night watch, when it could be manufacturing energy to irrigate land in the far-off Central Valley?

Intertie meets all the demands of logic, but Intertie has had a stormy history.

The Defense Power Administration has urged Intertie because it would increase agricultural and industrial production in California and at the same time save oil. But \$2,000,000 in funds to start the 119-mile set of transmission poles was cut off by a House budget committee. A bill by Congressman CLAIR ENGLE, of California, specifically authorizing Intertie, has languished without action.

Democrats as well as Republicans in the Northwest have been lambasting Intertie. In spite of the fact that it is the region with as much potential hydroelectricity as all the rest of the Nation, the Northwest suffers from a power shortage. Two factors account for this. (1) Aluminum plants alone absorb 50 percent of the Bonneville-Grand Coulee production; and (2) dams have not been built fast enough to keep pace with the region's burgeoning economy.

Intertie would not aggravate the shortage of power, but it frequently is difficult to convince people of this. The difficulty is heightened when politicians discover they can make hay by claiming California wants to steal our greatest God-given resource, the Columbia River.

A curious inferiority complex exists in the Northwest where California is concerned. Let some national magazine mistakenly place Mount Hood or Crater Lake in California, and the protests will drown out the thunder of Bonneville's spillway. In vain do a few lost voices try to point out the importance of California to the prosperity of the Northwest. California, in fact, is far and away the Northwest's best customer.

NORTHWEST WOULD BENEFIT ALSO

Not long ago the Interstate Commerce Commission took a careful sampling of railroad waybills originating in the Northwest. The facts disclosed that this is the percentage of important Northwest products shipped in freight cars to California:

	Percent
Railroad ties.....	61
Cattle and calves.....	56
Sheep and goats.....	50
Potatoes.....	46
Onions.....	31
Fresh apples.....	33
Furniture.....	47
Newsprint.....	66
Wrapping paper.....	59
Flour.....	40

These extremely significant figures demonstrate that the Northwest will benefit substantially from anything which increases the prosperity and efficiency of California.

Not so long ago nearly all the Northwest's raw materials had to be shipped eastward, bucking the discriminatory freight-rate differential. Once resources were processed, they took a far higher rate. This made the Northwest a colonial empire, a kind of India to the factories of New England.

But gradually California began to fill up with people. This meant that the Northwest had a large potential market, not 2,000 miles and more away but a mere 700 miles away, on the Southern Pacific's Shasta route. A little-known interior freight line to California, operated jointly by the Great

Northern and the Western Pacific, suddenly boomed with cargo. Rail had to be strengthened and roundhouse forces increased. The Shasta route couldn't handle all the freight traveling between the two vast regions.

So why not intertie the Northwest and California with copper wires carrying kilowatts? Wooden poles could be used and the cost of the connection would be only \$6,000,000. This might be amortized during one season of power conservation. Nor would the power benefits flow only in one direction. From October until April, California's power projects probably could transport energy northward to the Bonneville system, thus reciprocating in part for off-peak summer energy sent to Shasta Dam.

But will the project materialize? Its future remains uncertain so long as California-baiting continues politically profitable in the Northwest. Henry Carstensen, master of the Washington State Grange and a proponent of public power, is as vehement against the idea as is any conservative or Tory. He claims the project would milk the Northwest of its power resources. This is embarrassing to the Interior Department, which has a loose working alliance with public ownership advocates. William E. Warne, Assistant Interior Secretary, has endorsed Intertie. He contends it would provide usable hydroelectric energy which at present is not even generated.

The recent 1951 session of the Oregon Legislature produced a torrent of invective against California. Bills were hastily whipped to passage denying any Oregon water to northern California, even though many lawyers warned that some provisions were probably unconstitutional. One would not have thought that boys from California were dying at the front in Korea alongside boys from Oregon. Had a spectator from Mars sat in the legislative gallery, he might have been justified in supposing that California was an enemy land rather than a sovereign State of the United States of America.

Some Northwest politicians realize the logic back of Intertie. But they confess that they fear to get out in front for Intertie so long as their adversaries can collect votes by shouting that it is all a scheme to sell out the Northwest to wicked California. In domestic matters as well as foreign affairs, political demagoguery is fatal to the national interest.

[From the Oregonian of September 28, 1951]

CALIFORNIA POWER TIE NEEDED

Henry J. Kaiser, operator of aluminum plants at Spokane, is one of the few who have joined this newspaper in approving the Interior Department's proposal to interconnect the Columbia River and California Central Valley power systems. If the Intertie were in effect now, the Northwest would be getting approximately 100,000 kilowatts of energy from California—in exchange for excess power delivered to California in periods of surplus.

The vigorous opposition to the California Intertie, especially in the State of Washington, appears to be more of a regional political nature than the result of calm appraisal. The cry has been that the Northwest does not have enough power for its own purposes, hence should not permit any exports (though excess power has been delivered to British Columbia for years). Apprehensions that an interconnection would be another step toward a Columbia Valley Authority also have been expressed, on what reasoning we cannot determine.

Actually, the agreement proposed for the interconnection would have prevented the delivery of any power to California except

that capacity not needed in good water periods. More power would be delivered to California than California would return to the Northwest, but the difference would be made up in additional revenues to the Federal power system of the Columbia basin.

The Northwest could pick up an additional 100,000 kilowatts of energy in low-water periods such as this by the construction of a transmission line from the Oregon border to Shasta Dam, and without any arguments over fish. The present shortage is reason enough to press this program in Congress.

Creeping Inflation

EXTENSION OF REMARKS OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. REED of New York. Mr. Speaker, under leave to extend, heretofore granted, I am inserting in the RECORD an article by Paul O. Peters, which is most enlightening:

FEDERAL CONTROLS OFFSET BY FEDERAL SPENDING MERELY SLOW INFLATION

The creeping inflation which started in December 1949, accelerated in 1950 has only been slowed up by the controls established under the authority of the Defense Production Act of 1951.

The President's Council of Economic Advisors reports the gross national product for the first 9 months of 1951 at the annual rate of \$324,000,000,000. In the calendar year 1949 it was reported at \$257,300,000,000 and in 1950 at \$282,600,000,000. Measured in terms of inflated dollars (dollars with less purchasing power), there is nothing encouraging in the bare figures because they do not reflect a material increase in the production of goods and commodities, but on the contrary, reflect a situation, which, unless brought under control soon may get out of hand and confidence in our monetary and financial policies be seriously impaired.

The new taxes which the Congress has seen fit to approve were thought to be the most useful tool with which to syphon off excess purchasing power and thus control the spending. This idea failed mainly because the Federal Reserve banks and the Treasury allowed the money in circulation to be increased to a new high of \$28,300,000,000 as of October 3, 1951. With money plentiful and bidding for goods against the Government, the inflation is bound to last for many months and that situation will not be corrected by new taxes or warnings that the Government will take more and more of this or that material for the defense program.

The Bureau of Labor Statistics reports the comparative index for 28 commodities at wholesale on the basis of August 1939 equals 100 as follows:

	Dec 30, 1949	Oct. 20, 1950	Oct. 5, 1951
General index.....	247.7	330.0	334.1
Imports.....	286.2	356.1	346.0
Domestic.....	242.4	314.2	326.6
Domestic agricul- ture.....	207.0	248.2	258.8
Foodstuffs.....	305.3	352.9	372.3
Raw industrials.....	222.9	317.6	319.6

Net receipts of the Federal Treasury in the first 9 months of 1951 are up approximately

46.4 percent above the comparative period in 1950

The totals are:

Net budget receipts 9 months 1951.....	\$42,052,725,404
Net budget receipts 9 months 1950.....	28,715,073,866

Gain over 1950..... 13,337,651,538

In the first 9 months of 1951 the budgetary spending has been \$1,494,149,904 less than the receipts. However, on October 8, there was \$66,768,259,183 to the credit of disbursing officers to be paid out.

PAUL O. PETERS.

The Web of Bureaucratic Functions and Procedures

EXTENSION OF REMARKS OF

HON. H. ALEXANDER SMITH

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Monday, October 15, 1951

Mr. SMITH of New Jersey. Mr. President, on behalf of my colleague [Mr. HENDRICKSON] who cannot be here at this time, I ask unanimous consent that there be inserted in the appendix of the RECORD two thought-provoking communications. One, from the regional director of the Wage and Hour Public Contracts Division of the United States Department of Labor; the other, a reply to the first over the signature of Herman Lazarus, Jr., publisher of the Bayonne Times of Bayonne, N. J.

These letters speak for themselves, but I should like to say they furnish a good illustration of the manner in which American business and industry is being enmeshed in a web of bureaucratic functions and procedures which may soon completely stifle and destroy the free-enterprise system which has been one of our richest heritages.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

UNITED STATES DEPARTMENT OF LABOR,
WAGE AND HOUR
AND PUBLIC CONTRACTS DIVISIONS,
Newark, N. J., September 19, 1951.

Mr. DAVID J. WINKWORTH,
Labor Relations Adviser, Times Print-
ing & Publishing Co., Bayonne, N. J.

GENTLEMEN: This will acknowledge your petition for approval of wage increases dated September 13, 1951. Before we transmit your request to the Wage Stabilization Board, it is requested that you amend your petition in accordance with the following:

It is noted that you have submitted original and three copies. Current procedure requires that petitions be submitted in original and four copies. It is suggested that you submit another copy as soon as possible.

Your petition will be held in this office 15 days pending the receipt of the information requested above. Unless you ask for an extension of time to submit the required information, the petition will be forwarded to the Wage Stabilization Board at the expiration of the 15-day period. Upon your request, all copies of the petition will be returned to you for the purpose of amending the original request.

The Board may request additional information before acting upon your petition, and in such case, will contact you directly.

Very truly yours,

FRANK J. MUENCH,
Regional Director.

By HUGO C. SICA,
Wage Stabilization Supervisor.

SEPTEMBER 24, 1951.

Mr. HUGO C. SICA,
Wage Stabilization Supervisor,
Wage and Hour and Public Con-
tracts Divisions,
Newark, N. J.

GENTLEMEN: Enclosed is additional copy of form No. 94-R-239 with attached letter as requested in your letter of September 19. Your third paragraph refers to this as a request for information, and I would like to emphasize that it is only a request for an additional copy. Your letter also states that you acknowledge our petition dated September 13, when actually our original petition was filed with your office on July 10 in the form of a letter, as we were instructed to do by your office at that time.

The copy enclosed with this letter is the thirteenth copy we have sent to your office. If this were not so tragically serious, it would be ridiculously funny. This application is made by a small business. It affects two employees out of a total of 72 persons employed here. But 60,000,000 persons are employed in the United States. When the fantastic paper work required for this petty, all but trivial case is multiplied by the paper work for the 60,000,000 in the Nation, what do we have? Tragedy or comedy?

And some cases in the United States may be complicated, may require special study and special attention. The case here is simple. It is readily understood by anyone. Since wage stabilization became effective, certain customers of one of our departments asked that it get delivery in the early morning instead of the late afternoon. This made it necessary for us to transfer men who had been working days to a schedule calling for night work. Since this was the first time that department had been on night work, we had no established practice which we could follow in favor of employees who work the night shifts. It is and always has been the desire of this company's management to abide by this practice, but the wage-stabilization rules made it necessary for us to apply for special permission.

Such application is not easy. The wage-stabilization program is so complicated that small employers are all but forced to engage expert counsel to interpret the rules. Meanwhile, it is sure that most employees will never understand the rules; most of them will never even want to. They believe that when they are entitled to more pay it is up to their employer to provide it. But the employer is caught in the red tape of wage stabilization. This situation brings about distrust of the employer by his employees, and the distrust grows deeper as the employer struggles to find his way through this costly, inefficient, thoroughly unnecessary tangle of governmental controls.

Big labor and big business get their rulings, they even get rulings that break through the rules others must obey. Their cases are fought out in the open, with much publicity; but rulings come more slowly, if at all, to small businesses. In our cases, the bureaucrats can indulge their love for multiplied copies, for long letters phrased in the dialect of Government functionaries, for endless delays that defer rulings and preserve the jobs of the time-wasters in Government. Our request inflationary? How does it compare in that respect with the payment of continuing salaries to hordes of

Government workers hired to do nothing but process these endless forms that busy men must supply in order to be able to hope to run the rest of their businesses normally?

One of the primary rules for good relations in industry and business is frankness and honesty between employers and employees. Honesty and frankness become progressively more difficult when the employer has to deal with clumsiness of this order in the wage-stabilization program. Employees, their expectations put off again and again, begin to think they're getting the run-around. Employers, caught in the web of governmental stupidity, find themselves helpless in spite of their specially hired expert advisers.

We first applied to your office for permission to grant these two increases on July 10. This is September 24. I would appreciate a letter from you offering me your best guess as to when we can expect a final ruling in this matter. I am thoroughly sick of putting these men off again and again while your office tries to make up its mind how many copies it needs, how many letters it needs, how much information it needs, with long delays between each tiny forward move you allow.

I propose to give this letter what publicity I can.

Very truly yours,

HERMAN LAZARUS, Jr.

P S—Please don't ask for 13 copies of this letter. It's too long.

The Social-Security Fund

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, October 15, 1951

Mr. LEHMAN. Mr. President, one of the most frequent charges against social security is that the social-security fund is insecure because its assets have been converted into Government bonds. The charge has often been made in the press and, indeed, on the floor of the Senate, that the investment of the social-security fund in Government bonds is somehow dishonest and unfair to those who have made payments into the social-security fund. On October 6, the St. Louis Post-Dispatch carried a very instructive editorial, completely dispelling, in my opinion, these misleading inferences and charges. I ask unanimous consent that the editorial be printed in the Appendix of the Record.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THAT SOCIAL-SECURITY KITTY

A Post-Dispatch reader wants to know whether the Government still uses its social-security receipts to meet current operating expenses, and deposits its I O U's in the kitty for ultimate payment of social-security retirement benefits.

This is one of those loaded questions which implies that beneficiaries of the social-security system may be swindled, when it comes time to collect their benefits, by finding only I O U's in the till.

On the same principle, one would have to assume that every holder of a Government bond may be swindled when the time comes

to cash it in. The social-security fund, as a holder of Government bonds, is no worse off and no better off than all the banks, insurance companies and individuals who also hold Government bonds.

Currently the social-security fund collects in contributions more than it pays out in benefits. What should be done with the surplus? If it were held in cash, like bank notes squirreled away in the mattress, it would earn no interest for the fund, and in the end the beneficiaries would receive smaller retirement payments than if the surplus were invested. Moreover, the stored-up bank notes would be no sounder, basically, than the Government bonds. Both are promises to pay. The soundness of both depends ultimately on the solvency of the Government and the productive power of the people.

Instead of holding the surplus in cash, the social-security fund invests it in Government bonds. And why not? So long as a public debt exists, what is the objection to having part of it held by the social-security fund for the ultimate benefit of retired people? Surely this is no less sound than the investment of private retirement funds in various forms of public or private debt.

Free Medical Care

EXTENSION OF REMARKS

OF

HON. H. ALEXANDER SMITH

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Monday, October 15, 1951

Mr. SMITH of New Jersey. Mr. President, I found it most refreshing to read in Sunday's New York Times a news item about a New Jersey country doctor who, through his own initiative and sense of responsibility, has set up a free clinic for anyone unable to pay his regular fees. During the past 9 months he has treated 400 to 500 patients without charge, by means of a free clinic held every Monday. I think this is a fine example of the type of thing that our doctors can do themselves to make medical care available, especially in rural areas, to the needy and the indigent. I ask unanimous consent to have inserted in the Appendix of the RECORD the article from the New York Times to which I have referred.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DOCTOR POINTS WAY ON FREE CARE ISSUE—HAS CLINIC FOR NEEDY PATIENTS IN REGULAR OFFICE HOURS AND FINDS HARDLY ONE FRAUD

CLAYTON, N. J., October 6—County, State, and national medical associations may still be bickering about socialized medicine but Dr. Benjamin Broselow, 40-year-old physician in this farming community of 3,000, has worked out his own solution.

Last January Dr. Broselow put up a sign in his office that said he would hold a free clinic every Monday for anyone unable to pay his fees. In the 9 months since then, Dr. Broselow disclosed today, he has examined and treated 400 to 500 patients without charge.

And, he said, he has come to the conclusion that the average American is proud and thoroughly honest.

"In these 9 months I have had only two persons come into my office whom I would class as chiselers," said Dr. Broselow.

"The rest have been people who honestly could not afford medical care and in a small town like this you know whether they are indigent or not.

"For the most part the men and women who have taken advantage of the clinic have been either on old age or social-security pensions who could not afford to seek medical aid at a price and were too poor but too proud to seek help elsewhere.

"I've been able to detect many cases of incipient cancer, tuberculosis, and hypertension and arrest or relieve the condition."

Dr. Broselow, a graduate of the University of Pennsylvania and Hahnemann Medical College, said he opened the free clinic with doubts as to how his experiment would be received by the Medical Society of New Jersey and whether he was opening his door to a flood of neurotics.

On both scores his anxiety was groundless, he said. His medical colleagues of the county have congratulated him, and as for the "neurotics" he had expected:

"I have more trouble with paying patients than I do with the fifteen or so a week who come into the free clinic. When they are told to come back in a month they wait 30 days, they don't rush back the next day or the next week to pour out a new set of symptoms."

Relations With Scandinavia

EXTENSION OF REMARKS

OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, October 15, 1951

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a letter concerning relations with Scandinavia, written by Maj. Benjamin H. Namm to the editor of the New York Times, and published in the Times on October 13. I would point out that this letter is most interesting and enlightening.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

RELATIONS WITH SCANDINAVIA—GOOD-WILL VISIT OF MERCHANTS BELIEVED TO PREBAGE CLOSER COOPERATION

TO THE EDITOR OF THE NEW YORK TIMES

Your issue of August 31 carried the announcement of a good-will visit that approximately 50 Scandinavian retail merchants will make to this country in January 1953.

Since I just returned from a 6 weeks' stay in Sweden, Norway, Denmark, and Finland, some of your readers may be interested in receiving a few first-hand impressions regarding conditions in these countries.

Of the four countries that I visited, Finland proved to be the most surprising. I had been led to believe that Finland was virtually behind the iron curtain. Nothing could be further from the truth. I saw more Americans in Helsinki than I saw Russians. I found a free press, which was willing to print anything I cared to say, and a free radio system over which I made a nation-wide uncensored broadcast.

Of the four countries, Sweden is in the best shape, from an economic standpoint. The index of its volume of industrial production (1938=100) has increased from 140 in 1947 to 162 in 1950. There has also been an annual increase in productivity of about 5 percent in the postwar period. Sweden has also made great progress toward closing the gap between imports from and exports to the United States. In the month of September 1947, the gap was 160,000,000 kronor, while for the whole year of 1950 it amounted to 182,000,000 kronor. Sweden has received no grants from our ECA. All the assistance she now receives is in the form of an interest-bearing loan of approximately \$120,000,000.

AID RECEIVED

As to the other Scandinavian countries, Denmark has received approximately \$250,000,000 in grants and about \$30,000,000 in loans. Norway has received about \$225,000,000 in grants and about \$35,000,000 in loans. Finland has received no ECA aid whatsoever. All four countries are tackling their economic problems realistically and with full confidence in the future. Communism is at a very low ebb. Its existence is primarily underground.

During recent years, when improved methods of transportation and communication have made the entire world seem small, the Scandinavian countries have acquired a new and vital importance for the United States. Norway, Denmark, and Sweden are now the keys to the control of the North Atlantic Ocean. They are also Europe's gateway to the north polar cap, and it is quite possible that, in these days of atomic fission, that area may serve as the scene of the future struggle for survival between the east and the west.

Norway and Denmark are members, along with the United States, of the Atlantic Defense Pact. Norway, like Finland, has a common frontier with Soviet Russia. It is generally believed that Stalin plans, as Hitler did, to use the deep fjords of Norway as submarine bases, if and when war should come.

NEED FOR UNDERSTANDING

There are, however, additional and urgent reasons why close cooperation and improved understanding between our country and the Scandinavian countries has become very necessary. First, there are many millions of American citizens who are of Scandinavian origin. They are among our best citizens. Second, there is a growing need for all the free countries of the world to find markets for their products and products for their markets.

American retailers, generally speaking, are quite happy about the economic cooperation that has been extended to the countries of Europe at the Government level, under the Marshall plan. We believe, however, that Government action was only the beginning. We further believe in economic cooperation at the business level—between trade groups, labor unions, farm groups, and individuals. In that way, perhaps, the free peoples of the world may succeed, where the diplomats and the warriors have failed, in ultimately achieving world peace and economic stability.

The good-will group will be the guests of honor at the Forty-second Annual Convention of the National Retail Dry Goods Association. Following this the delegation will visit several leading American cities.

It is our hope and belief that this visit, along with those that are being scheduled from other countries, will make a substantial contribution to the development of that friendship, understanding, and improved trade relations upon which the future of the world so largely depends.

BENJAMIN H. NAMM.

BROOKLYN, September 4, 1951.

City of Words

EXTENSION OF REMARKS

OF

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. BOLLING. Mr. Speaker, I want to call the attention of the Members to a very fine column written recently by the well-known Washington correspondent, Mr. Walter Shead, of the Western Newspaper Union. The union, as I am sure we all know, is a well-respected agency in Kansas City, Mo., which furnishes much of the news for the smaller papers throughout the Middle West.

Mr. Shead has expressed clearly and cogently, I believe, the fact that many Americans have fallen victim to a campaign of smear words designed to stop progress in our Nation.

The article follows:

CITY OF WORDS

(By Walter Shead)

Washington, with all its beauty and cleanliness, its stately buildings and broad, tree-lined avenues, its smart shops, wide streets, tradition and historical significance, seat of government of the world's greatest Nation and cynosure of the eyes of the world, is not a pleasant place in which to live just now.

The man or woman who can penetrate the fog of confusion, who treads the paths with his feet firmly set on ground hallowed by former great Americans is, indeed, rare here in Washington. We live here in a whirling mist of eddying words—words which mean nothing or everything—according to the point of view. Even the word democracy, if mentioned in some circles, gets an indignant outburst and is given a leftist connotation.

"This is not a democracy, it is a republic," is the disdainful reply. Everybody has a gimmick to sell, an angle to peddle, whether it is influence or a Government building. The gush of words goes on, day after day. Congress does one thing today, tomorrow it reverses itself.

Lobbies are spending millions on words to sell an idea. According to Fortune magazine, the National Association of Manufacturers and others are spending this year something like \$100,000,000 buying high-priced advertising and high-priced words on the free enterprise campaign to sell America to Americans to sell our American way of life to our own American people. The fallacy to that campaign and to these meaningless words is that the American people know more about their way of life than anybody can tell them. They are living it.

SOCIALISM CHARGE

We recently wrote a column taking issue with a railroad president because he wanted to abolish the entire Social Security program on the grounds it was socialistic. Just because he said so does not make it socialistic. From the earliest days of this country every progressive idea has been branded by its enemies as socialistic, which, of course, did not make it socialistic.

Even some ideas sponsored by Socialists have not proven to be socialistic. Some of these ideas first sponsored by Socialist leaders such as the late Eugene V. Debs were the Federal graduated income tax, direct vote for United States Senators, Federal in-

spection of meat, building inspectors, public regulation of public utilities and safety inspectors in factories. Does anyone consider these ideas, all embodied in the laws, socialistic today?

SOCIALISM IN HISTORY

Going further back in our history, the Tories of revolutionary days called Thomas Jefferson a rank Socialist for his progressive ideas. His free, tax-supported public-school system was fought through the Congress as socialistic. Benjamin Franklin was called a Socialist as an early sponsor of the Federal Post Office and a great system of Federal post roads. Federal subsidies and free lands for railroads were called socialistic in their day; the great system of land-grant colleges was also socialistic.

The Federal Deposit Insurance Act, the Federal Housing Administration Act, the Wages and Hours Act, old-age pensions, unemployment compensation, the Federal Reserve Banking System, the Securities Exchange Commission, the entire system of social security, the Home Owners' Loan Corporation, farmers cooperatives, all these and many more have been branded as socialistic by their enemies, not because they were fostered by Socialists, but to smear these ideas in an attempt to defeat them. Just more words to add to the general confusion of words.

FREE ENTERPRISE

Here is a word to the backers of the free-enterprise campaign. The American people believe in free enterprise and the free-enterprise system, but for all the people, not just a few self-appointed custodians at the top of the heap. The American people pride themselves on their possession of good common sense. They believe when ideas are thrashed out in open debate they are able to decide for themselves whether the idea squares with common sense, not with a doctrine of socialism or with the fears the word "socialism" is supposed to arouse.

DELUGE OF WORDS

We might point out to our friend the railroad president, who says the Social Security Act is socialism, that he is in the company, of real Socialists who oppose the act and are its severest critics, for they regard the act as one which treats only symptoms of unemployment and old age, rather than causes of such human ills. This deluge of words will fall eventually of its own weight. A charge of socialism does not make it so.

Vocational Education in Agriculture

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the Record, I include the following resolution of the Iowa Vocational Agriculture Teachers Association:

Be it resolved by the Executive Committee of the Iowa Vocational Agriculture Teachers Association, assembled in regular meeting in Des Moines, Iowa, Saturday, September 8, 1951:

1. That we strongly oppose the transfer of Vocational Education in Agriculture from the Vocational Division of the United States

Office of Education to the United States Department of Agriculture as proposed in S. 1149, section 7.

2. That vocational education in agriculture is an organized systematic training program conducted by and through public schools to train present and prospective farmers for proficiency in farming.

3. That vocational education in agriculture is developing as a regular part of the program of public schools in this country in meeting the needs of present and prospective farmers, for training in farming and in maintaining high farm production and a strong democratic rural citizenry.

4. That the agricultural education program in this country should be administered by local public schools and recognized State and National public-school agencies.

5. That strong and definite effort be made to secure funds and personnel, as provided in the national vocational education acts, in the Vocational Education Division, United States Office of Education, to work with the States in the further development of the program.

6. That the vocational agriculture program in this country must be free from partisan politics and free from domination by other governmental agencies and by other groups or organizations.

7. That the Hoover Commission be commended for recommending that the administration of vocational education in agriculture remain in the United States Office of Education and not be transferred to the United States Department of Agriculture.

8. That the Citizens Committee for the Hoover Report be requested to make a further study of the vocational agriculture program and the implications of the proposed transfer.

9. That copies of these resolutions be sent to: (1) The sponsors of S. 1149, (2) the Iowa Senators and Congressmen, (3) the members of the Citizens Committee for the Hoover Report, (4) the officers of the American Vocational Association, (5) the officers of the Iowa Farm Bureau Federation, (6) the officers of the American Farm Bureau Federation, (7) the officers of the National Grange, (8) the officers of the National Vocational Agriculture Teachers Association, (9) the members of the Iowa Vocational Agriculture Teachers Association, (10) the Governor of the State of Iowa, (11) the members of the State board for vocational education, (12) the members of the House subcommittee and the Senate subcommittee on appropriations of the Labor Department and the Federal Security Agency, (13) the superintendents in schools with vocational agriculture departments in Iowa, (14) to other interested groups, organizations, and individuals, (15) the offices of the Farmers Educational and Cooperative Union.

Adopted unanimously by the executive committee of the Iowa Vocational Agriculture Teachers Association.

The Best Things in Life Are Free

EXTENSION OF REMARKS

OF

HON. HARMAR D. DENNY, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. DENNY. Mr. Speaker, under leave to extend my remarks in the Record, I include the following letter published in the Washington Post of October 11, 1951:

THE BEST THINGS IN LIFE ARE FREE

The thought hit me at 10 minutes to 5 on Monday afternoon. I picked up the phone

and called the Red Cross, "I can spare a pint and can deliver it at 5:15—will you be there?" Answer was "Yes."

I phoned my wife and said, "Honey, the boys are really low and hurting and I'm going to chip in a little blood, so I'll be maybe an hour late getting home." My wife said she'd save dinner for us. She's great.

"How short are they over there?" I asked the nurse. "They need it," she said. She told me about a dream job with a cork company she had given up in April in order to help out. Told me how good the job had been—but how glad she now was that she had made the change. The Red Cross needed her.

I gave the nurse a 2-minute speech on my favorite subject: politics. Well, maybe three. When I got wound up, oh boy.

Before I could get finished the blood was in the bottle. The nurse had to tell me because I hadn't noticed the blood was going out while we were talking. Oh, I knew the connection had been made all right. But didn't have time to watch the bottle.

So then I had grapefruit juice and doughnuts and coffee with a couple of the boys. Reminded me of a Red Cross setup in Metz I had run into in the last one.

"I hear they're getting to the bottom of the barrel," the big fellow said. Wouldn't it be rough if they ran out? We agreed. I got my hat and coat and went home. I thought how my taking a little time like that and being late for dinner might save a Joe. Probably would.

That was the fifth human being I figure I've saved by dropping off a little blood to the Red Cross. The Red Cross fixes it so I can reach out my arm 8,000 miles to Korea and touch life back into a hurt, dying buddy—whether I have a million dollars or am in my usual financial condition makes no difference. The fellow who said the best things in life are free was right. They are.

WILLIAM S. POWER.

PITTSBURGH.

The Third Tax Bill

EXTENSION OF REMARKS

OF

HON. J. HARRY MCGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 11, 1951

Mr. MCGREGOR. Mr. Speaker, Congress will soon pass another tax bill, the third since the start of the Korean war. The new bill will bring the total annual Federal tax burden up to about \$68,000,000,000, which exceeds by \$22,000,000,000 the highest Federal tax levy of World War II.

All three measures enacted during the Korean war will produce approximately \$18,000,000,000 in additional taxes. This increase alone is more than three times the total Federal taxes collected in 1940.

What is needed at once is an earnest effort by the administration and Congress, working together, to cut to a minimum all Federal spending not truly essential in this period of national emergency.

Despite efforts of economy-minded Members of Congress, the new tax bill represents the price the American people are being asked to pay for the failure or refusal of their Government to tighten its own belt as it has repeatedly urged the people themselves to do in this war emergency.

The Federal civilian-employment picture is one of the best examples of bureaucratic growth. In 1939, the Government had a total of 960,939 civilian employees on its payrolls. The total civilian-employment figure as of July 1951 was 2,500,889.

CIVILIAN EMPLOYEES

If we exclude from these employment statistics all war-related agencies, we find that the Government had 666,616 civilians on its payrolls, exclusive of the armed services and the Veterans' Administration. Comparable figures for July 1951 show 1,036,963 people excluding not only those employed by the Armed Forces and the VA, but also those of defense mobilization agencies, the Atomic Energy Commission, and the ECA.

This is a 55-percent increase in comparable civilian employment in all non-war-related agencies. Civilian employment means large expenditures to meet the payroll. Large expenditures mean high taxes and high taxes mean increased living costs for all of us.

Civilian employment in the Government can be reduced by weeding out spending programs that the Nation can get along without in this period of emergency. This is no time for luxury, waste, or extravagance anywhere, not even in the armed services of the United States.

The Story of the United Nations

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. BURDICK. Mr. Speaker, Hon. JOHN T. WOOD, Member of Congress from Idaho, delivered an address before the United States Flag Committee at Hotel New Yorker, October 10, 1951. His speech should be of great interest to the people of this country as it sounds a warning to the people of just what attempt is now being made to build in this world a super-government of which the United States is to become simply one state in this great world organization. Here is the speech:

THE STORY OF THE UNITED NATIONS

(By Hon. JOHN T. WOOD)

The story of the United Nations is one of the strangest, most weird, and most tragic which has perhaps ever been unfolded upon this earth. Mothered by a universal desire for peace, almost at any price, which still thrills the soul of America, it is a strange compound of love and hate, a burning desire among the millions of Americans to banish war from the earth; while on the other hand it has well served the purpose of still more millions of an alien horde of Communists, still other millions of Socialist or near Communist nations, with a still greater admixture of savage or barbarous peoples who have not yet learned the first lessons of living decently with their fellows more or less under a reign of law and order.

Gendered by the American people in an honest and fervent desire for universal peace, proclaimed from most pulpits as more or less of a going concern, and almost a panacea for the reign of godliness and Christian liv-

ing, there can be no reasonable doubt at this time that it was a made-to-order trap for the Communists to bring into being a one-world government, a Communist world state, and a pliable instrument for Soviet aggression. It is all so incredible that the good people of America, not being used to Oriental duplicity and intrigue, simply cannot believe that men could be so utterly false to all the laws of decent living, regard for the rights of minorities, and the great moral principles upon which this Government was founded, and which its people have followed for the past 175 years.

DUPLICITY OF SOVIET RUSSIA

Lying, duplicity, treason, suicide, bloodshed, genocide on a scale never before witnessed upon this earth have been practiced in the rape of Poland, Lithuania, Latvia, Czechoslovakia, Hungary, Yugoslavia, Rumania, China, Tibet, East Germany, and many other smaller states, whose peoples were either brutally murdered when they refused to bow the knee to the invader, were sent to a fate worse than death in the slave labor camps of Russia and Siberia, or who are living in peril of their lives in the police states set up in these overridden countries.

And yet the Communist hordes of Russia and her satellites piously profess their adherence to the alleged principles of the Genocide Convention. What a strange thing it is that the people of America, blinded by their desire for universal peace, have either overlooked this discrepancy, or refused to believe it. One of the five original signers of the United Nations Charter still poses as a liberty-loving democracy. In spite of all these hideous crimes against the minorities in the states it has engulfed. No wonder I shudder every time I hear the word "democracy." It is now Stalin's word, and has an entirely different connotation than when Webster wrote his dictionary. Certainly no American should ever now use the term. I am sure I do not need to remind you that we are not now, and never were a democracy, we are a constitutional republic, and have nothing in common with that hated term, which has now become opprobrious to a most extreme degree.

THE WORLD'S MOST GULLIBLE NATION

The American Nation is undoubtedly the smartest on the face of the earth in its scientific know-how, and in its capacity for getting great things done quickly, as witness the speed with which, starting from scratch, we armed ourselves, the rest of our allies, and even Communist Russia. At the demand of the President, 60,000,000 workmen sprang to work, and with the expenditure of almost unlimited savings of American citizens, we truly became the arsenal of the world. And we are doing it again, though our savings are almost gone, and we are reaching a most dangerous stage of inflation, where our dollar is only worth about 40 cents.

But it is a tragic fact that, with all of this capacity to produce, we have been the world's most gullible Nation, blinded by our inherent love for peace, to the Communist menace which has been set up within our own borders by this spider web thing we call the United Nations, an instrument designed by the Communist hordes to compass our enslavement and destruction as a freedom-loving people. It is my purpose tonight to categorically give the facts which support this thesis.

AN INTERNATIONAL FRANKENSTEIN MONSTER

Possibly no one could have envisaged the ultimate purpose behind this Communist plot at any single given time. It is only as the dark schemes unfold that we may begin to realize the ulterior motives present from the beginning in the ignoble birth of this international Frankenstein monster. It is no wonder that President Roosevelt, the bewildered partner of the compact, said that

he did not see how it could work, but that it must work. If he could see it now, he would realize that it has worked all too well in the Russian design to enslave America for communism.

Frequently the accumulated wisdom of the ages may be compressed into a few simple and homely sayings. Among these might be mentioned: "A stream cannot rise higher than its source"; "Like begets like"; "Men do not gather grapes from thorns, nor figs from thistles"; and "You cannot make a silk purse out of a sow's ear." And with all our boasted modern wisdom, much of which is spurious, we still do well not to run counter to the truth expressed in these timely maxims.

Contrary to its stated aims, the United Nations Charter was never an instrument dedicated to the cause of universal peace as its Charter proclaims. It has always been an instrument of force from its inception. And while its founders cloaked the application of power with the universal desire for peace, even a cursory reading of the Charter will demonstrate that a solid backbone of military power occupies almost one-third of the body of the Charter, with speculations as to its effective use on occasion by the dominant Big Five of the contracting powers.

Power in itself is entirely an unmoral thing. It knows neither right nor wrong. The same force which might loose cataclysmic destruction in the explosion of an atomic or hydrogen bomb, might conceivably run farm machinery, or help in the production of crops, or increase the number and complexity of labor-saving devices. In fact, this is the purpose of the atomic plant set up in my own State of Idaho. Power may be a good thing or a bad thing, depending upon the moral nature and aims of its users.

UNIVERSAL PEACE ACHIEVED ONLY THROUGH SLOW EVOLUTION

I believe firmly in the innate nobility of the soul of man. But it has seemed to be God's will that largely such a growth of the soul from the savage to the highest characters in a Christian community has followed a process of slow evolution, and while there are abundant exceptions to this general law, certainly the larger growth of nations has seemed to follow such a general evolutionary plan. Any scheme for universal peace shall probably fail unless predicated upon this fact, and also upon the additional fact that, even in more advanced peoples, selfishness still remains the dominant factor which determines their collective actions and reactions. Freedom from the bonds of the flesh comes slowly and painfully rather than by some arbitrary convention such as the United Nations, and a study of its results so far will demonstrate even it is not far removed from the reign of tooth and claw.

Ever since there were mothers, there has been more or less of a universal desire for peace. For no mother, unless fired by profound family, religious, or patriotic urges really wants her sons to go to war, and even then does so shudderingly and shrinkingly.

There have always been efforts to preserve peace by means of union with stronger nations, leagues, balances of power, and what not. Such may have prevented some wars, but sooner or later, selfishness in persons in authority, nationalistic or religious urges, or the desire for national aggrandizement has triumphed over the desire for peace. For there are many things worse than death; and the stultifying Munichs and Tehrans of the past have frequently been the basis for future wars. It seems inevitable that large power concentrations shall sooner or later override the rights and national aims of minority nations, until the emotional strains of the less powerful nations at least become vocal and explosive enough to result in war. And even if the

minority may lose the war, there is always the chance the victor may be outsmarted at the peace table, as happened with the last war.

CECIL RHODES OBSESSION OF PAX BRITANNICA

Possibly the first of the modern urges toward universal peace originated in the fertile brain of Cecil Rhodes, who envisaged the role of Great Britain as the one power able to enforce world peace. Originally Great Britain was supposed to act alone in this capacity, but later he began to comprehend the rising power of the United States was necessary to be joined with Britain to accomplish his aim. And thus originated his idea of Rhodes scholarships, through which American young men, possessing the necessary elements of leadership, which was prime in his scheme, should be taken back to English universities and there indoctrinated with his compelling idea of a Pax Britannica, with the aid and assistance of the United States. Hundreds of these young men have returned to America to foster the idea that the great English-speaking peoples should eventually rule the world.

And in spite of the fact that the sun of the British Empire seemingly set at Dunkerque, this idea is still far from dead. Rhodes scholars in the United States are plentifully present in every department of public life, and are still attempting to warp the policy of this country toward a strong union of the English-speaking peoples, both in and out of the United Nations. Much of the near treasonable policies of our State Department are perhaps as much pro-British as pro-Communist. Many of them are present in Congress, and one may almost always determine beforehand what their votes shall be, particularly in foreign policy.

One must never forget that the lifeblood of the British Isles is foreign trade. They cannot exist without it. The greatest opportunity for foreign trade at present exists between them and Communist China, and Socialist Britain finds it politically easy to forget her many obligations to us, even to the extent of shipping potential war materials to our common enemy, even if United Nations rules did not prohibit such a restriction, and those rules do just that.

UNITED NATIONS CHARTER DESIGNED AS INSTRUMENT OF FORCE

The Charter of the United Nations was written by Alker Hiss, the treasonable felon, assisted by Harry Dexter White, later cited before a Congressional Un-American Activities Committee as a possible Communist, and who died shortly afterward from causes which were never cleared up. Molotov of Russia, and Edward Stettinius, who was then Secretary of State. It was patterned to some extent upon the Constitution of the Soviet Republics, frequently paraphrasing the wording of that document.

A perusal of articles 43 to 51, inclusive, will reveal the fact that it was designed as an instrument of force, and the flinching of Russia in obtaining the preponderance of votes over ours, proves that she intended to use it as an instrument of aggression against us. This fact was dimly realized by the other signers of the pact, to the extent that a General Assembly had to be formed, in addition to the original Executive Council of the big five, wherein Russia and her satellites could be outvoted, and where her veto would not be permitted. And in point of fact, most of the deliberations of the United Nations at present are carried on in this General Assembly.

UNITED NATIONS SELF-GRANTED POWERS FORMING ONE-WORLD GOVERNMENT

All of this was bad enough, and hopeless enough, as far as the best interests of the United States were concerned, but worse was still to come. Entirely through self-constituted authority, without a single particle of

any grant of power from the American Constitution, there was formed within the body of the United Nations, self-granted powers to form a one-world government, with hundreds of subsidiary organizations, such as UNRRA, UNESCO, the International Labor Organization, the International Court, the International Economic Organization, the Atlantic Pact, the Atlantic Community, International Education Organization, International Child Welfare, the Human Rights Convention, the Genocide pact, and many others of a similar ilk. While the Charter of the United Nations was brought into being by a treaty signed by the President and the United States Senate, certainly it was never intended that these later powers should be spawned from the womb of the United Nations Charter, each of which by the terms of the treaty becomes the highest law in the land for this country, and superseding the laws of the individual States.

The United Nations, I repeat, was bad enough, and illusory enough but the later inclusion of the idea of a one-world government, dominant over the Constitution, and the laws of every State in the Union, and which is even now actively functioning, to our great detriment, is intolerable.

AMERICA IS ON THE MARCH TO REGAIN NATIONAL HERITAGE

We shall never surrender the freedoms set up for us by the founding fathers to this alien monstrosity, this malignant being we are now sorry we ever gave the right to live and function in this free America. It is our modern Frankenstein which must be destroyed ere it destroys us. Free America is on the march to regain our glorious national heritage, and we shall be satisfied with nothing less than the destruction of this mongrel and alien entity, with its total expulsion from our shores, along with the Communist traitors who have gained refuge in its welcoming arms.

Reexamination of the basic recognition of the United Nations by the United States Senate is being conducted at this time by a Subcommittee of the House Foreign Affairs Committee, based upon testimony brought to the floor of the House in a debate, through a speech by Congressman Usher L. BURDICK, of North Dakota, which appears in the CONGRESSIONAL RECORD of September 27, 1951, page 12293, and which was spearheaded by a report of the American Bar Association as to the possible loss of our national sovereignty through the later inclusion of the idea of a one-world government in the United Nations, which is superseding our body of Federal and State laws as in the California Fujii case. Congress is becoming exercised about the increasing perils for continuing American institutions in the handling of our internal affairs, free from the encroachments of this cancer implanted within the body of the United Nations. My own House bill 5080, introduced into the House August 8, 1951, seeks to strike at the root of the matter by a complete severance of our national fortunes from the United Nations, with all its monstrous accretions.

Since the filing of my bill, which seemed to focus the attention of the House, as well as patriotic people in every State in the Union, there have been four bills introduced into the House, either seeking to withdraw from the United Nations, or to pull its teeth by limiting its power to destroy the United States through the host of conventions introduced by one-world devotees in that body, which are plainly designed to merge the people of the United States, with their glorious national institutions, into a fantastic and unworkable world government which, in the opinion of most thinking and truly patriotic Americans, promises nothing for us but enslavement to European and Asiatic hordes, hungry for our wealth, but without the slightest comprehension of the freedoms we

have toiled so long and with such difficulty to obtain.

FALLACIOUS REASONING OF ONE WORLDERS

Proponents of this one-world government are apt to point a similarity between the position of the Thirteen Original Colonies under the articles of confederation and the condition of the United Nations at present. But what a foolish simile this is, and how designed to point up the differences. In the Thirteen Colonies, we had groups of brave and adventurous peoples, who certainly had this great compelling thought in common: a burning desire for freedom from a domestic oppressor, and the will to fight and die for the attainment of those freedoms. And history records how well they succeeded in the quest of their holy grail of freedom. The less adventurous, and those who were willing to submit to oppression, stayed at home.

As over against this intrepid band of modern Jasons, united in the search for the golden fleece of freedom and self-expression, let us compare for a moment, the motley lot, other than the United States, providing the present complexion of the alien countries within the United Nations:

Great Britain: A Socialist state, shorn of most of her former glory.

Russia and her satellites: Completely Communist and pledged to destroy everything we hold dear.

France: Thirty-percent Communist, the balance strongly Socialist

Australia, New Zealand, and Canada: Representative democracies and worthy allies.

Argentina: A Fascist, totalitarian state.

Brazil: A representative democracy, with socialistic or Communist leanings.

China: Nonexistent through our base betrayal.

Czechoslovakia: Betrayed by the United States; and now Communist.

Denmark: A constitutional kingdom inclined toward socialism.

Ethiopia: A barbarian monarchy.

Greece: A kingdom, leanings toward communism.

India: Problematic, leanings toward communism.

Indonesia: Strong Communist leanings.

Iran: Mulcted by the British. Tendency toward socialism or communism.

Mexico: A republic; some leanings toward communism.

Netherlands: A monarchy.

Norway: A constitutional kingdom.

Sweden: A constitutional kingdom.

Turkey: A republic with totalitarian leanings.

Yugoslavia: Communistic.

Besides those mentioned, there are other smaller states, most of which have little conception of what membership in the United Nations is all about, merely looking to it for protection against their stronger neighbors; or with strong desires to participate in American give-away programs, which have been plentiful enough to almost bankrupt us, with little avail in increasing the national standard of ethics in the countries receiving the gratuities. Not only so, but they have become quite insolent in varying degrees in their demands for bigger and more expensive aid.

WE MUST NEVER SURRENDER OUR NATIONAL SOVEREIGNTY

I submit that it might be perfectly proper to join with some of these nations who really desired it, and who have even a slight conception of freedom and free institutions, in some form of an international league, in which international problems could be discussed and helpful solutions sought; but to merge our national fortunes in a firm union with such, giving them the right to tax us out of 300 years of our earnings, and to surrender land and property rights to them, our freedom of speech and press, our rights

to be secure in person and property against the encroachments of any state, whether domestic or foreign, I repeat this: We cannot, should not, and will not tolerate. I am sure no patriotic and thinking American would tamely submit to such atrocious doctrine. I feel sure every American citizen will cry out with Patrick Henry: "I care not what others may think; but as for me, give me liberty or give me death."

USURPATIONS OF OUR CONSTITUTIONAL RIGHTS

Now, lest you should think some of my conclusions are far-fetched, let me quote some of the comparatively recent usurpations of our constitutional rights promulgated by the United Nations; and the result of these orders to a free people, whose tax-gathering principles are well defined, and the subject of many statutory safeguards, which alien orders shall be inevitably reflected in the taxes you will pay next year.

1. While standing by the ticker tape in the cloak room of the House about midsummer of this year, I saw spelled out the news item that the International ECA Committee of the United Nations had met that afternoon, and had decreed an annual tax levy of \$19,000,000,000 upon the peoples of the United States, Canada, New Zealand, Australia, and of all peoples, Western Europe, who are at present the recipients of our national ECA.

Within a few days, the President sent to the House Appropriations Committee a request for \$7,500,000,000 for our international ECA fund, as our share of the \$19,000,000,000, allotted to us for this purpose, by order of the international ECA committee of the United Nations. And this was done, in the face of an amendment placed in the measure appropriating funds for the continued existence of the United Nations, and passed by the House, placing a ceiling upon our contributions to this body to not over one-third of the amount paid by the other member nations. And it is well to further remember that many of the member nations have not paid a single cent into the United Nations since they were admitted, while our payments have run between 90 percent and 51 percent of the total. And our percentage has been paid. Not only so, but we loaned, or perhaps one should say, gave them \$65,000,000 for the building of their new home. So we now occupy the unique position of not only being destroyed by the United Nations, but paying them for the privilege of destroying us. In other words, we are having a royal set of horns placed upon our devoted heads, by this group.

ACCEPTS PRESIDENT'S CHALLENGE

The House cut the seven and one-half billion to something over five and one-half billions, on which I voted "nay." A few days later, the President wrote a stern letter to Congress, suggesting that if any of its Members felt that way about the foreign-aid bill, they should immediately submit a bill to get out of the United Nations, which I did, 8 hours afterwards, as soon as the bill could be drawn.

In doing so, I remembered that the founders of this country had fought the Revolutionary War on the principle that they could not, and would not submit to taxation without representation; and it seemed to me this was just that same old principle wherein we had merely exchanged masters.

UNITED NATIONS CAN SEND YOUR SON TO WAR

2. The constitutional right of Congress to declare war has been completely transferred to the Military Committee of the United Nations, both in foreign countries, as well as those comprised in the Atlantic Pact. Articles 43 to 51, inclusive, leave little doubt of the fact that the United Nations now has the power to order us into war at any time, without the consent of Congress. What we have done in the acceptance of

the United Nations is to take away from Congress the power to say when, where, and with whom, we may engage in war. In the name of the United Nations, we may bring freedom to a foreign nation; but we shall have lost our own. Moreover, our soldiers are to be denied the privilege of serving under their own glorious flag, the beautiful Stars and Stripes. They must serve under the hated spider web banner when going into battle, and its alien folds are to enshroud their coffin should they have the misfortune to be killed while serving under it. They must wear its emblem on their sleeves, and serve under its generals.

Present examples of these facts are the police action in Korea, which has already cost us 100,000 casualties; and the continuing sending of our troops to Europe, to countries with which we are at peace; and which it is now decreed to continue until we have a total of 4,000,000 men serving upon foreign soil, in a war which has never been declared, and with which Congress has had nothing to do except appropriate money and charge the account to the taxpayers of this country.

And this sending of our troops abroad is plainly illegal, for the terms of the Atlantic Pact provide that only in case of actual war may troops be called upon to serve under that treaty; and there has been no aggression demanding it. In an article published in the *Evening Star* of Washington, D. C., recently, bearing the heading "United Nations group urges call on force such as Eisenhower commands" it went on to say: "A special United Nations group recommended today that in case of future aggression, the United Nations should call on regional defense, such as the army of General Dwight Eisenhower, to act in the name of the United Nations."

This was one of the main points in a report by the military subcommittee of the General Assembly's Collective Measures Committee which is preparing a master plan to meet future emergencies. The subcommittee also proposed that the military-command structure be revised generally to give both the United Nations and the participating countries a bigger voice in the combat operations.

DICTATES OF UNITED NATIONS SUPERSEDE STATE AND FEDERAL LAWS

3 The superseding of the dictates of the United Nations International Court over our Federal and State laws, as in the Fujii case in California.

4 The International Labor Organization dictates much of our internal labor legislation. For instance, the Wagner Labor Relations Act was written by this body, and submitted to Congress without any alterations. The composition of this body at that time comprised about the same number of Communists or Leftists as does the general complexion of the United Nations.

5 The International Child Labor and Child Welfare Committee, the International Health Organization, and socialized medicine are sponsored, and frequently dictated, by these committees of the United Nations, and are usually introduced into Congress later by leftists.

SUBVERSION IN OUR SCHOOLS AND CHURCHES

6 The educational policies of the National Education Association follows the general line of those laid down by the International Education Committee of the United Nations. For instance, when Congressman A. L. MILLER of Nebraska recently made a survey of the textbooks used in the District of Columbia schools, he found quite a proportion had been printed in Russia, containing clear Communist teachings, and even including pictures of Marshal Stalin. A number of the teachers belong to subversive organizations, and a certain number of them were discharged. Undoubtedly large numbers of

these same subversives are employed in the structure of our high schools, colleges, and universities throughout the United States. The recent Pasadena case will point the fact that the situation is becoming serious.

7 Religion even is not exempted, though communism is known to be atheistical and opposed to all religion except the worship of totalitarian force. One of the high officers of a national religious organization has publicly stated that "The living of the Christian religion is not possible except in a Communist state." I may say parenthetically, that I consider this the greatest example of fuzzy thinking I have ever observed. Many of the high officials of this church organization belonged, or had belonged, to from 3 to 41 subversive organizations.

8 The Human Rights Convention of the United Nations takes away the vested right of every American citizen to acquire property by lawful means and to remain secure in its ownership under American law. The recent Fujii case in California has proved that this right is now no longer secure, that the rights of citizens, States, and even the rights of the Federal Government may be contravened at the will of the International Court of the United Nations.

GENOCIDE CONVENTION CONTRAVENES AMERICAN LAWS

9 The Genocide Convention dictates that not only must nations abstain from the wholesale destruction of other peoples, as occurred in some of the countries of Europe during the last war, and since the last war by Russia in the Baltic Provinces and the eastern states of Europe, but that also one cannot inflict mental harm to any other person, or any other national of other countries, or even hurt his feelings, without being liable to be called to account before the International Court of the United Nations, wherein he would be denied the rights which have always been accorded to him under American law, such as the right of trial by a jury of his peers, and the right to be tried in the court nearest to him. Under this convention, if he happened to call Stalin a murderer, even though Stalin might secretly feel complimented, he might even be taken to Russia and tried under Russian law. Thus the Genocide Convention contravenes the entire framework of American jurisprudence.

10 They have their own postal system, a most decided advantage to the free exchange of information between the Communists within our borders, and those in other countries bent upon our destruction.

11 They have diplomatic immunity from arrest, and full diplomatic release from import or export duties. No American legal process can attack them.

12 Salaries of all employees are exempt from taxation by the United States. This immunity from taxation is not enjoyed by any other person in the United States, not excepting the President.

13 The seizure of nine cities in southern California by Military Reserve units, trained by the United States Army, and acting under the authority of the United Nations, with the immediate institution of martial law, accompanied with the declaration that all civil functions were hereby taken over by the military forces of the United Nations until further notice.

The statement was made that this action was taken for practice; and that it was planned to seize cities on the Atlantic States in the near future.

Mayors were displaced, newspapers taken over, civil and criminal courts closed, all schools closed, and all the populations of these cities were warned to look to the commanding officer of the occupying force for further orders. Apparently the enemy is moving faster than we thought to our attempted complete subjugation.

"Upon what meat doth this, our Caesar feed?"

MY FIRST SIGHT OF OLD GLORY

I well remember the first time I ever saw Old Glory. Upon leaving England with my parents, when I was 10 years of age, we had sailed down the river Mersey from Liverpool, and were in the Irish Sea. There sailed into view a big ship with the Stars and Stripes at its masthead. Its colors were gloriously beautiful against the glow of the setting sun. I asked my parents "What flag is that?" They said: "That is the flag of America, where we are going." I said, "How beautiful it is." Little did I think I should be here much later in life seeking to defend Old Glory against its own citizens.

The imperial eagles of Rome, the lily banner of France, the composite Saint George's cross of Britain, the rattlesnake banner of the Thirteen Colonies, all have a connotation which has fired the imagination, and provoked the patriotic fervor of all who have looked upon these symbols as the outward manifestation of an inward and spiritual faith.

Fellow countrymen, this should not be my joy at all. I am an Englishman, but many of you present tonight were born in this country. You, like Paul of Tarsus, in Biblical days, could stand before Lysias, the Roman captain, who had just told Paul that he had purchased Roman citizenship with a great price, and could answer with Paul: "But I am American born."

TO BE AN AMERICAN IS GREATER THAN TO BE A KING

You were born to the purple; born into a glorious heritage where every man is a king by divine right. All the enginery of our free institutions were yours for the asking. You were privileged to enjoy by birth the priceless boon of hard won freedoms, secured for you through the blood and strivings of your liberty loving forefathers. The freedoms you enjoy so thoughtlessly were won for you on hundreds of battlefields.

The sighs of dying soldiers, the wounded on the pain-racked beds of countless hospitals, the fortitude and wisdom of a Washington and Lincoln, the forensic abilities of a John Marshall and a Daniel Webster, and the mighty works of numerous other wise and patriotic giants wrought the privileges which have been yours to enjoy, and I might here add, to defend.

THE STARS AND STRIPES FOREVER

This flag of ours, and I refer only to the Star-Spangled Banner, is something more than merely a piece of colored bunting. It stands for the bravery of the colonial soldiers fighting the French and Indian wars; for the drums and fife of the Revolutionary War; for the hungry and frozen soldiers at Valley Forge, for the peace at Yorktown, for the Articles of Confederation, the nursing ring for that most glorious of all state documents, the Constitution of the United States.

It is the glorious fight of the good ship *Constitution*; the sturdy defense of Andrew Jackson at New Orleans; the matchless seamanship and naval skill of Decatur at Tripoli, Jefferson, and the acquirement of a western empire in the Louisiana Purchase; the glorious epic of the western trappers and voyageurs; the spiritual gallantry of the Jesuit "black robes" winning the western Indians for Christ; the Mormon trek; the Alamo, with its glorious defense; the building of the transcontinental railroads; the Civil War, with its almost healed wounds; the death of the great and good Lincoln; our great industrial progress; the First and Second World Wars; and the present Korean episode; all are in that beautiful flag.

Our national fortunes are not ensouled in the United Nations flag. We cannot hitch our wagon to that star. Its motive power is too erratic, and its orbit is ill-determined by treacherous and ignorant captains. Straight ahead under the glorious banner which has won our hearts, and is

capable of exciting our love and devotion, is our only safe course. There is no other millennium for America. We cannot become traitors to our forefathers, and cast their hard-won freedoms, and our glorious heritage into their teeth. If we do, then they have wrought, won, and died in vain. God grant that we may survive as a United States, worthy of such beginnings, determined to carry the torch of freedom they have handed to us, to the conclusion of the glorious race. We are on the march to the completion of our marvelous destiny; and in that march, we must continue to have our eyes fixed upon the Stars and Stripes before us to hearten us with the memory of what it represents in the building of America. We cannot march under a hybrid flag else our hearts shall have no song.

If You Can't Kill It, You Can't Eat It

EXTENSION OF REMARKS OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. JENSEN. Mr. Speaker, Mr. L. W. Schaller explains in his letter to me in a few words how OPS rules and regulations have kept him from buying beef, hence he cannot furnish beef.

Everybody, even Mike DiSalle and Harry Truman, should know that you first must butcher a beef before you can eat it. Yet OPS wants the Congress to reimpose slaughtering quotas. Even a dumbhead should know slaughtering quotas mean three things: Less beef-steak at the counter, black marketing, and higher steak prices.

This kind of silly OPS business proves but one thing, which is that Mr. Truman is determined to bring about a condition which will reduce production, force prices up, and hence perpetuate the emergency of keeping a horde of big and little Federal czars on the necks of honest businessmen.

Congress should not only refuse to reimpose slaughtering quotas, it should throw OPS out the window, lock, stock and barrel. There is but one way to keep prices down. Let the great productive capacity of America operate full speed ahead.

*Cedar Falls Refrigerated Lockers,
Cedar Falls, Iowa, September 17, 1951.*

Mr. BEN F. JENSEN,
United States Representative in Congress,
House Office Building,
Washington, D. C.

DEAR Mr. JENSEN: I just read today in the Des Moines Register an article written by Clark Mollenhoff under date of September 14, 1951, quoting you as saying, "Beef slaughtering quotas have resulted in a discrimination against midwestern packers."

I want to commend you on this statement. For 15 years I have operated a locker plant in Cedar Falls, Iowa. During those years I have never slaughtered a single beef for resale. Always purchased my beef from the packers. Today I cannot buy one single quarter of beef from a single packer in this territory. One thousand and forty of my locker customers have depended upon me for their beef. I cannot furnish beef because I cannot buy it, and OPS rules do not

allow me to slaughter because I have never slaughtered for resale.

Just returned from an eastern trip through New York State and Pennsylvania, and I found locker plants there had plenty of beef; no shortage whatever. Your statement in the Register seems to prove itself in my experience.

The Office of Price Stabilization uses the slogan, "Fair Distribution of Livestock and Meat." What is fair about this kind of a situation. Never during all of World War II did we want for beef like we do right now.

Mr. JENSEN, I appreciate your statement and your stand against this very inequitable situation.

Very truly,

L. W. SCHALLER,
Owner-Operator.

As to Scrap

EXTENSION OF REMARKS OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. KEATING. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Olean (N. Y.) Times-Herald. The editorial follows:

AS TO SCRAP

In recent weeks, this newspaper has commented on the fact that the defense-production program is using up such vast quantities of steel that the Nation's ready-at-hand stocks of scrap are just about reaching the vanishing point.

Various activities now are being outlined with a view to remedying the situation; but it would seem that an inordinate amount of time is being wasted conferring over the situation.

In the meantime, what a western New York Congressman has had to say on the matter is worthy of attention, both official and public.

Representative KENNETH B. KEATING, of Rochester, had no hesitation in taking the floor of the House last week and accusing Government agencies of being the chief laggards in the campaign to collect scrap steel for use in defense industries.

Mines, railroads, junk yards, and even farm yards, Mr. KEATING pointed out, now are being combed for scrap.

But until the Government "takes its own dire warnings and directives to heart," he said, "and exerts some earnest effort itself, one cannot help feeling that the wrong people are being alerted."

The Rochester salon specifically castigated the Department of Defense for laxity in the matter.

The urgent warnings and pleas of Defense Mobilizer Charles E. Wilson to "get the scrap out," he said, will be received with greater enthusiasm when all Government departments "including especially the Defense Department and not just the Office of Defense Mobilization" take the scrap steel shortage seriously and "review their own potential sources of scrap."

Then the Congressman became even more specific.

"We have all seen abandoned Government material in various supply dumps throughout the country," he said.

"Reports of tons of such scrap in Navy yards, Army depots, and Government agencies not only are rife in the industry, but are the constant source of legitimate gripes in congressional mail from taxpayers far and wide."

There is a colossus in this country which, when it operates smoothly, efficiently and speedily, is the most powerful human force in this world.

It is the Government of the United States. But when that colossus becomes lazy, dilatory, unwieldy and generally slow-moving and inefficient, it becomes a menace to the people it is pledged to serve.

Recent revelations as to some of the "goings-on" within the "higher circles" have not been calculated to enhance the respect and confidence of the American people in their Government.

Representative KEATING is to be commended for his forthrightness. If he is in error, he will be the first to admit it.

And if he is right, his declamation should have the effect of improving a situation that badly needs improving.

Attack on the FBI

EXTENSION OF REMARKS OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include the following article from the New York Herald Tribune:

THE RED UNDERGROUND—PARTY BANKING ON SUCCESS OF LAW GUILD DRIVE ON FBI

(By Ogden R. Reid)

Communist Party functionaries have "lots of hope" that the 3-day annual convention—ending today—of the National Lawyers Guild in Chicago's Congress Hotel will be a complete success.

These functionaries have expressed satisfaction over the convention's agenda, which lists as a must the launching of a national campaign against the FBI. A guild resolution, drafted on Thursday, said: "The FBI activities continue to invade elemental rights of privacy, to infringe on constitutionality * * * and to intimidate and repress free speech and association * * *. The liberties of the American people are not safe as long as the FBI continues on its present path."

Prof. Thomas I. Emerson, of the Yale University Law School, who has been associated with the guild since its inception in 1937 and who is currently its president, is expected by the Communist Party to run for reelection if his duties defending 16 of the 21 Communists indicted on June 30 (in pretrial motions) do not interfere.

The party may be disappointed, however, as Professor Emerson, in an interview in the Congress Hotel on Thursday, said: "I indicated I would only hold the job (the presidency) for 1 year. I feel it should change hands at that time. I am planning to write a book in the field of political and civil rights—a legal textbook."

A House Committee on Un-American Activities report of September 21, 1950, said:

"The National Lawyers Guild is the foremost legal bulwark of the Communist Party, its front organizations, and controlled unions. Since its inception it has never failed to rally to the legal defense of the Communist Party and individual members thereof, including known espionage agents. It has consistently fought against National, State, and local legislation aimed at curbing the Communist conspiracy. It has been most articulate in its attacks upon all agencies of the Government seeking to expose or prosecute the subversive activities of the

Communist network, including National, State, and local investigative committees, the Department of Justice, the FBI, and law-enforcement agencies generally. * * * The National Lawyers Guild has constituted itself an agent of a foreign principal hostile to the interests of the United States. It has gone far afield to oppose the foreign policies of the United States, in line with the current line of the Soviet Union."

Why in God's Name?

EXTENSION OF REMARKS

OF

HON. J. FRANK WILSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. WILSON of Texas. Mr. Speaker, under leave to extend my remarks, I include the following editorial which appeared in the Dallas Morning News on Sunday, October 7, 1951:

WHY IN GOD'S NAME?

Three minutes of your time, please—3 minutes away from the world series, football scores, the comics

A man in Korea who loves his baseball, football, and L'il Abner paid a high price for these 3 minutes.

He lost a leg in a see-saw game of death on a Korean hill. He questions not the loss of a leg, the shattering of the other. He is a soldier

The question on his boyish lips is bigger than personal tragedy.

Lieutenant X, United States Marine Corps, Dallas, United States of America, wrote a couple of letters home in the last 2 weeks to his Mom went the first. To an uncle, the second.

They are recommended reading. The words of this 26-year-old leatherneck will burn into your soul:

"DEAREST MOM: My platoon was called on today to clear an assembly area and a trail of enemy mines. We did this without mishap and then went back down the hill and led the infantry boys up.

"We watched the battalion as it laboriously moved up the long, steep climb. They carry all their possessions on their backs—rations, ammunition, and weapons. It is a terrible load, but there is no other way.

"Soon they jumped off in attack. The colonel hit a mine up the hill. He was badly injured and had to be flown out by helicopter.

"It is a mighty rough go for the infantrymen. The casualties are high. The North Koreans dig into the mountains and stay until someone kills them. But they take a terrible toll before they die.

"The boys who go in after them have all the courage in the world. Their superhuman efforts can never be fully appreciated. Climbing the hill is hard enough without having to pack 80 to 100 pounds and then fight for their lives.

"The nights are cold and damp, and the days are hot. They are never warm enough at night or cool enough during the day. The world owes each and every one of them a debt that cannot be repaid.

"I'm telling you this, Mom, in hopes that more people can learn just what hardships these boys are going through. Maybe more people will demand that this war be given all-out support.

"Why in God's name do we let them say this is a police action that should be fought on a limited basis?

"Every available means should be brought to bear to bring this conflict to the speediest conclusion possible—including the atom bomb, the Chinese Nationalists, the Japs, and whatever else we could use that we are not now employing

"I know that there are many problems confronting our Government with respect to utilizing our various potentialities. But I feel that if more people could become conscious of the suffering and the hardships that infantrymen are enduring, pressure could be brought to bear and at least an objective conclusion could be our goal.

"We have many things to be thankful for, mainly that I am in the engineers and not in the infantry. Some good is bound to come from this experience."

Three days and a hellish experience later, another letter arrived in Dallas. It was addressed to an uncle:

"I have decided to write you concerning my misfortune. Then, will you go over and talk to mom?

"Two days ago I stepped on a Russian shoe mine. It was 3.45 p. m. I had taken my platoon out to clear a mine trail. We had removed some 50 mines. I was off the trail, examining ground for a road. It is impossible to find all the mines in the high grass.

"I stepped on a crude wooden box mine that contained one-fourth to one-half pound of Russian TNT. It immediately blew my left foot off just above the ankle. It broke my right leg.

"One of my boys came up to get me. He stepped on one in the grass and received approximately the same injuries. I directed my men to carefully clear a path to us and to call for a helicopter. We were taken by jeep to a landing field and flown several miles by copter.

"I was given the proper treatment and sedatives and was operated on about 8 p. m. When I awoke I felt no pain and looked down to see a cast on my right leg. My left one was bandaged and cut off below the calf.

I am now in a big Army hospital. It is fine, with all the comforts of a stateside hospital. I was put in a ward with U. N. forces—French, Dutch, South Koreans, and colored boys. We receive excellent attention and it is a real eye-opener to observe the close feeling between these wounded of various countries.

I have no qualms about my disability. It could have been so much worse. Since I still have the majority of my leg below the knee it will be quite simple to wear an artificial foot.

"Soon they will fly me back home. I will miss the cold winter, I will be home 7 or 8 months sooner and I am no longer exposed to worse fates. Infantrymen here with me with shrapnel and bullet wounds, suffer a great deal more. * * * Please don't spend your time worrying about me. Direct your prayers for those who still face the hardships and danger of Korea.

"And it looks as if I'll get to see some football games after all."

Almost forgotten the war in Korea! Men still die and are maimed—every day on every hill.

Neckyoke Jones Says

EXTENSION OF REMARKS

OF

HON. WILLIAM H. HARRISON

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. HARRISON of Wyoming. Mr. Speaker, under leave to extend my re-

marks, I would like to submit the following "Neckyoke Jones Says" column from the Sheridan Press, Sheridan, Wyo., under date of October 6:

"I seen by the paper," I whortes to Grease-wood, "that Harry Truman is mad at the newspapers an' magazenees, because, he sez they are tellin' all of our seckrits to the enemy." "Yep," he refrigerates, "it's down-right terribul. The newspapers has been tellin' all of the folks about what's goin' on with the New Deal, Fair Deal, bad deal an' sundry—which is sure bad campaign amnytion. It has allus been said that a boll kin be a pain in the neck—an' withouten tryin' to be funny it looks like iffen you spell it differunt—me bein' an expert on spellin'—a Boyle kin also be a pain in the neck. Not to be prejdiced—probably folks would jest as soon see this here Boyle an' ol' Gabrilson both go back to wherever they come from an' try to make a livin' by bein' lawyers—the same as other lawyers. It ain't fair not to let some others set in an' make a lil' easy money. Of course, when you git right down to cases, what these fellers has been doin' ain't very important as they kin git the bartender's boost iffen the people wants to give it to 'em—but what is important is the publick don't seem to give a whoop or a holler how rotten things are. I'm still thinkin' about that ol' boy Esau, in the Good Book (with which I ain't too familiar) who sold his birthright for a bowl of dog soup." Grease-wood gits Scripturuel at times. Hopin' you are the same, I am

Yure fren,

NECKYOKE JONES.

Thought Control

EXTENSION OF REMARKS

OF

HON. SID SIMPSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. SIMPSON of Illinois. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the Jackson (Ill.) Daily Journal of October 10 1951:

THOUGHT CONTROL

Freedom-loving Americans should support the protests of editors of leading newspapers, as well as of many Congressmen, against the growing tendency in Washington to withhold the news or revise it to suit bureaucratic ends. In a republic there must be accurate reporting of events so that the electorate will be informed.

The more nearly 'his ideal is approached, the better the Government. There is much to be disturbed about. The history of the past decade has been doctored by the withholding of relevant facts and official revision of vital information. The executive department has blocked attempts by Congress to obtain documents and facts from bureaus of the Government.

Emboldened by these successes, the executive department now is sponsoring the mischievous policy that no information shall be given out that is derogatory to any of the departments.

Unless challengers of this trend are supported by the public, this can go on until America becomes the victim of complete thought control regarding governmental affairs.

How To Walk in Government Buildings**EXTENSION OF REMARKS**

OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. SMITH of Mississippi. Mr. Speaker, the complexities of administering our thousands of Government buildings and millions of Government employees are great, and deserve the sympathy of the Congress, but some of our administrators sometimes let the problem go to their heads. As an example, I submit the following, under unanimous consent.

[From General Services Administration, Public Buildings Service, Buildings Management Division, region III]

MAY 22, 1951.

To: Chief clerks, administrative officers, all agencies.

From: Chief, buildings management division.

Subject: Study of unsafe practices in corridors having waxed floors.

Our safety and fire prevention section has received several reports of accidental falls within buildings under our jurisdiction. Many of these accidents are reported to have been caused by waxed floors. An investigation of each of these incidents indicates that the cause, in the large majority of cases, was not the slipperiness factor, but carelessness on the part of the injured person.

It is virtually impossible to properly maintain some types of floors within our buildings without waxing. This must be done not only as a matter of proper maintenance, but also for cleanliness and appearance. Our Engineering and Research Office is constantly testing waxed floors with a Sigler pendulum impact type slipperiness tester, developed at the National Bureau of Standards, to insure their safety. This testing program determines the coefficient of friction which is an index of relative slipperiness. Our tests on recently waxed floors with this equipment show satisfactory antiskid properties and do not indicate a high slipping hazard to exist.

We believe that many of the accidents blamed on waxed floors are avoidable and that much of the difficulty can be eliminated by employees exercising greater caution while going about their daily duties. Accident statistics indicate that about 85 percent of our accidents are the result of unsafe acts. We would appreciate your assistance by the issuance of a brief instructive memorandum to your employees to help them in the prevention of this type of accident. Listed for your convenience are a number of suggested causes and remedies for this type of accident:

1. Walk, don't run.
2. Face in the direction you are walking
3. Be extra cautious on waxed floors.
4. Don't read while walking.
5. Keep to the right of the center in corridors.
6. Keep far to the right in turning corners, especially blind corners.
7. Enter corridors from offices, stairways, and elevators with caution.
8. Don't crowd or push.
9. Avoid horseplay.
10. Wear a practical-type work shoe.

We feel sure that a brief educational program of this nature will do much to eliminate many of the accidental falls now being reported. The basic objective to be gained is a mental awareness on the part of our occu-

pants that they have some responsibility in the entire program of accident prevention. Your cooperation will be very much appreciated.

W. H. SAALFIELD.

Chicago International Trade Fair**EXTENSION OF REMARKS**

OF

HON. THOMAS S. GORDON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. GORDON. Mr. Speaker, under unanimous consent, I include my remarks in the RECORD on House Joint Resolution 331, that authorizes the President to invite the States of the Union and foreign countries to participate in the Chicago International Trade Fair, to be held in Chicago, Ill., March 22 to April 6, 1952, which passed this body on October 11, 1951.

As a Chicagoan, it gives me much pride in the initiative Chicago is taking again in continuing the exhibitions of manufactured goods of America and many other countries of the world.

I believe that every worthy effort and every possible encouragement should be applied for such a program so as to bring about better understanding in the development of marketing the manufactured goods that will aid directly in the promotion of world peace.

A little more than a year ago I was happy to lend my support to the resolution introduced by the Dean of the House, Mr. SABATH, which authorized the President to invite the States of the Union and foreign countries to participate in the First United States International Trade Fair at Chicago. An identical bill, House Joint Resolution 331, passed this body enthusiastically on October 11, 1951, authorizing a Second International Trade Fair at Chicago, from March 22 to April 6, 1952.

The splendid accomplishments of that first fair in quickening the economic life of Chicago, the Midwest and the United States have led the same civic-minded leaders of Chicago to plan this second fair next year.

Fairs of the proportions of those that Chicago holds are not casual or spontaneous. They represent endless weeks and months of careful planning and wise management. They demand a type of civic support that is so uniquely characteristic of American communities. If I were to read the roster of those citizens of Chicago who were responsible for the success of the first fair, it would be a Who's Who of Chicago. The same is true of the fair planned for next year. We citizens of the Midwest owe them a tremendous debt of gratitude for what they are doing to spur the economic life of our area. My hat is off to them.

We are a nation of traders—among ourselves and with other people. Our whole history is one of expansion of trade and of the opportunities to develop trade. Anything that contributes to the

enlargement of trade is a step for the advancement of our national welfare. Much of our postwar effort has been devoted to the restoration of world trade. The Marshall plan was dedicated to that purpose. And the degree to which Europe has recovered can be measured in a large degree by the trade recovery she has made.

Paul G. Hoffman, former ECA Administrator and a Chicago boy, made this apt observation not so long ago:

We believe such an exhibition, in which products of both continents would be on display, would prove of great value to Western Europe and to the United States. It would give manufacturers on both sides of the Atlantic an opportunity to exhibit their products, make sales contacts and develop new methods of marketing and distribution.

The first Chicago Fair resulted in the introduction of hundreds of new products to the United States. Within the confines of the fair agricultural, consumer and industrial products from many corners of the world were brought to the attention of the American public. Foreign exhibitors gained a first-hand knowledge of the American market, its demands and its tastes, and the method of American distribution. This will be a valuable asset for foreigners who seek to enlarge their American outlets.

Finally, there is one valuable contribution that fairs such as that in Chicago have made—they create a bond of good will and understanding that cannot be measured in material terms. I think that next year's fair is one of the most constructive steps being taken in these days of world tension. Its motto speaks its purpose—"World trade promotes world peace."

I hope that all of you will come to Chicago during fair time and see what one American city is doing to promote world peace and world betterment.

Slogan for Bob Taft: A Clean Deal in Washington**EXTENSION OF REMARKS**

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. BENDER. Mr. Speaker, public opinion to the contrary, not all public officials are crooks, and by the same token, not all crooks are public officials. A cursory reading of the day's news sometimes creates this highly erroneous notion, and it is about time that we began to do something to correct it. As matters now stand, many people who should be attracted to political life because they think soundly, reason accurately, and have a storehouse of ideals which they desire to put into practice, are deterred from entering the political arena because they are afraid of being tarred with the stigma of infamy.

The serious weakening of morality and ethical standards in public life must cause concern to all Americans. Integrity and leadership on high principles are the foundation on which all public responsibility must rest. Nothing that is morally wrong can ever be politically right.

What has been happening in Washington is made to order for Senator ROBERT A. TAFT, of Ohio. The New Deal, the Fair Deal, have begun to look more and more like a "Dirty Deal" as the internal machinations of bigwigs inside the Democratic Party have been exposed to public scrutiny. Washington today needs a "Clean Deal." No man in the national spotlight is better qualified to lead this effort than BOB TAFT.

How a Congressman Should Represent His Constituents

EXTENSION OF REMARKS OF

HON. TIMOTHY P. SHEEHAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. SHEEHAN. Mr. Speaker, recently I was privileged to address the radio audience of radio station WGN in Chicago on the subject of how a Congressman should represent his constituents. The address is as follows:

In discussing politics with some of my friends in the Eleventh Congressional District, the question frequently arises as to how a Congressman should represent his constituents. I felt my political philosophy on this subject would be of interest to every Chicagoan and I would like to present my views to you.

In the Federalist papers, written with a view toward explaining the meaning of the Constitution to the American people, Alexander Hamilton and James Madison brought out the idea that the sense or will of the community will prevail in our republican constitutional type of government. They said:

"As the cool and deliberate sense of the community ought in all governments, and actually will, in all free governments, ultimately prevail over the views of the rulers, so there are particular moments in public affairs when the people stimulated by some irregular passion or some illicit advantage or misled by the artful misrepresentation of interested men, may call for measures which they themselves will afterward be the most ready to lament and condemn."

With the above viewpoint of our founding fathers in mind, I am of the political philosophy that a Congressman should vote to express the will of the majority of his constituents, unless, in his own conscience, he is convinced that such majority opinion would be contrary to the general welfare of the country. In that event, the Congressman voting against the will of the majority of his people would have an obligation to let the people know why he felt their majority opinion was contrary to the general welfare of the whole country.

Now the question will probably be running through your mind, "Well, how does Congressman TIM SHEEHAN go about finding the majority opinion of the people in his district?"

In my particular case, I feel that the will or opinion of the majority of the people on

the northwest side of Chicago can be readily ascertained on practically all major issues before Congress. I, personally, have used the following methods of ascertaining my constituents' views:

1. By carefully reading all letters sent to me in Washington. I might add, I answer every one of these letters.

2. By frequent trips home, where I talk to people and arrange to meet personally constituents interested in stating their views.

3. By attending a town hall meeting, where I reported to the people and also asked them their opinions on important questions before Congress.

4. By conducting a postcard survey, asking 2,600 people their opinions on certain major issues. Every single receipt in the Eleventh Congressional District was covered in this survey, which included most civic and community leaders.

By talking to precinct captains of my own Republican Party, asking them how the people in their precincts felt about these major issues.

5. By writing letters to certain individuals whom I feel have their fingers on the thinking of the people, asking these individuals to tell me their neighbors' thinking.

There are several other minor methods of ascertaining the majority opinion, but I feel the six methods outlined above constitute the major manner of finding out the majority will of my constituents.

It is also a part of my political philosophy that a Congressman should report to his constituents and inform them of his work in Congress, of his votes on vital issues, important speeches he makes, and to report any facts or information crossing a Congressman's desk which is not readily known or available to his constituents.

I accomplish this last objective by issuing a newsletter every 10 days, which is mailed to 3,000 people in the Eleventh Congressional District. Also, through the kindness and public spiritedness of many of the local community papers in my district, who publish my news releases, I keep the great majority of my people informed as to the conduct of their Congressman. I have informed the people of my special work in Congress as chairman of the Policy Committee of the Republican Freshmen Congressmen, of my having introduced the first resolution in this Eighty-second Congress to bring MacArthur home to report to Congress, of my being the first Congressman to introduce a resolution for the investigation of the mass murders of 5,000 Polish Army officers at Katyn Forest in Russia, and this week you probably read that Congress passed a like resolution Tuesday and I was appointed a member of this investigating committee.

By following such a political philosophy of representing the will of the majority of my constituents, and by reporting my actions to them, I best feel that I am carrying out the ideals of our Constitution by having, as Hamilton and Madison stated, "the cool and deliberate sense of the community . . . prevail over the views of the rulers."

Mr. Baseball

EXTENSION OF REMARKS OF

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. GAMBLE. Mr. Speaker, under unanimous consent of the House, I insert in the Appendix of the CONGRESSIONAL RECORD the attached editorial from the Daily Times published in Ma-

maroneck, N. Y., September 25, 1951, entitled "Mr. Baseball":

MR. BASEBALL

Ford Frick, of Bronxville, is naturally to be congratulated upon his selection as the new commissioner of baseball. The 7-year term at \$65,000 a year, with the attendant responsibilities and authority, is an important job.

At the same time, we feel that the two major leagues are themselves to be congratulated upon their perspicacity and upon the fact that so experienced a man as Mr. Frick was available. We may, ourselves, be pardoned, we trust, for expressing a bit of professional pride in the knowledge that the new commissioner of baseball came up through newspaper work.

For a quarter century now Mr. Frick has made Westchester his home, a point which of itself indicates sound judgment and keen discernment of values. Formerly he lived at 129 Dellwood Road in Yonkers and for the past decade at 16 Edgewood Lane in Bronxville. He is a former president of St. Andrew's Golf Club, a member of the Bronxville Field Club, a member of the Bronxville Episcopal Church, and a member of the American Yacht Club in Rye. Thus it will be seen he had injected himself and family into community life along various lines.

To this third commissioner of baseball, former English professor, former newspaperman, former radio commentator, former National League president, we extend every good wish for a long tenure in office. It is pleasing that one of our neighbors rises to a post of tremendous potential public service. And we are certain that as in the past he will make good.

Dr. Homer C. Brown, Leader in Dentistry

EXTENSION OF REMARKS OF

HON. JOHN M. VORYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. VORYS. Mr. Speaker, it was my pleasure and privilege today to attend a luncheon honoring Homer C. Brown, D. D. S., of Columbus, Ohio, in recognition of his services to the dental profession, given by the American Dental Association, as part of their convention, at Hotel Statler. Eleven past presidents attended the luncheon.

The program was as follows:

Presiding, Dr. Clyde E. Minges. Invocation, Dr. Carlos H. Schott. Dr. Brown, the Friend, Dr. Frank M. Casto, presented by Dr. Earl Jones, Columbus, Ohio. Dr. Brown's Contribution to the Army Corps, Gen. Oscar P. Snyder, Director of Dental Activities, Army Medical Center. Dr. Brown, the Builder, Dr. J. Ben Robinson. The Marks of a Professional Man, Dr. Arthur H. Merritt. Presentation of Token, Dr. Harold W. Oppice, president, ADA. Response, Dr. Homer C. Brown.

Here is a brief summary of the life and accomplishments of this leader in dentistry:

Dr. Homer C. Brown was born in Mason County, W. Va., September 4, 1868. Parents moved to Ohio in 1870. Served short preceptorship in the office of Dr. C. E. Miles, Gallipolis, Ohio. He matriculated as junior, Ohio College of Dental Surgery, Cincinnati, September

28, 1888. He graduated March 12, 1890, with first honorable mention. He was married to Miss Mary Louise Shaefer, of Gallipolis, Ohio, December 21, 1893. Mrs. Brown was the first president of the Women's Auxiliary of the ADA, serving two terms, 1924 and 1925. Dr. Brown became a member of the American Dental Association in 1897. He moved to Columbus, Ohio, and started practice there in 1902; appointed on Dental Board of Ohio June 6, 1902, and was named secretary the same year. Served three terms. President of Columbus Dental Society, 1905. President of the Ohio State Dental Society, 1906. Was elected corresponding secretary and member of legislative committee of NDA at 1908 meeting. Was leading force in negotiating merger between the ADA and the NDA and was elected the first president of the combined organizations in 1913. Advocated and outlined a program for improving the status of the dental profession in the Armed Forces in his presidential address of that year. Named chairman of the legislative committee of the ADA in 1914 and served in this capacity until 1934. Appointed member of Ohio State Board of Health June 2, 1913. Was the first dentist in the United States to receive such an appointment. Served on research commission of ADA from 1912 until 1937. Cooperated in establishing research program of United States Bureau of Standards. Dr. Brown led the fight opposing increased tariff duties on dental instruments, thereby saving the dental profession thousands of dollars. Dr. Brown organized the Past Presidents' Club of the ADA in 1923 and served as secretary for 25 years. Is now the only living charter member. Dr. Brown is a Fellow of the American College of Dentists, a member of the Pierre Fauchard Academy, an honorary member of the Military Dental Surgeons Association, and many State and local societies. Was the recipient of the Callahan Award in 1933, and was the first recipient of the Harvey J. Burkhart Award in 1949.

Dr. Brown is a long-time personal friend of mine, a civic leader in my home town, and I am proud of the deserved recognition he has received in his profession.

The World Menace and How To Meet It

EXTENSION OF REMARKS OF

HON. PAUL CUNNINGHAM

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks in the Record, I include the following address delivered by Karlis Ieyasmeyer at the House Breakfast Group Thursday, October 11:

Honorable Members of the United States Congress, it is with deep humility and profound appreciation that I appear before you to fulfill the commission of Providence, to which I owe my life, to be a voice for those

millions who have been silenced and are being silenced and a faithful witness regarding the menace of world communism. My every heartthrob and thought belongs to America, the stronghold of liberty and the refuge for pilgrims yearning to be free of whom I dare to be one. I testify of facts which I have learned in personal experience, observation and first-hand studies during the 34 years since communism started its march for world domination.

Communism has not been victorious because of inevitable fatality as some think, but because of exploitation of the following factors:

1. Masterly use of mass psychology methods and the powerful lower drives and instincts.

2. Successful exploitation of the shortcomings of the Western World:

(a) Political oppression by promising political and all other freedoms;

(b) Economic exploitation by promising prosperity;

(c) Social injustice by promising the rule of the working people;

(d) Religious vacuum, indifference or confusion by igniting a religious-like fervor for the Communist ideology.

3. By system and action of deceit:

(a) The whole Soviet system is a duplicate system with absolute power vested in the Communist Party alone, concealing this fact by fake government institutions and agencies as attractive democratic window dressing;

(b) Communism, struggling to overthrow the existing governments, conceals its real aims and reality but presents itself in stages, promising and as if striving to fulfill the old revolutionary ideals of liberty, equality, and fraternity. But as soon as they have succeeded in establishing full grip over the victim nation the grim reality falls description.

The true reality of communism is—

1. In the political field: Having established an all-powerful secret police with an inner security army behind it and a thorough spy net covering the whole nation, they bring down the existence of the people on the level of life or death, i. e., life must be earned by unlimited obedience to the Communist Party requirements. Even freedom of thought is lost as everybody is forced to study, apply, and praise the Communist ideology and deeds, and so life becomes a nightmare of absolute slavery under an absolute political dictatorship.

2. In the economic field: After the expropriation of all property without any indemnity there is basically only one form of ownership and that is, officially, national or state property, but in effect, because of the absolute political power of the Communist Party, the whole state, public and private property becomes the property of the Communist Party, thus combining in its hands absolute political and economic power.

3. In the moral field: Having pronounced all moral principles as prejudices, religion as opium of the nation, and the evil forces as their spiritual source of power and leadership, they have only one formal principle guiding their actions—expediency. Everything that might help the Communist cause must be done irrespective of moral principles, sentiments, or beliefs.

In order to safeguard the Communist system and maintain its success, real or potential enemies or opposers, including faithful Christians, are being made harmless in three death-mills:

(a) Secret police prisons. There are executed the supposed leaders of the opposition with the most atrocious methods. Though innocent I went through it, had to face their execution squad and, only through divine intervention, miraculously escaped. During 34 years of Communist rule in Russia in them have been liquidated thousands of men and women.

(b) Organized starvation. By confiscation of all food from the opposing peasants, or by deprivation of food rations from certain disliked groups of people in the cities, several times artificial famines have been caused in which children, young people and adults have perished, including my two sisters and other relatives. The rest of us survived only by eating decaying straw. In this way extensive groups of the opposing population have been destroyed.

(c) Forced labor. Large segments of the nation and lately whole nationality groups, the Baltic people, who are distrusted, have been brought into the forced labor camps. Under hard labor and small food rations there have succumbed millions of the best men of Russia and many European nations. With the subjugation of other nations under the Communist domination other thousands of victims are on the road to extermination.

COMMUNISM IS A DANGER TO THE WORLD AND AMERICA

1. Marx, Lenin, and Stalin have repeatedly stated and the Communist ideology is built on the basic assumption that the permanent security and stability of the Communist system can be insured only by the conquest of the whole world.

2. Communists consider the awakening hungry millions of Asia and Africa as their potential allies and they work hard to capture these masses. In their drive for the world the Communists already have succeeded so far that about 800 million people are directly under their command with many other millions around the globe in their following.

3. To reach their goal the Communists have deprived the conquered nations of any comfort, but have used the rich resources of their lands for rearmament purposes and thus already have become a formidable military force.

4. The present situation of the world is such that there is not a power in Asia, neither in Africa, nor even at the moment in Europe that could stem alone a military onslaught of the Red tide, but the United States with its wealth, technical and military might is the bulwark to match the armies of enslavement. The Communists realize that with the defeat of America the world is conquered and vice versa.

5. Communist forces have always exploited for the downfall of a nation its internal weaknesses to the extreme. Therefore, in addition to the external there are internal threats to the existence of America:

(a) According to the FBI there are in the United States approximately 50,000 card-holding Communists with about 500,000 fellow-travelers.

(b) The Kefauver Crime Committee uncovered in the United States a Nation-wide crime syndicate, political and criminal corruption of such extent that it has brought, according to the judgment of Senator Kefauver, this country close to the ruination point.

(c) Dope addiction and juvenile delinquency are alarmingly widespread. They are ruining the moral backbone of the Nation.

All these facts show conclusively that in this crucial hour the stronghold of the free world—the United States of America—is in real and imminent danger.

HOW TO AVERT THE COMMUNIST THREAT?

1. All diplomatic efforts have failed to reach a satisfactory agreement with the Communist-dominated world.

2. Military preparations, through most important, yet do not offer full security from outward attack, nor solve the problems of internal danger.

3. With the titanic responsibility for the destiny of the world on its shoulders, the American Nation needs gigantic moral and

spiritual power, must be healed internally to sustain even mortal blows and at this late hour a grand ally that can balance the scales. Stakes are higher than ever in human history and command unflinching action. It is noteworthy that those men who are directly responsible for the fate, future, and rearmament of this great Nation, as well as the leaders of the free world, have pointed to the supreme source of moral and spiritual power and the mightiest ally in the universe—God. What is His significance in the swinging scales of destiny?

Two facts give convincing answer with striking clarity:

(a) Amidst all the countries overrun by the Communist armies there is only one small nation of 4,000,000 people whose moral integrity and spiritual strength could not be broken. Although militarily defeated twice, its borders near the gates of Leningrad, it is the only free country under the Soviet control. How is this miracle in modern history possible? Finland is one of the most Christian countries in the world and God is for most of the Finnish people a living reality. After nation-wide religious awakenings this rough and sturdy race of Asiatic descent became a symbol for high morals, admired sportsmanship, and unsurpassed heroism, and an irrefutable proof to the great truth: It must be of the spirit if we are to save the flesh.

(b) When the combined forces of Hitler and Stalin trampled most of Europe and had smashed the small British army at that time in Belgium, threatening to invade England, the British King called on his people, who were left alone, to seek God and His alliance. They did. Up to that moment the German blitzes had been amazingly successful, but after that Hitler began to make blunders of a blinded Old Testament conqueror. God intervened and the ruthless tyrant was doomed.

If a moral and spiritual rebirth sweeps over the American Nation, its infirmities and deficiencies will be cured and the Communists, after their experience with Finland, will never court a disastrous plan of attacking an internally indomitable and mighty America. The assured alliance of the Almighty will frustrate the vilest devices of a satanic and formidable enemy against the shores of freedom.

Such an America will become a magnet of global effectiveness, will have the willingness and power to lift the hungry world out of its mire of despair with her material, technical, and spiritual resources, will win them for a better way of life and the banner of freedom before they line up with the armies of destruction.

WHAT ARE THE CONCRETE STEPS TO SUCH ACHIEVEMENTS?

Nominal religion is ineffective, has failed, and is traitorous in this crucially momentous hour. Only real, experimental, applied Christianity and a living faith in God can change men, nations, and the march of doom. We are in a race against time. Therefore, it seems to me, the imperative orders for every American patriot are—

(a) become a changed man and woman by the grace of God;

(b) transformed men, start a spiritual avalanche by everybody leading another one to the inner rebirth and the application of Christianity and awareness of God in all phases of life;

(c) all whose hearts belong to America support spiritually and morally American leaders in their tremendous responsibility;

(d) participate actively in selecting men of sound integrity for positions of leadership;

(e) let the solid foundation of America, the fountain of power, and the secret of victory become in the flame of experience America's strength and shield: "In God we trust."

The Honest Do Not Hide

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. REED of New York. Mr. Speaker, it has been said that people can lose their liberties, and not miss them for 100 years. Step by step that is precisely what is happening under the Truman administration.

The suppression of information, whether it relates to those on the welfare list or relates to the activities of the administration, is gradually increasing. It is so gradual that the people do not realize the extent to which the noose is tightening, but their homes will soon be visited by administration appointees to ferret out all that should be secret within a family.

Under leave to extend, heretofore granted, I am inserting an editorial which appears in the November issue of Farm Journal:

THE HONEST DO NOT HIDE

An ever-present fear constantly terrorizes every person who lives under the Communist tyrannies behind the iron curtain. The same fear pervaded Hitler's Germany and Mussolini's Italy.

At any hour of night or day uniformed officers may appear at any door. The member of the family who is summoned—father, brother, mother, or daughter—has to go instantly with the officers. Where? Usually no one ever learns. Why? That is secret, too. Whether any word will ever be heard, or whether the victim will ever return, no one can learn.

That sort of thing is today common in all Communist countries. The overwhelming power of secret government leaves the individual completely helpless.

Beyond what is essential to military security, the least tinge of secrecy in government is dangerous to the people.

If no other reasons argued against secret actions by public servants, it would be enough that government by the people depends upon free and complete access to information. How can the people decide unless they have all the facts?

Other highly important reasons make secrecy abhorrent. Secrecy offers a convenient cover for corruption. It hides mistakes. And it permits Government officers to exert power to which they have no right.

In this issue Farm Journal reports the extraordinary facts of the potato marketing agreement referendum which was conducted last year. The Iowa farming firm of McKinley & Sons has challenged the procedure, and "unreasonably annoys, embarrasses, and oppresses" the United States Government, according to the Federal attorney who is trying to prevent all the facts from coming to light.

The key point in this matter is secrecy. Department of Agriculture officials, making their own rules, kept the counting of ballots secret, and refused to allow growers as observers.

This is a far cry from the trembling Russian who is seized from his home by night. But both situations arise from the same evil—the evil of secrecy in government.

President Truman last week signed an order which directs all agencies of Government to classify as secret certain kinds of information. So far as this protects military secrets, it is customary, and necessary.

But this order went far beyond military matters. If permitted to stand it will help to cloak mistakes, hide corruption, and to hold out information vital to fair judgment by the people. Only recently the New York Times published an impressive list of secrecy acts, by the State, Treasury, and Defense Departments, for which obviously no justification could be found, and which concealed facts to which the public was entitled.

The secret "diplomacy" of the State Department, from Yalta on, has misled Americans, and has built up toward the tragedy of Korea and the costly tensions of today's world.

Secrecy is indispensable to dictatorship and destructive to freedom. Let's not tolerate it in the United States of America.

Overriding of Veto of H. R. 3193

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mrs. ROGERS of Massachusetts. Mr. Speaker, when Congress overrode President Truman's veto of H. R. 3193, the bill that provided \$120 a month for veterans who are so helpless or blind as to need the regular aid and attendance of another person, most of us knew that we were doing a kindly and humane act for these bedridden and helpless veterans.

I was cognizant of a number of instances where such an authorization would mean that the infirm veteran would be able to leave the Veterans' Administration hospital and go home where his loved ones could give him the personal care and attention that he craved.

Aside from the humanitarian aspect of the law, when one considers that it costs the United States Government about \$10 a day to maintain a patient in a Veterans' Administration hospital, it is readily seen that great savings will be made by paying the veteran the additional sum so that he can provide his own attendant.

One of the nicest letters I have received lately came to me this week from the wife of a blind veteran who has been for 7 years a patient at the Wood, Wis., Domiciliary Home of the Veterans' Administration. I hope that the Members of this House who voted to override President Truman's veto will read this letter. I know they will feel as I did when I read it. There is much more to be considered in these veterans' bills than the mere cost of the proposals.

The letter follows:

DEAR MRS. ROGERS: My husband and I received your lovely letter of October 2, in which you told us of the passing of Public Law No. 149.

Not only my husband and I thank you with all of our hearts but all of the men at Wood, Wis., are doing the same. I wish you could have seen the happy faces of the men at Wood when the news came. They feel independent now, not afraid if they ever should leave the VA that they would be a burden to someone.

After living at the VA for 7 years my husband will leave on Christmas eve for our home at Williams Bay, Wis. Now that the pension has gone through he feels that he, too, can contribute his share toward the maintenance of the home. I believe I told you he and I were just married last New Year's eve. I had been a widow 19 years. Raised five lovely children, all of whom are now married, and have five lovely grandchildren. My husband never had any children of his own but now has a large family. The children are so happy that I found such a wonderful man and as our eldest daughter lives in our house now, they will continue to live with us for awhile. I have a room right outside the VA gate and see my husband every morning. Week ends we go home.

There were improvements we wanted, so I have worked to get them, but on Christmas eve both he and I will leave for Williams Bay to live.

God has been good to me, Mrs. ROGERS, and somehow I feel this, too, has been in His hands. I met my husband just a year ago on the bus going home. You see after my last two daughters married I came to Milwaukee to work. I knew my job was done and didn't want to interfere with their lives, and was here only 2 months when I met my husband. We are very happy; he is a wonderful man, so kind and true. We both feel so grateful to you and your colleagues for the wonderful thing you have accomplished and should you ever come to Wisconsin we would deem it a great honor to have you visit us. We have a large house and can make you comfortable, I know.

Please again accept our heartfelt thanks and also the thanks from the veterans at the Veterans' Administration hospital at Wood, Wis.

Sincerely yours.

Migration of Surplus Workers From Free Europe

EXTENSION OF REMARKS OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. JAVITS. Mr. Speaker, following on the consideration of this matter in connection with the appropriation for the Mutual Security Act last week, the appended editorial from the Washington Post of October 9 makes a direct and practical suggestion by which this program vital to the well-being and future security of Europe can be implemented:

MIGRATION

No one who has read the conference report on the Mutual Security bill will be surprised at the news from Naples that the United States has rejected the International Labor Organization's 5-year plan for the resettlement of surplus population. The conference bill authorizes the appropriation of \$10,000,000 to aid migration of peoples from overpopulated lands, but the conferees agreed that none of the fund may be allocated to any international organization in which Communist-controlled countries are represented. That excludes the I.L.O. which has among its members five satellites of Soviet Russia. In these circumstances, the Naples conference considering the I.L.O. plan is left hanging in midair.

Other large questions had been raised about the I.L.O. plan. It call for \$10,000,000 to be used by the I.L.O. for the improvement

of technical services connected with migration. And it contemplated the raising of \$130,000,000 to finance the movement of surplus people who cannot pay their own way over the next 5 years. No one had indicated how a fund of that size could be raised, and, with the United States bowing out of the picture, there seems to be no possibility of implementing the plan.

Other practical steps can be taken, however. As soon as Congress appropriates funds under the mutual security bill, they could be drawn upon to take over and operate the 12 ships that the International Refugee Organization has been using for the transfer of migrants and refugees. With these ships, it is estimated that 115,000 migrants could be moved in the first year. If an interim program of this sort could be worked out, a conference of the interested countries could then arrange to carry on from that beginning. The important thing at the moment is to keep in operation the ships already conditioned for this service.

Memorial Foundation of Fraternal Order of Eagles

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. MANSFIELD. Mr. Speaker, under unanimous consent, I am inserting in the RECORD a radio address by the Honorable Frank Murray on the Memorial Foundation of the Fraternal Order of Eagles:

Good evening, ladies and gentlemen. At this time I wish to express to the management of the Z-Bar Net my deep appreciation for their courtesy in making this radio time available to me in order that I might speak to you about the Memorial Foundation of the Fraternal Order of Eagles.

In making this report, we must go back to those dreary war days when the Fraternal Order of Eagles, like many other groups and individuals, made a promise. "We will look out for your children until you return."

Soon the realization came that some means had to be established so the Eagles could keep that promise to their members of the armed services. This realization was driven home as the casualty lists mounted daily.

The administrative director of the Fraternal Order of Eagles, M. L. Brown, presented to the Eagles in 1944 the idea of what he called a living memorial, the Eagles' own "Memorial Foundation". During that year 1944 the grand aerie of the Fraternal Order of Eagles had founded and established the Eagles' Memorial Foundation.

This foundation was established for the commemoration of all Eagle World War II veterans. It is a living memorial dedicated to improve the lot and welfare of children forever.

In planning the Eagles' Memorial Foundation program, the important question was, "How may Eagles best serve children?" The answer: "Help build children into strong, healthy, educated citizens, so that they might become useful and active citizens in their communities."

The Eagles swung into full action in 1947, basing its program upon the present purposes of the foundation. This is to provide financial assistance in the educational, physical, medical, surgical, clinical, dental, and optical welfare of the children of those members of the Fraternal Order of Eagles killed

in action or dying as a direct result of wounds or illnesses contracted while serving in the Armed Forces of the United States or Canada. That is providing that such members were members of the Fraternal Order of Eagles during their service in the Armed Forces in World War II—also the present Korean situation.

Thus, the program of health assistance was established and placed in action. It was realized that the widows of our deceased brothers would need this form of assistance to preserve the integrity of their homes and for the best interests of their children.

The foundation was very loyally supported by many understanding aeries, auxiliaries, and their members. Soon many Friends of Eagles, believing in and having faith in the principles of the living memorial program of the Eagles Memorial Foundation, contributed to this fund.

Immediately a search was started to locate all the children who were eligible for participation in the foundation program. This was a very difficult task due to the upheaval and turmoil of war. The search is still going on as the foundation tries to locate all eligible children. In the Philippines, where all the records were destroyed by the Japanese, the task is extra hard.

There are many hundreds of memorial foundation children today throughout the United States and Canada and the Philippines. These hundreds of children, from toddlers to college age, are the large family of the Eagles' Memorial Foundation.

Today, each foundation child is provided with an annual medical and dental examination by his or her family doctor and family dentist. The widow chooses her family doctor and dentist because they know her children and her problems and they can best help and advise her.

The annual medical and dental examinations are very closely scrutinized. Many times, the foundation through the assistance and advice of the family doctor and dentist, has been able to correct deficiencies, thus improving the health, physical welfare, and emotional adjustment of the child.

Each succeeding annual examination has shown a steady health status improvement in almost every case. The foundation's goal is to develop the best possible health for every foundation youth.

When disease, illness, or accident strikes a foundation child, the foundation provides the best possible medical, hospital and clinical care obtainable. It is during these dark times, when a mother, financially helpless, struggles to hold her family together, that the foundation best typifies the fraternal spirit of Eageldom.

There have been many very outstanding individual programs for Eagle foundation children. They include speech lessons for children with oral defects; the correction of physical deformities; the furnishing of eyeglasses; dental services; surgical operations and special clinical treatments. There are hundreds of these cases where foundation children have received special services and care in order that they might take their rightful places along side their friends and classmates.

The foundation's educational program provides each foundation youth with an opportunity to prepare himself for useful and productive citizenship by aiding him to attend the vocational school, university, or college of his choice. An all-out expense account is not granted, as each student is expected to help himself. Today, on many campuses, these youth are preparing for teaching, ministry, engineering, radio, TV, business administration, nursing, law, welding and many other careers.

As the memorial foundation swung into full action, it was soon discovered that the earned income of the original memorial foundation fund would never sustain the

planned memorial foundation program. None of this fund has ever been spent for administrative purposes. The administrative expenses have been paid by the Grand Aerie of the Fraternal Order of Eagles.

Therefore, as the foundation studied its future, it was foreseen that planned action must be taken, because in the 1960's, two-thirds of the foundation children will graduate from high school, and they will need foundation educational assistance.

The planned action developed by the Eagles foundation was the creating of the Eagles' Memorial Foundation Annual Seal Campaign. The Memorial Foundation Seal is a beautiful seal. It tells an outstanding Eagle story and affords all Eagles and Eagle friends an opportunity to endorse the memorial foundation program in a dignified manner.

As the needs of the foundation keep mounting, it is essential that the March 1952 annual seal campaign be an outstanding success.

A beautiful new Eagles' memorial foundation patron bond and patron certificate has been added to the seal campaign. These patron bonds and patron certificates afford all Eagles and friends of Eagles an opportunity to demonstrate their belief in the Eagles memorial foundation and the foundation program by becoming Eagles' memorial foundation patrons. Every Eagles memorial foundation patron receives a beautiful patron bond and/or patron certificate bearing his name. For further details regarding this foundation fund, please write to FOE, 23 South Center Street, Springfield, Ohio.

The Eagles' memorial foundation is a living memorial dedicated to be of perpetual service as long as there is an America, because as long as there is an America, there will be a Fraternal Order of Eagles. All Eagles and friends of Eagles may be justly proud of their loyal support to this project for child welfare; the Eagles' memorial foundation.

When the first phases of the Eagles' memorial foundation have been completed, the foundation will move into its second phase—this will include giving financial assistance to accredited hospitals and associations engaged in health welfare work, baby clinics, and other like undertakings calculated to improve the lot and enhance the physical, mental, and spiritual welfare of underprivileged and physically handicapped children in various communities.

Much of today's success of the Eagles' memorial foundation fund is due to the kind consideration and understanding that the loyal members of the Eagles and Eagle friends have given this program.

We hope that all aeries, auxiliaries, Eagles and Eagle friends will plan to again participate in the foundation's month of March seal campaign next year.

Remember—"He who builds well in the lives of children builds a monument to the heavens."

In closing, I take this opportunity to congratulate and applaud all members of the Fraternal Order of Eagles and Eagle friends for contributing over \$3,000,000 as a living memorial to Eagle members killed in World War II also the present Korean situation. As previously stated, the income from the fund goes to pay all medical and educational expenses of more than 1,300 Eagle children left fatherless by the war. During April and May of this year, over 1,000,000 Eagles and their friends throughout the 1,700 aeries in this country attended dances, dinners, picnics, or card parties to aid and increase the fund for the Eagle memorial foundation.

Since the founding of our order in 1898 we have always championed such humanitarian work. We have led the fight in many

States for workmen's compensation and we urged the passage of the present United States social-security law. Today, through our memorial foundation fund, we fill the more immediate needs of a new generation.

We are definitely in an era of building, the best kind of building—the building of great humanitarian work for the benefit of our Nation and with the definite objective of building human happiness.

Keep up the good work.

Good night, and thanks for listening.

Sincerely and fraternally yours,

FRANK MURRAY,
Grand Aerie, Regional Vice President,
Fraternal Order of Eagles

President Truman's Attempt To Muzzle the Press and Prevent Criticism of Public Officials One of Most Dangerous Steps Ever Taken by a President of the United States—Confederate Stars and Bars Not Worn for Provocation Purposes

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 9, 1951

Mr. RANKIN. Mr. Speaker, in answer to the criticism of me for wearing a necktie with the Stars and Bars of the Confederate flag on it, I desire to assure you that it is not worn for purposes of provocation, but as a memorial to the Confederacy, one of the greatest governments the world has ever known.

No administration that ever existed for the same length of time had more statesmanship and less corruption than did the Confederacy. Her flag floated over more victorious battlefields, for the time it lasted, than has any other flag that ever existed in all the history of mankind.

I have never seen as many Confederate flags in all my life as I have observed floating here in Washington during the last few months. But, as I said, they are not used as emblems of provocation; they are merely memorials. And if this administration keeps going on down the dangerous road of communistic internationalism it is now following the chances are that in a few years you will all be wearing ties with the emblem of the United States flag on it, as a memorial to the dead Republic. In that event we Members from the South may be compelled to join you.

I saw in a recent issue of the New York Post a picture of the Confederate flag with Stalin's likeness on it. That was about the craziest distortion I have ever seen; for if there ever was a government far removed from communism, it was the Confederate States of America.

My country comes first. I put the welfare of our own Nation, and our own people, above all other considerations. And I can say without fear of contradiction, that the same feeling exists among those Members on both sides of

the aisle whose fathers, grandfathers, and collateral relatives fought on opposing sides during the War Between the States.

Whenever a question arises that concerns the very safety of the Nation, the relatives of those old veterans who faced each other on the battlefields of that war, are always the first to rally to her standard.

President Truman's attempt to muzzle the press and to prevent criticism of individuals on the Federal payroll is one of the most dangerous steps ever taken by a President of the United States.

This administration is making war on white Americans, and especially on the white people of the Southern States.

One of the first real victories of communism in this country was the beastly treatment meted out to the white children in the District of Columbia when the administration wiped out segregation and drove them from their playgrounds and swimming pools. That was an accomplishment the Communists had been planning for more than 30 years.

The attempts to wipe out segregation in the public schools of the District of Columbia, and other similar movements, are driving the white people over into Virginia by the tens of thousands. Something has happened to the members of the Civil Service Commission to cause them to stack the various departments and bureaus of this Government with racial minorities that are subjecting the white women on the Federal payroll to indignities such as they never dreamed of a few years ago.

You can hardly find a white gentile on the payroll in many of these bureaus; and the service has degenerated to an alarming degree.

One of the most vicious communistic movements ever instituted by any administration was that wiping out segregation in the Armed Forces. It has done more to demoralize our Armed Forces than anything else that has ever been accomplished. It is subjecting our white boys, and especially the ones from the South, to the most beastly treatment ever imposed on white Americans anywhere; and these attempts to wipe out segregation in the public schools in the Southern States is a communistic maneuver that is likely to drive our people in the South, and probably in other sections, to private school systems. In that case the Negroes would have practically no schools at all.

But this gang of Reds that have swarmed into this country, and got into many key positions of this Government, do not give a tinker's damn about the Negroes. They are merely using them as a smoke screen to drag America down, bankrupt her, and subject her to the domination of alien racial minorities, under whom no civilized white people have ever been able to live in peace.

Stirring friction between the whites and Negroes in the South, as is now being done by this administration, is not only doing the white people infinite harm, but it will result in more harm to the peace, safety, security, and welfare of the American Negroes than anything

else that has ever been attempted since the War Between the States.

This communistic drive here in the District of Columbia to wipe out segregation in the Fire Department is an illustration. The ones who are pushing it remind me of a drunk man sitting on a keg of dynamite and striking matches with both hands. It would not only result in infinite harm to the Fire Department, but it would probably result in the loss of millions of dollars worth of property, to say nothing of the human lives that might be lost, as a result of demoralizing the Fire Department in this way. What Stalin wants is race riots all over the country, and all this agitation, all these crazy movements to reverse the laws of nature by Executive edicts, orders, and regulations is likely to result in race riots, not only here in the District of Columbia, but throughout the entire country.

The people of this country are not in favor of this crazy FEPC. It was the chief plank in the Communist platform, and has been pushed by the stooges of Stalin from the very beginning.

Everywhere they have taken a vote on it, the people have turned it down. They voted on it in California and defeated it by more than a million votes. I do not believe it would carry in a single State in this Union, if the people were permitted to vote on it and understood just what it means. It did not carry a single precinct in California, where white Americans were in the majority. Yet this administration is trying to impose it on the people of the District of Columbia and on the people of the Southern States, when everyone familiar with the situation knows that the gang behind it belongs to a racial minority that constitutes the brains and strength of communism throughout the world.

They are the followers of Karl Marx and are insidiously attempting to ram the philosophy of Marx down the throats of the American people; and, as I said, are using the poor Negroes as a smoke screen.

The people of the South are not going to stand for this kind of mistreatment. They now have it in their power to control the next election. If they will nominate a strong man for President, and one for Vice President, on what has been called the Dixiecrat ticket, it will sweep the South and throw the election into the House of Representatives; for the simple reason that no candidate can possibly get a majority of the votes, if the South sticks together.

If no one got a majority of the electoral votes, that would throw the election into the House of Representatives. Then it would be an entirely new election, with each State having one vote. New York would have one, Nevada would have one, Mississippi, Pennsylvania, and all the other States would have one vote apiece. If no candidate carried a majority of the States in the House on the first ballot, the South's man would be elected; for the simple reason that all Republicans would rather have him than Truman, or any Trumanocrat, and all the Democrats would rather have him than Taft, Dewey,

Eisenhower, or Stassen, or anyone else who is likely to be nominated on the Republican ticket.

That seems to be the only way to get us out of the horrible mess we are in today, and save America for Americans.

Between the Lines

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the St. Louis Globe-Democrat of October 11, 1951:

BETWEEN THE LINES

(By Harry B. Wilson)

KANSAS CITY, Mo., October 10—One of the favorite American themes is that of the poor boy who rises to wealth and influence. It used to be that he rose by hard work or by marrying the boss' daughter. Today, there is a new way. Take, for example, the career of Turney Gratz, a resident, successively of Kentucky, Kansas City, and Washington, D. C.

Today, Gratz has very reason to look around his world and find it sweet. He is a vice president of one of the country's biggest trucking concerns, Riss & Co. Not long ago, he was an executive of the Reconstruction Finance Corporation. And he is an old friend of none other than Bill Boyle, the man who runs the political affairs of the Democratic party which, in turn, runs the Government.

Boyle, another poor boy from Kansas City, also rose fast. Gratz regards their respective good fortunes as mostly a coincidence. "Boyle might have been in the cheese business and I driving a taxicab," he once said.

This remark was made when some Senators had Gratz over for questioning. They were curious about Gratz being Boyle's personal bookkeeper and investment counsel at the same time that he was with the RFC. In 4 years, Boyle paid Gratz \$11,000 for his part-time services.

The business of the RFC is to lend money to people the banks are afraid of. Boyle has been accused of throwing his political weight around in behalf of applicants for RFC loans. Why, the Senators wondered, did he have an RFC man on his private payroll?

Just a matter of old friendship, said Gratz. He added that he had never tried to influence an RFC-loan decision to please his old friend. The Senators, perhaps because they had other witnesses waiting, didn't question Gratz very much about his past. They missed some interesting stories.

He was born in Kentucky 49 years ago and christened Hugh Turney Gratz, although he has long since dropped the Hugh. When he was still a young man he came to Kansas City. Before long he was a Pendergast-machine precinct worker. In the Kansas City of those days that was a good spot for an ambitious young man.

Gratz had a variety of jobs, none very impressive. He was, for example, secretary-manager of something called the North Side Business and Improvement Association. The association seemed to be more interested in the improvement of Pendergast than the North Side. And the police once seized some gambling casino books that indicated Gratz was on the payroll there as well.

At about the same time the city park department was paying Gratz 50 cents an hour as a "skilled laborer." And the city water department paid him \$1,584 a year as a "chemical attendant."

That must have been an important job, despite the low salary. Someone was unkind enough once to imply that Gratz wasn't worth the \$1,584. "I work my hours," Gratz replied indignantly. "When a mother gives a child a glass of water she can thank me because I've been on the job and the water is purified."

In addition to improving the North Side, laboring in the parks, and purifying the water, Gratz found time to defend Kansas City's old produce market. His friend Boyle, then a police lieutenant and expert wire tapper, helped.

Some residents of Kansas City, Kans., decided to build a new produce market. It was designed to take a lot of business away from the market in Kansas City, Mo. Loyal Missourians, Gratz and Boyle set out to block the deal.

The two men appeared in Washington one day in 1938. Gratz said they were carrying wire-tapped recordings which proved that the Kansas City, Kans., people were trying to pull a fast one on the Government. Today, Boyle certainly could have taken such a matter straight to the President.

Gratz tried, but was sidetracked to the office of Harold Ickes, who was running the PWA then. Ickes listened to Gratz denounce the political morality of his Kansas City, Kans., neighbors. At the end Ickes had only one comment.

"Dear, dear," he said, "that from a Kansas City Democrat."

Times, of course, were different. Kansas City Democrats had yet to be elevated to the same semisacred position in Washington that cows, monkeys and such like occupy in India.

Gratz next tried to help Kansas City by rushing to Detroit to talk Henry Ford out of closing his Kansas City automobile assembly plant. Gratz announced he was Pendergast's spokesman, a fact Pendergast disputed. In any event, Gratz must have charmed the Ford people, because they gave him a job.

Then Mr. Truman, an old Kansas City Democrat himself, became President. Boyle moved to Washington. So did Gratz, to a \$10,300-a-year post with the RFC. He left a year and a half ago to become Boyle's No. 1 assistant at Democratic headquarters. From there he went to the Riss & Co. vice presidency.

And nobody mentioned his old city water department job when he came back to Kansas City to help prepare for a huge dinner in Boyle's honor. Gratz was a friend of Boyle's. That made him a big man, by proxy if not in person.

It made him a big man even though he has never shown any signs that he thinks there is much of a difference between National Government in Washington and local government in Kansas City. Except, of course, that the RFC paid him more than the city water and park departments.

People Want MacArthur

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. MILLER of Nebraska. Mr. Speaker, as my colleagues all know, I have

been a consistent advocate of the election of Gen. Douglas MacArthur to the Presidency and have continuously urged my party to nominate him as a candidate for that high office. I am encouraged to believe that the people of my party are coming around to my way of thinking on this matter. Evidence of this is shown in the recent Gallup poll which revealed that 54.89 percent of Republicans with opinions on the subject said they would like to see MacArthur run for President on their ticket in 1952. The significant thing about all this is that support for the general has not been stimulated by an organized effort in his behalf but is a spontaneous upsurge of feeling that he would lead us out of the morass into which we are sinking as a result of the fumbling foreign policy and disastrous fiscal policy of this administration. They are sick and ashamed of the tie-up of government and crime and the sale of political favors that are being revealed day by day. The whole dirty mess is becoming a stench in their nostrils. They long for leadership that will clean it up. To my mind no better words can be found to express the growing feeling about General MacArthur than those of the late Senator Vandenberg in his Collier's magazine article of February 12, 1944, entitled "Why I am for MacArthur for President". He said in part:

I know that he [MacArthur] would come to the White House with no thought or purpose except to serve America at home and abroad in the climax of a devoted career. I know he has never shirked a tough job in his life or compromised with it. He is granite in the face of duty. I know that his training and experience produced an integrity of character which will persist in any assignment he accepts. I would like to vote for integrity of character. It means more to me than a thousand campaign promises. Isn't that what America needs? He has the know-how because he has dealt with Government all his life. More than any other Presidential possibility he would be elected as a great unifying American, who would win his country's unified support by deserving it.

Further quoting Senator Vandenberg:

I repeat that spiritual values rule his mind. This blossoms in every speech he has ever made. I have lasting consolation and assurance in this simple Christian's reliance upon divine grace. That is the kind of President I want, Mr. Editor. I believe General MacArthur has what it takes in full measure. He has maturity and vast experience. If nominated, he will be elected. If elected, he will bring a great mind, a great heart, a great capacity, and a great devotion to the proud leadership of a great Nation.

Mr. Speaker, those words were spoken in 1944. They are more than ever true today. I would like to have General MacArthur invited to address the national convention when it meets in Chicago next June. I am convinced he would set such a high plane for the coming campaign that it would be more like a crusade. Our country is badly in need of such a crusade to clean out the accumulated rottenness and restore it to the high purpose set for it in the Constitution.

A Man With a Message

EXTENSION OF REMARKS

OF

HON. EDGAR A. JONAS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. JONAS. Mr. Speaker, I read a most instructive and inspiring message yesterday. It was an address delivered by Col. Robert R. McCormick, editor and publisher of the Chicago Daily Tribune, over the Mutual Broadcasting System on Saturday night, October 13.

Colonel McCormick's address dealt entirely with the prevailing dangers relative to governmental encroachment upon the freedom to write and the freedom of the press. Colonel McCormick presented what I consider unimpeachable facts tending to show the tyrannical and consistent movement that is afoot with the obvious intention of encroaching upon one of the facets of the Bill of Rights. This must never come to pass here in the United States. Members of Congress cannot turn their backs on any overt act intended to rob the people of the benefits of the free press. Colonel McCormick has been a tower of strength in fighting the subversive forces who apparently are trying to bring this about, but the task of preserving freedom of the press is not that of one or more individuals. The primary responsibilities to prevent this rest with the Congress of the United States. In his radio address, Colonel McCormick stressed the assaults by Government upon a free press and cited some glaring examples and instances of how the enemies of this freedom propose to accomplish their objective.

In his address, he also gave us a splendid analysis of the story that lies behind the history of suppressing freedom of the press in England. Very succinctly the message points out that the only enemy of a free press is government.

Undoubtedly many thousands heard the address over the air, but I believe it is well worth while to preserve this message in the CONGRESSIONAL RECORD.

Mr. Speaker, under unanimous consent, I extend my own remarks in the RECORD and include therein a radio address entitled "Freedom of the Press" delivered by Col. Robert R. McCormick and printed in the Chicago Daily Tribune on October 14, 1951. The address follows:

FREEDOM OF THE PRESS

(By Col. Robert R. McCormick)

Within the last few weeks, freedom of the press of the United States has suffered one of the most vicious attacks in the history of the Republic. This attack is part of the continuing pattern of Government assaults upon free newspapers which has characterized all of history for the last 500 years since printing began.

These assaults by Government upon the rights of the people to print and to inform each other have been particularly violent during the last 18 years of the New Deal. With scandals, thievery, corruption, and treason in Government reaching an all-time high in this Nation; with a national election approaching which may settle the fate

of the New Deal and rob the Socialists and Communists of their right to rule us, the attacks upon freedom of the press are becoming unusually vicious.

It is vitally necessary, therefore, to alert every citizen to the real meaning of freedom of the press and to examine, once again, its history. Since I have written most of that history, and even have made a part of the history of the freedom of the press which occurred in my lifetime, I feel qualified for the task.

All of you who read newspapers or listen to the radio know what has occurred in recent weeks. President Truman has called upon Congress to pass a law which will move the New Deal's latest plan to control both newspapers and radio nearer to completion. This law would give the President vast dictatorial powers over the press by granting him control of revenue from all newspaper and radio advertising. It also would strangle business and industry. The President could dictate how much money any business could spend for advertising in offering its goods or services to the public.

At the same time, the President issued an order to all the civilian bureaus and agencies of Government to censor their news at the source, on grounds that it would protect military security. The Defense Department and the State Department already classify much of the business they do as a military secret and refuse to disclose it to Congress or to the newspapers.

This order would give the same right to the Department of Agriculture, the Treasury, the RFC, and every other alphabetical agency in the land. The first result of the President's order was that the Office of Price Stabilization warned its employees not to disclose any news to the public which might cause embarrassment to that bureaucracy.

The storm of protest which arose in Congress over this edict caused the President to rebuke the OPS and rescind its action. But his general order classifying news of the operation of all Government bureaus under the cloak of military security—keeping that news from the public—remains in effect.

Congress and groups of newspaper editors and newsmen all over the Nation have condemned this act of censorship. Alert Americans everywhere have asked: What secrets can these civilian agencies of Government know which the public should not have?

The answer is obvious. Only the secrets of graft, corruption, and treason which are being exposed with increasing momentum in every day's headlines. If Russia is our enemy, let us take what security we can in the fact that our most important military secrets already have been betrayed to the Soviet by the Communist spies and traitors on the Federal payroll in our Government.

Alger Hiss was one of them and he is now in prison. He was the architect of the Roosevelt-Truman foreign policy, the trusted manager of the State Department, upon whom Dean Acheson will not turn his back. He was the brains behind all that Roosevelt did at Yalta. He was the creator of the United Nations at Dumbarton Oaks and San Francisco.

Several other traitors in our Federal Government are in prison, two of them in the death house at Sing Sing. Their crime was that they stole and delivered to Stalin the secrets of the atom bomb—our greatest weapon—even before it had been dropped on Hiroshima in 1945. These people were exposed by the Congress—not by the President and the administration. In every single case of treason, the administration sought to cover up and to whitewash investigation until the weight of facts in the hands of newspapers and the people made that course impossible.

At this late hour, the President calls upon his deputies in the executive department to withhold news of their operations because it will protect our military security. Reasonable men, who know the facts, cannot believe any such story. Patriotism is not involved here. Beyond Members of the Congress, there are few patriots in our Government today.

Two measures are ready for possible ratification as treaties of the United States which were drafted by United Nations. One of them is the so-called Genocide Convention. Both of these documents have been drawn up through the connivance of our State Department, and with the assistance of Mrs. Eleanor Roosevelt, who was our United Nations delegate to the U. N. Council on Human Rights.

Since treaties are the "supreme law of the land," and have been held powerful enough to override the Constitution itself by Supreme Court decision, either of these documents could kill the first amendment to the Constitution and kill a free press in America as thoroughly as Stalin has done in Communist Russia.

Who is attacking freedom of the press in the United States today? Government. It is the government of the Socialist-Communist welfare state. It is the government of the United Nations, devoted to the same Socialist-Communist principles, conceived and put into operation by men like Alger Hiss.

Freedom of the press is liberty from the tyranny of government. That is all it means today. That is all it ever has meant since printing first began. Government—powerful government—is the enemy of free newspapers and of the people's right to know. There is no other enemy. This has been true throughout the last 500 years just as it is true today.

You may have heard a lot of strange new definitions of freedom of the press from Red university professors, Communist pamphleteers, top bureaucrats in government, and others in the pinko fringe. All of them are on the side of oppressive government, and against the people's right to know. When that is understood, their arguments carry no weight.

Every modern critic of a newspaper's right to print the facts suggests some method by which government shall be given power to censor newspapers or to impose a responsibility over them. None of these critics believes in liberty. None of them wants to give the people more freedom to print and exchange the news. They say that government has become so big and so important to the people that government's own side of the story—the whitewash that government wants to apply to its own operations—must be told to the people by every newspaper, and government has the right to impose that responsibility in the interests of the people.

This is hogwash—Socialist, Communist, big government hogwash. The people are entitled to the facts. Free newspapers give them the facts. Any government which has a side to the story which is unfriendly and inimical to the people is a tyrannous government. In our Republic the power of Government is derived from the people, and the people have the inalienable right to know, at every step, what their Government is doing.

The United States is the only nation in history which has had a free press. We have this great freedom because of the unique and precious principles of republican government which our forefathers drafted into two great documents. In the Declaration of Independence the architects of this Government set forth the self-evident truth that each individual citizen possesses "certain unalien-

able rights" from the Creator—rights that no government can take away from him because no government is powerful enough to give them to him.

Based on this great and original "declaration of rights" is our Constitution and its Bill of Rights. The first amendment says "Congress shall pass no law regarding the establishment of a religion, or prohibiting the free exercise thereof, or abridging freedom of speech or of the press * * *." We have the right to forbid government to infringe on freedom of the press because, as individuals, we have accepted the self-evident truth that the Creator has granted us that right. Here, again, in the basic documents of our Republic, is the acknowledgment that the only enemy of a free press is government.

It is significant that the first amendment defines the three great freedoms in one single sentence. Thomas Jefferson explained it thus: Freedom of the press, he said, is the most important freedom because it defends the other two. If either freedom to worship or freedom to speak are threatened, freedom of the press will defend their right. If freedom of the press is lost the other two freedoms cannot defend themselves against the tyranny of government.

How right Jefferson was is proved not only by what is going on in Washington and in the New York headquarters of United Nations today, but by all of history. The history of freedom of the press is only 500 years old, but throughout it has been a history of newspapers fighting the tyranny of government.

Gutenberg invented movable type about 1450. Before then there had been no printing and no press. Caxton brought the printing press to England in 1476. It was a hated machine, hated by government, and government immediately took steps to control it.

In the reign of James I newspapers first were established in England under strict licensing and tyrannical abuse. Unlicensed printers and violators of censorship were punished by having their ears cropped, their tongues slit, or by hanging. They were the men who tried to tell the truth about the King's Government and for their devotion to truth they were maligned.

Under Charles I the tyranny grew even more terrible and the star chamber was established. This was a kangaroo court of the King's nobles and their bureaucrats, very similar to the kind of behavior clinic certain leading professors in our greatest universities would like to see established to regulate the freedom of the American newspaper press today and make it responsible.

Among the professors who have suggested such a device are ex-Chancellor Robert M. Hutchins, of the University of Chicago; Zechariah Chafee, William E. Hocking, Arthur M. Schlesinger, of Harvard; John Dickson, of Columbia; Robert Redfield and Charles E. Merriam, of Chicago; Harold Lasswell, of Yale; and George Shuster, of Hunter College.

When King Charles was beheaded and Cromwell took over as the defender of the people's liberties the star chamber was abolished. But the Long Parliament immediately enacted a licensing law to prevent the press from criticizing government or exerting influence to control it.

It was against this licensing law of the Long Parliament that Milton wrote, and printed surreptitiously, his famous essay *Areopagitica*. "Give me liberty to know, to utter, and to argue freely according to conscience, above all liberties."

Milton's words fell on deaf English ears, for in his lifetime nothing was done by his countrymen to make them live. But they became the clarion cry of all free men, everywhere.

When a king was restored to the English throne, this time Charles II, parliament re-

newed licensing of the press. The law died in 1679, but Chief Justice Scroggs, an evil name in legal history, rushed to the breach to support the power of government against the threat of a free press. Scroggs invented the theory that the king has common law right to license newspapers, parliament notwithstanding, and held no one could print without royal consent.

James II, in turn, persuaded Parliament to renew the licensing acts, and they did not expire in England until 1694, during the reign of William and Mary. Thus, for the first 144 years of the history of printing, government held the whip hand over the press. The story of government's attempts to do the same thing continues right down to the present.

Under the reign of Queen Anne in England and under George I, newspaper publishers were persecuted, but the persecutions were not frequent. At this same time, however, a new method by which government could suppress newspapers and prevent people from learning the truth was thought up. It was conceived in, and passed by, Parliament—government. This was the "taxes upon knowledge."

It was a threefold plan: Taxes upon advertising, taxes upon paper, and stamp taxes upon newspapers themselves. This idea lived long enough to plague the American colonists and contribute to the cause of the American Revolution. It still is not dead. Huey Long attempted to revive it in Louisiana some 20 years ago. Several other States attempted to use it.

It is, even now, a favorite device suggested by the evil college professors who are looking for ways to control and dominate the American press.

Stamp taxes were one of the causes of grievance against King George III outlined by our forefathers in the Declaration of Independence. At this same time other tyrannous laws concerning libel, and the pernicious doctrine of "libel upon government," held English newspapermen in check.

One famous British publisher, John Wilkes, editor of the *North Briton*, would not be suppressed. He described George III's address before Parliament as "the most abandoned instance of political effrontery."

For this simple statement—a crime against government—Wilkes was held to trial for libel and found guilty. The King was outraged and wanted to have his ears. But the people of England were with Wilkes. He was elected twice to Parliament. Each time Parliament expelled him. Finally, the excitement died down and he was elected again and allowed to take his seat.

From that time on the story of the crusade for freedom of the press and real liberty to print the truth moved westward, to the American Continent, where freedom of the press first was truly defined. England made progress along that road, slowly, steadily, but not completely. America led the way to real freedom. Today we lead the world. Our story is the greatest ever told.

Reaching Hearts and Minds of Men

EXTENSION OF REMARKS OF

HON. JOHN A. MCGUIRE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. MCGUIRE. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article entitled "Reaching Hearts and Minds of

Men" which appeared in the Lewiston (Maine) Journal shortly after an address by Jim Farley at Ithaca College:

REACHING HEARTS AND MINDS OF MEN
(By Daniel S. Dexter)

James A. Farley—he doesn't mind being called "Jim"—is a master of the art of politics. It's an art and close to being a science. Many miss that.

To be successful in politics—and the word is used here in its best meaning—one must have a good memory for faces and names.

The former Postmaster General Farley has this faculty.

While he needs no memory aids, he takes the precaution to make a note now and then to stiffen his memory and refresh his recollection.

The Plumed Knight, of James G. Blaine whose heirs gave his house for Maine Governor's residence, saw a face or heard a name once—and he never forgot.

Maine's Senator OWEN BREWSTER has a top-flight memory.

Farley, who broke with Franklin D. Roosevelt on the third-term issue has a little talk on Reaching the Hearts and Minds of Men.

He's had many years' experience with reaching hearts and minds, which was his major objective.

To be successful in politics, he says, a man must gain the confidence of enough voters to persuade them to vote as he suggests.

It's the same with the businessman.

The man in business is forever at the polls. He wins if he succeeds in instilling confidence in himself and his goods. That is also the idea behind advertising. To build up and keep before the public the name of a company or product.

It's the same with an executive whether he has a squad in uniform or employs men and women in civil life. He must reach the hearts and minds of his subordinates.

Success in command or civil administration doesn't depend so much on authority as on the ability to win confidence.

Farley puts good manners at the top of the list in the art of reaching other people.

This is something more than knowing how to hold your soup spoon or how to dress when you go to a church wedding.

"Good manners are much more than a capacity to say the pleasant but insincere thing. It is much more than mere tact. It is to feel and, above all, to show that you have a genuine concern in others. It means caring for people, respecting them, treating them as equals and sharing their fears and earthly concerns and their ideals.

"Closely associated with good manners is what we call 'good humor,' he continues.

"And I am not now talking about ice cream, with which my own product is a close competitor. What I mean is the manifestation in all outward dealings with the public of a calm and friendly disposition. This is especially true in politics.

"We have learned in that very complex art that the most certain way that a man can defeat himself is to get angry. People are not interested in other people's angers. Anger does not attract, it repels.

"It causes the victim to say and do things that he would not otherwise say and do. He loses his balance of judgment. He makes mistakes. He reveals defects in his own personality and in his own ideas. He lays himself wide open to debate. Sometimes it is not easy to maintain a calm attitude, but success in life, in any profession, and success in attaining our own peace of mind is only gained by meeting situations with a smile, by turning aside criticism and the ill-natured attacks of others with calmness and courtesy."

And memory. "It is true that I have a pretty good memory for names and faces, and I have met a great many people in my

life, all over this country and all over the world. I do not always trust to memory alone—that is too risky. I have, throughout my life, made it a habit, not only in politics but in business and socially, to help that memory by keeping a brief memorandum of anything which seems important, and at the same time incomplete and unfinished. I keep that memo until the matter is closed * * *

"I would like to add something at this point. It is not a manifestation of good manners for a person to go up to another and challenge him by saying, 'Do you remember me?' That puts you at a great disadvantage if you happen to have forgotten. I have found that the best way to meet that situation, when the challenge comes and when I am unable to remember, is to answer frankly that I do not. Such an answer is not always pleasant for me but it is a good reminder to the other person that he should be tolerant and not expect too much of other people's memories. Of course, in my experience that has not happened too often and I am glad that it hasn't, but when I meet it, I meet it frankly."

The Proposed Aluminum Industry for Montana

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

MR. MANSFIELD. Mr. Speaker, I am inserting in the RECORD a copy of a letter addressed to the Honorable Jess Larson, Administrator of the General Services Administration, two telegrams sent to me by Robert E. Harris and Robert C. Weller, and a newspaper story carried in the Great Falls Tribune of October 12, 1951.

I am turning this material over to the Hardy subcommittee investigating charges made against the Harvey Co. It is my sincere hope that this committee will make its findings known shortly so that this matter can be settled and the aluminum project allowed to go forward in the Flathead Valley of Montana.

The above-mentioned follows:

HON. MIKE MANSFIELD. The following is a copy of a day letter dispatched to Mr. Jess Larson today:

OCTOBER 11, 1951

MR. JESS LARSON,
Administrator, Defense Metals,
Procurement Administration,
Washington, D. C.

DEAR MR. LARSON: It has come to our attention that you have asked the Harvey Machine Co.'s loan be held up until the application of a Montana concern headed by A. J. Smith, of the Smith Engineering Co., of Kalispell, be investigated.

We do not know about Mr. Smith's ability to perform, while he states he has \$15,000,000 equity capital to put up. While we do not want to oppose Mr. Smith's application, we do not in any way feel that it should stand in the way of the Harvey matter.

Many things in connection with the Harvey Machine Co.'s application to come into Montana have been handled on a personal, rather than a business, basis. We think there have been instances of discrimination and unfairness. We think the recent headlining of the Harvey Machine Co.'s applica-

tion in connection with the power shortage in the Northwest and the accompanying smear campaign of Drew Faelson and certain Congressmen and Senators, was used in this area completely to divert the power from Hungry Horse Dam out of Montana. The congressional group involved in putting out the propaganda individually admit receiving their information from an Idaho paper, which to our knowledge, in almost all instances, has been a spokesman for the Idaho Power Co. over a long period of years. The Idaho Power Co. is in turn a sister company of the Washington Water Power Co. The diversion of this power into the State of Washington and out of Montana would be a welcome diversion to all of the parties. It would be a power grab. It would mean that the fruits of our labors would be diverted to another State for use by industry there. It would be the denial of industrial development in Montana.

We feel there has been far too much obstruction and delay, much of it inspired, with respect to the establishment of the aluminum industry in Montana. By using power from Hungry Horse Dam in Montana, we are not taking anything away from anybody. This has been answered by the Bonnevile Power Administration before at least two congressional committees in past 2 weeks.

Certainly the downstream benefits which are added by Hungry Horse Dam to existing plants in the Northwest is contribution enough for Montana water to make. We urge that you immediately instruct those responsible to bring about the entrance of an independent producer in the aluminum business at the earliest possible moment. There will be plenty of power available in Montana next year for an additional aluminum quota to be allocated the Smith Co. or any other company if they are able to perform and meet Federal requirements, but it seems ridiculous now to hold up the Harvey matter pending negotiations with any other company. Inasmuch as the Harvey Co.'s war production record has withstood the light of investigation and several agencies have stated there is no reason to hold up the loan, we can only interpret any further delay in the approval of the Harvey loan as an aid to the interests which are now attempting to stifle progress in western Montana.

We ask your cooperation in bringing the matter to a final and speedy conclusion.

Very sincerely yours,

FLATHEAD VALLEY CITIZENS COMMITTEE,
By DONALD C. IRLE, R.
KALISPELL CHAMBER OF COMMERCE,
By JAMES E. MURPHY, President

KALISPELL, MONT., October 13, 1951.
HON. MIKE MANSFIELD,
House of Representatives

Carpenters union and other organized building crafts now building Hungry Horse Dam are greatly alarmed over the apparent effort to divert this power out of Montana. Request that Smith Engineering Co. proposal for aluminum allocation not be allowed to interfere or delay the Harvey Machine Co. loan or construction plant for this area. Please make our wishes known to the appropriate Government agencies.

ROBERT E. HARRIS,
Business Representative, Northwestern Montana District Council Carpenters Union.

KALISPELL, MONT., October 13, 1951.
HON. MIKE MANSFIELD,
House of Representatives,
Washington, D. C.:

Flathead Valley loggers and lumber and sawmill workers local unions disgusted over apparent efforts of some Government agencies to find ways and means to take Hungry

Horse power out of Flathead Valley where it is badly needed to alleviate historically heavy seasonal unemployment. This entire district council supports its members in Flathead area and urges an end to all maneuvering now going on to defeat proposal for Harvey machine aluminum plant. Believe application by Smith Engineering Co., not in best interests of Flathead and Montana until after favorable conclusion of Harvey loan. Please represent our wishes to various agencies involved.

ROBERT C. WELER,
Business Representative, Montana
District Council Lumber and Saw-
mill Workers Unions.

[From the Great Falls (Mont.) Tribune of
October 12, 1951]

KALISPELL ASKS FAST ACTION ON HARVEY LOAN

KALISPELL, October 11—The Kalispell Chamber of Commerce and the Flathead Valley citizens committee has sent a letter to Jess Larson, Administrator of the Defense Metals Procurement Administration, urgently requesting fast action on the Harvey Machine Co.'s loan application for an aluminum plant here. It was announced today.

The action came as a result of information received here that Larson has ordered the Defense Production Administration to hold up action on the loan until a study has been made for another proposal for an aluminum plant made by the Smith Engineering Co. of Kalispell.

The letter said: "We do not know about Mr. Smith's ability to perform . . . while we do not want to oppose Mr. Smith's application, we do not in any way feel that it should stand in the way of the Harvey matter."

The letter was drafted by Donald C. Treloar, president of the citizens committee, and James Murphy, president of the chamber of commerce. Copies were forwarded to 18 Government officials and Congressmen who have been involved in the processing of the loan.

Tax Pinnacles

EXTENSION OF REMARKS OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Globe-Democrat of October 11, 1951:

TAX PINNACLES

Within a week Congress probably will pass the new \$5,500,000,000 tax bill, estimated to boost the annual Federal levy to \$67,000,000,000.

Most individuals will have to pay about 12 percent more, corporation earnings will take another \$2,000,000,000 slash and higher excises will add upward of \$1,200,000,000 to the costs of living. The public will utter a concerted groan and start paying through the nose.

We might as well face the fact we have to pay through the nose. Even with perfect tax policies and an economical Government in Washington, we would be forced to accept a punitive tax burden. That is the price of national rearmament and military aid to our allies around the globe. This is the price we must pay because of Soviet aggression and the Kremlin's imperial fanaticism.

So it is old hat to gripe arbitrarily about painful taxes. It is especially tiresome and futile if we do nothing to alleviate the problem. But it certainly is time the Nation calmly took stock of the runaway trend in taxation.

The United States can tax itself into an economic stall. We can tax ourselves into inflation. We can tax ourselves into a "bust" that would make the debacle of the early thirties look no worse than a scratched fender on our economic wagon. All this is precisely what Joseph Stalin expects and has publicly prophesied. His Communist policy of aggression, power threat, and subversion is directed at a crack-up of American economy.

Have we reached the tax peril point? How close are we?

Let's survey a few facts:

The new Federal tax rise means, according to a research study of the U. S. News and World Report, that \$84,000,000,000 a year will go to tax collectors, Federal, State, and local. It will be higher in 1952.

It means that approximately \$1 out of every \$3 of American income goes to taxes.

In 1940 the aggregate national taxation was \$15,500,000,000, the Federal share \$6,700,000,000. At World War II peak (1945) the aggregate levy upon the Nation was \$47,600,000,000, with Federal revenues \$37,300,000,000. Now the total taxes paid by the country will bulk \$83,900,000,000.

The new bill will be the third tax measure passed by Congress since the Korean war began. The combined result of these three laws is to add an estimated \$17,000,000,000 to Federal taxes.

It costs to rearm, and we must rearm. But billions of tax funds could be saved by Federal Government if it would come to grips with the problem of lavish Washington bureaucracy.

In the face of new, back-crushing imposts, the President has stood adamant against budget cutting by Congress. Government departments and other special-interest lobbies have exerted savage pressure to balk appropriation paring.

Estimates by Senators BYRD and DOUGLAS, Representative TASON, and others have set possible savings in nondefense spending at figures up to \$10,000,000,000. But the administration has ignored demands of the Hoover Commission or the few doughty economy spokesmen. It refuses to tighten its belt in a war emergency.

There is a point obviously at which taxes can smother the economy. They grow so steep as to destroy or erode initiative; they can cause lavish expenditures for unneeded purposes to avoid taxes. Some experts have placed the peril point at 25 percent of national income. America's tax bill now will be approximately 30 percent of income.

The Nation, its leaders and private citizens need to take a long, careful look at the stampeding tax trend. Not because of individual stress, or perhaps hardship, but because the structure threatens national economy. We have reached taxation pinnacles, beyond which may lie sheer destruction.

Truman Can't Lose

EXTENSION OF REMARKS OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 10, 1951

Mr. SABATH. Mr. Speaker, an article appearing in the September issue of the American Magazine written by an eminent son of a former great statesman

and Cabinet officer, Jonathan Daniels, editor of the Raleigh, N. C., News and Observer, entitled "Truman Can't Lose," struck me as a very timely and authoritative analysis of the national political picture, particularly as it concerns the future of our great President, Harry S. Truman. A great deal of to-do has been and is being made in the press daily over the possibilities and the probabilities of potential Presidential candidates in 1952, but I am convinced, as is Mr. Daniels, that Truman cannot lose.

For the edification of the many seers and prophets, as well as Members of the Congress and the public generally, I include the article by Mr. Daniels as part of my remarks:

TRUMAN CAN'T LOSE

(By Jonathan Daniels)

Harry S. Truman will be the Presidential nominee of the Democratic Party in 1952 and will be reelected President of the United States.

We seem all set now for a repetition of the old pattern: "He won't run; he can't win; ouch."

The people who were surprised in 1948 are now carefully rebuilding, hope by hope, the same toppy structure which fell on them in 1948. It will fall again. The emblem of Truman's opposition is not so much the elephant as it is a resilient Humpty-Dumpty who does his act every four years.

I do not expect to be surprised in 1952, but I was surprised one day during the summer when I talked with reporters after a visit to the White House. I had just seen Harry Truman, whom I know and admire, and I had sensed his attitude toward his candidacy and his problems. I told the reporters outside his office that in my opinion he would run again. The surprise was that this seemed big news to them. The news hit the radios before I left the White House grounds. It got front-page space all over the country.

I had thought everybody must realize that Truman will run again. Like the girl in the song he hasn't said yes and he hasn't said no. For him to say either now would be to court the administration troubles of a lame-duck President or to overemphasize pure politics in the Presidency. But he will say yes in good time.

Of course, those who are reluctant to have him run are putting redoubled stress on his own human reluctance. Some in their own eagerness for Truman's retirement are stressing Mrs. Truman's retiring personality, forgetting that she has never held Harry Truman back from any fight he felt he ought to make. Increasingly, however, the politicians of Truman's party, who know that they have to make the fight on his record, recognize that he is the man to make that fight. Inescapably he realizes that, too.

Truman has to run. Under the Constitution this is the only method by which a President deeply concerned for his program can put the democracy of the people behind it. Truman is deeply concerned. Barring profound and unexpected developments, he will win by a greater electoral majority than surprised the experts on the flabbergasting night in November 1948.

During the campaign there will be the often-repeated stories about his playing the piano. The ghost of Pendergast will be made to walk its millenth mile. But in the end the campaign will have been won on the high level of foreign affairs and American security.

There seems nothing strange or confusing to him about his foreign policy and he will have made the issues clear to the American people. They will understand that his purpose is effective peace in the face of an im-

placable enemy. He believes the people understand now the policies behind that purpose: economic and military assistance to our allies and the building of American strength as the central phalanx of a truly United Nations determined to bring sense and safety to the world. The Truman platform will be not merely the promise of peace but the clear demonstration of a way toward it.

The essence of his fight in 1952, as now, will be defense of his policies against those who by isolationism or going-it-alone, or a strange combination of both, would have America cut loose from its leadership in international cooperation.

His foreign policy is, however, by no means entirely foreign. To him the New Deal-Fair Deal is not merely domestic in its significance. The welfare of American farmers and workers, old people, children, the minorities, and the underprivileged is not only important at home; by example it is essential also in the contest for the minds and the hopes of the world.

Harry Truman will not find it strange if in the fight of 1952 he faces a continuing alliance of the isolationists and go-it-aloners with those who would make communism abroad an excuse for economic and social reaction in the United States. American aid and arms to other freedom-loving people and America's example to the rest of the world seem to him equal parts of a policy essential to the safety of the people of the United States. It is a policy, he believes, which appeals to their intelligence.

He will win on those issues. Already he has a tremendous head start, which his opponents, as usual, prefer to disregard. Every 4 years they energetically create the impression that the American people may do a political somersault. That undoubtedly makes both newspapers and polls exciting and salable. The records and the realities are less exciting but more informative.

National political somersaults are rare. The facts are that for many years this was a Republican country and for a long time now it has been a Democratic country. In five straight presidential elections 23 States have given their electoral votes to the Democrats. Even the census seems to have gone Democratic, since next year population increases will give those 23 States more electoral votes—251 of the 268 votes necessary to elect.

On the other hand, the States which have been most consistently Republican will add up to only 43 votes.

Let us look at some of the things which opponents of Truman are counting on in their predictions of a national political somersault in 1952:

The South is still mad about civil rights. Labor walked right out of the defense mobilization set-up. Taxpayers don't like high taxes. Farmers have been furious about beef roll-backs. There has been at least one milk coat, and Tom Pendergast is only 6 years dead. According to Senator JOSEPH R. McCARTHY, even Gen. George C. Marshall is a stooge of anti-American conspirators. Some people don't like Margaret Truman's voice and others are shocked by the Truman letters. The Republicans gained in the 1950 congressional elections. And Harry Truman is 67 years old. Here are some others:

1. The country is tired of Truman.

This can be regularly filed under "Time for a change." I think this feeling is recurrently true as it was under Roosevelt. Up to now, however, Truman has been lucky enough, as was Roosevelt, to reach the low points of recurring unpopularity many months before presidential elections. Truman, for instance, could not possibly be any lower in popularity than he was a year before the 1948 election.

2. The country showed it was tired of Truman when the Republicans made gains in the 1950 congressional elections.

This undoubtedly encouraged his Republican opponents, notably "Mr. Republican" himself, Senator TAFT, who was overwhelmingly reelected when the Democrats and labor tried to beat him.

One important item has been overlooked: While the Republicans made gains in the 1950 congressional elections, they made a smaller gain in the House than they made in any midterm congressional elections since 1934, just before the Roosevelt sweep in 1936.

3 The Congress which keeps its ear to the ground has been turning him down on practically everything he has asked, from civil rights to price controls.

Truman certainly has had his troubles with Congress, but there is nothing new about that. Roosevelt had so much trouble that he tried to purge some of his opponents in his own party. Also, using all his persuasiveness and powers of pressure, Roosevelt, 3 months before Pearl Harbor, was able to get selective service extended by a bare margin of one vote in the House. Actually, the Congress may now be giving Truman ammunition for an appeal to the people, though he may not be able to hit quite as hard at the present democratically controlled Congress as he did in 1948 at the Republican-dominated Eightieth Congress.

4 The farmers are furious.

Certainly they, or some of their leaders, have made some angry sounds about beef roll-backs and commodity price controls. This undoubtedly could be serious to Truman, who showed great and unexpected farm strength in 1948. It is worth remembering, however, that the beef roll-back fight is practically a playback of the fight in 1946, when the same combination of the Farm Bureau Federation, the National Association of Manufacturers, and the Cornbelt Livestock Feeders Association insisted that price controls of beef would cut beef production. They made it a campaign issue in 1946 "Ladies, if you want more beef, vote Republican." Many of them did. Two years later, however, even Iowa, where the Republican president of the Farm Bureau Federation lives, voted for Truman. Farmers who do not want their prices controlled at the top are still concerned about the system of supports from the bottom which the Democrats gave them.

5 Labor is unhappy and might go Republican or just sit at home and on its hands.

There was, indeed, the united labor walk-out from the Wage Control Board set up by Defense Production Director Charles E. Wilson and his big-business boys. Truman backed up Wilson. Incidents like that could make labor less friendly to Truman. But labor was also pretty angry before the 1948 election. After Truman's crack-down in the railroad strike of 1946, the head of the trainmen promised to spend his whole union treasury to beat Truman, who, he said, had signed his own political death warrant at a CIO meeting in New York. Truman was described as the No. 1 strikebreaker of the American bankers and railroads. John L. Lewis opposed him with bitter Lewis rhetoric in the 1948 campaign.

When the chips are down, however, labor has found, and will find again, little reason for voting for the party in which the title "Mr. Republican" has been given to one of the authors of the bitterly resented Taft-Hartley Labor Act.

6. "The people are sick of Pendergastism in Washington."

Certainly the changes have been rung on this one, and wrung pretty dry. On the basis of one fool and a milk coat, an effort has been made to prove that the Democrats in Washington have reached a proficiency in corruption equaling that of the Republicans in the Teapot Dome case. There is always too much grabbing and seeking around Government. There must be a constant vigilance to weed out the 5-percenters and the

bigger percenters in the influence racket. That is being done. The remarkable thing, in a Government spending billions under the scrutiny of eager political investigators, is that no major scandal has been uncovered in Government in 20 years.

Pendergastism is a dead issue. Though small and busy slanderers are still trying to smear Truman with it, the biggest and most powerful Republican paper in his home State, the Kansas City Star, has given him a clean bill of health on his connections with Tom Pendergast. Also, in 1948, the people of Missouri, who ought to know most about their own political machines, gave Truman a bigger majority than they gave Roosevelt in 1940 or 1944.

7 "The angry South just got started in revolt in 1948. In 1952, it will really pull out of any Truman party."

Actually, there seems less and less chance of a recurrence in 1952 of the Dixiecrat revolt. This does not mean that Truman has won the affection of the South. More southerners next year may vote the Republican ticket, though not enough of them to threaten any State. But the Dixiecrats are done. This judgment is based upon the increasing probability that the contest in 1952 will shift in emphasis from the civil rights of some Americans to the national security of us all. And in foreign policy the South since the time of Woodrow Wilson has been devoted to the kind of program Truman defends now.

Furthermore, the Dixiecrat revolt in 1948 accomplished nothing for the South except to reduce its voting strength in the 1952 Democratic convention. Because 4 Southern States failed to vote the Democratic ticket in 1948, the 11 Southeastern States, under the regular apportionment rules, will lose 16 votes in the 1952 convention. The southern revolt created no southern heroes and did not pay off for Strom Thurmond, who ran for President for the Dixiecrats. He was beaten 2 years later in his own South Carolina when he ran for the Democratic nomination for United States Senator.

A recent southern revolt meeting staged by Governor Talmadge, of Georgia, with Senator HARRY BYRD, of Virginia, as the speaker, lit no bonfires in Dixie. When Byrd lambasted the administration it was apparent that his speech was the same as he had been making since Roosevelt's second term. Also, in each Presidential year since 1940 Byrd himself has put up a small lightning rod as candidate for the Democratic Presidential nomination, and it has attracted very little southern lightning. His alliance with Talmadge will not add respectability to his reaction. The South does not like civil rights, but it is not ready for a combination of economic reaction and Bilboism to which Talmadge is the natural heir.

Undoubtedly the situation is complicated by the bad blood between Harry Truman and Gov. James F. Byrnes, former Secretary of State, since they separated in 1947. Byrnes has great prestige in South Carolina and in the South as a whole. However, he has declined to align himself with the Dixiecrats. It is very doubtful that at the age of 73 he would consider running for President on any third-party ticket. Yet if he does not run almost anyone else would seem definitely second class and unable to hope for a significant following. Suggestions that Byrnes might be nominated as Vice President by the Republicans to cement a new southern-Republican coalition have been heard less frequently since Republican optimism bounced again as a result of the 1950 congressional elections.

Byrnes has sometimes been sharply critical of some aspects of the administration's foreign policy since he ceased to direct it, but in other important particulars he has given it clear and strong support. Even most conservative southern Senators have been supporting the administration's foreign

policy and often doing so with vigor and effectiveness.

Undoubtedly a Supreme Court decision ending segregation in the public schools in the South might swiftly alter the attitude of the South on everything. The present chances, however, are that with a grimace the South which does not love Truman will put all its votes in the Democratic column next year.

8 "The left wingers who always voted for Roosevelt are dispersed or dissatisfied."

Certainly there is nothing new about that. Dewey beat Truman by only 60,989 votes in Dewey's own State because to Wallace went 509,579 votes which were largely drawn from the Democrats. Similar things occurred in Michigan and Maryland. Next year the Communists, who used Wallace to lead off the innocents, will prefer anybody to Stalin's chief antagonist, Harry Truman, but many thousands whom they duped may be expected to come home to the more liberal Democratic side of the contest.

9 "Truman just isn't a big enough guy to be President again, particularly at a time like this."

The effort still persists, of course, to make Truman seem still just the piano player and the busted haberdasher. That effort will continue. One thing already clear, however, is that he is not going to run against Superman but against a Republican politician nominated by Republican politicians.

The truth is that Truman has always seemed an unlikely candidate. He never in his life entered a contest for a major office in which he seemed to have the proverbial Chinaman's chance. Although he has nearly always looked like the man who could not win, Truman's career has been that of a man who could not miss. Whether he will have tough going in 1952 depends, of course, not only on how he runs, but against whom he runs.

Truman's favorite opponent would be Senator ROBERT A. TAFT, of Ohio. He would enjoy a campaign against Taft personally and would be delighted politically if the Republicans in Chicago in 1952 would nominate the Senator they have turned down twice before. Nobody could better serve to dramatize the differences which the Democrats want dramatized in the 1952 elections. No accident gave Senator TAFT the sobriquet, "Mr. Republican." To his admirers he embodies all the virtues of their conservative hopes. Also, Democrats think he personifies all those characteristics which conjure up the images of big business, old- and new-style isolationism, and upper-crust conservatism which the masses of the people have learned to distrust. Nobody so well as TAFT, they think, could hold the mass of Democrats enthusiastically behind Truman or any other Democrat.

Second in Truman preference probably would be Gen. Douglas MacArthur, whose fluorescent fading away after his dismissal as American military chief in the Far East undoubtedly did more than any other thing to make it certain that Truman would be a candidate again. Republicans, however, have been shying away from MacArthur since their initial enthusiasm for him on his triumphant return. He not only would make a colorful candidate, but one who would make the issue of foreign policy exactly as the administration wishes it to be made.

The big mystery candidate, of course, is the other soldier. So far the polls, if not the politicians, have indicated that more people this year have been for General Eisenhower for President than for anybody else, including Truman. Presidents are nominated by political parties, however, and nobody yet knows to which party, if either, Eisenhower belongs.

Some effective Republican politicians have declared themselves for Eisenhower, and it has been suggested that Truman himself has had Eisenhower under wraps as his own successor as Democratic nominee next year. Truman has made no statement suggesting that. Indeed, when Senator PAUL H. DOUGLAS of Illinois, himself often suggested as Democratic candidate for President or Vice President proposed that both parties nominate Eisenhower for President and presumably forego any election, he got a sharp crack from Truman. When asked about the Douglas suggestion, the President seemed sarcastic. With DOUGLAS for Vice President, he suggested.

Apparently the proposal irritated the President. Truman has not missed the fact that some of those urging Eisenhower as the Democratic nominee are anti-Truman Democrats who believe they might end the New Deal-Fair Deal domination of the party with the admirable soldier whose views on most public questions nobody knows.

Eisenhower's position is complicated too: Not a Democrat so far as anybody knows, he is the personal symbol of Truman's European arms program which has been criticized and limited by the Republicans. Also, he is still a soldier at a time when the Truman administration has sternly met MacArthur with the issue of civilian control.

Eisenhower has Truman's admiration and respect, but I am confident he will not get his mantle. Truman himself is going to need that at the whistle stops.

I doubt that either party will nominate Eisenhower. The last time the Republicans turned to an outsider and an amateur they got Wendell Willkie, and the Old Guard did not like that or him. If the Republicans believe they can win they want to win with a man about whose Republican ideas there can be no question.

If Eisenhower were nominated he would be a much better candidate in July than in November. In the guerrilla fighting of American politics he would have difficulty maintaining the dignified and spotless role of knight in shining armor. Also, while the MacArthur parade demonstrated considerable market for a savior in uniform, it also stirred deep and ancient prejudices against military direction of American affairs.

There is no shortage of willing Republican opponents to Truman. Governor Dewey may seem to be in exactly the same position William Jennings Bryan was in 1904. His travels in the Far East, which Senator TAFT caustically referred to as a holiday, suggest that he means to be going somewhere. Harold Stassen could be persuaded to give up an academic career. JOE MARRIN and JOE MCCARTHY would both be willing.

Truman in a fight is not the kind of campaigner who needs to be afraid of anybody, but in my opinion probably the most dangerous man he could meet would be Gov. Earl Warren, of California. If Warren has no national record to commend him in national affairs, neither does he wear any of the scars of national contention. He is a Republican who does not seem the stereotype of the Republicanism which has now been five times rejected.

Indeed, no Republican in the United States has shown such facility in picking up Democratic votes. Last year in his campaign for reelection as Governor he beat the Roosevelt Crown Prince Jimmy by more than 1,000,000 votes. As second man on the Republican ticket in 1948 he could not quite pull California to Dewey, but as top man he might easily win his own State, which will have seven more electoral votes in 1952 than it had in 1948, more than any State except Pennsylvania and New York.

Warren is not so well known in the East as some other Republican candidates, but he

is not so well worn, either. He did his duty as Vice Presidential candidate with Dewey in 1948, but somehow seemed untouched by the Dewey deflation. I do not believe Warren could beat Truman, though the similarity of the appeal of the two men might make a real race.

While Warren appears to be the toughest opponent in sight, the toughest issues on which Truman will make his fight include high taxes, high prices, criticism of the State Department, the war in Korea, General MacArthur, bureaucracy, and Government spending.

The Democratic ticket will need strengthening. Undoubtedly ALLEN BARKLEY added much to its appeal in 1948. He has been a very popular Vice President. Apparently his age and health may not permit his renomination in 1952. That would create a real hole to be filled. There will be no shortage of men to fill it. Justice William O. Douglas, who has often been "a bridesmaid but never a bride" will be prominent again. He turned down the Vice Presidency in 1948. The rejection of Truman's offer then may not make Truman so ready to offer it to him next year.

Truman can name his running mate; and some of those most prominent in the public eye may seem less acceptable in his. Some of Truman's close associates felt that Senator ESTES KEFAUVER, of Tennessee, as chairman of the Senate Crime Investigating Committee before the 1950 election, showed a positive addiction for investigating Democratic neighborhoods and avoiding Republican ones.

Senator PAUL H. DOUGLAS, of Illinois, apparently did not particularly please Truman when he proposed that both major parties nominate Eisenhower.

Senator J. WILLIAM FULBRIGHT, of Arkansas, however well or badly he may have handled the RFC hearings from the point of view of the White House, irritated Truman when he suggested that Truman resign after the Republicans won the congressional elections of 1946.

Senator RICHARD B. RUSSELL, of Georgia, who has done a fine job as chairman of the MacArthur investigation, would as Vice Presidential nominee end any fears of a repetition of southern revolt, but RUSSELL was the angry South's candidate for President against Truman in the 1948 convention and might be unwilling to take second place on a Truman ticket.

Senator ROBERT S. KERR, of Oklahoma, would be available and effective on the stump. Senator BRIEN MCMAHON, of Connecticut, has made a good impression as chairman of the Joint Committee on Atomic Energy and has kept himself relatively free of the sectional contentions within the party.

A recent but very popular newcomer to party politics, Senator BLAIR MOODY, of Michigan, will be worth watching when the process of selection narrows down. So will a number of others: Gov. Sidney S. McMath, of Arkansas; Gov. Adlai E. Stevenson, of Illinois (whose grandfather was Vice President under Cleveland); Gov. W. Kerr Scott, of North Carolina; Senator Clinton P. Anderson, of New Mexico; Secretary of the Interior Oscar L. Chapman, of Colorado; former Secretary of the Army Gordon Gray (now president of the University of North Carolina); Secretary of Agriculture Charles F. Brannan, and a body of dark horses, one of whom may now be only a gleam in Harry Truman's eye.

Truman will be the man making the race. And his victory will be a surprise again. Talk to the fellow you meet at the club. Talk to your neighbor. Talk to the experts. Most will tell you again that Truman has not a chance: "One accident, not two. One surprise, but surprise can't be a habit." (I'm not so sure of that.)

What they say repeats what was said in every race in which Truman ever ran. He

always seems like the tortoise looking through spectacles at the hind end of the hare. But he does not lose.

Certainly nothing less than an explosion will beat Truman. There is no present indication that the States which have rolled up regularly in the Democratic column five times straight will not be there again. Here they are: Arizona, Arkansas, California (Warren might change that), Florida, Georgia, Idaho, Illinois, Kentucky, Massachusetts, Minnesota, Missouri, Montana, Nevada, New Mexico, North Carolina, Oklahoma, Rhode Island, Tennessee, Texas, Utah, Virginia, Washington, and West Virginia. As I said, they will cast 252 votes in the electoral college. Necessary to elect: 266.

Furthermore, in 1948, but for the votes which went to the Dixiecrats and the Wallaceites, the Democrats would have carried Alabama, Louisiana, Mississippi, South Carolina, New York, Michigan, and Maryland. In 1952 these States will cast 111 votes. Also in 1948 Truman carried Iowa, Ohio, Colorado, Wisconsin, and Wyoming. In 1952 these will cast 56 votes. Total for these last two groups of States, 167 electoral votes. Add this to the total of the States which have been consistently Democratic in five elections and the total is 419. Necessary to elect: 266.

No sensible prognosticator would claim any such exact total for Truman now. Also, I am not conceding the other 112 votes to the Republicans; only one in five elections have they received that many. All I say is that my assumptions are a molehill beside the mountain which must be claimed by those who say that Truman can be beat.

No region or group could claim Truman's 1948 victory. It was, indeed, preceded by the loudest complaints against him by the organizations of farmers, labor, and professional politicians. In the election no minorities came to him with the balance of power from Harlem or the Bronx, Philadelphia or Detroit. He did not require the solid South or the city bosses. He carried California, though he received 74,000 fewer votes than Roosevelt got in the strange and wonderful county of Los Angeles. He got along without the extreme right or the extreme left.

Those who admitted their surprise at his victory have never yet really got around to admitting even to themselves the terrific vote-getting quality of the man, particularly among the town and country people, the unorganized people, the people the politicians and the pollsters apparently did not know existed.

These people are still there. Truman knows they will elect him again. He will not be cocky about it. Indeed, he will still look a little unimpressive on the back platform of his train, speaking as the leader of the free world before the upturned faces at tank towns. He will be confident. He has gone to some pains to tell the newspapermen who have watched his exuberance that he is never cocky—just confident.

"I think," he told them, "that the programs and the policies that the Executive has been endeavoring to put into effect are right, and I think the people of the United States and of the world believe they are right."

For the benefit of the people of the world he means to give all the people of the United States a chance to confirm that next year. They will. The politicians, the pollsters, the pundits might as well get ready for that if they want to avoid another rude shock in 1952.

They can't beat Truman. In this tough world "here will be no change in the policy or the President of the United States.

Statement of the Red Bay Industrial Committee on the Locational Advantages of Red Bay, Ala., for Plants to Manufacture Office Furniture

EXTENSION OF REMARKS

OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. ELLIOTT. Mr. Speaker, there has recently come into my hands an attractive statement of the locational advantages of Red Bay, Ala., in Franklin County, for plants to manufacture office furniture.

This statement was prepared by the Red Bay Industrial Committee, in cooperation with the Alabama State Planning Board in July 1949. It emphasizes the large supply of native labor, available raw materials, including 39 species of timber, cheap power and fuel, transportation by rail, truck, and bus, the good climate, community attitude, government, schools and churches of Red Bay, and the surrounding area.

Red Bay is situated in the midst of an excellent farming area. Its manufacturing assets are small, but substantial, consisting primarily of lumber, garment and feed manufactures. Its people are enterprising and industrious, and they are to be commended on their foresight in urging the advantages which the town possesses upon prospective industries seeking a good location for expansion purposes.

A new spirit pervades the entire Seventh Congressional District of Alabama. A great effort is being put forth to improve the economic opportunities available to all the people.

In this effort the Seventh District is doing what for it is pioneer work. The results of this work will be in proportion to the effort put forth by all groups.

It has been my privilege, as a Member of Congress, to work closely with the groups dedicated to the industrial development and promotion of the assets and resources of the Seventh Congressional District, including the people of Red Bay.

I include the statement of the Red Bay Industrial Committee, and the Alabama State Planning Board in the RECORD.

To the Manufacturer of Office Furniture:

Red Bay, Ala., has locational advantages for your manufacturing operations. In a framework of facts and truth, we are presenting data setting forth the locational advantages of Red Bay, Ala. This information is presented to you in the hope that you will find it pertinent and that you may establish a plant in Red Bay which will be productive and profitable.

The tremendous advantages of Red Bay are in terms of labor availability, large and growing markets, and raw material availability in this area.

GEOGRAPHIC LOCATION

Red Bay is located in the northwestern section of Alabama. It is on the Alabama-Mississippi State line in western Franklin

County. Red Bay is 50 miles southwest of Muscle Shoals on the Tennessee River and the Tri-City region (Tusculum, Sheffield, and Florence, Ala.). It is 78 miles west of Decatur, Ala.; 141 miles northwest of Birmingham, Ala.; and 142 miles southeast of Memphis, Tenn. The city is 50 miles northwest of Tupelo, Miss., and 50 miles southwest of Corinth, Miss.

The surrounding land is best suited to timber growing and range pasture with some excellent land planted in row crops. The land is generally rolling to hilly.

POPULATION

The 1940 census showed a population of 1,560 persons for Red Bay. A present estimate places the population at 2,200 persons. Franklin County had a population of 27,532 persons in 1940 of which some 5 percent were nonwhite.

LABOR FORCE

Active labor supply: Files in the Alabama State Employment Office in Russellville, the county seat, show 87 active applications from the Red Bay area. Of these, 10 are classified as skilled, 35 as semiskilled, 27 as unskilled, 11 as clerical, and 4 as professional. This does not show the complete situation as this office is located 26 miles from Red Bay and many people seeking work do not go to Russellville to register.

Potential labor supply: There is at present a definite surplus of workers in the Red Bay area. The present estimate made the 1st of July 1949 shows that within a 15-mile radius from Red Bay there are some 300 females, semiskilled and unskilled, available for work, and 450 males, semiskilled and unskilled, desiring labor. Most of the women are interested in local employment and are for the most part housewives, with a few textile and clerical workers. The available male labor supply is composed mostly of farm and sawmill workers, with a few industrial workers. At present a noticeable number of industrial workers commute to the tri-city area and a majority of these would be interested in local industrial employment.

State labor supply: In the State of Alabama it is estimated that at present there is a fluid group of unemployed workers numbering between 65,000 and 75,000 persons. These are 80 percent unskilled and 20 percent skilled and any reasonable labor demand could be supplied at any locality within the State.

MATERIALS

Alabama is the third largest lumber-producing State among the 48. Franklin County, Ala., and the two adjoining counties in Mississippi are large lumber producers. Figures on standing timber and lumber production are as follows:

1946 Estimate, Franklin County, Ala., standing timber

Sawlog net volume:	Board feet
Softwood.....	106,900,000
Hardwood.....	134,100,000
Total.....	241,000,000
Total net volume:	Cords
Softwood.....	511,400,000
Hardwood.....	1,282,800,000
Total.....	1,854,200,000

1947 Lumber production, Franklin County, Ala.

	Board feet
Softwood.....	4,926,000
Hardwood.....	4,834,000

The species of timber growing in the county are basswood, beech, birch, red cedar, chestnut, cottonwood, cucumber tree, dogwood, American elm, slippery elm, winged elm, black gum, sweet gum, tupelo gum, mockernut hickory, pignut hickory, holly,

hop hornbeam, red maple, sugar maple, mulberry, black oak, blackjack oak, chestnut oak, red oak, post oak, white oak, willow oak, persimmon, loblolly pine, shortleaf pine, Virginia pine, sassafras, sourwood, sugarberry, sycamore, tulip, poplar, black walnut, and black willow

ELECTRIC POWER

Lights and power are furnished by the Tennessee Valley Authority to the city of Red Bay which has its own distribution system. The commercial rate for large blocks of power is as follows:

Demand charge

First 1,000 kilowatts of demand per month at \$1 per kilowatt

Excess over 1,000 kilowatts of demand per month at \$1 per kilowatt.

Energy charge

A Applicable to annual customers (defined as all customers under this schedule other than seasonal customers).

First 15,000 kilowatt-hours consumed per month at 8 mills per kilowatt-hour

Next 25,000 kilowatt-hours consumed per month at 6 mills per kilowatt-hour.

Next 60,000 kilowatt-hours consumed per month at 4 mills per kilowatt-hour

Next 400,000 kilowatt-hours consumed per month at 3 mills per kilowatt-hour

Excess over 500,000 kilowatt-hours consumed per month at 2.5 mills per kilowatt-hour

B Applicable to seasonal customers (defined as customers such as cotton gins, cotton oil mills, and others, who, owing to the seasonal character of their requirements, take power for no more than 8 months in the year)

First 10,000 kilowatt-hours consumed per month at 10 mills per kilowatt-hour

Next 25,000 kilowatt-hours consumed per month at 6 mills per kilowatt-hour

Next 65,000 kilowatt-hours consumed per month at 4 mills per kilowatt-hour

Next 400,000 kilowatt-hours consumed per month at 3 mills per kilowatt-hour

Excess over 500,000 kilowatt-hours consumed per month at 2.5 mills per kilowatt-hour

Charge for energy in excess of 360 times the demand shall be subject to a reduction of 0.5 mill per kilowatt-hour from the otherwise applicable rate

For the purpose of illustrating the cost in mills per kilowatt-hour of electrical energy for industry under operating conditions the following actual case is offered:

Garment factory 20,040 kilowatt-hours used over 3-month period. Total cost, \$129.88 6.4 mills per kilowatt-hour.

TRANSPORTATION

Railroads: A main line of the Illinois Central Railroad from Chicago, Ill., to Birmingham, Ala., serves Red Bay. There are 14 scheduled trains with three mail deliveries daily over this line.

Highways: State Highway 24, a first-class road running east and west, connects Red Bay with Russellville and Decatur, Ala. At Russellville there are direct United States highways to Nashville and Memphis, Tenn., and Birmingham and Montgomery, Ala. Good roads connect 24 with U S 78 (between Birmingham, Ala., and Memphis, Tenn.). There are also connections to Mississippi Road 25 which leads to St. Louis, Mo., and northward by way of U S 72.

Buses: The Red Bay Bus Lines operate between the city, Russellville and Decatur, Ala., with four daily schedules each way. At either of these towns bus connections with Greyhound and National Trailways Bus Lines lead to all major points in the Nation.

Trucks: B. and M. Express picks up freight at Red Bay frequently for delivery to major points over the Nation. Local lines provide short-haul service.

MARKET AND TRADE AREA

The purchasing power of consumers increased since 1940 at a faster rate in the Southeast than in the rest of the United States.¹ From 1940 to 1947, incomes of individuals rose by 184 percent for the 11 Southeastern States,² whereas the gain for the country as a whole was 150 percent. The gain for Alabama was 211 percent. Improvements in land use and intensive industrial development give some evidence that the favorable trend in the South is likely to continue.

The number of consumers in the South has also been increasing at a faster rate than that for the United States, even after allowing for migration. The rise in incomes has modified the market estimates based on the number of potential consumers for most products. The first map following shows the population within radii up to 1,000 miles of Red Bay. The second map shows population within radii up to 200 miles.

The gain in business and industry has been just as outstanding as the purchasing

power above and was one of the main causes of the income gain. Therefore, the market for office furniture is keeping pace with the general increase in market potential in the South.

WATER SUPPLY

There is a municipally owned water plant which supplies Red Bay. The water is filtered and chlorine treated as it comes from springs and shallow wells. The daily capacity of the plant is 220,000 gallons, and the average daily usage is 160,000 gallons. A recent analysis of this water by the Alabama Department of Public Health shows total alkalinity, 16 parts per million, total hardness, 15 parts per million, pH (acid factor), 6.6.

The cost of water is as follows: First 3,000 gallons, \$2, next 7,000 gallons, 50 cents per 1,000, next 15,000 gallons, 40 cents per 1,000; next 25,000 gallons, 30 cents per 1,000, next 25,000 gallons, 25 cents per 1,000; next 125,000 gallons, 18 cents per 1,000; all over 200,000 gallons, 12 cents.

Alabama taxes on manufacturing corporations

Tax	Payer	Basis	Rate
1. Entrance fee (paid only once)	Foreign corporations	Capital employed in Alabama during the first year of operation	25 percent on first \$100, 5 percent on next \$900, 1/10 percent on all over \$1,000, \$5 minimum, \$100 maximum
2. Corporation permit (annual)	Domestic corporations	Paid capital stock	
3. Corporation franchise (annual)	Domestic corporations	Capital employed in Alabama	\$2 per \$1,000.
4. Corporate income tax (annual)	Domestic corporations	Full stock	
	Foreign corporations	Capital employed in Alabama	
	Domestic corporations	Net income	3 percent.
	Foreign corporation	Net income earned in Alabama (expenses, interest on indebtedness, taxes paid or accrued, etc., are deductible from gross income)	
5. Property taxes (annual)	Corporations, individuals	60 percent of value of all real and personal property.	

State	Mills
Franklin County	6.5
City of Red Bay	11.5
City of Red Bay	5
School district	3
Total (per dollar or \$2.60 per \$100)	26

Strong consideration will be given to exempting county and city taxes for a period of 5 or 10 years. The city has no special taxes on gasoline, cigarettes, tobacco, etc., other than a 1-cent tax on cigarettes.

Climate¹

Month	Normal precipitation	Normal mean temperature
	Inches	" F.
January	5.00	43.0
February	4.80	44.0
March	6.00	54.0
April	4.60	61.0
May	4.10	69.5
June	4.00	77.0
July	4.70	79.5
August	4.10	79.2
September	2.80	71.0
October	2.90	62.5
November	3.60	51.5
December	5.30	41.0
Year	51.00	61.6

¹ Interpolated from normals of stations in area.

INDUSTRIAL DEVELOPMENT IN AREA

Industrial activity in Red Bay is small but thriving. The lumber industry is the largest industry operating in the area at present.

¹ Source: Survey of Current Business, August 1948.

² Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, and Virginia.

It is reasonable to believe the lumber industry will continue on a substantial basis in this area because the stands of timber are being cut on a sustained yield program. A garment factory specializing in children's clothes has grown from a very small beginning into a stable industry employing some 80 people.

There are several local consumption industries in Red Bay, such as a feed mill producing prepared animal feed and some corn meal products. This mill employs about 20 people.

Several cotton gins process and bale the locally grown cotton crops.

Desirable industrial sites are available at reasonable cost within the city limits.

LIVING CONDITIONS

Health: Red Bay is the itinerant point for a full-time health unit that operates from Russellville, Ala. A free 4-hour clinic is held in the city hall every week. Once a month a State sanitary officer makes a scheduled survey of the business establishments in the city. At present there are three practicing physicians and one resident dentist in Red Bay.

The nearest hospital is in Russellville, Ala., 26 miles east of the city.

Alabama was the third State in the Nation to provide a full-time health department in every county. Alabama was the first State to pass and enforce legislation for the detection and treatment of syphilis and for the detection of tuberculosis in the 14-50 age group. The county health offices hold free periodical clinics, supervise public water

supplies, and work to combat malaria, typhoid, and other contagious diseases.

Housing: At present there are no available housing facilities in Red Bay, but building space and supplies are readily available. Houses in the city with adequate yard and garden space generally rent from \$80 to \$45 a month.

Recreation: There has recently been constructed a canteen for young people in the city. The American Legion Hut is also available to the citizenry for use the year round. There is a large, lighted baseball-football field and a new \$40,000 gym is being completed at the high school which will greatly add to the city's recreational facilities. There are also a motion-picture theater and a roller-skating rink. Wilson and Wheeler Dam reservoirs on the Tennessee River are within 50 miles and Bantock National Forest is 70 miles distant. These are nationally known recreation areas.

CIVIC ASSETS

Schools: The Red Bay school system consists of a senior high school, junior high school, and elementary school for white children, along with a junior high school and elementary school for Negro children. The school system is staffed by a principal and 22 teachers. During the 1948-49 school session there were 104 senior high school students, 135 junior high school students (including Negroes), and 400 elementary school students (including Negroes).

Churches: There are seven churches in Red Bay of the following denominations: Methodist, Baptist, Church of God, and Christian. Five of the churches are for white people and two are for Negroes.

Organizations: The Civitan Club, a businessmen's luncheon club, meets regularly and sponsors civic improvement programs. There is also a lodge of Masons, the American Legion, and a VFW post. For women there are garden clubs, bridge clubs, sewing circles, and the Eastern Star. For children there are Boy Scouts, 4-H, and F. F. A. organizations.

LOCAL GOVERNMENT AND SERVICES PROVIDED

Red Bay is governed by a mayor and council. Municipal services provided are fire and police protection 24 hours per day. Adequate sanitary sewers are maintained and garbage is collected regularly.

A community canning plant is maintained. Individuals with surplus garden produce may avail themselves of this facility to can the produce for winter use.

ATTITUDE OF COMMUNITY TOWARD INDUSTRY

The municipal authority and civic organizations of Red Bay are ready and willing to offer any reasonable cooperative assistance to industry in the community. Every effort is being made to make Red Bay a pleasant place to live.

Telecasting of Games

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial from the Boston Herald of Friday, October 12, 1951:

LET TV COMPETE

The Justice Department is performing a service to both television and the general

public by challenging the National Football League's rule limiting the telecasting of games by member clubs.

TV has undoubtedly posed a major problem for the sports promoters. When a big sporting event is televised, thousands of potential box-office customers stay home and enjoy it free. The big stadiums and sports palaces are in danger of becoming empty shells. And even minor sports are hurt by the tendency of the public to concentrate its interest on the big contests which television now makes so widely available.

But in the inevitable adjustment which the new medium is occasioning there must be some rules. The old vested interests must not be allowed to stifle TV altogether. And in the sports field this is now a real danger.

The Government is charging the National Football League with engaging in a conspiracy in restraint of trade and violating the Sherman Act, because it has bound its members in several States to boycott certain stations and "black out" telecasts of their games to certain areas. Whether the league's actions in fact violate the law will have to be decided by the courts. And the results will be of extreme interest to other organizations, notably the National Collegiate Athletic Association, who have adopted similar restrictions against TV.

But we are convinced, in any case, that the principle which the Federal men are seeking to establish is sound. Whether or not the Sherman Act proves applicable, it is certainly important from a public point of view that all restrictions be removed on the right of each football club to determine for itself whether and on what terms it will sell its broadcast and telecast rights. This is the essence of a competitive system.

Television must sell itself both to the public and to the legitimate promoters of sport. It should get no special favors. But neither should its opponents be permitted to gang up on it and exclude it from an important field of entertainment and communication without a chance.

If the Justice Department has a case under the Sherman Act, an early decision will clear the air enormously. If it does not, the need for eliminating combinations to restrict TV will remain and other means must be found to bring the boycotters around.

We cannot afford permanently to hold back anything as big and vital as TV.

OPS, Like the Old OPA, Is Doing an Effective Job of Taking Beef Off Your Dinner Table

EXTENSION OF REMARKS

OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 25, 1951

Mr. BUFFETT. Mr. Speaker, under leave to extend my remarks, I wish to insert the following article from the Omaha (Nebr.) Daily Journal-Stockman:

SAME METHODS, SAME RESULTS

During the reign of OPA in the livestock and meat industry a few years ago market history was full of evidence of how Federal control strangles production; disrupts normal distribution of supplies; and promotes illegal trading through violations of the price laws. In the short time that OPS has thrown its authority around in this business

its actions have upset the well-regulated meat and livestock industry more quickly than even OPA did during and after World War II. It took OPA some time to turn production down. But not so with OPS. Here is a record taken from Government files of what has happened since OPS froze meat prices late last January, its first plunge into control of the meat industry:

In January packers under Federal inspection butchered 1,159,942 cattle, the biggest January total in 3 years, and 5 percent more than January of last year. The December 1950 volume ran 4 percent ahead of a year earlier. November was up 3 percent and October 1 percent over the same period of 1949. Beef production was on its way up. But then the blow fell. Mr. DiSalle and his misinformed "wrecking crew" went to work on January 26, 1951, with their "monkey wrenches." It was not long before they had beef production and distributing machinery slowed down and heading toward chaos.

Department of Agriculture data shows that February butchering of cattle dropped to 887,448 head, the smallest of any month since May 1948, and down 5 percent from February 1950. It was the smallest February total in 8 years. Every month since has seen less cattle handled than in the same month of 1950, decreases replacing the increases shown before OPS's first action. March volume dropped 10 percent behind last year, April was off 8 percent and May off 8 percent.

On June 4, OPS tightened its strangle hold on beef packers by ordering all plants to observe ceiling price regulations for live cattle. DiSalle and his men should have known that the only packers who would abide by the new rule would be the same packers who were losing business steadily to the illegal trade, the same meat interests that were put almost out of business of OPA in 1946. Inspected butchering of cattle immediately tumbled further below 1950. The June slaughter of 786,861, down 26 percent from last year, was smallest for any month since September 1946, the month before President Truman was forced, by the worst meat famine the country ever knew, to end all controls over the industry.

It is not surprising that we must go back to OPA days to find beef production as low as in 1951, because those in control now are following the same harmful methods of destroying tonnage. Price administrators lost a little of their power at the end of June when slaughter quotas ended. This was immediately reflected in some slight improvement in inspected production and some improvement in distribution. July slaughter was down only 14 percent from last year and the August total down 10 percent. However, in the first 9 months of 1951 inspected packers butchered about 1,000,000 fewer cattle than a year ago, and only 1,000,000 more than in 1946 when many retail butcher shops in the country were closed because black markets had taken over the meat industry.

Justice Delayed Is Justice Denied

EXTENSION OF REMARKS

OF

HON. EDGAR A. JONAS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. JONAS. Mr. Speaker, I call attention to an editorial which appeared in the Washington Post on Sunday, October 14, 1951. The editorial is entitled "Illinois Needs Judges."

Mr. Speaker, I worked in the interest of and supported legislation that made provision for more Federal judges to be appointed to the United States district court in the northern Illinois district. I charge that it is a crying shame and a disgrace that Illinois is being deprived of the benefit of more judges, due in no small measure to that of politics and political jockeying.

The editorial quotes from a report of the Director of the Administrative Office of the United States Courts, and his description of the crowded condition of the court calendar in the northern Illinois district should supply all of the argument that is required to support the reasons for a clogged and crowded court calendar which has resulted from the dereliction of those in authority and charged with filling the judicial positions created in the Eighty-first Congress.

Mr. Speaker, how long must the people of Illinois tolerate a condition that is depriving them of even-handed justice? We are denying justice to these people due to a long and shameful course or procrastination superinduced by the juxtaposition of politics.

Mr. Speaker, under unanimous consent to extend my own remarks in the Appendix of the Record, I include therein an editorial entitled "Illinois Needs Judges," which follows:

ILLINOIS NEEDS JUDGES

President Truman's comment that he assumes that some day he will make new appointments to the two vacant judgeships in Illinois is far from being reassuring. Illinois needs additional judges now. Of course the President is irritated by the Senate's rejection of his two previous nominees because the method of their selection was obnoxious to Senator DOUGLAS. But he has only himself to blame. If his previous nominations were not made entirely for political reasons, they were casually made, and when Senator DOUGLAS protested against such methods of selection the President refused to correct his error. In the circumstances the Senate was justified in wiping the slate clean and, in effect, asking the President to start over again.

The action of the Senate has not, however, made it any less urgent to fill these judgeships. In his recent annual report as Director of the Administrative Office of the United States Courts, Henry P. Chandler, has this to say in respect of the northern Illinois district where these vacancies exist:

"A constant increase in the pending civil caseload in this district has continued, due largely to the fact that there have been three vacancies for the last year, only one of which has now been filled. Civil cases filed were 1,993, the number terminated 1,774, and the pending cases on June 30, 1951, were 2,231. For cases tried and terminated in 1951, the median interval from filing to disposition was 16.7 months and from issue to trial was 10.8 months. With the addition of two more judges to fill the judgeships created by Congress last year, the situation should begin to improve immediately."

Illinois is not the only State in which the law's delays often mean the denial of justice. Some other States are in even more critical need of additional Federal judge power. But the situation in Illinois is sufficiently acute to demand prompt attention. With the old controversy settled, will President Truman be big enough to swallow his defeat and give Illinois the kind of judges that it obviously wants? If so, he will have to consult with Senator DOUGLAS and the leaders of

the Illinois bar. For a change the doctrine of senatorial courtesy has been used to require higher standards of judicial selection than the President was originally disposed to follow.

Pulaski Day Program

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following address which I delivered in connection with the Pulaski Day program of the Polish United Societies of Chelsea, Mass., on Sunday, October 14, 1951, at Pulaski Monument, Chelsea Square, Mass.:

When Count Casimir Pulaski came to the New World, he stepped ashore at Marblehead in Massachusetts. On his way to Boston, he must have passed close to this place where we stand, near the monument that has since been set up in this square to perpetuate his memory.

The deeds that made him famous occurred almost 200 years ago. They belong to the past but the courageous spirit of the man and his devotion to liberty are desperately needed today.

We gather before his monument to pay tribute and to take heart.

For the struggle to win peace and freedom is not something that is embalmed in history. It goes on in every generation, as we who live in the year 1951 well know.

A child depends upon his parents. The time comes, however, when the child must mature and in turn assume parental responsibilities. The same may be said of nations. You and I grew up thinking that all the tremendous efforts to win and strengthen our independence had been made by men and women in the past, that the worst was over, and that life for us would be clear sailing.

World War II dispelled that dream.

The mounting American casualties in Korea tell us that we can never afford to relax.

The clouded future will test our worth, even as it did to Pulaski, in his time.

Will we prove ourselves, as he did, for the benefit of those who come after us? If we don't, our lives will have little meaning except that we have taken up a little space and time. And we will have lost for our children that which our forefathers won for us.

We are sometimes confused and discouraged in these tense days by the evidence of shallow and uncertain leadership in too many quarters.

Remember that this is nothing new.

This Nation as a whole has the vitality and the endurance to surmount any crisis. Sometimes our criticism springs from our own lack of confidence—seeing the occasional defects but missing the over-all strength of this, a people's government. It is we who choose or chance our leaders. They represent us. In the larger sense, however, the worth and purpose of the United States is determined by the millions of American citizens, by their faith and their industry and their sense of justice.

There were times when Pulaski was discouraged, but he never quit.

He not only had to fight the enemy in front of him, but the timid and short-sighted

civilian leaders behind him. He was shocked by those who put narrow personal interest before the claims of a nation that was struggling for birth.

But he had the physical and the moral courage that was supreme against the dangers of the battlefield and the cowardly corruption behind his own lines.

There is the bravery of a soldier, and there is the bravery of an honest citizen.

The two have much in common.

Joined, they are unbeatable.

The example of Pulaski's leadership drew many citizens to his standard. They became soldiers all, defeating the best professional and mercenary warriors of Europe before they returned to their plows and their looms and their shops. Pulaski, the Polish count, and the rough frontiersmen of the New World were united in their respect for one another as freemen and in their opposition to oppression.

It was almost 200 years ago in his homeland of Poland that he fought to throw out the Russian despot who occupied his country. The young man and his small band of patriots could not do the job alone. Then, as now, many people refused to face the facts. They would not give the young leader the support he needed and deserved. They played it safe, as they thought, and tried to do business with the invader who only scorned their weakness.

Casimir Pulaski clearly saw the danger long before we did. Russian imperialism, hungry for conquest, was on the march then, just as it is reaching out today under the deceptive slogans of international communism, to make Russia the ruler of the world.

The odds were too much against him; so Pulaski came to the New World to continue the fight for freedom. He saw far into the future, sensing what so few in his age understood, that the struggle to win liberty and protect it goes on in all countries and at all times.

The brand new land of America matched his own youth. Here was the great chance to begin all over again, avoiding the mistakes which had betrayed the peoples of the Old World into the hands of false leaders who kept them in ignorance and poverty.

Perhaps he believed that we could build a new society here, where every man would have a chance to prove his ability, and that it would become so strong by the liberation of these talents, that it would encourage the downtrodden everywhere.

We have grown up to that position of responsibility.

In a little more than 175 years we have demonstrated that there is nothing like emancipation to promote the happiness and prosperity of all the people in a community.

What we have done, others can do.

The tragedy of Europe and Asia is that they no sooner throw off one oppressive rule than they are tricked into accepting another.

In Italy, China, Iran, and even in the once powerful country called England, the average person is striving for what he calls economic freedom, or the chance to earn a decent living for himself and his family.

This is an aspiration which no one should deny.

But unscrupulous men who seek power at any cost, promise to give what they cannot deliver, and in turn become oppressors.

Political freedom, economic freedom, or any other similar cry or label means nothing if it is not founded on God's law of respect for one's fellow man. It is not enough to think of honesty and justice or to speak of these virtues unless we try to practice them in our everyday actions.

We are thankful that we live in a country where "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof," as guaranteed by the first amendment to the Constitution of the United States.

As Americans who believe in tolerance, knowing that the variety in our Nation has sparked its progress. We don't care what the next man's spiritual beliefs are as long as he practices them. All faiths have this in common—that they help men to live the good life, without which human society would degenerate into animalism.

As men drift away from God's laws, the troubles of this world increase. The menace of Russian communism is that in rejecting the moral code it has become a plague to itself and the world. Even in the United States we see the corruption which easy virtue breeds.

Why do I speak in this vein?

Because we are apt to forget that Casimir Pulaski was not only a brave man but one who devoutly believed that in the conduct of his life he must answer to his Divine Creator.

No man can move in two directions at the same time.

In living for freedom under God, he finds the one that leads to all truth.

Brigadier General Pulaski, hero of the American Revolution, knew this for sure. He came all the way from Poland to help us when the difficulties of travel in those days made the journey seem as far as from one planet to another.

His was the faith that was stronger than pain, hardship, or death itself. He lived his life for others, that they might gather courage to make their way through darkness into light.

He came to help the colonists in their hour of need. He placed implicit faith in their cause and paid the supreme sacrifice for its realization. He died believing that we of succeeding generations would not falter in our duties.

Holding a prominent place in the history of his native land, he is assured of even greater glory in these United States that he helped to create. He was the intrepid warrior who twice saved George Washington's army from disruption. And among the patriots of all nations he shall ever be remembered as the hero of two hemispheres.

Around the campfire at night, during the period when it seemed that the cold and hungry and poorly armed colonists could never hope to win their independence from the world's strongest nation, he must have thought of his own homeland and the spirit of the Polish people that would never be conquered.

How alike the two peoples are in their passionate love of independence.

Perhaps some day America will help Poland in turn to win the freedom that belongs to mankind.

Before this monument to his memory in the year of 1951 we make that promise because we know that the people of Poland look to us for hope and assistance.

In ways as yet unseen we shall repay the debt that we owe to Casimir Pulaski because, in the words that he might have said, "We have sworn upon the altar of God eternal hostility against every form of tyranny over the mind of man."

Flood Controllers Should Study How Oklahoma Does It

EXTENSION OF REMARKS
OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. WICKERSHAM. Mr. Speaker, under leave granted to extend my re-

marks in the Record, I include the following editorial from the Saturday Evening Post of August 4, 1951:

FLOOD CONTROLLERS SHOULD STUDY HOW OKLAHOMA DOES IT

(By Elmer T. Peterson)

With almost monotonous regularity come reports, usually in spring or early summer, of floods in the great agricultural valleys. With corresponding monotony the tendency seems either to regard these visitations as unpreventable acts of God or to build huge downstream dams in an effort to contain the torrents after they have got well under way.

Oklahoma, forced by climate and the character of its soil to work faster than usual in the conservation movement, comes up with a prescription that rejects both alternatives. And it works.

One of the wildest actors in the State is the Washita River, whose guilt is frequently evident in the red mud it carries down into the Red River. In its valley are the beginnings of a project to prevent floods by the same kind of foresight that stops cancer. The method is to halt the evil right where it begins—in the gullies, in the furrows, and right up to the stalk-and-root system of grass. Defeating each individual floodlet before it gets started means defeating the big flood, for the river has no way of getting water (except from its tributaries).

In May of 1950, 13 inches of rain fell within 36 hours on a section of West Owl Creek, south of Purcell. This is the lowest official report. Other reports ranged upward as high as 15.5 inches for that area. This part of West Owl Creek had been given a thorough soil-conservation treatment, including the use of grass, contour farming, terracing, and the building of smallish detention reservoirs, a degree larger than the average farm pond.

In previous years downpours of less intensity and volume had produced destructive floods, destroying crops and contributing to the main rush of water down the valley. This year the creek stayed within its banks until it had flowed 1 mile past the last conservation-treated section of its valley. By that time the creek had received runoff from untreated slopes, and it began to go out of its banks. The detention reservoirs took care of a substantial proportion of the runoff. The surface treatment held back another substantial share. A regulated flow from a draw-down valve in each reservoir kept the creek within banks. The threefold system worked even better than had been figured in advance by the conservation engineers.

On May 16, 1951, the Sandstone Creek watershed of 65,000 acres, southeast of Cheyenne, received a downpour ranging up to 4.57 inches. A similar system of detention dams and conservation practices had been not quite completed. The runoff water did not even come up to the draw-down pipes. In other words, none of the permanent pools was filled. Sandstone Creek, which in previous similar storms had been a bad actor, was perfectly tame and did nothing to augment the flow of Washita River, though other creeks in that part of the State were doing great damage.

Barnitz Creek watershed, near Clinton, during the same wet period, received 18 inches of rain within 24 hours, according to several unofficial gage tests. It has an area of 4,000 acres and is equipped with two detention reservoirs with two smaller dams upstream from them, besides the usual surface treatment of terracing, regrassing, and the like. It stayed within its banks while neighboring creeks did great damage with equal precipitation.

"We planned it that way," said one of the conservation technicians. All these agricultural-flood-control-project reservoirs are engineered in advance to hold considerably more runoff water, in proportion to drainage area, than the big Army-engineer projects

in the same region. The huge dams built by the Army engineers and Reclamation Bureau have come under heavy fire in recent years. Since one of the chief functions of the big dams, according to the promoters, is flood control, it is up to the opponents of the big projects to propose a practical substitute. They will do well to make a close study of the Washita program.

The Community Chest

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include a portion of my address at the conclusion of a parade to promote interest in the Community Chest campaign for Greater Lawrence, Lawrence, Mass., on October 14, 1951:

We have just seen a colorful parade, in which thousands from all walks of life took part.

This enthusiastic turn-out proves that our people have a real civic pride and a civic spirit.

Just as a soldier is ever ready to help and support his comrades, so do we, as citizens, owe a responsibility to the children, the youth, the old folks, and those in unfortunate circumstances. They, too, are members of our community and belong to the larger family that we call Greater Lawrence.

This parade was not merely a show.

Its purpose was to call our attention to those organizations in our city which work day in and day out lending a helping hand to those in need. These charitable and social agencies, with their experienced and devoted employees, are the good Samaritans who bring the light of human kindness into dark places, assisting the weak and the discouraged.

In fact, they are doing this merciful and constructive service in human relations for us.

In other days we were called upon to do it personally in a hit-and-miss fashion.

The 13 Red Feather agencies through the Community Chest have taken over this responsibility from us and have put it upon a 365-days-a-year basis that reaches every worthy case among the 125,000 people in this area.

By group effort, more is accomplished than any number of individuals, motivated by good will toward their fellow humans, could ever hope to do. It is a system whereby a whole city mobilizes its strength against poverty and juvenile delinquency and helplessness. When all of us chip in, we make sure of raising the \$200,000 which, spread fairly among the 13 services, assures us that it will be put to the best use and that it will benefit the largest possible number of deserving people.

The more of us who share in the giving will guarantee that more will share in the help that they need.

It is the complete, efficient and economical way to take care of all our own.

Even to the heart-warming assistance that is provided to the men and women in our Armed Forces the world over as well as to their lonely families at home.

All of us are partners in the great defense program that is designed to protect our Nation from attack. That calls for a united effort from us to meet a common danger

and to meet it as members of the larger family that we call the United States.

There is also the problem of protecting ourselves from within. In every city and town of this country, we must try to build up the health and strength and courage of every individual. By giving just a little of our own productiveness, we rescue those who might go under without it.

No one of us would ever think of letting a brother or sister, a mother or father, suffer because of our indifference. Without love and consideration and sacrifice for those near to us, we would lose our own self-respect.

We owe a smaller obligation, but an obligation nevertheless, to assist our more distant relatives. And these include the fellow human beings in the locality where we share the common experience of life.

The parade just concluded was the energy which turned over the motor. But it will mean nothing unless we shift into high gear and accelerate the forward movement with our donations.

Money is the only fuel that will make this Community Chest drive go and keep going until it arrives at its \$200,000 destination.

I have been told by the authorities that there will be no speed tickets handed out on this drive.

This is one time when the faster we go the better for all concerned. We have only 2 weeks to travel 200,000 "dollar-miles."

A fast start is urgent. And we must keep feeding in contributions without let-up.

Let's get together the neighborly way, the organized way, by giving our individual quotas to the Lawrence Community Chest campaign today.

Columbus Cleans Up and Saves

EXTENSION OF REMARKS OF

HON. JOHN M. VORYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. VORYS. Mr. Speaker, with America's industrial capacity continuing at full speed, the problem of air pollution is quite likely to become intensified—especially in our larger cities—unless local government, industry, and the general public join together to prevent it. For your information and for the benefit of interested communities throughout the Nation, I should like to review the problem very briefly and to tell you something about how my home city has dealt with it. Cleaner Air Week is to be observed October 21–27, so this subject is particularly appropriate at this time.

Air pollution consists of dusts, pollens, smoke, fumes, and gases—some of which we can see and some of which we cannot. The character and intensity of pollution is largely dependent upon the geography and topography of a community, the locations and the nature of its industrial and commercial activity, and local weather conditions.

We should take advantage of the research and development progress that has already been made in combating one of the visible and more obvious components of air pollution—smoke. Power engineers have found that most smoke is unnecessary and that it can largely be

eliminated. They have also proved to us that smoke is wasteful. Fuel saving is a factor that no one can afford to overlook during the period of tight economy which we are now entering.

Now is the time that these proved engineering theories should be put to work cleaning up our atmosphere and cutting down our fuel bills. My home city of Columbus, capital of Ohio, has been putting these theories into practice with increasing success. Columbus has received widespread recognition for accomplishing a large reduction of smoke in a short period of time.

Columbus has met the air pollution problem of smoke with sound engineering principles and not with fuel prohibitions. The smoke law is based on the premise that any fuel that is available for practical use in a city—gas, coal, oil, or wood—will smoke if it is not properly burned.

Engineering and education have been the key words of the program since it was inaugurated by Mayor James A. Rhodes after the conclusion of World War II. Harry C. Ballman, smoke abatement engineer for the city of Columbus, has established that human failure is a chief contributor to smoke. He has found that carelessness and indifference plus old and improperly maintained equipment are responsible for 60 to 70 percent of all smoke.

One of the first undertakings on the agenda at Columbus was a survey of more than 300 plants, schools, hospitals, Government buildings, and large commercial buildings for the purpose of determining the principal sources of smoke. Then came the educational campaign to show how engineering methods reduce smoke and save on fuel bills. Night school classes were set up for operators of power-heating equipment, building owners and employees, and for railroad men. Our local newspapers—which have given immeasurable assistance throughout the entire project—carried series of articles explaining how to eliminate unnecessary smoke, as well as many promotional articles on the advantages of smoke control and why a city like Columbus should have it.

The plant surveys showed that most of our public buildings and a great number of our factories and commercial buildings were using equipment that was either obsolete or badly in need of repairs. Making the repairs and adjustments presented no insurmountable problems, but replacing an entire heating plant can be an expensive operation that is far more than an overnight job. Through excellent cooperation on the part of city and State officials, as well as industry executives, a tremendous amount of new heating equipment has been installed in Columbus since the survey was made, and the results have been highly satisfactory. Besides eliminating or reducing smoke, the new boilers and furnaces are saving so much fuel that some of them will actually pay for themselves within a few years.

Railroads were also a constant smoke menace until company officials, firemen, and maintenance men got together behind the smoke-abatement program. Fireboxes in the engines have been equip-

ped with special jets for burning all volatile matter before smoke can be formed. In the final analysis, of course, whether there is going to be smoke depends largely upon the engine crews of the five railroads serving Columbus, just as the men in charge of furnaces and boilers in large buildings and factories have such important roles in keeping the city's atmosphere clean.

The Columbus program against unnecessary smoke does not stop here. The smoke engineer has gone into the small business houses—the garages, dry cleaners, grocery stores, and the like—to see what can be done about their participation in the program for clean air. Many of these marginal shops are using obsolete and broken-down equipment, and they are not always in a financial position to make the necessary repairs or replacements. In like manner, all home owners cannot afford to invest in new heating systems on short notice. In these cases the only practical course to follow is to insist that extraordinary care be utilized in the burning of the fuel until such a time as the proper adjustments can be made.

The smoke engineer is empowered by the smoke ordinance to license installation of all new power and heating equipment. Our atmospheric conditions may thus be expected to improve from year to year because, as old equipment is discarded, plans for new boilers and furnaces must be wholly acceptable to the smoke-control authorities before installations are permitted. In this matter of equipment replacement, the division takes the same basic attitude as it does with fuel. There is no restriction on any make of equipment, but each piece of equipment must be installed in such a manner in relation to the rest of the plant that smoke and air pollution will be held to a minimum at the source.

There are instances of where the smoke-abatement office has been forced to take legal action against violators of the smoke law, but for the most part there has been excellent cooperation simply because the public in general is behind our officials on this project. The annual report of the division of smoke regulation and inspection points out that the successful job in air-pollution work depends upon the wholehearted cooperation of every operator, manager, owner, and citizen in the city of Columbus. By the same token, our entire citizenry can be proud of the national and international recognition that has come with our air-purification accomplishments.

Now, as you may know, I have refrained from going into detail on the program which Mayor Rhodes and Mr. Ballman have conducted so successfully. But their offices have handled inquiries from every State of the United States and from Canada as well, and they will be glad to provide basic information for communities in your districts. I hope that all communities will take an interest in smoke-abatement work, especially at a time when conservation of our fuel resources is so important.

As for the other components of air pollution—particularly the irritating elements contained in that mixture of contaminants known as smog—I feel confi-

dent that scientific and engineering research will one day bring us relief. The problem is under study in numerous laboratories, including those at Ohio State University and Battelle Memorial Institute, both in Columbus. These laboratories are cooperating with the city, and we are hoping that Columbus will pioneer developments in smog reduction just as it has been one of the pioneers in smoke abatement.

Six Cry Out From Korea

EXTENSION OF REMARKS

OF

HON. EDGAR A. JONAS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. JONAS. Mr. Speaker, in its issue dated October 13, 1951, the Chicago Daily Tribune printed what it termed "a heartbreak story from Korea." After reading the article, I came to the conclusion that characterizing the story as heart-breaking is placing a very mild interpretation upon its contents.

If the facts charged in the article can be substantiated, then the situation is nothing short of criminal negligence. The story is ascribed to that of six wounded soldiers of the Twenty-third Regiment, Second Infantry Division, who agreed to issue a statement about conditions in the Armed Forces in Korea. The story lays special emphasis on the treatment of the wounded and details instances that are so appalling that they cannot help but shock the conscience of every thinking and interested American whose attention has been called to what these boys have to say.

Mr. Speaker, I recall that a fortnight ago we appropriated more than \$60,000,000,000 for national defense and for military and Armed Forces including those in Korea. The facts depicted in this story, as told by the six wounded boys, should be thoroughly investigated and if found to be factually correct, then it is high time that Congress take more of a hand in the police action wars than that of furnishing funds for the military services. The story is replete with details about the hardships and suffering to which soldiers are being subjected.

I request that here in the House we do something about the deplorable conditions which the six soldiers described—that is do something constructive and something more than indulge in general debate and render lip service to a situation which seems to have gotten out of hand at least in some sectors where the fighting forces are now stationed in Korea.

When a boy in the combat services of our country finds himself subjected to a nightmare of starvation, thirst, cold, fear, agony, and death and cries out that we as Members of Congress are permitting this state of affairs to go on and the poor fellow openly acknowledges his lack of confidence in us and points out that only God can save us, it is high time that we take a careful inventory of our stewardship and ascertain where

the blame should be fixed. If we, as Members of Congress, fail in this task and permit the guilty to go unwhipped of justice, then we might well take cover behind the utterances of Mark Anthony from Shakespeare's Julius Caesar:

Age, thou art shamed;
Rome, thou hast lost the breed of noble bloods.

Mr. Speaker, under unanimous consent to extend my own remarks in the Appendix of the Record, I include therein an article published in the Chicago Daily Tribune under date of October 13, 1951, entitled "Only God Can Save Us." The article is as follows:

"ONLY GOD CAN SAVE US," SIX CRY OUT FROM KOREA—THEIR LETTER SAYS SOME PRAY, SOME GO CRAZY

The Tribune herewith prints a heartbreak story from Korea.

It is told in a letter, written to the editors on September 22, from a Korean hospital. Six wounded soldiers from the Twenty-third Regiment, Second Infantry Division, got together there to tell—more eloquently than they knew—of the soldier's war—a nightmare of starvation, thirst, cold, fear, agony, and death, and the hopelessness of youth sacrificed knowingly. It reads:

"DEAR SIR: If the American people could only see what is happening in Korea to their boys, they would never again think of war. I'm only a Pfc (private first class) over here, and let me tell you, in only 3 months I've seen more than I can hardly stand."

"I'VE SEEN BOYS DYING"

"I've seen boys dying on a mountain top because they couldn't get them down, blood soaked from head to foot, losing every second a little more of that precious stuff we call blood.

"But, you ask, what about those wonderful helicopters which are floating around in Korea? Those wonderful helicopters can't fly at night, and, when the fighting gets tough, you won't see those slow flying planes very close to much of the real thing.

"From where I am now it takes 8 hours to reach an aid station. So a badly wounded American (your boy) is carried down steep mountain trails by South Korean boys (who are sometimes too lazy to carry the stretchers and rest 5 minutes out of every 10).

"The stretchers are dragged over rocks, tree stumps, and all sorts of obstacles on the way down (no fault of the stretcher bearers). Yes, and if they are lucky to reach an aid station alive, they may still die, as some of the aid stations up near front are nothing but a tent. For light they use flashlights, a chaplain is usually there to pray for those who are badly wounded."

"IF WE ONLY COULD—"

"Only God can help these boys," he (the chaplain) said. "We can't get them to the hospital. If we only could, if we only could—" Maybe that boy was one of your boys who died in Korea. Of course, they won't tell you any of the facts of how he died. Lucky are the boys who don't know what hits them.

"Those who are slightly wounded and can walk are lucky. They only have to walk 8 or 10 miles to an aid station. And, if you get your foot shot off, they wrap a blanket around the stump and you can walk down that way. Mind you, the country is so rough over here, that this is the only way wounded can get to an aid station. But then there is a chance you will get ambushed by the enemy on the way down. In other words, you might get killed trying to get to an aid station."

A TEASPOON AN HOUR

"Water in Korea? Yes, there are rivers here by the hundreds. But, when you are on top of a mountain, it's a little different

story. They might as well not be any rivers in Korea, as they aren't doing a person any good when you are on a mountain.

"For 4 days, a half a canteen full of water is what you get if you are lucky. One teaspoon of water every hour is the way some of the boys over here drink their water while on a big mountain.

"What about food? Yes, the United States Army tries to get food to all the front line boys, but the food is delayed by ambush or mortar shells. Therefore, we are sometimes lucky to get two cans of food a day, sometimes none for 2 or 3 days."

THEY PRAY FOR WOUNDS

"Here is another thing hard to believe, but true. About 8 of 10 boys over here I have heard talking, pray they will get shot (not a bad wound) so they may go to a hospital. Isn't that something, when your boys want to get shot? Some fellows (there are tents full of them in Korea) say they are going nuts. Some of them are, some say they are. I don't blame them, this thing over here can drive anyone nuts."

"Seeing things like I am telling you here is what every GI sees every day."

"Yes, what have we to look forward to? If you get wounded they keep sending you back to the front till you can't walk any longer. Most fellows who have to climb a mountain say that just the climbing is a big enough fight, let alone when you get near to the top to have to fight an enemy who is poking a machine gun down your throat. An enemy who rolls grenades down the mountain like a little boy in the United States would roll a marble down a hill."

CAN'T SOMEONE HELP?

"Yes; this is Korea all right. Only God can watch over us here. He is the only one who can help us.

"But I say this, thank God that our friends and family can't see how bad it is; they would never believe it, you won't believe it, I don't believe it, but it happened to us, as we are in the hospital now.

"We pray for peace, but that is all we can do over here. Can't someone help us?"

Although written in first person singular, the letter was signed by 6 men. They are from Fisk and Gary, Ind., a small town in Wisconsin; Highland Park, Ill.; Kansas City, Mo., and a Minnesota farm.

The People of the Missouri and Kansas Valleys Need Governmental Assistance Now

EXTENSION OF REMARKS

OF

HON. CLARE MAGEE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. MAGEE. Mr. Speaker, in August of this year, Senator HENNING, of Missouri, introduced in the Senate a joint resolution to establish a Missouri Basin Survey Commission whose duty it would be to make a full and complete investigation of the land and water resources and their utilization for the Missouri Valley region, consisting of the entire Missouri River, its tributaries and watershed, as located within the following States: Montana, Wyoming, North Dakota, South Dakota, Nebraska, Kansas, Missouri, Colorado, Minnesota, and Iowa. Fourteen other Senators joined as co-sponsors.

In September a similar resolution was introduced by me in the House. So far no action has been taken before the Public Works Committee of either body on these resolutions.

I believe it was Odell Shepard who once said, "A man's memory is what he forgets with." And so it is that, in less than 3 months after the most devastating flood that ever happened in our country, we have conveniently forgotten.

As Congress puts on its final burst of speed to adjourn this week end and start for home, we have apparently forgotten that in the Kansas and Missouri Valleys there are thousands who have no home.

As we hasten to return and build our political fences, we have forgotten that many farmers living in these heretofore fertile valleys can build no fences. They cannot do so because their farms are covered with from 4 to 8 feet of muck and mire and sand and gravel. As one commentator put it: "Farm lands, rich, good earth, converted into sand dunes. The waters had brought the Sahara to the farmer."

Within a few days we shall hasten to return and tell the voters what we are doing for freemen everywhere. We shall speak in tones of self-sacrifice as we stress the benefits of the point 4 program and aid to starving India. In glowing terms shall we detail the economic aid to Europe and parts of Asia—how we have sent farm experts to rehabilitate the agriculture of those countries and rebuild the industrial plants of the free nations.

We shall tell the voters how weary and tired we are after 10 months of unceasing vigilance and attention to duty in their behalf. How nice it is to return home again and breathe the clean, pure air. We shall do all this while other men in Kansas City Mo.; Kansas City, Kans.; Manhattan, Topeka, Parsons, and many other cities and towns are still shoveling the stenchy mud from what was once called a home; and while other men, women, and children stand sad-faced to view only the stone steps and foundation of where a home once rested, a home that long since floated in pieces along the Missouri and Mississippi, and perhaps to the Gulf of Mexico.

Mr. Speaker, we are told that the flood damage may have amounted to some \$2,500,000,000. Big business, small business, large farmer, small farmer, big homeowner, small homeowner, and tenant inhabitants—they all suffered in many sections. What have we done to partially alleviate these great losses? We voted \$25,000,000 for rehabilitation and direct relief. That is a mere pittance. We thereafter made available to existing agencies around \$113,000,000, mostly for loans; that is, the House did, but the Senate has not acted.

There may be those who can avail themselves of this beneficence; but what of those whose homes have vanished or those who formerly paid \$25 per month rent and now can live in a Government trailer at \$35 to \$45 per month if they had the money—which they have not, because their jobs went with the floodwaters? What of the young married couple just getting started in life, with a home purchased on the payment plan;

a couple with a large debt hanging over them and nothing but the ground left?

Mr. Speaker, this particular flood did not touch my district. However, it is my thought that every district in the country has been indirectly affected. This area is not just a spot to itself. It is the heart of America. It is the crossroads of the greatest Nation on earth. Within its confines is the second largest railroad center in America. The whole basin area comprises one-sixth of the United States and a most important segment of our economic life. In sections of these fertile valleys is a loess soil of astonishing depth and richness which many authorities have stated is as fertile as the delta of the Ganges or the valley of the Nile.

Much of this great farm land has been badly eroded, the soil loss ranging from 2 inches up to 10, with some fields badly cut up by gullies and new ponds. This topsoil is irreplaceable.

On some of the tributaries flood control is needed for rainy years such as this and conservation pools are needed for the drouth years. A steady flow of water at all times is needed at power and industrial plants.

I have voted consistently for economic aid to Europe. In our fight against communism it has been my thought that we must render aid to democratic ideals everywhere. Victory can never come on the battlefields alone. The fight against false prophets must be finally won in the fields and factories where men labor and struggle for a full life. However, we should not forget our own people when disaster hits and sorrow falls.

As we spend billions for defense in this and other countries, let us not forget that we have here a problem of defense, a problem of prosperity and security not only for the people of the Missouri Valley, but of the Nation as well. We can ill afford to lose the industry of this great region.

In my opinion, we should not adjourn until reasonable legislation is passed for direct grants-in-aid. We should not adjourn until a commission is authorized to study the over-all problem of flood control and make recommendation to the Congress on proper measures to prevent a recurrence of this catastrophe.

Deployment of American Troops

EXTENSION OF REMARKS OF

HON. WILLIAM E. McVEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. McVEY. Mr. Speaker, under leave to extend my remarks in the Record, I should like to submit an editorial from the Pointer, a weekly paper published in Dolton, Ill., by Mr. A. L. Rausher. This editorial concerns the deployment of American troops on foreign soil.

I should like to preface this editorial in the Dolton Pointer with some reactions of my own to this particular topic. It

was in the autumn of 1940 that the Congress passed the first peacetime conscription. That plan for conscription contained the provision that the men to be drafted were not to be sent out of the Western Hemisphere except to our own territories and possessions.

Certainly, if there ever were a time when we were justified in placing a limitation on the manner in which our troops shall be deployed, it is now. We do not even know how long an American commander will be leading these troops, but we do know that they will be part of an international army, and that a dozen other governments will be exercising control over them. After the shameful way in which other nations have failed us in the Korean crisis, where the blood of our American youth by the thousands is being spilled, we shall betray our trust and be remiss in our duty to our country if we fail to retain the authority for the disposition of our troops in the Congress, where by constitutional mandate the power to declare war rests. Yes, I know there have been cited 134 examples of the use of such power on the part of the Chief Executive since the founding of this Nation. What are some of these citations? They include the following.

First. The dispatch of five marines to Cuba to bury one of their comrades who died of fever.

Second. Six sailors from the battleship *Tennessee* who were sent to Paris to guard our exhibit in the Paris exhibition.

Third. Admiral Perry had an honor guard of 300 bluejackets when he went to China.

There were many others in that list of 134 citations which were of no greater significance. There is a vast difference between such examples of the exercise of authority on the part of an Executive, and the war in Korea where casualties have exceeded 80,000, and where we now have approximately 300,000 troops committed to battle.

The issue before us today is not confined only to the deployment of troops; it involves the issue of peace and war. If we agree to permit the present incumbent of the White House to exercise his will in the use of our troops, we shall have abdicated the authority to declare war as vested in this body by the Constitution of the United States. If you do not believe this, look at what has happened in Korea. Are we at war there? Did the Congress declare that war?

We stand today on the threshold of new action. Where will that action lead us? Speaking for myself, I want the authority to make war to remain in the control of the Congress. Mr. Speaker, I am not going to embrace any other course, for I still have the haunting memories of what happened in June 1950, when our troops were ordered to Korea without the approval of the Congress. That step has led us into a situation fraught with the gravest danger. No one dares predict what the outcome will be. I do not want a repetition of episodes of that nature.

In this situation I speak only for myself and with the future welfare of my country at heart. My convictions, nevertheless, are strong. The Congress has

already abdicated too much of its authority, in my opinion. Let us hold the line at this point and prove that this body still possesses the virility which our founding fathers expected of us when they entrusted us with the defense of our country and the power to make war should necessity impose that burden upon us.

The Dolton Pointer has discussed this subject from an unbiased viewpoint in an editorial in a recent issue, and I should like to insert that editorial in the CONGRESSIONAL RECORD as an example of some of the impartial thinking on this subject which exists in our country today. The editorial follows:

AS WE UNDERSTAND IT

The great debate continues over whether the President has the legal or moral right to send troops to help garrison Europe without the consent of Congress, and, regardless of current actions, will continue for a long time to come. In more placid times, this extremely important dispute undoubtedly would have been given much more press coverage and comment than has actually been the case—it might, for instance, have been comparable to the late President Roosevelt's Supreme-Court-packing proposal in its impact on the public mind. Today, however, there are so many vital issues, and so much is going on in the world, that it is clearly impossible for each problem and controversy to be given the space and attention it may deserve.

The principal differences between the President and those who oppose him over the troops-to-Europe issue are sharp and clear-cut.

The President points to the fact that the Constitution specifically states that he is Commander in Chief of all the military forces. He holds that decision as to where troops shall be sent, and in what number, is a military and diplomatic decision, and that it can only be made by the Executive. And he cites many cases, going far back into our history, where the Presidents have sent troops on foreign duty without the consent or advice of Congress.

Those who think otherwise—and Senator Tamm has been a leader of this group—have strong arguments on their side. They say that the writers of the Constitution made the President Commander in Chief so that he could immediately rally the Nation's defenses in event of attack—in the stagecoach days, it took weeks to convene Congress, where now it could be convened overnight. They argue that it is a very different matter to send divisions of troops to Europe, in the face of the Russian menace, than it was to dispatch a few soldiers or sailors to deal with the Barbary pirates or Mexican bandits. Probably their most powerful argument is that, if the President can send troops wherever he likes and in any number, he actually has the power to make war without the consent of Congress, which would be a direct violation of the Constitution. It is an interesting fact that some Senators who are battling the President over this far-reaching issue are for, not against, sending substantial number of American troops abroad to serve under General Eisenhower's Atlantic Pact command. But they do not believe that one man should have authority to make that decision.

There is still another side to this which Walter Lippmann touched on in a recent column. "If the President were wiser than he is," Mr. Lippmann wrote, "he never would have dreamed of questioning the right of Congress to participate in the unprecedented project of placing an American standing army in Europe and of merging it in an international army. He would not only have sought the advice of Congress but he would

have insisted from the outset that Congress share his responsibility." Mr. Lippmann differed sharply with Governor Dewey's unequivocal support of the President on this issue, and said, "Can Governor Dewey argue that the project of an American standing army in Europe, involving perhaps 750,000 men, can be called a mere 'deployment' like sending troops to Hawaii, Alaska, or even by putting ground crews at some air strips in Great Britain."

So the various arguments run. One thing is sure—whatever the ultimate decision, this is one of the most important constitutional questions that has ever arisen in this country.

Our Policy in Western Germany

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. JAVITS. Mr. Speaker, the solution of the German problem remains the fulcrum of the capability of Europe to defend itself against Communist aggression, to repel Communist subversion, and to be unified economically and politically. The appended analysis—taken from the October 9 New York Times—of the issue now under negotiation which will determine Europe's and Germany's future should be of interest to every Member:

THE ISSUES AT BONN

Overshadowed at the moment by seemingly more dramatic events, negotiations of great importance are now under way in the provisional German capital of Bonn. These negotiations are based on the decision of the recent Washington conference to conclude a peace contract with Western Germany in return for a German contribution to Western defense. The negotiations deal, therefore, at one and the same time with the three basic problems that confront the Western World and affect all its policy decisions in dealing with Soviet imperialism—first, the solution of the German problem, which has been at the bottom of most recent wars and which could spark a new one, next, the reorganization of Europe, which has outlived the division into rival national states and is striving for new forms of unity as an essential condition for survival; and finally, the creation of an effective Western defense, able to balance Soviet power.

Thus far the negotiations have not been going well. After three prolonged sessions between Western High Commissioners and Chancellor Adenauer, and despite some announced progress, the basic problems remain unresolved, and there is even talk of a German walkout and an Allied postponement of the whole program. Such a development would play into Soviet hands, and it must be hoped that the new session scheduled for tomorrow will bring a break in the deadlock.

It would, of course, be easy for the Western Allies to impose any solution they like, at least on Western Germany, which is still under their unconditional occupation rule and has no other place to go. Nor are voices lacking which propose to do just this. But any solution that does not command wholehearted acceptance by both Germany and the Western Powers could soon backfire. It would leave a sullen and resentful Germany which would be a prey to the demagoguery of its neo-Nazis and the blandishments of Soviet propaganda, making any German con-

tribution to Western defense either futile or actually dangerous.

In these circumstances the most hopeful procedure is to emphasize, above all national rivalries, the idea of European unification, which is as inspiring as it is necessary, and which, under French leadership, has already developed a powerful grip on the European youth of all nations. That idea is the basis of both the Schuman plan for European economic integration, and of the European Army aiming at similar military integration. Both plans have been accepted by the German Government. But the value and even the full realization of these plans will depend on the success of the Bonn negotiations, which must lay the political foundation for them.

For the Western Powers the issue is not only German integration but also security against new German aggression and even German domination of a united Europe. For that reason they propose to continue what they consider essential political, economic, and military controls, either under the peace contract or outside of it. The Germans, mindful of their past history, cannot well object to measures necessary for this purpose. But for the Germans the issues are equality, security and a chance for ultimate national unification under viable conditions. It is on these issues that Soviet propaganda, under Stalin's personal leadership, now concentrates, dangling before German eyes the fantasy of a unified, independent and neutralized Germany. And however blatant its promises or threats, the issues themselves carry so much weight that they put the German Government under pressure.

For that reason the Western Powers, within the framework of their own security, must take account of this pressure. The Germans must be made to realize that European unification offers the best chance for their own unification and that equality must be earned. But any suggestion that the Western Powers are seeking German manpower merely for their own defense, indifferent to the fate of their new prospective partner and trying to retain controls for their own ends beyond the requirements of security—above all, any hint that they are still open to a bargain with the Soviets at German expense—can only wreck their own design. The situation calls for a solution along the lines laid down in the treaty recently negotiated with Japan.

This Is the Remarkable Story of What Happened to Lum Cummings and His Farm Family, of Franklin County, Ala., When It Decided to Use Pasture Crops, Fertilizers, and Beef Cattle to Work With Nature Instead of Digging It Out in Cotton and Row Crops With a Mule

EXTENSION OF REMARKS

OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 11, 1951

Mr. ELLIOTT. Mr. Speaker, the story of Lum Cummings and his fine farm family, of Franklin County, Ala., and its switch from row crop-mule farming to pasture crops and beef cattle, and the rewards that came in 14 short years as a result is a story that should be told millions of times in the southeast, because it points the way to increased prosperity in

an area that has for too long been tied to cotton as the one cash crop.

I had the pleasure of visiting the farm of Lum Cummings, and his son Lawrence, and their families on May 30 this year, and observing at first hand the wonderful transformation that their efforts had wrought.

The Cummings have as a sideline made a wonderful contribution to better farming in the area, by being willing, day in and day out to demonstrate to those who come, the results of their fine work. More than 5,000 people visited their farm last year.

I like the spirit in which Lum Cummings realizes the future of pasture and cattle farming in Alabama. When I talked to him on May 30, he pointed to a little boy and said:

That little fellow deserves a good opportunity in life. Pastures and beef cattle will provide it for him where cotton wouldn't.

As a part of the Lum Cummings story, I include an article styled Lum Cummings tired of following "a little mule," by J C Lowery, extension agronomist of the Alabama Polytechnic Institute, from the October 1951 issue of the Progressive Farmer.

LUM CUMMINGS TIRED OF FOLLOWING "A LITTLE MULE"

(By J C Lowery)

"I went around rows with a little mule so long I just tried to find another way of making a living," said Lum Cummings, of Franklin County, Ala.

This decision made more changes in the life of Lum Cummings and his family than any other he ever made. In 1937, he had an 80-acre farm with 26 acres in cotton, 16 acres in corn, and 17 acres in soybeans. Cotton was practically his only source of cash. As a matter of fact, Lum was in very hard circumstances financially. He just wasn't getting anywhere with the land use program he was following.

Then one day in 1937 his county agent, J D Wood, asked him if he would cooperate in testing some TVA fertilizer on pastures and other cover crops. He was willing to try, because he thought any change might be for the better. Mr Wood helped Lum work out a program for sound use of fertilizer in growing clover-grass pastures, perennials, and other cover crops. He started by clearing some swampland and improving 17 acres of pasture. The pasture was used by a small dairy herd. He also got his first purebred beef cattle. To provide some added summer grazing, he set some kudzu in 1938. Since then he has changed to sericea.

In the spring of 1938, Lum got his first hard jolt about his pasture. The pasture was so good that he put 35 head of cattle on 18 acres. In a few days along came the county agent, R M Reeves, assistant district agent, and the winter. Lum says he thought these fellows came to bug on his pasture. But all he heard on this trip was fussing about too many cows on the pasture. He says they just refused to pay much attention to his good pasture and kidded him about so many cows on the pasture. Lum never forgot that experience. Just as soon as he could he sold off part of his cows, and from that day on he has been very careful not to overstock his pasture.

It's a long story to trace Mr Cummings' development. Only a few of the high points can be covered in this article.

Here is a year-by-year brief of the changes on this farm as reported by Mr Reeves, who helped in developing this demonstration pasture.

1937: Started with 80 acres of land with normal yield of 200 pounds lint cotton and 8 bushels corn per acre. Cleared swampland and converted to pasture. Terraced remainder of farm. Improved 17 acres of pasture. Applied 50 tons lime. Bought first purebred beef cattle.

1938: Bought 60 acres of additional land. Increased improved pasture. Planted first perennial legumes. Applied 100 tons lime.

1939: Increased perennial cover by setting 10 acres kudzu. Reduced dairy cattle and increased purebred beef cattle. Increased hogs. Saved first sericea seed. Applied 40 tons lime.

1940: Bought more land. Increased sericea acreage. Reduced soybean acreage. Increased improved pasture acreage. Harvested 800 pounds sericea seed. Added broilers to livestock program. Applied 10 tons lime.

1941: Increased farm acreage to 275. Increased pasture acreage. Expanded small grain winter legume acreage. Increased beef cattle. Saved white Dutch clover seed for sale. Bought tractor and tractor equipment.

1942: Reduced farm acreage to 156. Reduced beef cattle to purebred animals. Added crimson clover and vetch seed to sources of income. Increased hogs and broilers. Increased bought feed.

1943: Improved home and tenant house. Expanded purebred beef cattle. Reduced hogs and increased broilers. Increased bought feed.

1944: Increased size of farm to 314 acres. Increased pasture. Increased sericea. Reduced cotton. Reduced broilers. Bought larger tractor. Did custom terracing up to \$3,000 under triple A program. Increased legume seed saved to 4,000 pounds.

1945: Increased size of farm to 354 acres. Bought combine. Increased sericea acreage. Increased legume seed produced to 31,000 pounds. Increased purebred beef cattle.

1946: Improved farm home. Installed running water in pasture. Increased improved pasture to 126 acres. Increased sericea acreage.

1947: Increased size of farm to 594 acres. Increased improved pasture to 188 acres. Increased sericea to 80 acres. Grew 365 acres of perennial and winter cover. Added cotton for tenants. Purchased new combine, hay baler, and lime spreader. Bought washing machine and furniture.

1948: Increased size of farm to 839 acres. Increased improved pasture to 211 acres. Added alfalfa. Built two barns. Bought water system for home. Increased legume seed sales. Increased cotton for tenants.

1949: Increased farm to 979 acres. Increased improved pasture to 345 acres. Discontinued all row crops except garden. Increased legume seed sales. Expanded registered beef herd. Increased annual application of phosphate and potash. Bought deep freeze, electric heater, and other household appliances.

1950: Increased improved permanent pasture and use of potash and lime. Enlarged registered beef herd. Bought truck, tractor, car, and water pump. Increased sale of legume seed.

He had in May 1951, 385 acres of improved pasture, 120 acres sericea. In 1951 he had more than 200 registered Hereford cattle on his farm.

The Cummingses fertilized all their pastures and perennials each year at least up to the rate recommended by the experiment station and, in many cases, at a higher rate.

For several years the Cummingses have been selling seed saved from their pasture when they have a good seed crop. The "Lum Cummings' pasture mixture" has become popular. It contains bluegrass, orchardgrass, and white clover seed. Mr Lum gets these seed in combining and does not separate them.

Mr Lum wants to see his customers succeed. So he insists on their preparing the soil well and using plenty of fertilizer. He

insists that those planting the mixture apply 2 tons or more lime per acre, 400 pounds superphosphate, and 100 to 150 pounds muriate of potash per acre. When the customers do what he says, they usually succeed.

In 1951, he sold \$100 worth of seed per acre from about 12 acres.

Here is a bit of evidence of how good Lum's pasture is. From August 1950 to August 1951, 32 head of cattle got their feed from 26 acres of pasture.

This development has been a family affair. Mrs Cummings and their son, Lawrence, and his family have been a vital part of the partnership.

Now for some of Lum's observations about his pasture job. He said:

"We came up the hard way. We never bought any seed except at the beginning. We have saved our own. For the first few years we rubbed out the seed by hand, because we did not have a combine or the money to buy one. We pulled weeds by hand and carried them out of the pasture in a pick sack. The main reason we have good pastures is the use of plenty of lime and fertilizers. Failure to use lots of lime and fertilizer causes most of the pasture failures."

"When we learn more about grazing, we will be better able to make a living without the plow. The hoe and the pitchfork are the two worst things ever invented. Take hay. We do not plant hay crops on this farm. We save the surplus growth of our pastures for hay."

"There is no loss of soil from our farm. The water comes off our farm clear. This is because we keep our soil in sod."

Here is a partial story of one of the most amazing pasture developments in Alabama. A man who started at the bottom, and now has one of the finest pastures in Alabama on upland not usually considered good pasture land. People from many States and foreign nations have traveled to visit this humble man and his family and see the miracle they have performed in pastures. Government officials, agricultural workers, professional and business men go to see him and learn his story. More than 5,000 people visited this farm last year. Day after day county delegations visit Mr. Lum.

Scarcely a day passes that travelers do not stop to see the Cummings pasture and the beautiful herd of more than 200 registered Herefords.

It has taken him 14 years to get to where he is—over the hard road.

On May 30, Cummings Pasture Day was held on his farm to honor him and his family and to see the great pasture story. Leaders from neighboring counties, professional men, executives of great corporations, the press, and farmers waded through orchardgrass, bluegrass, Dallis grass, white clover pastures and lespedeza sericea. They saw this pasture being prepared for market by his fine Hereford cattle.

All day long Mr. Lum kept preaching "Fertilize! Fertilize! Fertilize! We are trying to make a living growing grass."

The Cummings farm is now out of debt, from red ink to green grass.

Secretaries Wanted Desperately

EXTENSION OF REMARKS

OF

HON. ROY W. WIER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. WIER. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include an article from the Saturday Evening Post of October 6,

1951, titled "Secretaries Wanted Desperately," which describes the shortage of secretaries and stenographers in Washington, D. C., which the Federal Government is experiencing today.

For one thing, parents read exposés of the Capital, like *Washington Confidential*, which reports shocking moral and living conditions—

The article points out—

and then mamma puts her foot down and refuses to let her baby lamb go to the wicked city. Recruiters recently reported tremendous public reaction to an article published by a national magazine under the title: "Don't Send Your Girl to Washington." In some places it slowed recruiting to a standstill. Mothers ganged up on one recruiter in Boston and threatened to have her run out of town. Ministers rose up in their pulpits in one town, declaiming against the evils of the big city.

The *Saturday Evening Post* article sets forth facts that must be answered by the Federal Government. Not to do so, or to attempt to evade the issue, can only result in greater troubles.

I have recently introduced a bill in the Congress, H. R. 5373, the text of which appears below, which would give the Federal Government authority to deal with a large part of the problem by establishing recreation programs for the leisure hours of Federal employees, the young men and women recruited from all over the country, similar to those which private industry has carried on so successfully for over 50 years at such leading concerns as Eastman Kodak, Hershey Chocolate Co., Ford, Firestone, and Goodyear.

My bill is similar to legislation which passed the Senate during the Eighty-first session of Congress as S. 2859 and upon the recommendation of the Department of Defense and the Bureau of the Budget, acting for the President, was introduced in the present Congress by Senator RUSSELL, chairman of the Armed Services Committee of the Senate.

It is important that wise manpower policies be adopted by the Federal Government before it is too late. Too little and too late hardly describes the Federal Government's lagging 50 years behind private industry in this vital aspect of its employee relations. Wholesome recreational outlets must be provided Federal employees now.

Even during the war, when the need was even greater than it is now, Eleanor Roosevelt pointed out in her column *My Day* recently the Federal Government did not employ trained recreational leaders, nor did it take any interest in the recreation problems of its employees.

The article is as follows:

SECRETARIES WANTED DESPERATELY

(By Carolyn and Phil Gustafson)

In Washington they tell a story about the way Government agencies test new candidates for stenographic jobs. The timorous applicant is blindfolded and gently ushered into a large room. Then the blindfold is removed and she sees five tables lined up in front of her. Each table holds a single object. There is a juke box, a calculating machine, a cash register, a typewriter and a slot machine. If she can identify the typewriter, she's hired.

This story illustrates the desperate fix in which the Government agencies are finding themselves these days with the Capital burst-

ing its seams in defense expansion. Short supplies in other strategic materials may have caused more clamor, but as far as Washington bureaucracy is concerned, the three most critical items in the cold war are typists, stenographers, and secretaries. And so scarce are all three that employment chiefs in some of the new agencies say they are having a hard time getting their organizations under way.

At one point last summer, Arnold Sukrow, employment officer of the National Production Authority, was beating the bushes for 500 girls to fill out a complement of 1,200 while phases of the production program marked time. In the Office of Price Stabilization, his opposite number, John Ahern, was combing the country for 400. In one period critical aircraft-manufacturing contracts were held up at the Wright-Patterson Air Force Base in Dayton, Ohio, where 650 stenographers were needed. So frustrated did impetuous flying generals finally become that they started training their own stenographers—and paying them \$42 a week to learn. Screams of private employers speedily reached the ears of Senator HARRY F. BYRD's "watchdog committee" on Federal spending and the noble experiment was slapped down.

In Washington, executives lured into the production agencies from \$40,000 jobs in private industry wander from office to office like lost sheep, timidly begging for someone to type a letter. Sometimes the wheels of justice threaten to stop because lawyers in that department can't find anyone to type their briefs. Executives deny reports that they are walking the streets in search of secretaries, but one good-looking young NPA official helped a bundle-laden damsel across a busy street and hired her when they reached the opposite curb. New agencies raid old agencies for stenographers and typists, offering them higher grades, and both have robbed private industry until businessmen are resorting to desperate measures.

After losing three girls in a year, Kneessi and Adler, a Washington haberdashery, put an ad in the papers promising their next secretary a cocktail party every afternoon and a husband within 6 months. This news tidbit was picked up by the press services and spread over the country until it had brought in 300 applications. Attractive Elenore Nelson, 23, of Minneapolis, was the girl selected for the job.

True to their promise, Kneessi and Adler threw a cocktail party every afternoon at 5, with latecoming customers as guests, and in 3 months Elenore had had eight proposals, all of which she turned down. At the end of 4 months she went home to attend the wedding of her sister and neglected to come back, perhaps having discovered that the chances were better at home. Another flurry of publicity attending her departure brought Kneessi and Adler another secretary, who has the same guaranty.

"It's a pretty expensive way of getting a secretary," Mr. Kneessi chuckled, "but it's better than typing your bills yourself."

Distress is greatest in Washington, but the crisis in the Capital only reflects the bitter shortage of stenographers and typists which is gripping the country as a whole. And a civil-service survey shows the shortage is world-wide. The demand for these two frail items in the labor budget has gone up 10 times since Korea, according to the Labor Department, while demands for all other types of workers have risen only fourfold. Business colleges are having a tough time getting girls to come to school, and some are running only partly full. Placement officers say they get nine calls for every girl graduate—if she ever gets that far, for girls are being widely snatched out of school with their courses only half finished.

In Dallas, Tex., the employment manager of one large company called a secretarial school and asked for two graduates. There were none to be had, he was told. Then he

asked for a couple who were near graduation. There were none of these either, he learned.

"Then whom do you have in the school?" he demanded.

"No girl who has been here more than 2 weeks."

"Well, send over a couple of those," begged the desperate employment manager. "They have 2 weeks' more training than anyone else I've been able to find."

A Chicago business-college director was scandalized to learn that two local girls who used the hunt-and-peck system were recently hired as secretaries. Executives in Washington admitted that things weren't quite that bad in the Government, they only seemed that way. Civil-service requirements, which used to be much higher, now allow the hiring of stenographers who can type 40 words a minute and take dictation at 80. But the agency executives who get some of these young things say somebody's stopwatch is slow.

Between the bureaucrats and the businessmen, the District of Columbia has long since been picked clean, and 14 of the larger agencies are covering the country with hot-shot teams of recruiters, shaking the trees from Maine to California for any little peach that might fall. Other agencies are reaching for these hard-to-get girls through field offices, regional offices of the Civil Service Commission, and the 1,800 local offices of the United States Employment Service.

"We're doing everything but get down on our knees to get the girls to come on," reported Albert Sonntag, Civil Service deputy in St. Louis. Recruiters have already picked off the few remaining girls in that city and fanned out into small towns, where salaries are lower and girls are more susceptible to tales of Washington glamor. In other large cities the situation was the same.

As many as eight recruiting teams have been known to crisscross one another's paths in a single State and the competition is terrific. So is sales resistance. Recruiters come back from their tours with empty hands and hanging heads and tell heart-breaking stories to their bosses.

For one thing, parents read exposés of the Capital, like *Washington Confidential*, which reports shocking moral and living conditions. Then mamma puts her foot down and refuses to let her baby lamb go to the wicked city. Recruiters recently reported tremendous public reaction to an article published by a national magazine under the title "Don't Send Your Girl to Washington." In some places it slowed recruiting to a standstill. Mothers ganged up on one recruiter in Boston and threatened to have her run out of town. Ministers rose up in their pulpits in one town, declaiming against the evils of the big city.

Navy Department recruiters were aghast to find that one of their own officers, Capt. Walter Karig, USNR, special deputy in the Navy's Office of Information, had also made mothers militant by writing a best-selling novel, *Caroline Hicks*. The book is about a 21-year-old girl from a small Pennsylvania town, innocent of many of the basic facts of life, who does her bit to uphold Washington's reputation as the drinkingest town in America and loses her innocence in the process. When Mrs. Dorothy Jacobsen, Navy recruiting chief, good-naturedly charged Karig with sabotaging the defense program, Karig declared that the book has only whetted the girls' curiosity. It brought in a lot of fan mail, he says, along the lines of a note from a girl in Bryn Mawr, Pa.:

"I'm a candidate to become a Caroline Hicks myself—in a nice way, you understand. Will you please tell me how to go about getting a job in Washington?"

The indignation of parents and preachers, however, is nothing to the wrath of local businessmen threatened with having their secretaries spirited away by the Government. Angry merchants wait on publishers

beguiled by pretty recruiters into publicizing their visits, and threaten to withdraw their advertising. One ruffled Ohio man whose secretary had gone to see Mrs. Billie Moore, a recruiter for the Economic Cooperation Administration, called up to warn, "I'm telling you right now, if you steal my secretary, I'm going to report you to my Congressman!"

Especially infuriating to the local businessmen are the crack teams of the Navy Department, who, unlike the girl hunters of other agencies, nearly always get their woman. The Navy's staff of 30 women has been bringing in 200 to 250 civilian recruits a month.

"They pull out all the stops, those Navy girls," growled a middle western personnel manager. "They always seem to manage to have a couple of cute sailors around somewhere or else they let a picture of some good-looking young gob 'accidentally' fall out of their papers and land at the prospect's feet."

But the recruiters from Washington are only part of the Federal competition which the businessman has to buck if he wants to keep his girl. For of 2,316,045 Federal employees, only 256,060 of them work in Washington, the rest are spread over the country. Since Korea, the lives of businessmen in such cities as Detroit, Chicago, Columbus, Dayton, St. Louis, and San Francisco have been made particularly unhappy by booming Federal establishments, while in Baltimore and Philadelphia they are plagued by the nearness of "Truman's Teapot," as one Republican likes to refer to the Nation's Capital.

The lures of the Federal hiring agents were hard for most private employers to beat, for the Government brings in typist-stenographers at grade 3, \$50.96 a week—and grade 4, \$55.29 a week, where the average starting salary in private business is about \$10 lower. Cities like New York, Chicago, San Francisco and Detroit are exceptions, there private salaries are competitive. Apart from salary, the Government dangles such enticing extras as 26 days' paid vacation each year and 15 days' sick leave with pay.

Businessmen in critical areas have had to upgrade salaries 15 to 20 percent to meet the competition, and the scale is still going up. In Columbus and Dayton such foolishness as the customary half day of work on Saturday has been quietly dropped in favor of a 5-day week. Married women, long taboo in some firms, are now welcome as the flowers in spring.

A businessman phoned a New York employment agency and offered to find an apartment for any stenographer who would come to work for him and promised to have it redecorated to boot. The agency's placement officer gasped and would let no one apply until she'd checked to see whether the employer's intentions were honorable. Apparently they were, and the job was filled.

"The girls are choosing their bosses with care these days," said one business-college official, "but the funny part of it is that these fellows still seem to pretend it's the other way around. They're going to have to learn to sell themselves."

The stenos, on their part, have come to realize that they are the queens of the day, and they like the feeling. One girl in St. Paul passed up a good job because the boss didn't have an electric typewriter. One turned up her nose because she wouldn't be allowed to smoke at her desk. And another because the boss smoked El Ropos.

A faint idea of where this attitude may lead can be had from an incident reported by Frank Kimball, personnel chief for the National Production Authority. Four sweet young things from the Middle West, signed up after a good deal of heavy rushing on the part of the recruiters, finally arrived at Union Station in Washington and were met by

an NPA limousine. The car took the girls to the personnel office, where they filled out some routine papers, and then delivered them to the boardinghouse where the agency had found temporary accommodations. The girls had been told to report for work at 9 o'clock the next morning. Nine o'clock came and went, and no girls. Ten o'clock and no girls. At last an NPA telephone rang. One of the recruits was calling. "When are you going to send the limousine around to take us to work?" the girl inquired sweetly.

The main reason for the shortage, of course, is rapid defense expansion. And at such a time many a sharp young lady finds it pays better to put on overalls and go into a defense plant. Moreover, attractive jobs have been opening up in advertising, fashion, radio, and television. The girls say they're tired of working under conditions that shouldn't happen to a dog. We talked to a number of them who had moved on to other jobs, and they had plenty to say about their former employers.

"I got good and tired of being treated as a social inferior," snapped a peppery little redhead from the Bronx. "When visitors came into our office, was I ever introduced? I was not. Then all day long it was 'Katy this' and 'Katy that,' but I had to call him 'mister'."

"When a couple of his friends would come in," complained a dignified young lady in Philadelphia, "he'd fish down in his pants pocket with a wink, throw me 50 cents, and say, 'How about some coffee, Jonesy, old girl?' One day when he popped this question, I settled back in my chair and cooed, 'Why, I'd love some, Archie, old boy.' It was not long after that that I left."

One girl voiced a common complaint, "He'd sit around in conference all afternoon and hold hands with a lot of other so-called executives who couldn't make up their minds either. Then he'd dash in at 4, dictate until 5, toss me a cheery good night, and hurry off to a hot supper. There I'd be, battling out a batch of 'must' letters, that could have waited until next week anyway, and stuck with the seven-oh-one for the third or fourth time that week."

But the prize complaint of them all came from the crack ex-secretary of the brilliant young president of one of the Nation's leading advertising companies.

"He'd start dictating at 160 words a minute as soon as I got in the door," she recalled, "and sometimes finish the letter before I had even had time to sit down. Things went on and on at that same mad pace all day. The man was utterly disorganized. I was there to put order in his life. And for this I got sixty a week."

"He'd come in wearing the coat to one suit and the trousers of another, with a tie that went with neither. I was always running out to buy ties, and brother, were those things hypnotic. Not only did I have to take the spots off his suit but I had to put a note in the pocket to tell him when it needed cleaning. When he went to Europe last summer I had to take care of his office and run his house in the bargain. On request, I canned the prize peaches from his orchard, kept an eye on the kids' nurse, and helped mind the Alredales. When one of these had puppies, I was to give the little darlings away to members of his office staff. People had always seemed thrilled when he'd given out other litters. But would they take them from me? In the end, I called the SPCA. And did I ever catch it for that?"

Among the big reasons for the woman-power shortage in Government are the stories that float back from Washington about the maze of restrictions that keep women from getting the pay they deserve or block them off from jobs for which they are qualified.

Practically hoodwinked into taking a grade 4 job at \$55.29 in the early stages of

the defense effort, many a bright girl has had a rude awakening when she ran into a tangle of red tape that forced her to mark time for a year or more before she could take a grade 5 job at \$59.62 even if she had the offer. Any number of such cases were quick to join the half-million Government workers who shift jobs or leave the service each year.

Bright-eyed young things are being made into bitter, complaining women by the unwritten law that a girl's grade is dependent on that of her boss.

"I can tell you why there's a shortage of stenos," one of them told us. "I've been a grade 4 stenographer for 9 years, and because I work for a grade 13 boss I'm told I can't get a higher grade. My only chance to go up is to find me a grade 15 boss."

So much of a howl has gone up from the typists and stenographers that civil-service grading experts came out last summer with modifications in the hidebound rules on promotions. Among other things, the rule requiring 6 months "in-grade" was reduced, in all grades through 5, to 3 months.

But whatever rules are changed, the situation is expected to get worse before it gets any better. And one of the things that are making it worse is the bad press that the Capital keeps getting all over the country.

As the various Washington expositors have it, the Government girls have to sleep in flea-bitten barracks under conditions that would revolt a DP from Soviet Poland. Food and housing, are out of sight. The Capital is full of sin. The few men in town are wolves. You take your choice and become a fallen woman or a dudge.

"The average Government girl goes home to her tiny room to eat her dinner out of cans and ponder whether to wash her panties or write letters home or get drunk," say the authors of Washington Confidential.

All these reports are nothing but a pack of lies, say officials of Government agencies, who have joined with Washington social organizations in a campaign to expose the expositors.

"The theme of Washington Confidential, that the District of Columbia is a moral cesspool, is so far overdrawn as to be silly," says Ray Everett, director of the Social Hygiene Association's Washington branch. "Why, the city is so prudish that it even closed down the Gayety burlesque a while back."

Mr. Everett admits that the problem cases involving promiscuity have grown with the population, but claims they're still far from reaching any dangerous proportions. Police say the city is still running along on the same low curve of delinquency that set in after the last war.

Upset at reports of high costs and housing shortages, the Civil Service Commission issued a fact sheet which says that plenty of good, pretested rooms are available at \$35 to \$50 a month, and that Government girls can eat in restaurants for as little as \$2 a day. They can even have apartments if they will double up on the costs. ("What apartments?" say the girls.)

To dispel the notion that Washington is a lonesome and manless place to live in, social agencies flood Government offices with booklets that list every kind of diversion from bird watching to water skiing. They promise so many opportunities to meet young men that matrimony would seem almost incapable. The District Recreation Department lists 500 to 1,000 girls who stand ready at the drop of a telephone receiver to dash off to surrounding camps and dance with soldiers and sailors.

School and university officials claim Washington offers more cultural and educational opportunities than any other city in the world. They point with pride to an estimated 10,000 part-time students—most of them Federal workers. American University even runs a special work-study plan by which, for \$850 a year, a working girl can live

on the campus and get a bachelor's degree in 6 years.

As a shining example of what an ambitious girl can do in Washington, the university points proudly to Miss Margaret Matus, 26, who came to Washington 6 years ago from the little town of Nescopeck, Pa., and went to work for \$1,440 a year. By last June she had worked herself up to grade 7 at nearly \$4,000 and graduated with honors as a bachelor of arts. Her next steps will be a master's degree and a job as administrative assistant. Far from being an overworked drudge, Miss Matus is a sensibly dressed, attractive brunette who views her double life calmly. She shares an apartment with another girl, finds time for concerts, the theater, golf, and horseback riding, and says she likes Washington fine.

Training, personnel, and employment experts in the Capital have plenty of ideas on what should be done about the shortage, and one of the most outspoken is Dr. J. S. Noffsinger, executive secretary of the National Council of Business Schools.

"Congress is still living back in the horse-and-buggy days," he fumed. "Government officials could save millions of dollars if they'd follow the lead of private industry and recruit through the Nation's twelve hundred business schools."

Another critic of present methods is Mr. Kimball at NPA. "I proposed the idea of having the schools do the recruiting, but I got slapped down by the Civil Service Commission," he said. "So I say it's up to the commission to take the lead and recruit office workers for all the agencies."

We took the question directly to Robert Ramspeck, Chairman of the Civil Service Commission.

"It isn't practical for the Commission to recruit for all the agencies," he told us. "We did it in World War II, but now we've become too decentralized. And anyway, we'd just be stealing from private industry if we turned on any more heat. I think the next step is some training. We might pay the trainees' tuition, assuming Congress is willing."

To improve the situation in private business, a number of things seem to be needed. Most of them come under the heading: More pay. Especially for gals who run the office while the boss takes a fishing trip. But that isn't all of the story.

"Why be a good secretary when it leads to nothing else but more secretarial work?" asks Dr. Irene Place, an official of the National Association of Secretaries, which lists 10,000 members. "Today's young woman would rather be Lady Friday on an air liner. The job of being a secretary has lost its glamour. Businessmen have to invest it with more prestige, better human relations, more interesting duties, and a better goal to shoot at."

Other employment specialists are quick to point out that the employer has only himself to blame for his predicament.

"He hires for sex appeal, not ability, and that's where his troubles begin," says Mrs. Badie Brown, director of the Collegiate Secretarial Institute, a New York business college. "He keeps this cute featherbrain around to show what a picker he is. He can't stand a capable girl around because he doesn't want women pushing up in the business. He's psychologically unable to accept women as business equals. This is one of the reasons we train and recommend men as secretaries. They have an unprejudiced opportunity to go on up in the business."

Vernon Armstrong, employment specialist in the Labor Department, says employers do themselves out of a lot of good workers because of race prejudice.

"When you insist on keeping to the white market these days," he told us, "you're scraping the bottom of the barrel, and what you're

getting is splinters. Move over to the other barrel and you can have the cream of the crop. Big-league baseball found this out."

They are also passing up a lot of good secretaries among the older women, according to the employment service of the Federation of Jewish Philanthropies in New York, who have been running into all sorts of resistance in their efforts to train and place high-caliber older workers.

"When I tell them my age, they're ready to drop dead," said one capable 51-year-old woman who has been trying in vain to get a typing job.

The Civil Service Commission, at the urging of Mr. Ramspeck, has been campaigning among Government agencies for improving on the use of existing talent.

"Please don't use trained stenographers just to type reports and answer telephones," is one of their requests. Mr. Ramspeck has also been carrying on a campaign for wider use of dictating machines.

Many large companies are doing the same thing and some are carrying the idea even further by using a machine which allows as many as 20 executives to lift individual desk instruments and dictate to a central station. Their voices are picked up on records, which may be transcribed by a single typist.

The next step may be a machine which will take the spoken word and put it right down on paper without benefit of the feminine hand.

"Scientifically speaking, it's perfectly possible to create an electronic secretary," says Dr. Waldo Kliever, research director for Minneapolis-Honeywell, which develops automatic machinery. "But I don't think American businessmen would ever go for a robot secretary. Who'd correct our spelling and grammatical mistakes? Where would we get our inspiration? Beautiful or not, the secretary can't be spared by American business. She's here to stay—we hope."

Highway Safety

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, October 16, 1951

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the speech I shall make tonight at the Virginia Highway Conference at Virginia Military Institute, Lexington, Va.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

This has been the most trying session of the Congress during my 18 years of service in that body. On the House side Members are limited to one major committee and, while the Ways and Means Committee on which I served, which as Champ Clark said, handles the lifeblood of Government, namely, taxes, was a hard-working committee, it normally handled only one major bill in a session of Congress. When I transferred to the Senate in 1946 I was happy to be privileged to serve on the two committees on which my predecessor, Carter Glass, had rendered such distinguished service to Virginia and the Nation, namely, Banking and Currency and Appropriations. I knew, of course, that they were both important committees but I did not know that we were moving into a period when they would be the two hardest-working committees of the Senate, the former handling a flood of bank-

ing and currency and economic-control bills and the latter appropriations of an unprecedented size.

Before the end of the week I anticipate that the Congress will complete action on an amendment to the price-control bill which it was my privilege to draft as chairman of the subcommittee which conducted the public hearings. The Appropriations Committee has completed its hearings, totaling thousands of pages, on budget requests of staggering amounts and we hope Senate action can be completed on that program before the end of the current week.

Needless to say, it was not easy for me to leave my duties in Washington during the closing days of a tough session but throughout my period of public service I have been so deeply interested in the development of good roads and, in recent years, so deeply concerned over how these instrumentalities of improved travel have been turned into national death traps, that I felt that I could at the moment render no better service than to come here tonight and publicly endorse the efforts of Virginia and her sister States in working out ways and means for greater safety on our highways.

This three-day conference was preceded by a brilliant series of articles in the Richmond Times-Dispatch by our young Lexington friend, Charles McDowell, and during the proceedings here those far better qualified than I to discuss the subject have given to you all of the material facts involved. While I am, therefore, in the position of bringing coals to Newcastle tonight, the situation confronting us is so very serious that some of the fundamental facts involved may be given emphasis by mere repetition.

On Memorial Day of each year we gather to commemorate the sacrifices of those who have died on the field of honor. Their total since 1776 is now 800,000. It is fitting and proper that we should commemorate their memory because, as Pericles said of the young men of Athens, "They gave their bodies to the commonwealth and received, each for his own memory, praise that will never die, and with it the grandest of all sepulchres, not that in which their mortal bones are laid, but a home in the minds of men, where their glory remains fresh to stir to speech or action as the occasion comes by."

No day has been set aside by our State or by our Nation to commemorate those who have died on our highways in motor vehicle accidents although the pen of the press is poised to record the death of that man who will make the total 1,000,000. The press has already recorded the fact that each year in recent years the casualties on our highways amount to over a million, many of whom while not killed are crippled and maimed for life. No Memorial Day orator can arise and say to a solemn assembly that those millions of killed and wounded have been sacrificed for the perpetuity of political and economic freedom. The harsh fact is that most of them died uselessly and unnecessarily, that many were guilty of self-destruction while others were guilty of violating the oldest and most fundamental law of all history. "Thou shalt not kill."

Every father and mother with a son on the fighting front in Korea is happy when a day passes without the receipt of a telegram: "Your son has been killed in action." While fewer men have been engaged in Korea than were engaged in either of our two World Wars, more men have been killed in 1 year in Korea than were killed in the first year in World War II. The casualty rate has been so high that one newspaper correspondent has described it as a race between rotation and death. And yet those killed on our highways during the period of the Korean war numbered nearly three times as many as those killed in battle, while those seriously injured in traffic accidents were far more than three times the number injured in Korea.

The annual property loss from highway accidents is approximately \$3,000,000,000, while no figures are available on the amount of loss of earning power of those who have been incapacitated. This situation has caused the English historian, Arnold Toynbee to say that western civilization has progressed from the premechanical road, where the problem was "getting the journey accomplished at all" to the road of today on which "the old challenge of physical distance has been transmuted into a new challenge of human relations between drivers who, having learned how to annihilate space, have thereby put themselves into constant danger of annihilating one another."

Man's mastery of the physical sciences has outstripped his mastery over the social sciences. Our discovery of how to split the atom and to explode a bomb that would destroy great cities at one blow is no longer regarded as a means of preserving an uneasy peace. The definite knowledge that Soviet Russia has a stockpile of atomic bombs, coupled with the admission of our Air Force that a considerable percentage of jet-propelled bombers bearing those bombs could penetrate any defensive screen we might throw around our major metropolitan areas, has caused many to believe that H. G. Wells was right when he predicted that a third world war would leave civilization cowering behind a windbreak or in the disease-soaked ruins of a slum.

With the hope that a demonstrated ability to retaliate will stay the hand of a potential aggressor, the duly elected representatives of the American people have at this session of the Congress voted to appropriate approximately \$90,000,000,000 for our national security. At the same time and for the purpose of preventing ruinous inflation which inevitably would result from financing such a public outlay with borrowed money, the Congress has imposed the heaviest tax burden in the history of our Nation. That burden is so heavy that the chairman of the Senate Finance Committee, Mr. GEORGE, has publicly declared that the current tax bill is the last one that he intends to support. But even on the basis of collecting in tax revenue the unprecedented sum of approximately \$65,000,000,000 per year, most economists are agreed that if our defense production plant can be expanded as now planned, outgo by the end of the current fiscal year may exceed income by as much as \$8,000,000,000 and by the end of the following year by as much as \$20,000,000,000. It, therefore, behooves the American people to take stock of our resources in manpower and in physical wealth to ascertain in what manner this apparently unavoidable strain upon our domestic economy of military preparedness can be to some extent offset by prudent economy in other fields.

It is needless for me to remind you that the entire Virginia delegation has at this session of the Congress presented a united front against unnecessary domestic spending. I feel justified in saying that the current program in Virginia, as evidenced by your wonderful conference at VMI, dedicated to the conservation of life and property on our highways has the united support of the Virginia congressional delegation. We share the concern of our distinguished Governor and of the best highway commissioner that any State has ever had over the fact that only 10 States have a higher death rate than the Old Dominion. The national traffic accident death rate has since the safety movement commenced 5 years ago been reduced from 11.3 deaths in traffic accidents for every 100,000,000 vehicle miles of travel to 7.5 in 1950. But in that year Virginia's traffic rate rose to 9.2. Fear has been expressed that the national ratio will be exceeded in 1951, to say nothing of the fact that we now have around 50,000,000 vehicles on the road as compared with 30,000,000 in 1946 and travel mileage has increased proportionately.

In 1942 Virginia adopted the uniform motor-vehicle operators' and chauffeurs' license law advocated by the National Conference on Street and Highway Safety. We also adopted the basic provisions of the uniform code covering registration of motor vehicles and some of the recommended provisions concerning financial responsibility. Virginia's traffic laws covering serious offenses, rules of the road, and equipment provisions have been described by the Federal Bureau of Roads as modern, comprehensive, and substantially the same as the uniform code recommendations. Yet casualties on Virginia highways continue at an alarming rate and last week the seven hundred and sixty-first death for this year was reported.

Everyone in this audience who has operated an automobile for 30 years or more well knows the kind of cars we had in those days and the kind of roads over which we drove then. Your lights would suddenly go out. The two-wheel mechanical brakes, which were never adequate for complete control, sometimes completely failed, or the steering mechanism would fail. The headlights of an approaching car would blind you and there was no law to require dimming. Today the mechanical defects of automobiles have practically been eliminated. And do I need to remind you of the old dirt roads where for drainage purposes side scrapers crowned them to the shape of a pone of Virginia cornbread and where the motorist was almost forced to take his half of the road right out of the middle. I hope our friends from other States will not deem me to be guilty of vain boasting when I say that to me the construction of highways in Virginia, first under Mr. Shirley, and then under General Anderson has been an epic. In areas of congested travel three- and four-lane highways have been provided, while all main travel roads have been hard-surfaced. Dangerous curves have been eliminated and what remained adequately banked. Hilltops have been cut off and the dips of the valley elevated.

Evidently, therefore, the hard core of our present problem is the personal equation referred to by Arnold Toynbee.

We must educate those drivers who are willing to learn safer procedures and we must eliminate from the roads those unable or unwilling to learn. We do not have enough traffic officers in Virginia now and I hope the next general assembly will appropriate for an enlarged force. There can be no question about the restraining effect on speeders and other traffic violators of visible evidence of the law and a demonstrated ability to enforce it.

I would recommend also that all trial justices and judges of courts of record be furnished with a scientific analysis of the meaning of driving under the influence of intoxicants. Virginia has a strong law on this subject. Section 18-75 of the code provides that: "No person shall drive or operate any automobile or other motor vehicle, car, truck, engine, or train while under the influence of alcohol, brandy, rum, whisky, gin, wine, beer, lager beer, ale, porter, stout, or any other liquid beverage or article containing alcohol." It also has been determined by a test case (*Owens v. Commonwealth*, 147 Va. 624) that the test is not the ability to drive and operate a vehicle with safety to self and others, but whether the driver is to any degree under the influence of alcohol.

That law gives all the authority needed to stop drunken driving in Virginia, if it is properly enforced. But I fear some would like to construe the statute like the three men who staggered up to the bar and ordered a whisky highball, while the fourth companion sprawled on the floor. When the bartender said: "What about your buddy on the floor?" One of them promptly replied, "Don't give him any more, he's got to drive." Scientific tests have clearly dem-

onstrated that a 1-ounce drink of whisky will influence the perceptions and reactions of a driver, that 2 ounces will very perceptibly influence him and that after taking 3 ounces, which is smaller than three normal drinks, an interval of 4 hours should elapse before a man undertakes to drive.

I also would suggest the advisability of increasing the minimum penalty for excessive speed and we should give serious consideration to the program advocated by the Department of State Police which calls for mandatory suspension of drivers' licenses for speeding, and reckless driving, and revocation for subsequent offenses as well as for driving while drunk. Twisting judgment or respecting important persons has no place in the administration of any criminal statute.

Before Moses took leave of the children of Israel on the Plains of Moab, he delivered a series of addresses, recorded in Deuteronomy, in which he summarized the fundamental laws and the rules of conduct for an organized society which during the previous 40 years he had given them, as recorded in Leviticus and Numbers. Among other things, he instructed the judges: "Thou shalt not wrest judgment; thou shalt not respect persons, neither take a gift, for a gift doth blind the eyes of the wise, and pervert the words of the righteous."

The great English statesman, Edmund Burke, once said, "Nations do not learn by experience." It has been a source of great embarrassment to Virginians and all other good citizens who believe that public office is a public trust that there have been officials in the Democratic Party who have ignored that fundamental injunction from Moses to the judges who were serving under him; and if a nation can learn by experience, it may help us to recall the parting injunction of Moses to the people he loved and whom he had led out of bondage when he said that if they disobeyed God, "Ye shall be plucked from off the land whither thou goest to possess it, and the Lord shall scatter thee among all people, from the one end of the earth even unto the other . . . and among these nations thou shalt find no ease, neither shalt the sole of thy foot have rest; but the Lord shall give thee, there, a trembling heart, and failing of eyes, and sorrow of mind, and thy life shall hang in doubt before thee."

In view of the fact that a passenger bus involves the safety of a large number of lives, I would recommend stricter enforcement of speeding laws on such busses, since it is well known that many of them now make an average of 60 miles per hour when traffic conditions will permit and apparently that practice on the part of the drivers is tacitly ignored.

We know that young drivers generally have quicker responses than their elders and potentially should make safer drivers, but we also know that young drivers are the ones who have the most accidents. It is evident, therefore, that our task is to train their mental attitudes rather than their muscles.

In the 1950-51 school year driver-training courses were being given in 229 of the 510 high schools in Virginia covered by a national survey on this subject and enrollment in these courses was estimated at 13,068. That is a fine start but should be only the beginning of a program which eventually will make the training of young people to handle an automobile safely as much a matter of course as teaching them to read and write and count.

This training must not stop with merely giving them experience in the mechanics of handling a car. They must accept the fundamental philosophy of the familiar maxim of English common law, "Sic utere tuo ut alienum non laedas—so use your own as not to injure another."

That principle has been recognized since the day when Cain offended and asked

guiltily "Am I my brother's keeper?" It was accepted in the days of the Roman Empire when roads were built which still stand today because the Roman law provided that if a road failed the contractor lost his life. The voluntary rather than compulsory aspect was emphasized by Jesus in his parable of the Good Samaritan and the principle is implicit in the statement of our Declaration of Independence that life, liberty, and the pursuit of happiness are inalienable rights. It is fortified also in the Bill of Rights amendments to our Federal Constitution which define the limits beyond which one man or a government of men may not go in using their own when the use might injure another.

In brief, we must teach that safety on the highways is—like democracy—a matter of co-operation and coordination and that liberty to operate a high-powered modern automobile over a modern highway designed and built for such use must be protected in the same way that all other liberties must be protected, namely, with a view to similar enjoyment on the part of the other fellow.

We have more miles of improved highway than any nation in the world and more motor vehicles. That is but another way of expressing a fact that has made up the envy of the world, namely, we are the richest nation in the world, with the highest standard of living. But it is just as true today as it was during the Constitutional Convention in Philadelphia in 1787 when Benjamin Franklin said: "I have lived a long time . . . and the longer I live the more convincing proof I see of the fact that God governs in the affairs of men."

Our Virginia forefathers made an enduring contribution to the birth of a Nation destined to hold aloft for the oppressed people of the world the torch of freedom. The sterling qualities of character, of moral fiber, of courage, and of self-control which characterized the Virginia pioneers are the same qualities we need today to pass on to generations yet unborn those priceless principles of political and economic freedom which were born of the brain and purchased by the blood of the founding fathers.

**Address by Hon. Robert A. Taft, of Ohio,
at Founders' Day Republican Banquet
at Detroit**

EXTENSION OF REMARKS OF

HON. HOMER FERGUSON

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES
Tuesday, October 16, 1951

Mr. FERGUSON. Mr. President, last evening, at Detroit, the distinguished senior Senator from Ohio [Mr. Taft] delivered an address at the Founders' Day Republican banquet. I had the privilege and the honor of introducing the Senator from Ohio on that occasion. I ask unanimous consent to have printed in the Appendix of the Record the address delivered by him and my introductory remarks.

There being no objection, the address and introductory remarks were ordered to be printed in the Record, as follows:

INTRODUCTION BY SENATOR HOMER FERGUSON

In the 21 years of complete Democrat Party control in this country evidences of moral degeneration emerge as a pattern that disturbs every honorable, loyal American—the graft and corruption—the scandals; the

staggering appropriations—resulting in excessive taxation; the resources of our Nation dissipated, our people bewildered and disturbed, the trend toward socialism and away from our basic freedoms. We join forces as Americans and unite as Republicans to stem the tide of disaster and fight to recover the moral strength which was the basis of our greatness as a nation.

Our speaker tonight has fought with courage and integrity, with knowledge and understanding, to help correct the errors of the past and to reestablish a sound political and economic national and international policy.

His background as the son of a President gives him an understanding of the importance of first things first and the necessity for clear thinking and integrity of purpose. His experience as aid to President Hoover with the tremendous job of rehabilitating Europe following World War I gave him insight to humanitarian problems. For this work he was decorated by the Belgium Government.

In any Who's Who you can read of our distinguished speaker's brilliant academic background, and the numerous honorary degrees that have been conferred upon him, but this recital cannot convey his ability, his courage and honesty of purpose.

He is a realist and as such he appreciates the serious problems that face us today, squarely and honestly.

I have come to cherish his friendship as one of the richer awards of being a United States Senator.

My personal affection for him has grown because he embodies the high principles in whose name we as Republicans are met together tonight.

In him is the courage which has fought through adversity to defend those high principles, and in him there is as well the vigor to defend them successfully.

In him there is the genius of enlightened and constructive thought which will not stoop to narrow interest or mere expediency.

Upon him there is the stamp of integrity, which is the hallmark of Republicanism.

I have the great pleasure of presenting my friend and colleague, ROBERT A. TAFT, Ohio's able senior Senator.

ADDRESS OF SENATOR ROBERT A. TAFT

It is a real pleasure to come here to the city of Detroit, one of the greatest bulwarks of production in the United States, at the invitation of Arthur E. Summerfield, Republican national committeeman for the State of Michigan. He is responsible for this great enthusiastic Republican meeting. I like to come to Detroit among other reasons because it is the home of Homer and Myrtle Ferguson whom I count among my close friends in Washington. I don't know any better Senator than HOMER FERGUSON. He is the hardest worker in the Senate. He will not deviate from principle, and he has effectively represented the views and interests of the people of Michigan.

Michigan has always been a great Republican State. At this banquet you are starting the campaign to assure its remaining a Republican State in 1952. Such a campaign was never so necessary. Never in our times will we see as crucial an election as that of next year. You must decide then whether we continue our present policies to their logical conclusion of totalitarian government and war, or whether we turn again to American principles and resume our progress in freedom and in peace.

A whole generation of Americans has grown up under New Deal and Fair Deal administrations. Forty-five million voters have never known a Republican president in their adult life. They have come to accept as a normal part of American Government, war and alarms of war. They hear of spending in such astronomical figures that they are unable to judge the necessity or the proper

scope of government action. They accept as a matter of course the appointment of left-wingers of all degrees, including Communists, to positions of power, and the exclusion from public office, with few exceptions, of those who refuse to sacrifice their philosophy of freedom. They are convinced that government is normally corrupt, and that government action and contracts and favors are dispensed in accordance with the desire of influence peddlers who dispense deep freeze, fur coats, and 12-pound hams to achieve their purpose. They accept as a matter of course the constant expansion of Federal power in every field. They have lived through a succession of emergencies and look for continuous emergencies in the future. They accept, while they resent, bureaucratic efforts to control their business, their farms, and their daily lives. They have lived under a regime of government by slogan, flooding the press and radio of the country from the greatest propaganda machine which the world has ever seen.

Many do not realize that these conditions are in fact abnormal, that they do not really represent the philosophy of the American Republic, or of the majority of Americans even today. It is your job and the job of all Republicans to inculcate again the principles of liberty and honesty and justice and common sense. The American people have not in fact changed. In the last 2 years I have talked with hundreds of boys and girls in the high schools and colleges of Ohio and other States. They still believe in those American principles which were the basis of the greatest experiment in self-government in the history of the world. They still believe in liberty and honesty and equal justice under law. They can be shown that the actual number of left-wing intellectuals is infinitesimal in proportion to the real Americans in the United States, that they are one hundred times as powerful in government positions as they have any right to be on the basis of proportion of population. They can be shown that government can be honest, as are so many of our State governments and city governments under Republican control.

The Republican Party appeals to these young people today, because it offers hope of an honest American government. We offer hope of peace and prosperity; of progress within American principles of liberty. We offer leadership toward those goals, and we ask the help of every true American, and particularly the help of the younger people to whom this country belongs, to achieve our goals and their goals. The Republican Party can assume the leadership of the country, but it can only do so if the people have confidence enough to make it their vehicle to achieve an able and honest government. We ask the help of all Americans in this crusade.

For years now the Republicans have had to carry on a rearguard action, and they have seldom had the power to put their program into effect. They had one chance in the Eightieth Congress, and there was more constructive action taken in that Congress than in any Congress in which I have ever served. The Government in one of our years had a surplus of \$8,000,000,000. We scrutinized every appropriation bill and carried through a long series of carefully planned measures, including—

1. The repeal of war controls and the return to a free economy.
2. The unification of the armed services, and a 70-group air force, later cut down by President Truman.
3. The Taft-Hartley law, to assure equality in collective bargaining.
4. The Aiken agricultural policy and price support law.
5. The Marshall plan to combat communism abroad.
6. The only tax reduction bill we have seen in many a New Deal year.

7. A constructive reclamation and REA program.

8. The first revelations of communism in government.

9. And many other substantive laws. The Eightieth Congress also initiated the studies which resulted in bipartisan social-security amendments. It passed the Vandenberg resolution which led to the Atlantic Pact. These laws, even those passed over the President's political vetoes, have been the basis of all Government policy since that day.

It is a pleasure to point out here in Michigan the great affirmative accomplishments of Arthur Vandenberg to the extent he was permitted to participate in the administration's foreign policy. He was the one who wrote some semblance of justice into the United Nations Charter at San Francisco after the State Department had written that charter at Dumbarton Oaks on the basis of an arbitrary and impractical five-power control of the world. He understood and analyzed the real nature of Communist Russia. He was the most powerful influence through his friendship with Secretary Byrnes in reversing in Europe the tragic policies of Yalta and Potsdam. The dismissal of Wallace by President Truman on his protest and that of Secretary Byrnes marked the final abandonment of appeasement in Europe. It is unfortunate that Senator Vandenberg was never consulted about the Far East, and he expressed often and forcibly his disagreement with the disastrous policy which lost Manchuria and China to communism. Thus on March 18, 1947, he said:

"It also is necessary now to get the record straight. This bipartisan foreign policy has been confined within relatively narrow limits. It has applied to the United Nations. It has applied to peace treaties in Europe. It has applied to nothing else. I have had nothing to do, for example, with China policies or Pan-American policies except within the United Nations and at times I have been satisfied with neither. The first I ever heard of the Greco-Turkish policy was when the President disclosed his thoughts 10 days ago at the White House."

Again on April 15, 1947, he said:

"I have stated publicly that I have been highly critical of the State Department's policy heretofore in China, because it has looked toward the creation of a coalition with Communists, and in my opinion no Communist ever entered a coalition except to destroy it."

In his earnest desire to prevent an open conflict with the administration, he made concessions in the amount of foreign aid and arms aid beyond the point which he considered wise. He insisted on independent administration of ECA and fought bitterly the State Department domination over the giving away of American money abroad, which is now to be fully consummated in the appointment of Harriman as administrator of foreign aid. With the reelection of President Truman, all pretense of serious bipartisan consultation was abandoned, except in the case of Dulles and the Japanese peace treaty, and President Truman has proceeded cockily to snap decisions and prolific spending.

Foreign policy is a matter of developing a well-thought-out program based on sound underlying principle, and making wise decisions in accordance with that principle from day to day. Wavering and uncertainty can only bring disaster, and unnecessary war.

Some say the Republican campaign in 1952 should be conducted on the issue of corruption, some say on domestic liberty, some on foreign policy, some on communism. It ought to be conducted on all these issues, for the very existence of the American Republic depends on restoring to Washington to operate in every field a government of

thrift, and honesty, and integrity, of common sense and sound judgment. The present administration has lost all these qualities, and its poor judgment is further distorted because it will never admit its own mistakes.

In the foreign field I cannot review fully here the disastrous policy of Yalta and Potsdam which established Soviet Russia as the dominating power in Europe and the Far East. The result of that policy was to establish Soviet Russia at Berlin and Prague and Vienna dominating Central Europe and threatening the freedom of Western Europe and therefore the United States itself. American troops could have captured both Berlin and Prague.

In the Far East by turning Manchuria over to Soviet Russia the administration abandoned every principle of American foreign policy since the days of John Hay and the open door in China. Although we had gone to war with Japan because of their aggression in China, the administration bargained away Chiang Kai-shek's most important industrial province without even telling him of the bargain for 4 months and established Russia in the very position which Japan had occupied. From that position the Soviet was able to aid and equip the Chinese Communists, while we abandoned the Nationalist Government which had fought by our side for 5 years. Then the President sent General Marshall to China with instructions to compel Chiang Kai-shek to take Communists into his cabinet, and for eight vital months the administration cut off all assistance to Chiang because he refused to comply. What happens to a cabinet when Communists are taken in was tragically revealed in Czechoslovakia. The net result of our policy was the loss of China and its 350,000,000 people to communism and to the Soviet.

We could have no more tragic example of the results of wavering and weakness than the Korean war. It was an unnecessary war which could have been prevented by common sense and a planned program against communism. Today we find ourselves in Korea exactly where we were 3 years ago and face exactly the same problem except that there have been more than 85,000 deaths and woundings of American boys, the loss of a million South Koreans, the utter destruction of the very country we undertook to defend, and the waste of billions of dollars.

The Korean war was begun by President Truman without the slightest authority from Congress or the people in a hasty decision the night of June 26, 1950. He plunged this country into a major war, when under the Constitution only Congress can declare war. He did not even notify Congress for 2 weeks that the war was on. Under the United Nations legislation he had no right to send troops without action by Congress, as I pointed out in the Senate on June 26, 1950. This administration has no respect for the Constitution, or for law, if it can evade our laws. It does not accept the principles in which most Americans believe.

It is said that we had to go into Korea under the United Nations Charter to punish international military aggression. That was for Congress to decide. But if that was the purpose, it has utterly failed today, for the United Nations has refused to punish Communist China, although the Chinese aggression was far more serious and directed at the United Nations itself. The only principle we have established is that if the aggressor is big enough, he will not be punished.

The Korean war could have been avoided. It never would have occurred if we had kept our Armed Forces in Korea as we did in Germany. I doubt if it would have occurred

had we armed the South Koreans as fully as the Russians armed the North Koreans, and on this subject the administration had before it the express advice of General Wedemeyer. In his report on Korea made in September 1947, and long suppressed by the State Department, he said:

"The creation of an American controlled and officered Korean scout force, sufficient in strength to cope with the threat from the north, is required to prevent the forcible establishment of a Communist government after the United States and the Soviet Union withdraw their occupation forces."

But the fact is that we did not arm the South Koreans and deliberately adopted the policy of giving them only small arms to prevent border raids and internal disturbance.

I doubt very much if there would have been any attack if we had given a definite notice that we would do exactly what we finally did—move American troops in to South Korea to resist aggression.

But Secretary Acheson practically invited an attack on Korea. He was determined that absolutely no aid should be given to the Nationalist Government in the defense of Formosa to prevent its being taken over by the Chinese Communists. In December 1949 he had issued a memorandum to all State Department officials directing them to prepare public opinion for the capture of Formosa by the Communists, although it was an island 100 miles off the coast of China where our Navy at practically no cost could prevent the further spread of communism. Now he testifies that this directive deliberately misrepresented the facts about the strategic importance of Formosa in order to save our face when Formosa fell. Either the State Department was lying then, or it is lying now.

I believe that history shows without question that the State Department really desired the liquidation of the Nationalist Government. Secretary Acheson was so determined in his prejudice that in January 1950 while he said that Japan, Okinawa and the Philippines would be defended if attacked, he repeatedly announced to the world that beyond this line the United States could not assure the rest of the Far East against attack, including, of course, by clear inference Formosa and Korea.

We had permitted the Chinese Communists to take over China. It was certainly a reasonable assumption on the part of the Communists that we would be even less concerned about their taking over the little land of South Korea. In May 1950, Senator Connally, the chairman of the Foreign Relations Committee of the Senate, was asked whether we were going to abandon South Korea, and he stated clearly that we would have to do so and that the Communists could overrun Korea whenever they got ready. As far as Russia was concerned we thus gave them to understand that here was a soft spot into which communism could move without cost. That is what the Russians have been doing for 200 years. They have seldom started an aggressive war against serious opposition.

Whether Congress should have authorized war in June 1950 can be argued at great length, but it was never given the opportunity to make that decision.

But no argument now can change the fatal results of administration policy. No argument can change the fact that we lost the peace after we won the war. No argument can change the fact that Soviet Russia presents a threat to our security greater than we have ever faced forcing a vast policy of mobilization dangerous to our liberty at home. In no way can this administration, directing our foreign policy for the last 18 years, escape responsibility for its tragic

results. They must be judged by those results.

As the Lord said in the Sermon on the Mount:

"A good tree cannot bring forth evil fruit, neither can a corrupt tree bring forth good fruit.

"Every tree that bringeth not forth good fruit is hewn down and cast into the fire.

"Wherefore by their fruits ye shall know them."

Today obviously we cannot withdraw without admitting a military defeat by China. I believe that by the methods suggested by General MacArthur we might have achieved the United Nations objective of setting up a united and free Korea. At this time, however, a stalemate peace at the thirty-eighth parallel is better than a stalemate war at the thirty-eighth parallel, a war in which the American Army is suffering 2,000 casualties a week. These are American boys who are being killed and maimed because of the mistakes and lack of judgment of this administration.

As far as the basic strategy of foreign policy at this moment is concerned there is no fundamental disagreement. We are all determined to prevent the spread of communism by military aggression and by propaganda, to the extent of our ability. In carrying out that policy I believe a firm and well-planned program can avoid war. When the threat of communism has been met, we should return to our policy of friendly assistance, and not court war by trying to dominate the world with our money or our military forces.

The purpose of any foreign policy must be to protect the liberty of American people, and so long as that liberty is threatened so is the peace of the American people. Modern war is pure tragedy. There is no longer the false glamor of earlier years. It means pain and suffering and destruction not only of soldiers, but of millions of men and women in civilian life.

In the meantime our battle must be carefully planned by intelligent and unprejudiced men. Today we are asked for the expenditure of such huge sums that the very economic stability of the Nation will be threatened in 1953 and 1954. There has been no intelligent appraisal of the limits of our economic capacity in time of peace. There is no intelligent program, and the plans change from day to day. While each department of the Government and of the Armed Forces may be making intelligent plans in its own field, there is no over-all brain operating with horse sense to assure that the whole program is efficient in its purpose, that is not as destructive as war to the liberty of the people.

The administration has turned with enthusiasm from spending at home to more spending abroad and to huge spending for the Armed Forces; for the philosophy of the New Deal has always been that Government spending of other people's money is a good thing in itself, spending for spending's sake. The whole policy is intended to corrupt the people—it is not strange that it has corrupted the politicians who believe in it.

The Republican Party believes that real progress toward the happiness, the security, and the increased material welfare of the people must be made within the principles of liberty, equality, and justice on which this Nation was founded, and whose application for 154 years has made the United States of America the greatest Nation in the world. Why change now?

What the Republicans offer is a government controlled by people like yourself. Because you and people like you make up a great majority of the American people I am convinced that you will cause the Republican Party to take over this Government in

1953. The American people believe in liberty. They don't believe in the constant extension of Government power and Government spending. They believe in the freedom of men to live their own lives and to run their own farms and their own business. They don't believe in OPA's and OPS's, and the Brannan plan. They believe in the freedom of local communities to decide how their children shall be educated and their local services performed. They don't believe in socialized and nationalized medicine. They believe in thrift, and in efficiency in Government equal to our efficiency in business. They believe in honesty and integrity. The Republican Party can be depended upon to build a better America for all our people. If you will help from now until election day in arousing the interest and concern of those who have slept in past elections, if you will bring home to them the fact that Government can be just as honest and healthy and American as baseball, that the Republican Party alone offers hope and leadership to achieve this result, there is no doubt about the overwhelming election of a Republican President and a Republican Congress in 1952.

No More Political Sham Battles

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. HOFFMAN of Michigan. Mr. Speaker, the Republican, like the Democratic, Party is split right down the middle.

Ever since early in 1933, the contest in the Congress has not been between Republicans and Democrats as such, but between those who call themselves liberals and progressives—by some opponents called taxers, spenders, wasters, and internationalists, and those who have been named as conservatives, and, at times, nationalists, isolationists, reactionaries.

Congressional battles have been waged between those who believed that the activities and spending of the Federal Government should continuously be expanded; that our people were obligated, because of their power and wealth, to assume the burden of raising the standard of living of all people throughout the world; that the welfare of our own people and the security of our Republic depended upon our active participation in the affairs and wars of other nations; that we can surrender a little of our sovereignty without impairing the effectiveness of our Constitution; and

On the other side were those—like-wise in both parties—who believed that, though charitably assisting other nations, we could best advance civilization throughout the world by following the advice of Washington and Jefferson who told us—the one in his Farewell Address, the other in his first inaugural address—to, as a nation, avoid entanglement in the affairs of foreign nations; that 150,000,000 people cannot, with safety, assume the burden of materially raising the living standard of 2,400,000,000 people, and that, in any event,

other peoples, who do not want our way of life, cannot be forced to accept it, nor can they be forced to accept our religious views; that we cannot, without destroying the welfare of our people and the security of our Republic, engage in every war in which other nations might become involved; that a surrender of a part of our sovereignty, however small, was but the opening wedge to the surrender of our independence.

As neither the Democratic nor the Republican Party presented a united school of thought to the people on either domestic or foreign policy, the last three Presidential campaigns have been in the nature of sham battles, just shadow-boxing.

Democratic candidates have advocated more spending, more control, by the Federal Government, a greater degree of participation in the affairs of other nations and their wars.

Republican Presidential candidates, that is, Willkie and Dewey, advocated a little less spending, a little less control by the Federal Government over the States' and people's activities, made the assertion that Republicans could spend to better advantage, make Federal controls a little more effective and economical.

But both Republican candidates for the Presidency heartily endorsed the administration's foreign policy.

So it has come about that, in the last three Presidential elections, the people have never been given an opportunity for a square vote on two questions: (a) Should the power and the spending of the Federal Government over the activities of its citizens and of the States be expanded; and (b) should we, as a people, continue to impoverish ourselves by economic and military aid to other countries which, without consulting us, become involved in war, and should we, as a nation, continue to conscript our men to fight on foreign soil, sometimes without a declaration of war by the Congress?

Three times Republicans have gone down to defeat at the polls. Is it too much to ask that those of us who are thoroughly convinced that, while we should extend Christianity's hand of charity and fellowship to all people and to all nations, we can best serve not only our own people, our own Republic, but world civilization, by conserving our resources, building a strong national defense, and, by our might and example, promote world peace?

Should not midwesterners, at least once in 16 years, be permitted to name the standard bearer?

The liberals and the progressives, so-called, internationalists, have three times sent their pinch hitter to bat. He has fanned each time. Now, let the conservatives, the nationalists—if you prefer, the isolationists—that is, those who believe and have confidence in our country and its form of government, name a candidate—Bricker, MacArthur, Taft, Dirksen, Byrd—anyone, frank, honest, sincere—who has faith in the wisdom of the forefathers, confidence in a Republic which adheres to the principles of the Constitution.

H. R. 5714

EXTENSION OF REMARKS
OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. EDWIN ARTHUR HALL. Mr. Speaker, prompted by many people back home, who are alarmed at the possible lack in proper school facilities, I am introducing H. R. 5714.

When one sees so many superfluous projects going up outside home and school construction it is hard to believe that responsible Government authority would deprive school buildings of necessary materials.

I call for priorities for structural steel and other metals and material to be given to school construction.

What heritage is more priceless to us than our youth? Their welfare should be our first consideration, and I hope our Government will keep in mind the necessity of building schools for them.

The text of the bill follows:

H. R. 5714

A bill directing the Administrator of National Production Authority to allocate enough steel for school construction

Whereas there is a shortage in many parts of the United States of schools to provide for educating our children properly; and

Whereas the national preparedness program has caused disappearance from civilian channels of necessary building materials such as steel and other metals; and

Whereas many school buildings have already been planned and even construction started thereon only to be held up by serious and long delays because of denials by various Government officials thereby making it impossible to obtain these vital materials; and

Whereas we must not neglect the education of our most priceless heritage, our American youth: Therefore

Be it enacted, etc., That the Administrator of the National Production Authority is hereby directed to order enough steel and other necessary materials allocated for the completion of schools now being built and also for the construction of schools already planned for, which are considered essential to the needs of educational authorities.

The St. Lawrence Seaway—"If You Live in a Glass House, Don't Throw Stones"

EXTENSION OF REMARKS
OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 9, 1951

Mr. RABAUT. Mr. Speaker, those Members of Congress, myself among them, who have for so many years been urging upon this body the approval of the St. Lawrence seaway, have noted with dismay two recent events which indicate, first, the sincere determination of the Canadian Government to proceed with completion of the seaway without the United States; and, second, that the United States will not take action on

this matter at least until January 1952, the date set by the House Public Works Committee for further consideration of the seaway resolution.

I am including as part of my remarks a letter which I have received from the Honorable G. Mennen Williams, Governor of the State of Michigan, which points out that the interests of the United States will not be as adequately protected nor as well served by the Canadian-construction program.

I also bring to the attention of my colleagues a compilation of data which shows that the outspoken railroad opposition to the seaway has not been as solicitous of the national budget in seeking rapid tax write-off privileges as they have been in criticizing the seaway on its cost of construction. The information in this table makes me think of the old and familiar saying, "It all depends on whose ox is being gored."

The table and Governor Williams' letter follow:

These figures represent totals to June 1, 1951. No precise over-all figures on railroads alone were obtainable from any governmental source. Moreover, the Defense Production Authority's information, as well as that of the Defense Transportation Administration, does not include a compilation of these data as to types of equipment. Practically all certificates and amounts listed, carry the designation "Transportation—Rail." One of the Defense Production releases for certificates of necessity does not include the percentage of the amount authorized for quick tax write-off. However, an examination of the remaining listings shows the percentage to be ranging generally from 65 to 80 percent.

GRAND TOTALS

Total number of certificates	157
Total amount authorized (railroads)	\$638,840,349
Estimated mean figure for amortization factor (percent)	72
Estimated amortization allowed the railroads themselves, using the mean factor of 72 percent	\$459,985,051
Total amount applied for (includes rail equipment for other industries as well as the railroads)	\$777,000,024
Amortization actually allowed for rail equipment (all industry)	\$562,208,000

¹ These are separate figures obtained from the over-all compilations of the Bureau of the Census, Department of Commerce.

STATE OF MICHIGAN,
OFFICE OF THE GOVERNOR,
Lansing, October 10, 1951.

The Honorable LOUIS C. RABAUT,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN RABAUT: After Prime Minister St. Laurent's recent visit with President Truman, I checked the problem of the St. Lawrence seaway in Canada and found the situation to be urgent. The Prime Minister's announcement seems to me a sincere declaration of Canada's determination to complete the seaway without further delay. I believe the Canadian Parliament will take aggressive and definitive action at an early date. Undoubtedly, preliminary plans at least will be formulated within a very few weeks.

It is my understanding that the Canadian program requires extensive changes in the engineering plans. These changed plans

place all critical locks and navigation facilities on Canadian soil. They further provide for the establishment of a 27-foot controlled depth up to and including Detroit, Mich., but not including channels to Lakes Huron, Superior, and Michigan.

All States and municipalities, but particularly those located north or west of Detroit, should view this revision with deep concern.

The interests of America are by no means so well served by this substitute. Practical business management, national security and the economy of America's heart land in addition to our national pride should require our immediate and affirmative action on this project. The United States should be Canada's partner in developing the tremendous economic potential of the Midwest.

House Joint Resolution No. 337 is now before the Committee on Public Works of the House. This new resolution takes account of the suggestions and criticisms that have been made before Congress during the course of extensive hearings this past spring. It incorporates positive requirements that will make this project totally self-liquidating. It establishes a new framework for the just and equitable determination of all tolls and charges.

The St. Lawrence seaway is essential to national defense, and the future prosperity of the whole country. The American program would open half a continent to world trade and its power facilities would provide electricity for power-starved New York and New England. In view of its importance to the national welfare, I am again taking the liberty to bring the matter to your attention. The hour is late. Canada has offered us one more chance to join her in this great project. It is imperative that we immediately take all necessary steps to bring Resolution No. 337 to an early committee vote. Even if action were taken on October 12, really definitive action would not be had until the return of Congress in January 1952. If no action is taken this month, then Congress will not be able to act until too late. I feel that we must demonstrate to our Canadian friends our sincere intention to cooperate with them on the construction of this great project. House Resolution No. 337 offers us the opportunity to make such a declaration. Let us make every effort on its behalf.

Without congressional action, we must reluctantly endorse the Canadian effort and offer them our help and encouragement for this partial substitute.

Sincerely,

G. MENNEN WILLIAMS,
Governor.

American Casualties and Not One Russian Dead

EXTENSION OF REMARKS
OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, American battle casualties in Korea have reached 87,650. It will soon be a hundred thousand unless there is a truce. While American men are dying in that undeclared war not one Russian has given his life in the cause of world communism; only Americans pay and pay and pay.

Mr. Speaker, under leave to extend my remarks, I am including an editorial which appeared in the Washington

News and which is pertinent to the remarks that I have made:

TWO THOUSAND ONE HUNDRED EIGHTY-ONE MORE AMERICAN CASUALTIES—AND NOT ONE RUSSIAN DEAD

American battle casualties in Korea reached 87,650 on Wednesday, an increase of 2,181 since last week.

This was during a period of comparative lull while we were still waiting to see whether the Reds really meant to talk peace.

Twenty-two hundred men—the finest commodity America has—poured into a bottomless pit, with no prospect that anything will be accomplished by it.

Twenty-two hundred American men killed, maimed or missing in still another week of the war of futility. Futility because we have no plan other than to continue a war of maneuver and attrition along the general line of the thirty-eighth parallel.

Not a single Russian has died, not a one has been under fire, while 87,650 American casualties were tolled off.

We're fighting Russian communism, yet Moscow is throwing her cheapest ammunition at us—the vast manpower of Red China. No Russian blood is being shed, only Chinese and Korean, and, on the Allied side, mostly American.

We can be bled to death that way. Because we are limiting our operations, trying to localize the war. General MacArthur was severely restricted by the Truman administration for fear of bringing the Chinese Reds into the war. Then when Stalin sent his Chinese puppets in anyway, General MacArthur's hands were still tied. He couldn't bomb their bases and supply lines in Manchuria for fear of bringing in the Russians.

If it was to be our policy to avoid offending Russia at all costs, we should have stayed out of Korea when the war started. The cost is now 87,000 Americans killed and wounded and missing. A frightful price—and the danger of Soviet intervention no less than when the war started.

While we are being weakened, our manpower used up at the rate of 2,000 a week, Soviet strength remains unimpaired.

Russia can afford any number of wars like this—but we can't.

Particularly, we cannot afford these losses in a war which we are not fighting to win. We're fighting only for a draw which would settle nothing. Because we're still committed to a policy of staying below the Manchurian border, leaving the enemy inviolate in his Soviet-protected sanctuary.

Mr. Truman and his strategists of the State and Defense Departments vetoed General MacArthur's proposal to go all-out for a quick and decisive victory.

If there is a substitute for victory, it is up to the Truman administration to find it, and soon. For the American public cannot longer close its eyes to the tragedy of the monstrous futility of what is happening in Korea.

No Short Cut to Air Power

**EXTENSION OF REMARKS
OF**

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. PRICE. Mr. Speaker, as long as the very real menace of Soviet war hangs over us and the whole world, we will be inviting national suicide unless we keep

militarily strong enough to meet attack and decisively defeat the enemy.

Since military leaders freely admit that the first blows in any war would be struck from the air, and that no armed force of modern times may win without an superiority, it is obvious that we must build our air power to a point of safety, and maintain a capacity of production to meet any threat.

Recognizing this, it becomes doubly important for us to realize that the building of air power cannot be achieved quickly. First, we must recognize and understand the inescapable time factor in aircraft development and production. Second, it is tremendously important that we project that factor into a stable long-range procurement program.

FLUCTUATIONS COSTLY

In design, tooling, research, supply, and manpower the aircraft industry could save untold millions of the taxpayer's dollars if it could avoid the erratic fluctuations which have marked its course since we first called for military planes in World War I. In Congress, where authorizations and appropriations establish the scope within which this industry can operate, we need to learn more about the vast complexity of manufacturing modern aircraft.

Production of aircraft cannot be turned on and off overnight. A minimum of 24 months is required to put bombers in production, 18 months for a new fighter. This is in addition to the design cycle, which requires from 2 to 3 years. It adds up to 3½ to 5 years before new design concepts can be translated into combat aircraft.

Just recently the Air Force awarded what it calls phase I, or design study, contracts to three firms for a new high-altitude interceptor. Eventually, one or more of these studies may be accepted and a prototype plane or two may be ordered. If it meets the performance and other requirements of that future date, it will be put into production. But that prototype would not fly before 1954. And remember that special tooling will then be required for its production. Right now, with semimobilization, aircraft factories sometimes cannot hope to get delivery on a relatively simple machine tool for at least 36 months.

That interceptor we may need against the Russians in 1954, 1955, or 1956 has to be planned now.

The expansion we can get in the aircraft industry is determined by the base size of the industry at the time expansion begins. World War II experience gave us a rule of thumb that under the impetus of all-out mobilization production rates can be accelerated three times within 12 months from the date the go ahead is given, and can again be tripled by the end of 2 years. It is impossible to increase this curve of acceleration in production activities.

INESCAPABLE TIME LAG

Here is another current example of the inescapable time lag: Two of our finest aircraft companies have been working for months to put into operation stand-by plant held over from World War II at Marietta, Ga., and

Tulsa, Okla. Yet neither company will deliver a plane from those factories until the spring of 1953.

Any substantial expansion in the Air Force is determined by aircraft production. The Air Force and the Navy arm cannot be increased in size and equipped with modern planes for from 3 to 5 years following the decision to expand.

Ironically air power is the first and most effective element to be thrown into combat, yet requires the longest time to build. This is all the more reason for a long-range program.

The importance of the time factor in expansion and the necessity for an adequate base from which to start are only part of the compelling reasons for a stable long-range procurement program. Unit costs under a long-range program can be substantially reduced. Here is a graphic example. For one of the top all-around World War II fighters, actual unit cost of the first 620 airframes was \$26,700 each; for the first 4,000 the unit cost was reduced to \$14,100 each. The same company's outstanding jet fighter airframe today costs \$121,132 each for the first 620, but on the basis of 4,000 production the company computes the cost at \$47,954 each.

SHORTAGE OF ENGINEERS

Another important aspect of the instability of the present year-to-year method of military aircraft procurement is reflected in the requirements for engineers and the inadequate number available. At the wartime peak, the aircraft industry employed 2,930,000 people, by 1947 it was down to 167,000. Consequently, the industry did not encourage college students to enter engineering courses since the number of engineers required for the small peacetime industry was not high. Now there is an acute shortage of engineers which is becoming increasingly serious and the numbers of engineering graduates from United States universities are on a constantly declining curve.

The complexities of the jet-electronic-supersonic age call for scientists and engineers of the highest quality. Their training for this specialized field takes time—a lot of it—but an erratically fluctuating industry can not attract them nor justify their expensive training. Thus, when the Nation's need for them is greatest, there are few to be had.

It is time we recognized that our national survival in the foreseeable future may depend primarily upon the aircraft industry. It is time we make provision for its enormous complexities by giving it a chance to do its job on a sound, stable, long-range basis.

It will be expensive to build up and maintain the necessary air preparedness. But we must keep improving our aircraft lest the enemy hurl better ones against us, and keep our aircraft manufacturing industry in all its wide ramifications on a base broad enough to meet emergency needs and sustained production if the shooting starts. The cost of airplanes is high, but as someone has aptly said, in a very real sense they represent the cost of living.

Christopher Columbus

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 9, 1951

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the *Columbia*:

COLUMBUS: MAN OF THE CHURCH

(By Thomas E. Kissling)

Some 800 objects of artistic and scientific interest, bearing on the life and voyages of Christopher Columbus, are on exhibit at the International Columbus Exhibition in Genoa. Twenty-four countries are represented in the exhibits, marking the fifth centenary of the birth of the great navigator, patron of the Knights of Columbus.

This event focuses attention on the fact that the relics and records of Columbus are scattered in many lands—Spain, Italy, France, San Domingo, Portugal, Vatican City, and in Washington, where the Library of Congress preserves a goodly number of Columbian treasures. It seems that every few years some new discovery about Columbus turns up, starting a documentary battle which attracts attention for a time and then is forgotten.

It is interesting to note that when preparations were being made for the great World's Fair, held in Chicago in 1893, marking the four-hundredth anniversary of the discovery of America, the United States Government sought the loan of precious Columbian relics, maps, and records from the Vatican archives. The exposition was held a year late because of construction delays, but on September 18, 1892, Secretary of State John W. Foster, in a letter to the papal secretary of state, Cardinal Rampolla, said:

"The intimate association of the Holy See with the Columbian enterprise and its results has so linked the memory of Rome and her pontiffs with the vast achievement of Columbus and his competitors in the work of discovery and colonization, that an exhibit, such as by the President's direction I have the honor to suggest, could not fail to be among the most noteworthy contributions to this international celebration."

POPE SENDS REPRESENTATIVE

Cardinal Rampolla replied stating that His Holiness Pope Leo XIII was pleased to grant the request, feeling "certain that the United States Government would spare no pains to preserve the various objects that are to be entrusted to it from any mishap, and he returns his thanks for the kind offer that has been made for their transportation" and cue. The Pope also announced that he would send Archbishop Francesco Satolli as custodian of the Columbus relics and to represent him at the public demonstrations at the fair. Satolli, a few months later, was named the first apostolic delegate to the United States. At the close of the Columbian Exposition, the relics were returned to the Vatican on the U. S. cruiser *Detroit*.

Not only did Pope Leo XIII loan the Columbus relics of the Vatican archives for the American celebration of the fourth centenary of the discovery of America, but as early as July 16, 1892, he wrote an encyclical letter on Columbus, addressed to the archbishops and bishops of Spain, Italy, and the two Americas.

Much has been written about the deep religious faith of Christopher Columbus. That he was a devout Catholic is evident in a number of his deeds. Letters and documents signed by him with his anagram read: "Suppliant servant of the Almighty Sav-

iour—Jesus, Mary, Joseph—the bearer of Christ (I. e. Christopher)."

The records show that one of the great admiral's first acts after putting out to sea, was to summon the crews to his flagship, the *Santa Maria*, to hear the chaplain's invocation to Almighty God for His blessing on the perilous adventure. The records of the voyages further show that Columbus turned to God for help when storms, tempests, shoals, and reefs threatened disaster. Thanksgiving to God was his first thought on sight of land, and in the ceremony of landing on shore he raised and planted the standard of the cross.

From his letter to Rafael Sanchez, treasurer of King Ferdinand and Queen Isabella, written March 14, 1493, on board the caravel while returning from his first voyage, we learn that the first land he discovered he named San Salvador (Holy Saviour) "under whose protection I made the discovery." And the second, Santa Maria de la Concepcion. He gave gifts to the natives, cautioning his men to make friends, in order that they may receive the faith of Jesus Christ, and be well disposed toward us. * * *

In this same letter (published in Barcelona, May 1493) the first publication concerning America, Columbus gives further evidence of his great humility and piety, chronicling that "the great success of this enterprise is not to be ascribed to my own merits, but to the holy Catholic faith and the piety of our sovereigns. The Lord often granting to men what they never imagine themselves capable of effecting, as He is accustomed to hear the prayers of His servants and those who love His commandments, even in that which appears impossible. * * *

A great faith in God, and a great desire to spread that faith. In a letter addressed to Pope Alexander VI, Columbus, seeking missionaries to accompany him, wrote: "I trust that, by God's help, I may spread the holy name and gospel of Jesus Christ as widely as may be."

Columbus' fidelity to Jesus was dramatically epitomized in his last hours on earth. His last words were, "Into Thy hands, O Lord, I commend my spirit." He was buried in the robes of the Third Order of St. Francis, on Ascension Day, May 20, 1506.

GLORY OF HIS ACCOMPLISHMENTS

Though, during his lifetime, there were those who attempted to defame or detract from the glory of his life and his accomplishments, Rome did not forget the apostolic zeal of Christopher Columbus. Successively, three Popes had honored him with their confidence. They and the Roman cardinals continued to honor his immortal labors.

Perhaps, because it obtained little progress, but few realize that there ever was a movement for the beatification of Christopher Columbus. However, the matter gained considerable momentum in the middle of the last century. In 1856, Count Roselly de Lorgues published a two-volume biography of Christopher Columbus—*The History of His Life and His Voyages*, compiled from authentic Spanish and Italian documents. It was an exhaustive work which attempted to vindicate the life and works of the great discoverer, and openly proclaimed his sanctity. The author received a letter of praise from Pope Pius IX, stating that it "results as much to the honor of religion as to the honor of Italy." The work received both the encouragement and support of some of the highest personages of the time. Count Tullio Dandolo translated the book into Italian. It was not long before an English edition, condensed to one volume, appeared in Boston (1870), the work of Dr. John J. Barry, who also expressed the hope that Columbus would be enrolled on the glorious catalogue of the canonized saints.

Pope Pius IX, as a young priest, served as auditor of the Apostolic delegation in Chile,

from 1823 to 1825. He thus was the first Pope who, before ascending to the papal throne, had set foot on the American Continent. Naturally, he was interested in things concerning the Americas. When, in 1865, Count Roselly came to Rome, he received him, together with Count Dandolo, with utmost benevolence. In response to their wish that the formal introduction of the Cause for Beatification of Columbus should take place, Pius IX explained the difficulties which it would meet through the impossibility of proceeding according to the rules established by the Sacred Congregation of Rites. But he concluded that one can always try.

The movement for the introduction of the cause soon made great strides. That is, it gained the support of the Archbishop of Bordeaux, Cardinal Donnet, who made a formal demand to the Holy Father. Associated with him were the Archbishop of Genoa, the French bishops assembled in provincial Council of Poitiers, in 1868, and the Archbishop of Burgos in Spain. They were soon joined by requests from other bishops in both Europe and America. Meanwhile, when the Vatican Oecumenical Council met in Rome, the Archbishop of Bordeaux initiated a postulation or formal request for the council to submit to the Holy Father. Many of the members of the council were in agreement, but the suspension of the council prevented its further progress at this time.

About the time of the fourth centenary celebrations of the discovery of America other attempts were made. Count Roselly de Lorgues, visiting Pope Leo XIII in 1893, presented copies of two books he had written, both designed to prove the sanctity of Christopher Columbus. But the great Pontiff had apparently expressed all his thought on Columbus in his encyclical, "Quarto abeunte saeculo," published to the Catholic world on July 16, 1892.

The movement for the beatification of Christopher Columbus stayed dormant for two decades. In October 1922 a news dispatch from Rome mentioned a Franciscan friar, Rev. Antonio Santarelli as in charge of the cause. In June 1941 with the approach of the four hundred and fiftieth anniversary of the great navigator's discovery, and the investigation being conducted at his tomb in San Domingo, rumors of progress in the cause appeared in the press.

Although Count Roselly de Lorgues in both his works makes an exhaustive and impressive case the real obstacle in the path of obtaining the honors of the altar for Columbus seems to be in the lack of convincing records to prove that his second son, Ferdinand, was born of a marriage recognized by the church.

With what consideration Christopher Columbus should be held in the eyes of the church we are wisely told by Pope Leo XIII in his encyclical issued to commemorate the fourth centenary of the discovery of America. The Holy Father did not hesitate to call him "the man of the church," and assert that "Columbus is ours." "It is fitting that the church should not be altogether silent," at the time of this great anniversary. "It is true," he continued, the church "reserves her special and greatest honors for virtues that most signally proclaim a high morality, for these are directly associated with the salvation of souls; but she does not, therefore, despise or lightly estimate virtues of other kinds."

On the contrary, she has ever highly favored and held in honor those who have deserved well of men in civil society, and have thus attained a lasting name among posterity. For God, indeed, is especially wonderful in His saints; but the impress of His divine virtue also appears in those who shine with excellent power of mind and spirit, since high intellect and greatness of spirit can be the property of men only through their parent and creator, God

* * * It is indubitable that the Catholic faith was the strongest motive for the inception and prosecution of his design * * *

"We say not that he (Columbus) was unmoved by perfectly honorable aspirations after knowledge, and deserving well of human society; nor did he despise glory, which is a most engrossing ideal to great souls; nor did he altogether scorn hope of advantages to himself; but to him far before all these human considerations was the consideration of his ancient faith, which unquestionably dowered him with strength of mind and will, and often strengthened and consoled him in the midst of the greatest difficulties. This view and aim is known to have possessed his mind above all, namely, to open the way for the gospel over new lands and seas."

A Foreign Policy Tied to Colonialism Has Failed

EXTENSION OF REMARKS OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an editorial from the Janesville (Wis.) Gazette which points out that American foreign policy needs a restatement with stress upon the fact that it should not be tied to colonialism. This editorial correctly points out that under our present policies we are losing one friendly nation after another because of our adherence to a policy which is ineffective:

HOW THE U S A CAN WIN FRIENDS

To peoples of every color and creed all over the world the United States of America has stood as a symbol of democracy, of the dignity of the individual, of the champion of the little fellow. They have seen proof of this in our treatment of the Filipino, in our aid to needy nations, in our sympathy for the colonials of empires.

Our lack of policy has turned many against us, for sheer misunderstanding of our motives. Our State Department fails to express the friendship of the American people for the peoples of nations in trouble. We fail to affirm our support for the everlasting struggle for freedom now stirring the peoples of many nations.

Iran and Egypt are the latest evidences of failure of the colonial policy. But what has the United States done to prove to those peoples that America is concerned with their problems, both social and economic? American dollars alone will never buy friendship.

In Saudi Arabia Americans are developing petroleum resources, but on a fair basis for the Arabians. Our development there is not sheer exploitation for our own benefit. We are teaching Saudi Arabians our know-how—how to make a living for themselves; how to solve their own social problems and raise their own living standards.

Iranians know this. The United States has been friendly with Iran. Yet instead of proving to Iran that we are concerned with the poverty, the social and economic problems of her people, we have been more concerned with our support of the British viewpoint, regardless of justice.

Could not the traditional United States policy of sympathetic understanding and concern for weaker peoples prove more suc-

cessful than outright support of the British there?

Is it not time for this Nation to assume its destiny, to stand forth against tyranny as the champions of the weak, and once more to raise the flag of freedom high that all may see? Is it not time to act and talk like Americans and prove the truth of our democracy?

This American policy was successful. We made friends of the Chinese, the Filipinos, Europeans and Arabs. Indonesia has sought our help. India's new independence was inspired by the American example. Japan is now being developed, not for American exploitation but for strengthening of a new Japanese democracy.

Our Economic Recovery Act was designed to help European nations rebuild their war-torn economies. Our aid to Greece was aimed at throwing off the Communist threat. Our activities in Italy bolstered her independence and recovery.

American know-how is the most that some countries required and they got it. We have tried to understand the social and economic problems of Saudi Arabia as our private oil companies help her to develop her oil resources.

The word "exploitation," does not refer to the American concept of our relationship to such areas as the Philippines, Puerto Rico, and postwar Japan. We have sought to develop in these areas and among these peoples social and economic strength for independence.

It is a fair question, therefore, to ask why American foreign policy does not go forward, firmly in the right to continue this kind of benevolent interest in foreign peoples.

Why do we not reaffirm our stand—the natural American stand—to help others to throw off the yoke of colonization as the United States threw off the yoke of foreign rule?

What have we to lose in retelling to the world that this is American policy?

Under present policy, we are losing one friendly world neighbor after another to the false promises of a false enemy—world communism. We have lost China. India questions our motives. Indonesia is not sure of American friendship and support in her struggle for independence.

Dedication of Civic Memorial Airport, Alton, Ill.

EXTENSION OF REMARKS OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. PRICE. Mr. Speaker, under leave to extend my remarks, I include herewith an address delivered by me at the dedication ceremonies of the Civic Memorial Airport, Alton, Ill., Sunday, September 30. It follows:

I am particularly happy to be here today. It is a pleasure to view the dedication of this beautiful airport to the service of aviation in this favored section of Illinois. I can clearly foresee what the operation of this airport will mean to the citizens of Alton and of Madison County, and I congratulate you. I would like to commend all those who have had a part in the planning and development of this very worthwhile project. Its development and expansion in the future would add new lustre to Alton's well-established reputation as a center of travel, of culture, and of human understanding.

In the relatively short span of time of slightly less than 50 years since the first flight of a heavier-than-air aircraft was made by the Wright brothers at Kitty Hawk, N. C., man has made tremendous strides in the conquest of this new world. Up to 1903, man was not only unable to fly, but the very idea that such a thing would be possible was almost universally met with ridicule.

In the past 48 years man has not only ceased to be earth-bound, but he has explored and charted the air lanes overhead. He has unlocked the secrets of weather, and of other conditions that prevail in the atmosphere. He has conquered heights and distances beyond the early airman's wildest fantasy. The little bicycle shop of the Wright brothers, where the first aircraft was built, has become the prototype of great factories and large laboratories throughout the United States and the world. Aviation has become one of the greatest industries of the country.

Let us pause and consider the significant potentialities of aviation today: the factors which escape many who travel by air, but which affect all of us who depend upon air power to defend us against enemy attack.

Aviation can usher in a bright new day of peaceful development, or it can provide the vehicle and the weapon for the most devastating attack man has yet made on his fellow man.

Airplanes make travel and communication quick and easy.

Airplanes, equipped with special devices, have been used to spray extensive areas to eliminate insects, and thus to contribute to the health of populations, or the protection of crops. Airplanes aid in forest-fire control. They fly mercy missions to flood-stricken areas and other areas experiencing sudden emergencies. They do rescue jobs on land and sea. They speed emergency mail and freight to their destination. They make it possible for world leaders to meet in person, easily, quickly, and often in the interest of world peace. And, as today in Korea, they serve as flying ambulances, hurrying our wounded men from the dressing stations of the front line to the permanent hospitals on the rear bases, or even back in the United States.

But even as Orville Wright feared, the airplane has become an instrument of destruction. Only a few weeks ago the United States Air Force released information on new, pilotless aircraft, called Matador B-61 Pilotless Bomber, which can carry atomic weapons to targets in enemy territory, or against enemy troops.

Other aircraft have already flown across the Atlantic Ocean and landed safely without the pilots' hands touching the controls. The day of robot pilots and push-button warfare has not arrived, but flight controlled by radar and other devices of modern science is perfectly possible, and has been amply demonstrated. The time may soon come, if it is permitted to come, when even this new airport with its modern facilities may seem old-fashioned and out of date. Aviation is still in its infancy. Many significant developments will come within the next few years.

Even with such airborne weapons as we have already developed, there is no likelihood that the United States will ever use them against another nation, except in defense. These United States of ours have never gone to war except in self-defense. As long as our free, democratic institutions prevail, it is unlikely they ever will. We must realize, however, that if we can develop terrible air weapons to use in our defense, other nations may be expected to develop similar weapons to use against us. As a nation we have no monopoly on inventiveness; we do not control the resources of the world; and time may be against us. We have no desire to engage in an arms race with any nation, but we would be unworthy of our rights as American

citizens, and unworthy of the heritage our forefathers have bequeathed us, if we did not build our defenses quickly and strongly.

Whether or not you have ever seen combat aircraft, antiaircraft artillery, or other evidences of aerial warfare on this memorial airport—and I trust that you never do—this municipal, civilian-type airport is part of the defenses we are building. The late Gen. H. H. Arnold, who commanded our victorious Air Forces of World War II, used to say that "Air power will always be the business of every American citizen."

Every plane that flies, private, commercial or military, every airport that is developed in this country, every service that air transport performs, contributes to the air mindedness of our citizens. This is the air age supplanting the age of sea power and the age of land power, just as the railroad locomotive supplanted the river steamboat, and the automobile, trucks, and busses have to a great extent already supplanted the locomotive.

Enlightened citizens, who understand this aspect of air power, will use the airplane, and all the services it can give, for the development of our natural resources, our national welfare, and our individual and collective aspirations. Building fine municipal airports like this, they will make them symbols of progress and national enlightenment. But they will also support military air power, as the chief armor of our defense. They will demand the build-up of air power, not to make war, but to preserve peace. They will demand a strong United States Air Force, to defend us against an enemy that would make war on us. And they will make of this airport, dedicated though it is to peaceful, civilian use, a symbol of the strength of the United States.

If we are strong, we shall remain free; and if we appreciate our freedom, we will not delay in building up our strength.

In the past, the courage and the valor and the sacrifices of our ancestors won and preserved the freedom which we now enjoy.

Today courage and valor are not enough.

Science must be added to sacrifice. All our resources must be mobilized in the defense of our Nation. But nowhere has science made greater and more startling progress than in aviation, and that during the lifetime and the memory of most of us here. So we look to aviation as a new guaranty of our security, our freedom, our welfare, and our happiness.

Because, in that sense, this airport means so much not only to the people of Alton and Madison County, but of Illinois and all the other 47 States, I again congratulate you citizens, and you leaders, who have brought this airport into existence. You have made a contribution to the welfare of your community and your Nation and beyond that, you have set an example for others to follow.

Our Federal Reserve System

EXTENSION OF REMARKS OF

HON. BURNET R. MAYBANK

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, October 16, 1951

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record the address delivered by the Honorable William McC. Martin, Jr., Chairman of the Board of Governors of the Federal Reserve System, delivered before the seventy-seventh annual convention of the American

Bankers' Association, held in Chicago on October 2, 1951.

There being no objection, the address was ordered to be printed in the Record, as follows:

OUR FEDERAL RESERVE SYSTEM

Mr. Chairman, I appreciate very much the opportunity to participate in this convention of the American Bankers Association. This is particularly so, because, as Chairman of the Board of Governors of the Federal Reserve System, I feel that we have a special dependence on, and a real responsibility to one another.

We are all painfully aware today of the manifold and overpowering complexities of our modern life. As bankers, dealing in media of exchange, we understand more clearly than ever before the ramifications inherent in our daily operations, which, like the proverbial pebbles tossed into the pool, set in motion forces with far-reaching repercussions. It was this realization that led originally to the creation of the Federal Reserve System.

Out of the increasingly unwieldy gyrations, the Frankenstein mechanics of an uncontrolled supply of money, the need for a strong central bank has been found to be essential to our economic stability. The banks, the people, and the Government realized that panics and crises, caused by periodic irregularities in the flow of our money supply, must no longer be permitted to rock our country back and forth every few years. The central bank was designed to minimize these convulsions, create more stable values, and thus make possible the smooth functioning of monetary machinery so necessary to promote the growth of the country and to improve standards of living. This was the purpose and this is the ideal.

Our present central bank is now nearly 39 years old and the time has come, it seems to me, when we must reevaluate, reassess, and redetermine its worth and effectiveness.

Central banking in the United States has been adapted to the requirements of a free people with a minimum of Government interference. The genius of the framers of the Federal Reserve Act lies in the creation of regional banks, knit together by a national governing body in Washington rather than in the establishment of a central institution with authoritarian powers. Each Federal Reserve bank and each branch office is a regional and local institution as well as part of a Nation-wide system. Through their boards of directors, the banks are in a position to represent the views and interests of the particular region to which they belong and, at the same time, they are the administrators of Nation-wide banking and credit policies.

Instead of functioning from the center outward, we function through an interdependence of all our parts. The lifeblood of the Federal Reserve System is in its members. The health of each member affects the whole and it is only through the work, and the conviction, and the determination of the members that the whole has life. No dictatorial powers were accorded it when it was set up. No dictatorial powers should it usurp. Within the framework carefully outlined by law, the Federal Reserve Board is charged with the responsibility for formulating national credit policies and supervising their execution.

The Federal Reserve System is certainly not perfect but it is unquestionably the main bulwark of our private banking system. Without a strong and independent central bank, private banking must inevitably lose the initiative it now possesses. Too few bankers seem to appreciate this fact. It was never more important than now for the central bank to understand and cooperate with commercial banks and for commercial banks to understand and support the central bank.

These are challenging times. These are times when strange voices would lead us down roads alien to the concepts of our founders. If our institutions do not serve us well, let us revamp them. On the other hand, if, given the imperfections of all things human, they are the best servants of the common good which we can fashion, and if they can adapt themselves to the changing needs of the people they serve, let us see to it that they are preserved. I call upon you as bankers, and as leaders in your community, to ever be conscious of the measure of freedom we have enjoyed in every sphere of our life, to be concerned with any attempt to deprive us of this freedom and to be vociferous in preserving those rights which we have obtained. Whatever changes we make, let us not betray the foresight of those who have struggled so valiantly to maintain our self-government and the security of our democracy.

In the next few years the bankers of America will be called upon to meet severe tests. They are already meeting successfully, in the voluntary credit restraint program in which they are so actively participating, one of the demands placed upon them. In this program, they have organized the managerial resources of the banking community in an educational program of benefit to borrower and lender alike. This has confounded the cynics and those who sneer at self-regulation. It will require real courage, vision, toughness, and stamina to continue this laudatory fight against inflation. I am confident that the bankers can meet the test, provided they are ever alert to the famous admonition, "eternal vigilance is the price of liberty."

The Business of Schools

EXTENSION OF REMARKS OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Tuesday, October 16, 1951

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a timely editorial entitled "The Business of Schools," published in Business Week for October 13.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

THE BUSINESS OF SCHOOLS

In Germany it was "guns or butter." Guns won, and Germany lost. In America, as the cold war takes more of our cash and time, it may become "guns or schools." If we choose either we lose. Somehow we've got to have both.

Guns have been getting both money and attention, but education has been going short. The schools are bursting at their seams. Thirty-three million Americans picked up their books last month. Over 24,000,000 of them trooped off to elementary schools, 6,500,000 to high schools, 2,500,000 to colleges, universities, and professional schools.

But some of them lack seats to sit on. Some of them haven't enough teachers. Some haven't as good teachers as they need. In the last 50 years the school population has doubled. We have built up a wonderful investment in buildings and equipment, in teaching staffs, in the ideal that every child shall have a chance at all the learning he or she can profit by. We have come to take all this for granted.

There lies the danger. Businessmen know that taking anything for granted means neglect. In these last years our fine free education system has been suffering from undermaintenance.

What can the businessman do about it? First, take a new look at the matter. Frank Abrams, chairman of the board of Standard Oil (New Jersey), says our country depends for its very life on people that are educated, productive, tolerant. And only that kind of people can make our business system dynamic and flexible.

So the board of directors of Standard Oil encourages its people to take an active interest in the public schools where they live. It wants more of them to serve on school boards, participate in the Parent Teachers' Association, take part in citizens' committees to bring schools up to date, and improve the quality and pay of teachers. It will even grant company time for this.

The Standard Oil pattern is worth thinking about. It costs time, energy, interest, and money. So does everything else that is worth doing. Unless businessmen back up our schools, we can have neither a strong Nation nor a strong economy.

Psychological Weapon Urged To Tame Kremlin

EXTENSION OF REMARKS OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, October 16, 1951

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record the text of a letter entitled "Psychological Weapon Urged To Tame Kremlin," written by J. Anthony Marcus, who is president of the Institute of Foreign Trade. This letter appears in the October 13 issue of the New York World-Telegram and Sun, and is very interesting and enlightening.

There being no objection, the letter was ordered to be printed in the Record, as follows:

PSYCHOLOGICAL WEAPON URGED TO TAME KREMLIN

(By J. Anthony Marcus)

Your October 4 editorial, Our Only Recourse, states that "We have no other recourse than to continue our own atomic build-up as the one remaining hope that our strength will be the ultimate deterrent to the atomic war that only Russia will start."

It would be sad indeed if that were true, if we had to depend upon armaments alone. The backbreaking expense soon would make itself felt in ever-falling standards of living, in further inflation, in a mounting public debt, and, if continued long enough, it might even result in national bankruptcy. This cannot happen in Russia. Stalin has tens of millions of slaves. He has recently acquired hundreds of millions of slaves in China and the satellite nations, with inexhaustible cannon fodder.

Fortunately for us there still is another recourse—the ideological-psychological propaganda front. We have not yet scratched the surface, while the Kremlin has been at it since December 24, 1917. Until 5 years ago we did nothing on that front. We watched Stalin proceed from one triumph to another. Belatedly we woke up 5 years ago and began to counteract his campaign of lies and slander and intimidation with the so-called campaign of truth. Our efforts have

proven feeble and foolish, even though hundreds of millions of taxpayers' money has been spent. We have failed lamentably and completely. The work of our United States Information Service and the Voice of America under the aegis of the State Department has proved to be a tragic joke.

We are publishing, for example, a Russian-language magazine, Amerika. Our officials bowed to the Soviet demand that every word going into the magazine be submitted for censorship; they again bowed to the Kremlin when they accepted the demand that circulation be restricted to 50,000 copies per month, and this has since been reduced to about 25,000 copies; they failed to protest when the Kremlin decreed who shall distribute the magazine in Russia.

At the same time we did not dare to impose similar conditions upon the Soviet Embassy in Washington, which has been publishing a fortnightly, the U. S. S. R. Information Bulletin, filled with propaganda and falsehoods designed to misinform and mislead our people. The constitutional provisions of freedom of the press, be it remembered, were not designed to help a foreign government come to our shores and under the protection of the Constitution carry on work inimical to our safety.

Under the conditions existing in Russia, I can state without fear of contradiction, that no Russian would dare be seen buying or reading our magazine Amerika. It would be the surest way of obtaining a one-way ticket to a slave labor camp. But assuming that I am wrong—that every man, woman and child in Stalin's "paradise" is able to read our magazine—what earthly benefit could they or we derive from this when its issues are filled with such articles as Dolls, the Attic—the Family Archive, Blankets from Colored Rags, Ladies' Pocket Books, Mosaic Windows, and similar drivel? Would such inflammatory messages bring hope to the oppressed Russian masses, would that kindle their hopes that we would help them in their struggle for liberation from the Communist bondage?

Unless we inaugurate a hard-hitting propaganda campaign (1) to stir the masses of the world outside the iron curtain by exposing to them the true conditions of Russia's enslaved, and (2) use all means at our disposal to bring about revolutions in Russia and the satellite nations, our armament program will not save us from a catastrophic world war.

MANHATTAN.

Rearmament Not the Way to Peace

EXTENSION OF REMARKS OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 11, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am inserting a newspaper article which appeared in Between the Lines, whose editor is Mr. Charles A. Wells, and who has been calling the turn on the crazy rearmament program now under way in the western nations. If we really want peace, we can find it through economic, social, moral, and spiritual means and not in the manufacture of weapons of war. The pattern we are following today is that of Hitler and Mussolini, and unless it is stopped, we will end in the same place, our Nation will go the same way that Ger-

many went under Hitler. It is time to stop and consider the course we are now on before it is too late. The article follows.

If we would devote the same amount of time, energy, and resources to the containment of communism by economic, social, moral, and spiritual means as we are now devoting to the weapons of war, we would find the solution. This is much more real and practical than it appears, for the free evangelical peoples of Finland, Sweden, Denmark, pressed closely on every hand by the threat of communism, have succeeded miraculously in curbing communism—not by military might but by their inner individual resources. Why must we in the cool vastness of our abundant west go stark crazy?

It is because two salient historical facts are being ignored or suppressed by the political and military spokesmen:

(1) That communism comes into a nation through internal upheaval, mob violence, civil war, not by the invading Russian Army. Nations are not being made Communist because of the invading Russian Army but by the breakdown from within of their economic, political, and moral life. (2) That, if the Russian Army should overrun Europe (no one pretends that they would dare try to overrun Asia), no historian living would say that Russia would then conquer Africa, then South America, then North America. For the truly well-informed authority on the subject is aware of the gross and traditional inefficiency of the Russian Government, the enormous amount of rebellion within the iron-curtain countries—and the magnitude of such a project. Only the irresponsible—and some of them in uniform and in politics—are saying that.

The same propaganda drum was beaten about the Kaiser—then about Hitler. Yet it is now freely admitted in all diplomatic, military and educational circles that Hitler could never have achieved such a program unless he could first conquer Russia, unless he could thoroughly subdue Europe, unless he could make the British, Dutch, Belgians and French work for him. Hitler failed to accomplish any of these things. His subjection of Europe we now know was a roaring, boiling, explosive farce. He hung on, millions suffered, but from the Goebbels' Diary and from many other authentic sources it has been recorded that Hitler himself knew he not only was failing to subdue Europe but that even Germany was full of growing revolt. If the Germans, who are an extremely well organized skillful people, couldn't do it—how can we presume that the Russians, a notoriously poorly organized, inefficient people, for all their other great creative capacities, could succeed?

In view of indisputable historical data—if communism spreads through Europe, Africa, South America, North America, it will not be through the power of Russian arms but through the power of communism as an ideology pouring in where nations, through selfishness, poverty and corruption, have opened the way. And that is a process we can't shoot at.

Do men really want peace? Top military men, top politicians, leading industrialists, financiers, when they stop to think, must know these things—for these are historical facts. Then what is at the heart of this mass hysteria of fear and devotion to physical violence?

We believe it is that, in the very action, the very onrush of this great parade, we are able to escape facing closer problems. Remember 1938? Business was flat; we had found no solution for the big depression that was still on. Then war in Europe came nearer and American business picked up as European war orders hit our markets. Following this, our own war orders helped boost business. But we never solved that depression—under the surface it still exists—the

12,000,000 men are still out of work. Oh, they are making machine guns, bombs, and planes, but they are really still unemployed as far as a healthy, stable economy is concerned. Business is booming, profits are booming, the stock market is booming, dollars are flowing, but they are cheap, shrinking, dying dollars.

A reasonable defense pattern for our hemisphere, a strong program for the economic, moral and spiritual rehabilitation of the threatened areas of the world has simply been crowded out by this big parade. The only way we'll change it is for those who see and understand—each of us, wherever we are—to turn around and march the other way. Only thus can the big parade be stopped this side of the precipice.

Socialized Medicine in Great Britain

EXTENSION OF REMARKS

OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, October 16, 1951

Mr. O'CONOR. Mr. President, I ask unanimous consent that an article entitled "London Dentist Says 9 Out of 10 School Children Are Denied Dental Care Under British Nationalized Health Services," published in the Washington Post this morning, bearing upon the results of socialized medicine in Great Britain, may be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LONDON DENTIST SAYS 9 OUT OF 10 SCHOOL CHILDREN ARE DENIED DENTAL CARE UNDER BRITISH NATIONALIZED HEALTH SERVICES—AUSTRALIAN WARNS ADA TO PREPARE FOR SOME GOVERNMENT PLAN HERE

(By Nate Haseltine)

Nine out of every 10 British school children are being denied dental care under their country's operation of nationalized health services, a London dentist said here yesterday.

The visitor, Dr. Cyril deVere Green, of London, official representative of the British Dental Association, gave the report to dentists assembled here in the ninety-second annual meeting of the American Dental Association.

One of the few British dentists who have declined to join their country's health services plan, Dr. Green warned American dentists to "take your lessons from our experiences."

Great Britain's dental profession, he said, was not prepared for the deluge of work thrust upon the dentists when the country's national health services act went into operation 4 years ago. As a result, he said, the dentists are working longer and harder than ever before, "and earning four times as much as they did in private practice."

But, under the British program, he added, the children suffer most because the dentists "naturally prefer" to work on adults. This, he explained, is because dentistry for children is more exacting and more time-consuming, as compared to measuring adults for false teeth.

"As a result," he declared, "the school dental services have been denuded by the scheme (National Health Services), initiated at the wrong end of the scale. The initial intent was to provide dental services first for children and expectant and nursing mothers, but it didn't work out that way."

Dr. Green said there are plans under way to provide dentistry for the school children

by "diluting" the dental profession. The proposals, he explained, would authorize special 18-month training programs, in contrast to the standard 5-year schedule in dentistry, to qualify for dental practice limited to children.

Japanese Peace Treaty Echoes

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks an article that appeared in *Between the Lines* on October 8 on the subject of the Japanese Peace Treaty, by Mr. Charles A. Wells, editor and publisher. Mr. Wells speaks with authority on this subject as he has traveled throughout the world and written extensively on matters of international relationships:

JAPANESE TREATY ECHOES

In recent issues we reported that many of the nations that signed the Japanese Peace Treaty at San Francisco did so with strong resentments against the American military policies behind this treaty.

When we ran these reports we assumed that there would eventually be adequate coverage of this situation in the usual news channels. That coverage has not been forthcoming, but you can substantiate and document our own reporting on this issue by referring to the full analysis presented in the *New York Times*, September 1, by America's top diplomatic writer, James Reston; and also to the long report from Rome in the *New York Times*, August 29, which stated the reasons for the Vatican's opposition to the Japanese peace treaty—reasons tied to the fact that many countries affected by the treaty, such as the Philippines, India, China, etc., as well as Japan—have strong Catholic constituencies. Also the *Nation*, September 15, discussed the inevitable misfortunes that will come of efforts to enforce this treaty and the resentment of the many delegates who, though they were compelled to sign up, freely expressed their fears and lack of faith in the military character of the pact. In short, *Between the Lines* does not stand alone as perhaps it may sometimes seem.

Perhaps the worst aspect, however, has been the misleading reports in most places about how the Japanese people themselves feel about the treaty. It has been known all along that there is widespread resistance in Japan toward the complete reversal of American policy, which only five brief years ago urged on Tokyo a constitution that denounced forever the use of arms as an instrument of international policy, then, within that short period, forced on Japan a policy of rearmament. The true picture was revealed when the Japanese Prime Minister Yoshida returned to Tokyo after signing the treaty, broke the ban of silence that had been imposed on him and announced that, while he had been willing to cooperate in shaping the treaty, as the Japanese leader who seemed destined for that task, he would not have anything to do with the program of rearming Japan.

The Japanese fear communism, but they fear war more. The Japanese people want protection against communism, and if such security requires rearmament they will do their part. But it is made clear by the statements of their leaders and their press that they do not want to destroy their antiwar

constitutional provisions, and if they are to participate in rearming, it must be under actual and realistic United Nations controls and direction and not just as a partner with America in militarism.

On the surface the American peace treaty with Japan presents itself as just a document of cooperative security, except that it sidesteps the UN and clearly indicates the intention of American armed power to be paramount and to commandeer a rearmed Japan. The Japanese people and many other Asians fear that the military extremism which has characterized our action in Asia will lead to war rather than to peace.

And can you blame the Japanese—and others—for having these fears when they have witnessed how the American military saved Korea from communism? All Korea is totally destroyed—industrially, economically—in terms of property and homes; out of their small population between two and three million civilians have been killed, to say nothing of the millions who have suffered torturing injuries, hunger, illness from exposure, etc.—all that aside from the military casualties. The Koreans feared and hated communism, but about the only ones who will bear a favorable testimony as to the way we have "saved" Korea are the Koreans whose professional careers in religion and education have been fostered by American mission funds and whose loyalties to American support and good will are to be expected. But when you read and hear statements by such Koreans, worthy and fine as they may be as Christian leaders, their opinions must be recognized as a far cry from the sentiments being expressed by the other 99 percent of the Koreans who have never had the good fortune to benefit by missionary expenditure and investments.

What has happened in Korea should at least teach the world that some other way must be found to stop communism. Modern military realism is like trying to prevent cancer by blowing a man's brains out.

Mr. Boyle and Mr. Gabrielson

EXTENSION OF REMARKS

OF

HON. JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Tuesday, October 16, 1951

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "One Out; One To Go," appearing in the October 15 issue of the *Journal-Every Evening*, of Wilmington, Del.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ONE OUT; ONE TO GO

Since we have no way of knowing how he feels we shall have to believe William M. Boyle, Jr., when he tells President Truman that "ill health" is the cause of his resignation as chairman of the Democratic National Committee. But it may well be the fact that the operation which Mr. Boyle had last year—and upon which he lays stress—is not the only reason for the present state of his physical being. The suspicions raised by his public conduct and the accusations which have been laid against him may well have made him just a bit tired. They would do that to most men.

Anyway, Mr. Boyle will soon be out and it's a good thing. The chairman of a political party in power has no business using his influence to obtain Government loans for private concerns or serving as counsel for

firms which want something from the Government. There may have been nothing illegal in the proceeding but it was reprehensible conduct nevertheless and should never have been tolerated by the President.

The case of Guy G. Gabrielson, chairman of the Republican National Committee, is not on all fours with that of Mr. Boyle, but it is still a question whether he, too, has not outlived his usefulness to the party. He has admitted that he sought the extension of a loan to a company he heads. That's using politics to further personal interests and as such cannot be defended in the case of a man in high position. As long, moreover, as he keeps his present place, as he says he intends to do, Republicans will have a difficult time convincing the average voter that their standards of ethics are any higher than those of the Democrats.

With Admiral Fechteler in Command, Navy Is in Good Hands

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article appearing in the October 14, 1951, issue of *Parade* entitled "Fechteler Is Tops":

WASHINGTON.—Why will 55-year-old Bill Fechteler do a bang-up job as our new Chief of Naval Operations?

News men have been asking that question since Admiral Fechteler (pronounced "FEK-tel-er") took over the late Admiral Forrest Sherman's office on the Pentagon's fourth floor here.

Lately, they've got answers from old Navy hands who've known Fechteler since his plebe year at Annapolis. Here's what they say:

1. He's smart. For example:

Twenty years ago the then Lieutenant Commander Fechteler was No. 2 gunnery officer on the battleship *West Virginia*. One disastrous day during firing practice a shot from a 5-inch gun hit a 12-inch gun turret a few yards away.

NO GLOOM FOR HIM

That's enough to end any blossoming naval career, and gloom was a fathom deep in the wardroom. But Fechteler had an idea. "Look," he told his brother officers, "it's not our fault. The ship is built wrong. Instead of blaming us, they ought to change the design of all our battleships."

It was a great and novel idea. It worked, too, because young Fechteler's suggestions got top-level Navy Department approval. The ship and her officers won an orchid instead of a raspberry.

2. He has a sense of humor.

They tell this one in the Pacific Fleet: Fechteler, in 1942 captain of the spick-and-span new battleship *Indiana*, was steaming toward Japan with a support force comprising some old battlewagons.

Skipper of one of them signaled: "You're making too much smoke."

Fechteler signaled right back: "Can't help it. Have to burn garbage to hold speed down to yours."

3. He's no worrier.

Late in the last war Fechteler was responsible for seeing that new ships had all their officers.

But word came that three commanders, assigned to a new cruiser had been wrongly

directed and had left for a hunting trip just 24 hours before the ship was to be commissioned.

Fechteler's staff was frantic, but Fechteler (as he usually is in tight moments) was placid as a tropic bay. "They'll get there," was all he would say.

THE NAVY USED A MULE

They did—and weeks afterward his junior officers learned that Fechteler had telephoned the smartest guide in the mountain region, and sent him out by muleback to bring in the absentees. "You can win a lot of war with a mule," he said.

That's Fechteler: smart, sometimes witty, sure thinking in an emergency. The fleet's in good hands.

The Democratic Party Is the Prosperity Party

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 16, 1951

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an able, courageous, and forthright address delivered by Michael J. Galvin, Under Secretary of Labor, before a luncheon meeting of the Women's National Democratic Club in Washington on October 11, 1951:

THE DEMOCRATIC PARTY IS THE PROSPERITY PARTY

What are the real reasons behind the ever-growing strength of the Democratic Party? In searching for the answer to the question I have raised, I tried to avoid comparing the current situation with the last year of the Republican administration, that is, with 1932. In order that no one accuse me of making an unfair comparison of a prosperous year with a depression year, I shall make most of my comparisons with 1929—the peak year of prosperity under Republican administration.

In reviewing the record for the past 20 years, I am impressed with the continued growth and present strength of our national economy. The national output in the United States increased from \$104,000,000,000 in 1929 to two hundred and eighty-three billions in 1950. Even after adjustment is made for the higher price level in 1950, the output in terms of actual physical quantities, the goods you and I consume, increased by 80 percent from 1929 to 1950. Each Democratic administration from 1933 on has contributed substantially to the increase in the economic well-being of the Nation. The increase has not been sudden. Except for minor ups and downs, you can notice a gradual and continuous increase in our national output beginning with the first year of the Roosevelt administration right down to the present moment. And as you and I well know, we shall not rest on our laurels—our country can look forward to a continued increase in our well-being.

The Democratic administration is concerned not only with an over-all increase in output but with making certain that a large majority of our citizens share in this increased well-being of the Nation.

The largest segment of our population are those who work for salaries and wages. If we look at the record and see what happened to this important segment of our citizenry, we shall see that they have fared extremely well in this increased output of the Nation. In 1929, the employees of this Nation re-

ceived about \$51,000,000,000 in the form of wages, salaries, and other compensation. In 1950, this figure tripled to \$153,000,000,000. Another way of interpreting the same phenomenon is to observe that a full-time employee earned slightly over \$3,000 per year in 1950 as compared with only \$1,400 in 1929. Even after allowing for higher prices, the purchasing power of the full-time employee was 52 percent larger in 1950 than in 1929. This means that on the average each employee could purchase 50 percent more goods and services than he could have in the peak prosperity year of the Republican administration. Is there any question in our minds that the persons who receive their income in the forms of salaries and wages have benefited tremendously by the past 20 years of Democratic administration?

Most of you may not be surprised by this fact since the Democratic Party has always been considered the friend of the wage earner. Let us now turn to the farmers and see how they have fared during the past two decades of Democratic leadership. One of the easiest ways to determine the farmer's status is by the value of his output. The total value of farm output in 1929 amounted to about \$14,000,000,000. In 1950, this value totaled more than \$33,000,000,000. Again after one makes allowances for the changes in price levels, the value of farm output increased by almost 50 percent. The actual output per farmer is even greater than that indicated by this figure in view of the fact that a smaller number of persons were engaged in farm pursuits in 1950 than in 1929.

I am sure that this fact alone should answer the question as to why farmers who previously have been considered the backbone of the Republican Party are turning in ever increasing numbers to the Democratic Party.

We have now covered the two largest segments of our population, the farm and labor groups, and they have undoubtedly benefited by the policies of the Democratic administration. Let us now turn to another very important segment of our population, namely, the business groups. I use the term "important" not in the sense of numerical strength but rather "important" from an economic sense.

President Truman as well as the rest of us in the Democratic administration is dedicated to the preservation of free enterprise. Our free-enterprise system can flourish only if the business groups prosper. Many far-sighted businessmen have looked at the record, as we are doing today, and they are satisfied that the Democratic administration has been good for them. But some businessmen have continued to oppose the policies of the Democratic administration. To them I say, let us examine the record.

Corporate profits amounted to slightly less than \$10,000,000,000 in 1929. In 1950 such profits quadrupled—over \$41,000,000,000. Ah, but some say that this increase is more apparent than real. All of the increased profits are going into taxes. This is far from the truth. In 1929, corporate profits after taxes amounted to slightly over \$8,000,000,000; in 1950 this figure amounted to twenty-three billion. Thus, corporate profits in 1950, after payment of taxes, were three times as large as in 1929. I am sure that our keen and far-sighted businessmen are not being fooled by the cry of higher taxes. Although I promised not to make any comparisons with 1932, I am compelled to remind some of our business friends that corporate profits, even with the low tax rate, were nonexistent in 1932. Our corporations actually showed a loss of \$3,000,000,000 in that year.

The story for small business is also spectacular. This can best be illustrated by the profit story for unincorporated businesses and enterprises. If we examine the data for unincorporated enterprises, we find that their income increased from eight billions in 1929

to twenty-four billions in 1950. I am sure that any businessman who is confronted with these facts would come to the same conclusions that I have. The Democratic Party not only is preserving our free enterprise system but also is strengthening it greatly.

Throughout the history of the United States, there have been repeated statements made by our political leaders that the strength of our country and our economic system depends to a very large degree upon the strength of our small business concerns. I am happy to report that there has been a substantial increase in the number of business firms in operation in the past 20 years. In 1929 there were about 3,000,000 business firms in operation. In 1950, there were about 4,000,000. Most of this increase of a million firms was among the smaller companies.

Thus, by any sensible criteria we can come to only one conclusion—our business community has prospered, and prospered well during the past 20 years. Looking at the record, we come to the inescapable conclusion that Democratic administration is good for the labor groups, the farm groups, big business and small business.

I do not have to elaborate on what the Democratic Party has done for the aged and retired people. It was the Democratic Party which spearheaded the legislation providing old-age insurance for the retired worker and survivors' insurance for his family. Again, I need not remind you about the program of unemployment insurance for our workers. It was the Democratic leadership which sponsored this legislation and has put it into effect.

I have been giving you numerous facts which indicate the well-being of the various segments of our population. One over-all single factor which is a real reflection of the well-being of our country is the number of families living in their own homes. In 1930, the number of such families amounted to about 14,000,000. Today there are about 24,000,000. Today, 55 out of every 100 families are living in their own homes.

I should like to come back to the question which I originally raised. What are the reasons behind the inherent upward trend in the strength of the Democratic Party? After examining the record, you will agree with me that the Democratic Party stands for the greatest good to the largest number of people. As a matter of fact, it appears that the Democratic Party has been good for everyone except the Republican Party.

Let us now turn to outstanding problems of the day. The most important problem of the day is the one of international security. The Democratic Party has taken the lead in combating communism. It was the Truman doctrine that stopped communistic aggression in Greece and possible aggression in Turkey. It was the Marshall plan that stopped the rise of communism in Italy and France as well as in other Western European countries. It was the Berlin airlift which stopped further aggression in Germany. It was the decisive action of the Truman administration backing up the United Nations that stopped the Communist conquest of Korea. Through these various acts, the administration has been successful in keeping the Communists from achieving success in their aggressive moves. This is not talk—this is action.

The second most important problem of the day is that of inflation. In combating inflation, it is the present administration that has brought forth concrete plans for stabilizing prices and therefore protecting all of the consumers of this country.

In conclusion, I ask every one of you and all other persons with whom you come in contact, to examine the record. Let each one draw his own conclusion as to whether Republican or Democratic administration is

best for his or her welfare and the welfare of the country. You and I know the answers. I am sure the others will come to the same conclusion.

Malone Bill To Abolish Bureau of Indian Affairs and Repeal the Wheeler-Howard Act

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Tuesday, October 16, 1951

Mr. BUTLER of Nebraska. Mr. President, I ask unanimous consent to insert in the Appendix of the Record a statement which I have prepared relating to Senate bill 2167, introduced on September 22, 1951, by the junior Senator from Nevada [Mr. MALONE] providing for the abolishment of the Bureau of Indian Affairs and the repeal of the so-called Wheeler-Howard Act.

There being no objection, the statement was ordered to be printed in the Record, as follows:

STATEMENT BY SENATOR BUTLER, OF NEBRASKA, REGARDING SENATE BILL 2167, INTRODUCED ON SEPTEMBER 22, 1951, BY THE JUNIOR SENATOR FROM NEVADA [MR. MALONE], PROVIDING FOR THE ABOLISHMENT OF THE BUREAU OF INDIAN AFFAIRS AND THE REPEAL OF THE SO-CALLED WHEELER-HOWARD ACT

Senator MALONE's statement in connection with the introduction of said bill is an able and forthright appraisal of the over-all question of the present policy in the administration of Indian affairs, which I hope will be studied by, not only Members of Congress, but also by the public in general. I support Senator MALONE fully in his efforts to help the Indians to help themselves.

When Congress enacted the so-called Allotment Act of 1887, and subsequent acts to implement this program, it anticipated the gradual and complete liquidation of all the Indian reservations in the United States. However, the period from 1934 to the present, during the John Collier, New Deal, and Fair Deal policies, has seen the complete reversal of the expressed will of Congress and the American people through the retention of lands held in trust status and the adding to tribally owned lands, by acquisition of Indian allotted lands and privately owned lands.

For the past several years I have advocated the emancipation of the Indians by giving them the same rights and privileges as other citizens, and I have sponsored legislation which would at least accomplish such purpose by piecemeal, such as—

1. Conferring State criminal and civil jurisdiction over Indians.
2. Transfer all Indian education and health to the States.
3. Medical services available to non-Indians in Indian hospitals.
4. Transfer of supervision of Indian irrigation projects to the Bureau of Reclamation.
5. Eliminate Indian Bureau agricultural extension, since Indian citizens have the same rights and access to such State and Federal services as other citizens.
6. Require the Secretary of the Interior and his Indian Bureau to dispose of the fractionated Indian heirship lands.

7. Distribute the approximate \$100,000,000 Indian moneys in the Treasury of the United States drawing 3 percent, 4 percent, and 5 percent per annum, costing the taxpayers approximately \$4,000,000 annually. This money should be distributed to the individual Indians in same manner as funds owned in common by other citizens.

8. Providing for a decree of competency of Indians in certain cases.

9. Repeal the Wheeler-Howard Act which includes the repeal of the authority of the Secretary of the Interior to create new Indian reservations, add to existing Indian reservations, and to set up Indian tribal councils which have power or authority only with the sanction of the Indian Bureau.

10. To cancel and rescind certain orders of the Secretary of the Interior establishing, under the authority of the Wheeler-Howard Act, Indian reservations in Alaska.

If such proposed legislation were to be enacted it would leave little or nothing for the Indian Bureau to administer in regard to the affairs of the Indians. If only one of such bills would be enacted it would at least diminish the power and authority of the Indian Bureau over the Indians.

The enactment of one or all of such bills would be an approach to the release of the Indians from governmental supervision on a piecemeal basis. The present Commissioner of Indian Affairs, Mr. Dillon Myer, apparently is opposed to such a policy of emancipating the Indians. He is constantly appearing before committees of Congress urging the enactment of the so-called rehabilitation long-range programs, which long-range programs, in my judgment, amount to the continuance of the Indian Bureau for all time to come.

Such long-range programs are in reality to enslave a minority group to a bureau of the Federal Government, which is the Indian Bureau. Such programs are also being advocated by the John Colliers, the James E. Currys, the Ruth Bronsens, the Congress of American Indians, Civil Liberties Union, and the like, which organizations and persons are advocating and approving of the withdrawal of public domain for Indian use under Indian Bureau control and the acquisition of lands, Indian and private, for the creation of additional Indian reservations or additions to Indian reservations, to alter boundaries of existing Indian reservations, and the elimination of individual Indian allotments and put all lands in communal or tribal ownership.

With reference to the withdrawal of public domain for the alleged purpose of Indian use, in a discussion on the floor of the Senate, on July 30, 1948, concerning a bill (S. 2394, 79th Cong.) providing for the amending the act of June 25, 1910, as amended (36 Stat. 847), so as to terminate such outstanding withdrawals from settlement, entry, location, or sale of public lands, unless such withdrawals be authorized by the Congress, and in a colloquy between the senior Senator from Nevada [Mr. McCARRAN] and the then junior Senator from Utah, Mr. MURDOCK, the following took place:

"Mr. McCARRAN. . . . To all intents and purposes, these withdrawals constitute Indian reservations or additions to reservations, and they all still stand in full force and effect. None has ever been revoked. They remain as festering sores of controversy to plague the communities and the States in which they are located.

"Mr. MURDOCK. Mr. President, will the Senator yield?

"Mr. McCARRAN. I yield.

"Mr. MURDOCK. Is it not a fact that after a withdrawal has been made, especially in connection with the Bureau of Indian Affairs, the withdrawal is used as a club over the heads of Senators and Representatives in order to force legislation through Con-

gress which otherwise, in my opinion, might not be considered at all? That has been my experience in both the Senate and in the House. The very withdrawal to which the Senator from Nevada has referred was made when I first became a Member of the House in either 1932 or 1934. It is still in full effect. Under that withdrawal the Bureau of Indian Affairs took over jurisdiction of, as I recall, approximately a million acres of land, and since then has constantly used that circumstance in an attempt to force through the Congress legislation which should never be enacted and will not be enacted.

"Mr. McCARRAN. Mr. President, no statement could be more accurate than that which the able Senator from Utah has made."

The Indian Bureau and the so-called Indian welfare organizations advocate rights without obligation for the Indians, and are advocating discrimination, not rights.

STATE LAWS SHOULD BE APPLICABLE TO INDIANS

I sponsored legislation conferring jurisdiction on the State of New York with respect to offenses committed on Indian reservations within the State of New York, which legislation was enacted and approved by the President on July 2, 1948. This law confers complete jurisdiction on the State of New York over crimes committed on Indian reservations in the State of New York, which law has now been in operation for more than 3 years. I am advised that this law is being administered by the State of New York to the complete satisfaction of the Indians, the State of New York and all concerned, yet the Indian Bureau advocates legislation which would retain in the United States jurisdiction over offenses defined by the laws of the United States committed by or against Indians within Indian reservations or Indian country. I submit that such a law would be discriminatory against the Indians and does not make them amenable to the same laws as other citizens. Why does not the Indian Bureau advocate and recommend the New York law as a pattern for other States?

INDIAN FUNDS

During this session of the Eighty-second Congress, I sponsored a Senate resolution (S. Res. 147) directing the General Accounting Office to make a study and investigation to ascertain the amounts of the funds and securities of the several Indian tribes, including those of tribal organizations, whether held in the Treasury of the United States, in private banks, or elsewhere, and the rates of interest which are being paid on such funds, and such other information with respect to such funds. This resolution was on July 23, 1951, adopted by the Senate, and I am advised that the Comptroller General has already started such study and investigation in pursuance to said resolution. I have complete confidence in Mr. Warren, the present Comptroller General, and I am sure that the results of such a study and investigation will be of much assistance to the Congress in the consideration of matters pertaining to the affairs of the Indians.

WHAT IS AN INDIAN?

The junior Senator from Illinois, Mr. DIRKSEN, on July 11, 1951, on the floor of the Senate stated:

"Some years ago I had this rather embarrassing experience: I sent a letter to the Indian Bureau. I simply said to John Collier, who was at that time at the head of that activity: 'What is an Indian?' I got back four pages of single-spaced typewriting and when I got through I could not find out what an Indian was."

"I addressed a letter to the Bureau of the Census. I got back 5 pages. To this good hour, I do not quite know what an Indian is, although by one standard probably one-sixty-fourth blood entitles one to be on the tribal rolls. By that standard the second

Mrs. Woodrow Wilson would have been enrolled upon the rolls of the Indian Bureau: And if numbers mean anything for the purpose of getting anything out of Congress, that is a very felicitous way to do it."

The junior Senator from Illinois is mistaken when he presumes that an Indian of at least one-sixty-fourth blood entitles him to be on the tribal rolls. I am advised that there are Indians on the rolls of the Five Civilized Tribes, of Oklahoma, who are one-two-hundred and fifty-sixth part Indian and less.

Indeed numbers of Indians mean a great deal to the Indian Bureau in getting money from the Congress.

In justification for appropriations the Indian Commissioner, this year, paraded 427,000 Indians before the Appropriations Committees of Congress, whose activities he claimed to supervise and for which he asked the Congress for an appropriation of \$71,425,000 for the alleged support of the Indians. Perhaps it would be more correct to say, "to feed his hungry board of bureau tax-eaters" in excess of 12,000 of them.

Under any rational definition of an Indian, there is nowhere near the population of 427,000 who need the care and supervision of the Indian Bureau, only a small proportion of this number is in any way dependent upon the Bureau. Among the 427,000 whom the Commissioner of Indian Affairs says he has to supervise are Congressmen, State supreme court judges, lawyers, doctors, State legislators, State and county officials, and hundreds and thousands of the one-fourth, one-eighth, one-sixteenth, one-thirty-second, one-sixty-fourth degree of Indian blood and less.

An Indian who is as much as one-fourth degree of Indian blood is three-quarters of some other race.

It is becoming increasingly difficult to distinguish an Indian from the other citizens of the Nation, in fact Congress made all Indians citizens in 1924, yet, due to powers embodied in the commerce clause of the Federal Constitution, the Federal Government continues to control by special legislation and regulation the lives and property of these citizens who are arbitrarily classed as "Indians." The power delegated in the Federal Constitution over trade and affairs is no longer needed nor just.

As long ago as 1899 in the case of *Keith v. United States et al.* (58 Pac. 507), the child of a white father and an Indian mother was held to be a non-Indian. Yet today there are many persons of infinitesimal proportions of Indian blood, even one-two-hundred-fifty-sixths and less who are on the rolls of certain tribes.

All enrolled, recognized, and allotted Indians or their heirs, regardless of tribe, degree of blood, or place of residence, should be given immediate control of their lands and the revenue therefrom now in the hands of the Federal Government. The allocation of their respective shares in their tribal funds or per capita payments should be made and they should now be given their share of all tribal money on deposit with the Federal Government, which is now being handled and used by the Indian Bureau and its puppet tribal councils, which councils can only do what the Indian Bureau allows them to do. This money belongs to the Indians and should be paid to them. Advancement and self-sufficiency of a people comes through the free use of their initiative—not paternalism or bureaucratic direction. Indians are not an exception to this well-established rule.

INDIAN BUREAU MUST GO

The Indians should be released from Federal supervision as quickly as possible. The Indian Bureau will not go voluntarily. It has been nourished and warmed too long. It will have to be kicked out by the Congress.

Disaster on the Horizon

EXTENSION OF REMARKS

OF

HON. FRAZIER REAMS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 16, 1951

Mr. REAMS. Mr. Speaker, no thoughtful American can deny the fact that there is possibility of disaster on our national horizon. I have just read a statement from a great American who has confidence in the judgment of the American people and their ability to take the proper action when they realize what a crisis we are in. In this, he makes suggestions which are so practical that none of us should fail to heed them. Under unanimous consent, I place in the Appendix of the Record the following statement by Mr. Nathaniel Leverone, one of the thoughtful citizens of Chicago and of the United States:

DISASTER ON THE HORIZON

(By Nathaniel Leverone, chairman of the board, Automatic Canteen Co. of America)

I have great confidence in America's future, but that does not prevent me from being deeply concerned over the present socialistic trend.

Right now the Nation is in the midst of a great crisis—in fact, it is facing an internal danger much more destructive than any A-bomb attack or invasion by a hostile power. The danger is more acute because the average man does not seem to be aware of it and hence he is doing nothing to prevent it.

We are feverishly working to prepare ourselves to meet any attempted attacks from without, but we are overlooking almost entirely the danger of complete internal collapse, which will be bound to take place unless we prepare to meet and defeat this new enemy—inflation.

Inflation is growing by leaps and bounds and is affecting every American family. It is destroying the value of their insurance policies, of their savings accounts, of everything else they have strived for to protect them and their families as they grow older.

Few incomes have kept pace with the increase in the cost of living, and as inflation continues to grow, it is only a question of a short time before it begins to reach the same proportions it did in Germany in the disastrous years following World War I. At that time the mark lost its value so rapidly that workers were paid daily at noontime in order that they might attempt to buy needed food and clothing before prices became prohibitive that same day. In spite of the fact that wages were increased almost daily, the income never kept up with the increased prices. Finally, as many of you will recall, laborers collected millions of marks for pay for a single day's work and actually used wheelbarrows to carry the necessary marks—in paper money—to have enough to pay for ordinary purchases. There were not enough printing presses in Germany to print new marks fast enough to keep pace with the drop in purchasing power. The result was that the entire economic structure of Germany was destroyed, and she entered the most disastrous period in her history.

Keen students who have no interest in either political party are agreed that we are going down the same road that Germany did, and unless something is done promptly, we may find ourselves in that same tragic situation that Germany did following the other world war. So let America beware.

However, I have confidence in the judgment of the American people and in their ability to take the proper action when they realize what a crisis we are in. So the important question now is how can inflation be stopped. You, as an individual, can do your share in this fight. Here are some suggestions.

Watch your purchases carefully, weighing the merits of each, buying only what you need, and, above all, avoid "scare buying." Don't be stampeded into buying something you do not need, at too high a price, because there is going to be a shortage of it. Isn't it much better to do without something unnecessary now than to have to do without necessities later?

You should write to your Congressmen. Tell them of your fears about inflation—let them know that they are accountable to you for their actions in Congress—that you do not intend to be represented by anyone who votes against the Nation's welfare by voting for extravagance. Elected officials pay attention to the people whose vote put them in office, and if you and enough other good citizens will cry out against governmental extravagance, it will be corrected.

Buy Defense Bonds. Every dollar invested wisely in savings is a dollar enlisted against inflation. Inflation, in its most simplified form, is a case of too many dollars in circulation. If you help keep more and more money circulating, you speed the pace of inflation. Every time you withdraw some cash for savings, you lessen the flow and help fight disaster.

I urge everyone who reads this to join the fight against inflation. Remember, no matter how difficult or painful the cure, the final stages of the disease itself mean the end of everything worth while for which America has always stood.

Time Running Out for Restoring Freedom in China as Mao Tse-tung Crushes All Opposition

EXTENSION OF REMARKS
OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 16, 1951

Mr. KERSTEN of Wisconsin. Mr. Speaker, time is working for Mao Tse-tung because he uses this time to kill off his opposition. As he gradually consolidates his position, the chances of freeing China become ever slimmer.

I present herewith the seventh and last in a series of articles by Everett S. Allen, which appeared in the New Bedford Standard-Times on July 2, 1951.

TIME RUNNING OUT AS CHIANG IS AWAITED TO OVERTHROW MAO

(By Everett S. Allen)

If Mao Tse-tung's Chinese Communist Government ever sits at a conference table with the Western Powers, it will constitute only a temporary diversion, designed to give him more time to build up his military strength. Mao views the United States as his principal foreign enemy. America, by virtue of contributing the major portion of UN military forces in Korea, has caused his alleged government acute embarrassment and possible serious trouble.

The ramifications are numerous within China. The Communists' civil program has been slowed down and their demands in men, money, and food stepped up heavily. Their

army, once heavily volunteer, now is largely conscript. All this has come at a time when Communist control over loosely joined China still is far from crystallized.

Result has been an obvious building up of silent resentment, and there have been noticeable, widespread signs of non-cooperation—passive, yet formidable in the light of China's enormous population. The purge certainly was scheduled anyway, for the Communist Party in China planned to cut its estimated 5,000,000 membership down to a total of 3,000,000 or fewer. And certainly political dissidents would have been removed according to plan. But the burden of Korea has forced acceleration of this purge, to keep the grumbling public aware of the iron hand's strength.

Probably the greatest advantage in time lies with the Communists. It has even been estimated that if Chiang does not make a major mainland strike within a year the corps of organizers on whom he should be able to count will have been killed off, one by one, without ever having had a chance to fight.

Neutralization of the Nationalist forces on Formosa by the United States Seventh Fleet, in accordance with President Truman's policy, prevents any move against the mainland Communists. This plays into the hands of Mao's government, for he is thus given time to stabilize an uneasy regime by eliminating opposition piece by piece.

Although it is true the Nationalists still reserve right of decision and could attack if they chose, such a move would be suicidal. The United States is their only hope for supplies, if they displease us, they won't get any. This happened to them once, and the memory is still fresh and painful.

Manchuria is a good example of the advantage that time gives the Communists, that Province now is Sovietized and would be a much harder nut to crack, for example, than the relatively unorganized areas of southern China. Given time and pressured by the methods the Communists know so well, the most rebellious populace can be brought to heel.

Communist control now is strongest in the west and northwest of China, it is not nearly so rigid in the south. It is tightest in the cities; the rural areas, with their tremendous distances and poor transportation, are much more difficult to systematize.

BITTER TOWARD BRITAIN

Thinking Chinese, perhaps 10 percent of the population, are bitter against Britain for recognizing Mao's government; they feel she was motivated by pounds and not principles. If the United States or the United Nations sits down at a conference table with Mao to discuss peace terms, they will say, "The west has betrayed us again. They are still deluded by Mao's barbarians, whom they consider as agrarian reformers instead of seeing them as they are, neophytes of the Russian NKVD, country cousins of the Red army."

They feel Mao cannot possibly carry on a long-range war in Korea on the present scale; lack of resources will force him to the wall. Further, they say Mao lost some of his Communist support, because he bowed to Russian will in the matter of engaging in the Korean war.

As for Chiang Kai-shek, he is no national idol. Many of China's thinking people declare he certainly is not the man to lead the country to a new future, possibly under some form of modified socialism. They look for a new political party and a new leader; as yet neither has appeared on China's horizon.

Critics of Chiang say he is an advocate of the spoils system and has an unfortunate knack for surrounding himself with incompetent officials whose primary interest is to squeeze out of a job all possible cumshaw and kick-backs, for their own enrichment.

But Chiang is accepted as the logical figure to lead the Communist overthrow by all shades of opinion. Even his adversaries say, "We would rally around a figure with horns and a tail, if he would bring a sizable, competent force—with a reasonable chance of victory, against the Mao government."

They are waiting for him to come now, confident that if he is reasonably prepared, he will win by sheer weight of numbers in a drive borne up by the people's desire for freedom from terror.

TIME RUNNING OUT

They feel time is running out, and fast. They foresee the time when the Communists will have killed every adult who is of no use to them, when all-out war against the Christian church—temporarily held in abeyance—will have wiped out this last link with the peoples of the west.

In Europe, the Communists found how easy it was to control an entire nation with a few key persons in the right places. It is even simpler in China, because of the illiteracy and lack of national organization.

Even though communism attacks their most intimate beliefs—the sanctity of the family and the dignity of the individual—China only sits in ponderous lethargy. Some day, in some century, the very weight of this passivity would wear out communism, like rain beating on a stone. But there are better ways and faster.

Nationalists, landing to establish a bridgehead in south China, might be expected to find, among persons of military age, a ratio of 19 anti-Communists to every Communist. Almost any of these young men, if they must fight, would rather fight in China than go to Korea which currently appears to them inevitable and illogical.

Chinese intelligentsia realize the Korean war—terrible though it is—is holding the attention of the western allies on the Far East. Otherwise, they know very well Mao probably would have been permitted to run roughshod over China, and perhaps would even have been given assistance by the West. Even now, they half expect America will join in an appeasement of the Chinese Communist regime.

And if fighting stops in Korea, they conjecture, will not the eyes of the West turn toward Europe, with which a closer kinship is felt? If so, the Mao government, uncomfortably spotlighted for the past year, may withdraw into comparative obscurity to continue its Sovietizing of China. And the West's natural apathy toward China will settle in once more.

But the Chinese still have a warm feeling for America and for reasons which our Government would least suspect. Not because of UNRRA, which spent lavishly and took tractors to areas where there is no gasoline so that now they are used for hen roosts. Not because of Federal propaganda agencies which told Chinese how they could do their farming in half the time and then did not tell them what to do with the half they had saved. And not because of the American displays of books and captioned photographs, created at great expense, which toured areas characterized principally by illiteracy. Nor even because of the "Voice of America," which can not begin to compete with the grass-roots, town-to-town broadcasts and oratory of the Sovietized propaganda.

The Communists are clever that way. They have gone to many places which Westerners never touched and are, therefore, the first new influence to make itself felt in those areas in generations.

But in sections where the Americans have been—usually along the coast or in the larger communities, the Chinese have a warm feeling for them. They do not understand democracy as such, but they have come to associate it with a virile, young country called the United States, where the living is good and everyone has a wonderful opportunity.

Russians scoff at Americans because they give away candy bars and are sentimental about their families. China will never forget the uninhibited GI who passed out chocolate and cigarettes, bounced slant-eyed babies on his knee and grinned because he could not speak any of the language. The Chinese will long remember the American mission schools, hospitals and churches and the patient work of Catholics and Protestants who sought to bring light and help.

FILMS HAVE BIG INFLUENCE

And the influence of American films is greater than most persons in this country realize. Communists recognized the worth of this medium immediately. They banned United States movies and distributed their own. But the Chinese still remember Clark Gable, Hedy Lamarr, My Blue Heaven, and the skyscrapers. Where America has made any inroads of feeling at all, the relationship is basically friendly.

What we do next, since obviously we are in a position to chart the new course if we choose, will determine what happens to that relationship.

Meanwhile, Mao's "agrarian reform" goes on. Every Chinese peasant will be given some land—even if it is only 6 feet of land, under which he can lie through eternity, attempting to dream away the bitterness of tragic disillusion.

Visual Education

EXTENSION OF REMARKS OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, October 16, 1951

Mr. WILEY. Mr. President, the American people are fast learning that this is a visual age as well as an atomic age.

Never before in man's history has he had more occasion to use his eyesight in viewing flickering images from which he learns, is informed, is entertained, is aroused.

The Members of Congress themselves are finding that motion pictures and television are increasingly affecting them in the legislative and political affairs of this Nation.

At this time I have prepared a statement reviewing some of the current developments in these fields as they affect Congress and America as a whole.

The particular occasion for this statement is the publication this month in the magazine "Educational Screen" of an article which I personally contributed on the subject of Congressmen's use of the visual medium in contacting the American people.

I ask unanimous consent to have printed in the Appendix of the Record, my statement, the article, and various materials along this line.

There being no objection, the statement, article, and other matters were ordered to be printed in the Record, as follows:

STATEMENT BY SENATOR WILEY

MOTION PICTURES AND TELEVISION IN THE AMERICA OF TOMORROW

In perhaps no single other area of activity today is there more dynamic development than in the field of motion pictures and tele-

vision. Wherever one looks in these fields, one notes significant occurrences which may powerfully affect American life, sometimes in obvious, sometimes in subtle ways that we of today can barely guess.

One can quickly run down a whole series of such developments.

RECENT DEVELOPMENTS IN TV

(a) Here in Congress a considerable number of bills have been introduced dealing with television and particularly its educational aspects.

(b) The Ford Foundation has set up a million-dollar television workshop which will provide a wide range of educational features to commercial stations—programs which the workshop hopes to have eventually sponsored so that the workshop and the stations will thereby cover the costs.

(c) The FCC has tentatively decided to reserve some 200 channels for schools and universities.

(d) Over in Berlin, Germany for 14 days there has been a tremendous demonstration of American TV sponsored by the Radio Corp of America, the Columbia Broadcasting System, and the Economic Cooperation Administration for 100,000 Berliners. It is estimated that one-sixth of the city's western population have "gotten the TV bug"—have seen and been enthralled by American TV, have gotten a graphic demonstration of what the American way of life can produce.

(e) Back in this country, while the RCA-CBS color television pot boils, Nation-wide black and white network television now includes all but 11 of the country's 65 cities served by television. In these network communities are 94 of the 107 operating television stations.

The 11 TV cities having a total of 13 stations which are not part of the network are in the far South, the Southwest, and the Pacific Northwest.

(f) Meanwhile, whole new vistas are possible in the development of subscription television if that medium is ever given the green light.

(g) Consider, too, the advances being made in theater television.

(h) Ponder the significance of the proposed merger between the American Broadcasting Co. and United Paramount Theaters.

Mix these developments together—consider their domestic and foreign implications, consider their complicated legal aspects, their effects on sports, etc., and you get quite a brew.

I mention these matters together because I feel that it is important that we in the Congress take the time to look at this total pattern.

Now, let us continue.

MOVIE TIME, U S A.

At this point, let us not forget that equally momentous developments are taking place in motion pictures. That great industry which already has contributed so abundantly to the pool of performers, producers, directors, writers, and other technicians of television, is observing Movietime, U S A., the golden jubilee of construction of its first theater. By means of Movietime, U S A., this mighty industry which has carried American culture to the far corners of the world is focusing the attention of our citizens and all others on the monumental achievements of United States cinema art.

By this campaign, the movie industry is using its traditional competitive salesmanship to meet head-on its current problems, particularly those posed by that lusty infant of visual media—television.

Those of us who are familiar with Hollywood's generous services to a great many patriotic causes—war bonds, blood donations, USO, community chests, infantile paralysis drives, etc., note that for once the movie industry is taking the time to bespeak its own cause. It is certainly eminently justified in that respect.

Now, let me point out that no man in public life can ignore all of these basic motion picture and TV developments, because obviously they affect all of the American people, particularly the Nation's young folks. Whole culture patterns of America are being changed, just as once the American automobile so dynamically revolutionized American life.

1952 ELECTION CAN HINGE ON FILMS AND TV

The man in public affairs finds that he too is being impacted by television and films. Almost everyone clearly recognizes that the 1952 Presidential campaign may well hinge on the opposing candidates' use of television and motion pictures.

The Republican and Democratic National Committees will be exceptionally active therefore in television. The 1952 party nominating conventions in Chicago will probably see the greatest single use of television that has ever occurred for a similar political gathering.

CRIME COMMITTEE HEARINGS SET MANY PRECEDENTS

Speaking personally, as one of the five members of the Senate Crime Investigating Committee, I saw how unprecedented television could dramatically impact the American people as never before.

In New York today there is currently being waged an important political campaign. There, one of the chief candidates for the presidency of the New York City Council is Mr. Rudolph Halley, the brilliant young chief counsel of our committee, who first came to Nation-wide public attention during the hearings in New York. He is accenting television in his live-wire campaign for that important post.

Here in Washington, the House Radio Recording Facility, under Mr. Robert Carr, has produced some 30 to 35 TV films showing legislators describing current events. These films, mostly 4½ minutes, but some 2 minutes or 9 minutes, are then shipped back to TV stations in the home districts or States.

TV COULD BECOME CRUCIAL IN NATIONAL CRISIS

I, for one, have long pointed out that some day television may become the very means by which the Nation itself may survive.

I visualize a day (although we pray it will never come) when possibly the city of Washington might be under enemy attack, and the Congress would have to disperse to widely scattered areas. From these centers, by means of a TV hookup, legislators could communicate with one another and could debate and vote on important issues. In these scattered areas, the legislator would be relatively immune from enemy attack. Think, too, of the potentialities of television in the event of such an attack insofar as the continued functioning of the armed services of the Nation would be concerned, and insofar as instructions are concerned to citizens on what to do and how to do it so as to keep the economy rolling.

WISCONSIN INTERESTED IN VIDEO FOR EDUCATION

I have before me still other evidence of the awareness of television's dramatic possibilities. The week before last, the Wisconsin State Radio Council filed a statement with the Federal Communications Commission relating to the proposed allocation of TV frequencies for educational use. The council, which now operates a network of State-supported AM and FM broadcasting stations, asked the FCC to amend its original proposal which was to reserve six frequency assignments for Wisconsin educational television use. The council seeks to reserve instead 12 frequencies for my State.

The council has estimated that such a network would cost around \$3,000,000.

The manager of the State radio council, Mr. H. B. McCarty, pointed out that the filing of the statement with the FCC by the council didn't constitute an application for

the frequencies, but was intended to convince Federal authorities that the TV envisioned for Wisconsin should be planned on what was felt to be a practical basis, which would cover the educational needs of the whole State.

Mr. McCarty also pointed out that no formal proposal has been made by the State radio council to the people of my State nor to the legislature at Madison for any TV broadcasting service.

"The State Radio Council's proposal to the FCC pointed out that the capital outlay involved in setting up a TV station, was considerably "less than the estimated cost of a single high-school building now under construction in a town of 25,000 inhabitants."

The Wisconsin State Radio Council consists of 10 leading State officials headed by Gov. Walter Kohler, Jr.

Incidentally, the chief executive of our State has indicated his firm support of the application for more TV frequency reservations.

I mention these facts as symptomatic not only of the potential revolution in the class room, which can be wrought by television, but also as examples of the thinking of educational and cultural sources throughout the Nation.

CRITICISMS OF STATE AM, FM, AND TV

I do want to point out that the matter of appropriating public funds for construction of radio stations has become an issue of considerable controversy in my State. There are many people who believe that the State might better devote its energies toward securing time on regular commercial broadcasting stations, rather than investing funds in constructing its own stations. Many feel that there are whole questions of public policy which arise from a State government competing for listener time with private broadcasting stations. Many feel, too, that a State radio or TV system would be misused by the politically ambitious.

Just last week the Milwaukee Common Council went on record against public ownership of an educational video station in Milwaukee. By a 20-to-3 vote, the aldermen adopted a resolution opposing public TV ownership at this time, and urging the Federal Communications Commission to remove from channel 10, there, the noncommercial education designation that has been placed on it. The council resolution stated, however, that commercial TV stations should agree to devote 15 percent of their broadcasting time to educational programs.

I do not propose to enter into, much less, to settle this controversy at the present time, because I think it is a matter for the people to solve at a State and local level. I do, however, want to mention the problem as significant of the ferment in the broadcasting and telecasting medium on the part of educational and related groups.

LIBRARIES GETTING INTO FILM WORK

While the commercial aspects of both films and TV are necessarily to the fore, the educational and cultural aspects are indeed exciting interest everywhere. For example, libraries are increasingly recognizing the challenge which is theirs.

Thus, the Wisconsin Library Association which has found that TV programs are competing with the reading of books, has just set up a circuit-film service for some of its member libraries. This series, the third of its kind in our country, was, in the words of a newspaper write-up, "deemed a countermove to compete with radio, television, commercial films, and picture magazines for public attention."

According to the WLA program, as presently set up, 6 participating public libraries will receive from 5 to 10 educational films a month.

The program was designed by the Wisconsin Free Library Commission at Madison and by the State bureau of visual education.

The library in Chippewa Falls, my home town, will be one of the participating regional libraries. It, like other libraries will draw from a pool of 45 films intended to stimulate public interest in library service. I might note, incidentally, that the first two States to set up such a service were Missouri and Washington. Next year, Wisconsin is expected to bring in additional libraries under the plan.

Dr. W. A. Wittig, director of the bureau of visual education at Madison, has said that the sponsors hope to inspire people to return to the library as a great storehouse of information.

"The public has been weaned from the reading habit," he said, "by the great clamor for attention by radio, TV, picture shows, and picture magazines. Unless we examine that competition critically and seek to meet it, there is great danger that the voice of the library will be drowned out."

REVOLUTION IN THE CLASSROOM

Every thinking American realizes that in no segment of America does the visual medium offer more dramatic possibilities than among America's children. Movies and television open up whole new worlds for the growing, developing, flexible minds of our children.

In the September 1951 issue of the famous magazine *Think*, published monthly by the International Business Machines Corp., there is a splendid article entitled "Revolution in the Classroom." This article points out the miraculous way in which, by the use of films, our Nation's young folks can be better educated, faster educated.

Recognizing, as I do, that the Nation's future depends, of course, on these young folks, I feel it my duty as a Senator to encourage to the greatest extent this use of the film medium by American education.

SENATOR WILEY'S 16-MILLIMETER SOUND FILM

It is a pleasure to have actually contributed, in turn, in some small way to this process. Ever since September 1950 there have been circulating in the schools of my State prints of an educational film entitled "America in Crisis," prepared by my staff and myself. The film is subtitled "Senator WILEY Reports to Bill Jones, an Average Wisconsinite."

The amazing reception which this little film has received has surpassed my fondest expectations. Although a year has gone by, and although the prints have been in continuous circulation all that time, there have been whole periods recently when the flood of incoming requests for prints has exhausted the quantity of 25 prints available. I do not flatter myself into believing that this is because of the intrinsic merit of the film. I think the film does make a small contribution, but I think the response to it reflects in considerable part the deep hunger of schools and other groups for constructive film material. It reflects the pleasure of folks in seeing on the screen in a graphic, dramatic way, the problems of our country in this challenging period.

That is why the prints, too, have received such tremendous circulation among adult groups throughout Wisconsin.

I might note at this point that thus far the requests for the film from inside Wisconsin have been so frequent that with but few exceptions it has not been possible to show it outside the State to the many groups which have asked for a print. It was shown, however, to a political club in Louisiana and to a National Guard unit on maneuvers in Tennessee and to some few other out-of-State groups.

It is an amazing fact that in all this time—one solid year of showing—never once has any charge of partisanship been leveled

against the film, and I have not received a single adverse communication, although it has been shown before every type of group—of every political faith and during the stormiest political times.

ENTHUSIASTIC LETTERS ENDORSE FILM

What do our people really think of this film? Let them speak for themselves. Excerpts from their letters follow this statement. I have selected these quotations as representative of a great many more messages which I have received. While these excerpts have very graciously commended the film, I realize that folks would indeed tend to be gracious in their response for a courtesy of making the film available to them. Nevertheless, I see in these messages genuine sincerity and enthusiasm, and I am deeply appreciative of their fine spirit. I submit them in order to help prove to my colleagues that a venture in an educational film proves very rewarding and more than compensates for the time, effort, and yes, the money expended in it.

A Member of Congress cannot assume that he is a D. W. Griffith, or a Cecil B. DeMille. The art of making motion pictures requires a great many complex skills which neither we nor our staffs can hope to possess, but we can offer in a simply, unaffected, straightforward way our views on film and the people will accept them in that light.

By means of an extended 22-minute film like my own, or even by a 2-minute film (clip used in a local video station showing a Congressman discussing current issues, the thinking of our people is stimulated. Films help weld the contacts between Washington and the grass roots of our country. Incidentally, films also help a legislator to first clarify his own thinking so as to be able to convey that thinking to his people.

I conclude by presenting the various materials previously mentioned:

1. Excerpts of quotations to me regarding my film.

2. The text of my article in *Educational Screen*, September 1951 issue.

3. The text of the article in *Think* entitled "Revolution in the Classroom."

QUOTATIONS FROM LETTERS TO SENATOR WILEY PRAISING HIS FILM

A businessman in Appleton: "I have seen your film, *America in Crisis*, and I want to compliment you for giving the citizens of Wisconsin this enlightening film. You can't get out a film of this kind without a tremendous lot of time and thought. We need more films like this and a program whereby we are assured they will be shown."

A co-op sales association manager in Milwaukee: "I want to take this opportunity to thank you for sending it to us and will say that we very much enjoyed it. It's a wonderful picture."

The wife of a farmer in Beaver Dam: "The Elks Ladies of Beaver Dam were delighted to have had your film *America in Crisis* last night at their monthly meeting. The film arrived and is in perfect condition. It had been shown at a Beaver Dam defense meeting and at the high school earlier in the month."

"The Elks Ladies commented that they found this film informative, stimulating, purposeful and a true and grave picture of our country's crisis. Personally, I wish large industries would show this picture to their employees."

A county official in Green Lake: "I showed the film last night at a sportsmen's meeting held in Berlin last night and it was enjoyed by all. I want to take this opportunity to thank you for forwarding the film and believe same to be very educational."

A club officer in Merrill: "We received the film you sent us and after showing it to our Rotary Club and several classes at the vocational school we forwarded it as per your instructions. We had many very favorable

comments on the film and I would estimate that 125 people saw the showing."

A leader of the Thirty-second Division Veteran Association in Milwaukee: "I believe the Red Arrow men in Milwaukee enjoyed your films and the subject surely was very timely. It also gave us a close-up view of our institutions in Washington and sort of created a tie between Washington and Milwaukee that should be beneficial to all concerned."

A parent in Merrill: "Your film *America in Crisis* came to us well before our scheduled screening time. We previewed the film and were very pleased with it. We had a Washington program at school to which the parents were invited and the film was shown then. Heard many fine comments on the film. It was taken to the high school for their Washington program to which the public was invited. On February 23 it was shown at the St. John's Parochial School—so all the junior and senior high students saw the film, including the parents that were present. The principals of the respective schools commented very highly on the film."

An American Legion Auxiliary leader in Wisconsin Rapids: "Thank you very much for the use of your film *America in Crisis*. Despite the fact that this program was scheduled on Ash Wednesday in 28 below zero weather we had about 40 auxiliary members in attendance."

"I had many favorable comments on your film and I certainly felt a great deal more was presented to the unit, than I would have been able to do in a prepared talk."

A Masonic officer in Waupaca: "The film has received a great deal of favorable comment and interest from the students at the high school, Lions Club, and our chapter. The approximate number seeing the film was 225. In view of the fact that we borrowed the sound projector from the school, they asked if they could screen the film before their classes in civics and social science. The Lions Club also heard about the film and asked if they might screen it for their Monday meeting. The general comment was favorable and that it was an instructive film."

A village officer in Weyerhaeuser: "We showed this film to an overflowing crowd at our village hall last night. Everybody present liked it very well. It's the kind of picture every American should see. We want to thank you for the loan of this remarkable picture."

A theater manager in Eau Claire (on the 35-millimeter version): "We played your short subject at this theater over the week end and I am sure that you will be happy to know that the comments from the patrons were very good. I personally thought it contained a very fine message on the subject of preparedness."

A trade-association manager in Milwaukee: "We are pleased to convey to you that the entire membership who attended our annual meeting appreciated very much the excellent film, *America in Crisis*. It is our candid opinion that this method of portraying historical events and Washington scenes is very educational. It also apprises the people of the State that we do have men in Congress who are deeply interested in protecting our American way of life. We are very grateful to have had the opportunity to show your film to our members."

A parochial-school principal in Eau Claire: "Thanks so much for your kindness in sending it to us. The students enjoyed it and it gave them food for thought."

A school sister in Kenosha: "We have shown the film *America in Crisis* to our seventh and eighth grade boys and girls, which include about a hundred pupils, and their reaction to it was very favorable."

"It fitted in nicely with the civics that is being taught in our school at the present time."

A librarian in Fort Atkinson: "The film was shown seven times here, to a total audience of 180. It was enjoyed and made people think about our current problems."

From a businessman in La Crosse: "I wish to express my appreciation for the use of your film. We showed it at our Toastmaster's Club of which I am an officer and also to the Shrine Club's quarterly meeting of which I am a member. One of our Shrine brothers, a teacher at one of our schools, asked to show this film tonight. So we made good use of it while it was here and we had some fine comments on same."

[From the Educational Screen]

"CONGRESS, THE PEOPLE, AND EDUCATIONAL FILMS"

(By Hon. ALEXANDER WILEY, United States Senator from Wisconsin)

Can a legislator stimulate the thinking of his constituents through the use of motion pictures? The answer is of course, yes. But it is not an answer which need be based on guesswork; rather, it can be proven in an actual illustration of a 16-millimeter sound motion picture entitled "*America in Crisis*" which I produced and distributed throughout my State.

In January 1950 I developed the idea that I should prepare such a picture so that through the magic of the audio-visual medium I might acquaint the people of my State with the basic problem of world peace in our times.

A small number of other 16-millimeter motion pictures had previously been prepared from time to time by other Members of Congress. Most of these films consisted, however, merely of collections of standard travelogue shots, i. e., scenes of the Washington Monument, the Lincoln Memorial, the Capitol, and so forth.

I felt that while it was essential that our people become familiar with these great landmarks of American freedom, it was infinitely more important to focus the attention of our people on some of the crucial present-day legislative and executive dilemmas.

I had my staff contact various Government agencies to see what footage might be available in their film collections on current-day problems. The staff contacted the National Archives, the United States Department of Agriculture, the Signal Corps of the United States Army, and other Federal agencies, in addition to private film collections. (The latter were used ultimately only for ideas contained in their films rather than for actual "borrowing" of footage.)

My staff quickly confirmed that there are, of course, available literally millions upon millions of pertinent film shots made by Government photographic departments and that probably 99.99 percent of this footage has been used exclusively by the executive branch rather than by any member of the legislative branch.

Unfortunately, we could devote time to this motion picture project only infrequently as at irregular intervals amidst the heavy schedule of the Senate. The project could not have a high priority in the office since I had to attend to an average of 300 letters arriving each day from constituents, in addition to participating in meetings of the Senate Foreign Relations Committee, the Judiciary Committee, and later the Senate Crime Investigating Committee.

Moreover, commencing actively in August 1950, I was engaged in a political campaign for renomination in the Republican primary and then for reelection.

I recognized, of course, that to some extent, any film that would be released during a campaign season would almost inevitably be labeled as "campaign propaganda" even though it might be sincerely intended for educational purposes. Mean-

while, in June 1950 had come the North Korean invasion which brought to a head the very problems I had been intending to present on the motion picture screen. Therefore, I felt it worth while to carry through with the project even though its educational effectiveness might to some extent be reduced by the partisan campaign.

The month of September saw the actual substantive work start on the picture. Members of my staff went to various Government projection rooms and there and in "Movieola" machines scanned through some thousands of feet of tentatively chosen film in order to make the final selection. From one Signal Corps film, they selected scenes showing American infantry in battle, scenes of the first atomic explosion in history in the New Mexican desert. From another film, they collected scenes of a 1930 dust bowl, an industrial dispute, a bread-line. Gradually, the clipped footage was assembled into a coherent pattern. Some 20 musical pieces (carefully selected to be free of copyright so as to avoid the expense of royalty) were secured for the sound track.

One morning, we put the finishing touches on the film at the Engineer's research development laboratory at Fort Belvoir, Va., which had been loaned to us. There, I recorded my portion of the narrative on the sound track. This portion of the film lasts for but a very few moments. Thereafter, the narration is taken over by a professional announcer and by voices of members of my staff. Thus, my own role in the film both on the sound track and on the screen is very limited. The film revolves around issues and principles rather than around any single personality.

We chose as the basic theme of "*America in Crisis*"—Senator Wiley Reports to Bill Jones, an Average Wisconsinite. The opening scene shows a veteran (one of whose arms had actually been amputated because of battle wounds) ascending the steps of the Capitol. On the sound track, the veteran's voice is heard as he describes why he had wanted to come to Washington—to see what the Government for which he had fought was really like. As he looks at the Capitol he states that he can see in his mind's eye why his buddies are fighting in Korea. Then, we see superimposed on the Capitol actual scenes of United States ground troops in combat.

Thereafter the film switches to my office, where I am seen briefly speaking to Bill Jones and introducing the report on America's problems. From there on, we view the documentary footage collected from the Government agencies. Initially, we show scenes of Washington itself, of the three branches of our Government, legislative, executive, and judicial, in operation. Then the professional narrator's voice takes over and he describes our basic domestic and foreign problems—prosperity and depression, freedom and slavery, war and peace. We see scenes of America's great freedoms, freedom to worship, freedom of speech, freedom of assembly, freedom of the air waves, etc. We see scenes of the bitter mid-thirties, when hunger and strife stalked the land.

Our camera moves to the world scene. We see the price which America paid in World War II, scenes of dead Americans lying in the surf of an embattled Pacific island. We see and hear a bugle sounding taps in a final tribute to the honored dead at Arlington National Cemetery and in particular, to the Unknown Soldier. The prelude to a possible World War III is then shown as Marshal Josef Stalin come into view, together with scenes of Russia's armed forces, scenes of the United Nations in action, and a map of Korea.

The film concludes with my voice urging the American people to seek further facts on the issues shown, to choose their leaders wisely, to vote soundly in order that they

might maintain the peace, keep their freedom, and secure a lasting prosperity. The film suggests no panacea, it attempts no profound analysis, it does, however, focus on the problems and urges earnest evaluation of them.

On the night of September 25, 1950, we screened the 22-minute film at the Academia Theater at the Washington headquarters of the Motion Picture Association of America. The MPA had kindly made available its facilities that night, and we had invited a very fine audience consisting of representatives of the movie trade press, of newspapers, radio, Capitol Hill, and Government agencies.

The response to the film that night was tremendously gratifying. While it was expected that the usual type of gracious, formal comment would be received, I sincerely felt that the warm response was most spontaneous and exceptionally kind.

I arranged for five 16-millimeter prints of the film to be prepared, and immediately sent out notices to Wisconsin organizations advising them of the film's availability. Within a short time, I had received a deluge of requests for the prints. Wisconsin newspapers added more references to the film and it was not long before the incoming requests had snowballed. We found ourselves so far behind in trying to schedule screenings that additional prints were ordered. Ultimately, a total of twenty-five 16-millimeter prints were secured and sent out. By a system of tight scheduling, the same print was shown in an, let us say, American Legion post in Racine and within 72 hours thereafter in a woman's club in Kenosha. Each print's schedule was prepared so that it remained in approximately the same geographic area, thus saving time in transit. Thus, within 6 weeks the film had been seen by a vast variety of farms, school, church, business, labor, civic, and other groups in 49 of Wisconsin's 71 counties.

In addition, several film libraries, both public and private, requested prints and they were gladly given permanent custody of them.

Virtually all of the expenses of the film had been borne out of my own pocket (including cost of repair of the prints, a cost that proved somewhat substantial since the handling of a film by amateurs is often not very skillful). The only cost to the Federal Government was the reproduction of the master print of its own documentary footage and the loaning on a few occasions of Federal lab facilities (which were costing Uncle Sam money, whether we used them or not).

An order to reach the widest possible audience, it was felt that some prints might be made for motion-picture theaters if a demand developed. What had been anticipated happened, and soon it became advisable to reproduce five 35-millimeter prints. These too, were snapped up as fast as they were sent out and a system of tight scheduling saw audiences multiply many fold. The Independent Theater Owner's Association of Wisconsin has been particularly helpful in arranging screenings.

Soon, too, a request was received from Station KSTP-TV in St. Paul and the film was shown over that outlet.

The entire experience of this project has been tremendously rewarding. The comparatively small total of man-hours put into this project (aside from the long intervals in between work, dating the film's conception in January)—that total seemed a well-justified use of my own and my employees' time, from the public standpoint.

On the political phase, it is a fact that the large number of people who saw the film prior to the election may have been somewhat more kindly disposed to vote for me. However, even in the heat of the election debate, no single message—verbal or written—was received in protest against any partisan angling in the film. The narration

and selection of footage are obviously conservative in approach, but no objection has been received from any source.

As I have indicated, there was a minimum of live scenes in the film. Only a few score feet were actually shot in my office and elsewhere. These scenes were taken by cameramen graciously made available by the Republican National Committee, and they in turn, assisted in the assemblage of the footage, in the recording of the sound track and other technical operations. The national committee took a very broad and public-spirited view of the film. It absorbed the cost for this technical manpower and secured reimbursement from me only for the actual charges for the raw film.

The precedent we set has apparently encouraged my colleagues. At the present time, the Joint Senate-House Radio Recording Facility is beginning to work on the preparation of television films for use of Members of the Congress. Thus, a Member desiring to produce a short film can go over to the studio, be photographed, can, in addition, record his voice on a tape (to be played as "stock" shots are shown on the screen) and then have the reel sent to his local station. Many of these stations are even willing to pay the cost of the film itself since there is such a shortage of usable subjects on TV stations. Of course, this service is necessarily limited to films used prior to political campaigns.

The whole TV approach is, of course, destined for a tremendous boom as the November 1952 election approaches. It is quite clear that both in the Presidential and congressional races, television as well as 16- and 35-millimeter motion pictures will play the greatest part that audio-visual media have ever played in American political history. The political party and the candidates who best recognize the nature of this medium, its problems, its advantages, its limitations, will have a tremendous advantage over their foes. The pioneering television achievement of Thomas E. Dewey in ably answering vast numbers of questions on the TV screen during the closing days of the New York gubernatorial race in November 1950, that precedent set a standard that other candidates will try to match.

I do hope that other seekers of public office will blaze new paths in this field because it is in the public interest that the most modern media be used by legislators to keep in touch with the American public. The miracle medium of television in particular offers a golden opportunity for reaching vast audiences that hitherto could be contacted only by radio or, very inadequately, by meetings face to face.

If an office seeker adheres faithfully to the concept of encouraging thinking by his audience (rather than trying to give them canned, predigested ideas), if he utilizes the medium in an honest objective way then I believe that he can make tremendous contribution to public enlightenment. The candidate can in the process stimulate his own thinking, because no man can satisfactorily put a subject on film unless he has personally thought that subject out.

Never before in the history of America has it been more important that our people think and think clearly, and never before have we been better able to utilize visual media to encourage straight and clear thinking.

[From Think of September 1951]

REVOLUTION IN THE CLASSROOM

(By William A. Buck)

A flurry of snow was blowing up from the bay, but the children in the schoolroom paid no attention to the weather. By means of questions and discussion the teacher pointed out several things she wanted the children to observe in the story, and she wrote these down on the blackboard. Two boys closed

the window shades on the rolling snow and the movie projector threw its cheerful oblong on the screen.

The film was a simple documentary on the home life of a middle-class family in Montevideo, Uruguay. It showed the family at meals and on a picnic; it showed the children at school, doing their home work, practicing their music lessons, in all their daily pursuits. It pictured the life of the family with a fullness and intimacy that could not have been achieved if the class had been transported to Montevideo by magic carpet. The students followed the story in wide-eyed silence.

When it was over everybody raised their hands at once. The children and the teacher had gone through a moving emotional experience together, and in the students' minds the barriers between them were down. Small boys who seldom spoke up in class now clamored for attention. They had not missed a single point among the items the teacher had written on the board. The thin girl in the third row finally gained the floor to point out that the Montevideo family owned no electric refrigerator, no vacuum, no washing machine, yet they could afford a servant. The picture of the girls and boys of South America going on picnics, wrestling with home work and music lessons, filled the class with astonishment and delight. No one had ever told them that home work and music lessons were curses inflicted universally on civilized mankind. The students emptied the school library of books on South America and scores of clippings about Uruguay and its capital city appeared on the classroom bulletin board.

"I can't imagine a better method of teaching tolerance, social responsibility, the United Nations in fact, than a movie like this," the teacher observed. "I have seen the attitude of an entire class toward spelling change completely after seeing a single movie. The spelling didn't improve while I had them, but the attitude certainly did."

Edison, who invented the cinematograph—if any one man did—would have appreciated the fact that such adventures in teaching were daily events in American schools in 1951. During his early experience with pictures, some 60 years ago, he predicted that movies would entirely supplant textbooks within 10 years. He believed then that his pictures that moved would be used entirely for education, and never dreamed that some day people would go to the movie for fun. He was wrong about the textbook, also, for the movies show no signs of supplanting either the text or the teacher, and the discussion before and after the screening is as necessary as the film.

Before World War II American educators had carried on large experiments with teaching films, more than those of any other land, but the educational film industry was able to produce only about 30 films a year. Since the war the industry has grown like Paul Bunyan's blue ox. In 1950 the United States industry turned out between 1,600 and 2,000 titles. In the thirties there were about 1,000 sound projectors in the schools of the United States. Now there are more than 50,000 and the manufacturers were making another 50,000 last year. There are 10,000 or more titles on the shelves of educational film libraries today.

Educators knew long ago that the movies had amazing powers of teaching, but not until World War II did they have a full opportunity to give their theories a try-out. At once Uncle Sam had to teach the American people a thousand new arts. Sound movies and film strips provided a large part of the means for doing this; without them the war would undoubtedly have been longer and more costly. The entire film industry organized for the task. Famous directors combined their experience with that of fa-

mous educators. New techniques, dramatic methods of presenting educational material were developed.

The result is becoming a revolution in the classroom, nothing less. "Audio-visual Aids in the Armed Services," a report on the Army and Navy war-time experience with educational films, says this: "Films can produce a most any desired responses, predispose men to almost any course of action, alter basic attitudes in a short period of time, and motivate men to hitherto unacceptable modes of behavior. Drama, suspense, propaganda, adventure, sympathy, intense emotional feeling and desire for action are all inherent within motion pictures. In civilian education multisensory aids can open new vistas of experience, broaden the horizons of childhood and youth, and motivate serious study of personal and social problems."

Films have a more intimate and convincing command over reality than any other teaching medium. They can communicate subtle sequences of ideas that make sense only in relation to each other. They can do useful tricks with time and space, can make fancy more real than reality, can be simple or complex, subtle or broad, bombastic or literal without losing touch with reality. They can eliminate all the unessentials, can look around the instructor's elbows, so to speak, so that every student gets an immediate view of what is going on. They can bring the whole world and all past history alive into the classroom.

Where movies are shown, there is no discipline or attention problem. Before the title appears on the screen, the film takes the student right out of the school room and puts him in the pleasant and easy atmosphere of the movie house. Consider these titles in contrast to the old birch rod and the textbook. *Cotton Planting*, reveals in an 11-minute reel a growth cycle that takes almost a year. *The Internal Combustion Engine*, by means of cartoons and other methods, breaks down the lightning stroke in a gas engine to a slow pace so that the auto student may study it. *Circus Animals*, for the kindergarten and first grade, gives meaning and background to the words and events the pupils find in their readers. *This Charming Couple*, made on a college campus, with student actors, tells in dramatic story form the tale of a marriage and analyzes why it failed. *The Baby Sitter* takes a shrewd look at some of the problems of both sitter and parents. There are dozens of films that show in a few minutes scientific experiments that could not be performed in an hour in a school laboratory, some that cannot be performed at all with a school's resources.

Under experimental conditions the sound film method of teaching was compared with the old-fashioned method to show that classes in natural science gained 22 to 30 percent more knowledge when given a boost with movies, and music units gained 18 to 34 percent. The pupils not only absorbed more knowledge but retained it longer and more fully. This experience has been generally confirmed.

A New Castle, Pa., school system reported that ordinarily they expected 20 to 25 percent of first graders to turn up with reading troubles after the first 4 months. By using motion pictures they slashed this percentage to less than six. Many quarters agree that films do not turn children away from reading. In fact, some who would never wholly learn to read, who have no talent for handling words, can actually make this art their own through the help of audio-visual aids.

Suppose you were a Parent-Teachers' Association member and you wanted to introduce an audio-visual aids program in your school. Probably half the projectors used today in the schools were donated by PTA's. Will your program be expensive? No; surprisingly cheap. A magazine of audio-visual education estimates the cost of starting and

maintaining for 10 years a full audio-visual program, including the purchase of sound projectors, a 300-film library, film strips, opaque projectors, and so on, for a school system of 100 teachers and 3,600 pupils, at some \$10,000 a year if the equipment is used moderately, at \$19,000 a year if used abundantly, or \$2.69 to \$5.38 per pupil.

School systems find the longest economy in buying prints of most of the films they use, not only from a short, bookkeeping point of view, but also because experience has proved that teachers make more use of films if they are obtainable without much bother. Most black and white sound prints cost from \$40 to \$50 a reel; color costs double. Local merchants, civic clubs, and graduating classes often donate films to schools. Some, sponsored by governments, social research trusts, or private industry may be secured for nothing or almost nothing. Many of these are excellent.

The Educational Film Guide and the Film-strip Guide list nearly all the films there are, give a brief description of each film and its story, where it may be purchased and the price. Each producer and each library, of course, also has its catalog. Renting a title you want may or may not be easy. There is no proper national network of movie libraries, but there are commercial libraries in many cities. Many public libraries lend films. There are large college and university free libraries and others connected with public schools, religious and industrial organizations and Government agencies. The Superintendent of Documents in Washington offers a pamphlet called *A Directory of 897 16 Millimeter Film Libraries*.

For those who have their doubts about teaching movies, if such there be, Harold D. Lasswell, of Yale, stated, "It is not too much to say that audio-visual media of instruction make it possible for the first time to educate for citizenship in the world community. By themselves, words are poor substitutes for direct observation of the social process. Audio-visual media open the doors of experience on the globe as a whole and upon all human history."

Support Is Where You Find It

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. EDWIN ARTHUR HALL. Mr. Speaker, I am picking up support everywhere I can get it in the rat race the bigshots are throwing me into.

Since that man of great stature, Chairman Pfeiffer, decreed that my new district would stretch clear to Timbuctoo, I have received a number of valued assurances of support all along the Erie line.

I include such a letter as follows:

ELMIRA, N. Y., October 14, 1951

HON. EDWIN ARTHUR HALL,

House of Representatives,

Washington, D. C.

DEAR ED: I have been following with interest the recent moves by some of the New York State Republican cloak-and-dagger detail.

If you can get down this way and carry on the same campaign you have in the past you can get elected just as well as not.

My inclination has been to write a letter to the editor of the local *Star-Gazette* telling of my acquaintance with you. It is a Gannett paper of course but George Crandall, the executive editor is pretty fair.

If you would like me to do this or anything else in your behalf please let me know. I am not a local bigwig, wheel, or anything else but I do have some friends who might be influenced.

Any time you are in Elmira look me up. I would like to introduce you around here and there.

Cordially yours,

A. WHITNEY.

Growing Socialism

EXTENSION OF REMARKS

OF

HON. WINT SMITH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 16, 1951

Mr. SMITH of Kansas. Mr. Speaker, seldom have I read an editorial or comment that says so much as this editorial by Lewis Haney. It certainly carries a great deal of fundamental thinking.

Mr. Haney is a professor of economics at New York University, and this fact alone should make it more worth while. We do not very often get such down-to-earth fundamental beliefs from eastern universities.

Here follows his comments from the *New York Journal-American* of October 10, 1951:

GROWING SOCIALISM

(By Lewis Haney, professor of economics, New York University)

Are our businessmen waking up to the danger of their position? Last week a number of leading bankers made strong speeches against the waste, inflation, and restraints on individual freedom that threaten us today.

Now comes the head of the American Petroleum Institute with one of the most penetrating discussions I have seen. Let us hope this is the shot that will be heard around the American business world.

W. Alton Jones, president of Cities Service Co., in addressing the Texas Mid-Continent Oil & Gas Association, said: Groups in both political parties are paying lip service to individual freedom, but are tightening the Government's grip on our personal liberties.

Said he: "During the past two decades the United States has moved in the direction of communism through Government control over saving, production, wages, hours, and prices. We must act promptly, or before we know it our savings will be gone and we shall be reduced to the level of the Government-dominated countries of the Old World."

In view of these strong and multiplied attacks on the creeping socialism that has infected us, I want to list below some of the evidences that too many American businessmen have been asleep. Here is my indictment of them:

1. They have fallen for and subsidized the publication of advertisements that attack the very vitals of free private enterprise. A notable case is the *Miracle of America* pamphlet which sees little but labor and power machines in our economic greatness—no enterprise. It centers on Uncle Sam as the giver of all good things.

2. They have fallen for the payment of wages that are not based upon the productivity of labor, but on so-called costs of living, profits, etc.

3. They have employed known Socialists to do research work and have used employee training material that might have been prepared by Karl Marx.

4 They have fallen for the practice of pushing Government so-called savings bonds on their employees, rather than encouraging productive investment in corporation securities. This is doubly bad. It transfers employee interest to the Government and it encourages public debt in a period of inflation.

5 They have advertised in pink publications and sponsored leftist broadcasts. This is not necessary. They have no power of censorship. They are not wise to feed the dog that bites them.

6 They have financed and sent their sons to colleges that are known to disseminate socialism. Many endowed institutions of learning are busy teaching that private property and private enterprise are bad, and that more and more central government control is desirable. For example, the Keynesian economics as spread by the Samuelson, Tarshis, and Morgan texts, leaves little or no room for private enterprise or private saving and leads to a managed currency and a managed economy—which is socialism.

7 They accept the easy-money policy which is the root of managed currency and inflation.

8 They stand by, and, like politicians, take no sides while our schools are infested with those who try to condition the whole child for the good society.

9 They often go along with world government and the UN.

10 They accept lip service to freedom and private enterprise, that are mocked by the actions and main ideas of the Socialists or social planners.

11. They run to Washington for subsidies and controls.

12 They stick to party lines, when the party offers little but "me too."

13. They set up foundations that use their millions of dollars to spread socialistic ideas.

Letter to My Constituents

EXTENSION OF REMARKS OF

HON. M. G. BURNSIDE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 16, 1951

Mr. BURNSIDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following letter which I wrote to my constituents under this date:

DEAR FRIEND: There's something unchanging about the land, and something heroic about the efforts of farmers.

The Korean land is a battlefield. Yet, I learned the other day that crop harvests this year have been 70 percent of normal—which has definitely averted the danger of famine in the months ahead. Certainly it is a victory for the farmers there, as great you might almost say, as any that we have won in our military actions.

This situation is the result of careful planning, bold action, and above all, the tireless effort of the Korean farmers. Many of them are persons who have been swept back and forth with the tides of battle. Many are aged and many are just past toddling. But they have gone ahead with their incredible patience and devotion to the soil, have worked to save their country and their countrymen.

I think they deserve our salute.

Also, in regard to the war, it looks now as though many of your sons who have been serving over there for sometime, will be coming home soon. Even while our offensive is grinding forward, the Army has announced

that it has speeded up its plans on rotating men. Gen. J. Lawton Collins, Army Chief of Staff, has said that "all personnel who endured the bitter combat conditions in Korea last winter" will be brought home this winter.

There's welcome news from the Agriculture Department on my desk this week. Farm income, I notice by their report, has gone up 17 percent during the first 7 months of this year, for a total of \$15,400,000,000. But this was not entirely a net gain for farmers because farm cost rates rose an average of 12 percent for the same period. Income from livestock and products was reported at \$10,700,000,000. Income from crops amounted to about \$4,700,000,000. I don't know how these figures apply to each of your farms—but I certainly hope that all of you had a good season.

I have heard from many of you since I began these letters, and I want to thank you for the correspondence. It has been most helpful in my work here in Congress.

Young Republican Recommendations

EXTENSION OF REMARKS

OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 16, 1951

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following summary of the high lights of certain recommendations of Republican policy adopted by the Glendale Young Republicans at their regular meeting held on September 20, 1951:

GLENDAL, CALIF., YOUNG REPUBLICAN POLICY RECOMMENDATIONS FOREIGN POLICY

1. We denounce the Yalta agreement.
2. We support the four steps advocated by Gen. Douglas MacArthur to conclude the war in Korea.

3. We support the North Atlantic Pact, but urge greater military participation by the nations of Western Europe in the common effort.

4. We favor the creation of a sovereign West German republic.

5. We favor the inclusion of Greece and Turkey in the North Atlantic Pact.

6. We favor the utilization of Spain's strategic position.

7. We oppose admission of Communist China to UN membership.

8. We oppose the Genocide Convention and the World Bill of Rights recommended by the Human Rights Commission of the United Nations Organization.

ECONOMIC POLICY

1. We urge a return to balanced Government budgets and an end to deficit financing.

2. We oppose nonessential public-works programs.

3. We oppose welfare programs which are in reality costly schemes for socializing the Nation.

4. We support the recommendations of the Hoover Commission as they apply to waste and inefficiency in Government and the armed services.

5. To prevent inflation in time of crisis, we favor control of private credit rather than price and wage controls.

6. We favor the enactment of a constitutional amendment to prohibit the Government from engaging in any business, profes-

sion, or enterprise in competition with its citizens except as specified in the Constitution.

GENERAL WELFARE POLICY

1. We support the continuation of private medical insurance.

2. We favor returning to State control all Government services which can be effectively operated on a less than national scale.

3. We oppose a continuation of the principle of Federal social security.

MISCELLANEOUS POLICY

1. We oppose corruption and incompetence in high office.

2. We oppose coddling of Communists and Communist sympathizers.

3. We oppose the so-called Fair Employment Practices Act.

4. We favor continuation and strengthening of the Taft-Hartley Act.

5. We favor a flexible parity on price supports of agricultural commodities.

6. We favor local self-rule for the District of Columbia.

Regulation No. 1 of the Petroleum Administration for Defense

EXTENSION OF REMARKS

OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 16, 1951

Mr. BOW. Mr. Speaker, on October 6, 1951, I wrote to the Secretary of the Interior requesting an explanation of regulation No. 1 issued by the Petroleum Administration for Defense. I have received a reply to my letter. I am pleased to report to the Congress that the Secretary has written a forthright letter in reply to mine, and in my opinion he has rendered a real service by clarification of some of the issues in the order referred to.

I am pleased to include my letter and the Secretary's reply. I wish to state, Mr. Speaker, that I appreciate the prompt and complete reply from Mr. Chapman.

The letters follow:

OCTOBER 6, 1951.

HON. OSCAR L. CHAPMAN,
Secretary of the Interior, Department
of the Interior, Washington, D. C.

DEAR MR. CHAPMAN: I have just examined PAD Regulation No. 1. You have by this regulation defined what you consider to be your authority to control deliveries of oil and gas.

Although you state in section 1 of the regulation "The directives will relate only to matters under the jurisdiction of the Petroleum Administration for Defense," I feel that by reason of section 3 a detailed explanation of what you consider that jurisdiction to be should be made immediately.

I particularly refer to that part of section 3 which reads as follows:

"Where a directive, or an amendment or supplement thereto, is issued, it shall take precedence over the provisions of any general order, regulation, direction, or other action of the Petroleum Administration for Defense, over the provisions of any contract to which any person, to whom the directive, amendment, or supplement is issued, may be a party, and over the provisions of any rate schedule, tariff, regulation, or order of any regulatory body, including regulatory bodies of the several States and Territories."

I am sure you are familiar with the so-called Bow amendment to the National Production Act, which reads as follows:

"No rule, regulation, or order issued under this act which restricts the use of natural gas (either directly, or by restricting the use of facilities for the consumption of natural gas, or in any other manner) shall apply in any State in which a public regulatory agency has authority to restrict the use of natural gas and certifies to the President that it is exercising that authority to the extent necessary to accomplish the objectives of that act."

Do you not consider the language of section 3 above referred to as in conflict with the language of the amendment adopted by the Congress?

I should like also to have you state with certainty whether or not you feel a directive can be issued taking precedence over an order of a State regulatory body relative to a rate schedule or tariffs. Do you feel that this Federal authority nullifies the functions of the States?

I believe, Mr. Secretary, that by virtue of the severity of section 5 of the regulation and the threat to a great industry contained therein that this matter should be fully explained in plain and simple language without equivocation.

I shall appreciate an immediate reply to this letter so that I may determine what steps may be necessary to preserve the integrity of the States and the proper regulation of an industry that so vitally affects not only a large segment of labor but also millions of our citizens.

Sincerely yours,

FRANK T. BOW,
Member of Congress

UNITED STATES

DEPARTMENT OF THE INTERIOR,
Washington, D. C., October 15, 1951
Hon. FRANK T. BOW,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN BOW: This is in reply to your letter of October 6, 1951, in which you ask for my views in respect of the relation of PAD Regulation No. 1 to the amendment to section 704 of the Defense Production Act of 1950, which bore your name.

I think that there is no conflict between the regulation in question and the Bow amendment. The regulation establishes a framework under which the Petroleum Administration for Defense proposes to exercise the authority to allocate oil and gas which was vested in the President under section 101 of the Defense Production Act and subsequently delegated to me and redelegated to the Petroleum Administration for Defense. Inasmuch as the authority for the issuance of the regulation itself is section 704 of the act, which is the section containing the Bow amendment, the issuance of directives under the regulation necessarily must be limited by the terms of the Bow amendment. It was because PAD understood that directives to be issued by it must be confined to the subject matter legally entrusted to its administration that there was included in the regulation the statement, quoted by you, that "The directive will relate only to matters within the jurisdiction of the Petroleum Administration for Defense."

You ask specifically whether I consider the language of section 3 of the regulation to be in conflict with the language of the Bow amendment. I do not. The Bow amendment relates only to restrictions on the use of natural gas. It does not apply to oil or manufactured gas and is applicable to natural gas only in States in which a public regulatory body has authority to restrict the use of natural gas and certifies to the President that it is exercising that authority to the extent necessary to accomplish the ob-

jectives of the Defense Production Act. It is not applicable elsewhere. Of course, no directive has been issued which conflicts with this prohibition, nor will any be issued.

You ask that I state with certainty whether or not I feel that a directive can be issued taking precedence over an order of a State regulatory body relative to a rate schedule or tariff and whether I feel that such authority nullifies the functions of the States. Section 101 of the act empowers the President to allocate materials and facilities in such manner, under such conditions, and to such extent as he shall deem necessary or appropriate to promote the national defense. Assuming this section constitutes a valid exercise of the Federal power, the authority thereby granted must necessarily supersede any conflicting exercise of authority by a State, in the absence of a specific reservation in the act, such as appears in the Bow amendment, that the Federal authority shall not do so.

Please do not misunderstand the use of the phrase "rate schedule" or the word "tariff." As you are aware, rate schedules and tariffs, both as to oil and gas, contain terms and conditions of service delimiting obligations to deliver oil and gas as well as establishing prices. It is only with respect to the former aspect of rate schedules and tariffs that we are concerned. PAD has no authority over prices and cannot and does not intend to attempt to exercise any such authority. That power, to the extent that it was granted to the President by the Defense Production Act of 1950, has been delegated to the Office of Price Stabilization, and forms no part of the authority pursuant to which Regulation No. 1 was issued.

Further, with reference to section 3 of the regulation, that section was included only for the purpose of informing persons to whom directives might be addressed of the legal effects of such directives. It is entirely possible, for example, that a directive might require an oil operator to take some action which was forbidden by another PAD order. Section 3 tells the operator to obey the directive rather than the prior PAD order.

Similarly, directives may cut across private contract obligations. This occurred recently in the cases of 4 producers of Navy special fuel oil and 14 other oil companies. The Navy needed 2,100,000 barrels of Navy special fuel during October, November and December. Directives were issued to 4 refiners to supply this fuel and to 14 other companies to supply, on a pro rata basis, grade C fuel oil to the primary suppliers to make up deficits caused by the diversion of this grade C fuel oil to blending into Navy special fuel. The refiners to whom these directives were addressed were not unwilling to meet the emergency created by the Navy's need but needed directives from PAD to protect them, under section 707 of the act, from liabilities arising from prior contractual obligations.

Another example of a situation in which directives might be issued involved the American Steel Foundries plant in East Chicago, Ill., which was being reactivated for the manufacture of military tank armor. The Armed Forces made strong representation to PAD that it was necessary that a reliable supply of gas be provided for this plant. By vigorous action and through industry cooperation, PAD was able to arrange for a combined supply of natural gas and liquefied petroleum gas for this essential defense plant. Fortunately, it was not necessary to issue a directive, but this was in part because no contract, rate schedule, tariff, regulation, or order of any regulatory body stood in the way of the service provided. It is easy to imagine that in another otherwise similar case it might be necessary to issue a directive to achieve the same result.

PAD policy is to issue directives only as a last resort and after all other avenues of meeting essential military and defense needs have been exhausted. Also, when at all possible, PAD intends to seek the cooperation of States and other governmental authorities in discharging its responsibilities under the Defense Production Act.

I am advised that actions of the type described are within the authority of PAD, even in States which have certified to the President under the Bow amendment, inasmuch as a directive of that character would not "restrict the use of natural gas," as that phrase is used in the Bow amendment. It is my view that the Bow amendment was not intended to nullify the clear obligation imposed upon the President under the Defense Production Act to assure the adequate operation of military activities including such defense production operations as are essential to the national defense.

I hope that this explains my views fully in plain and simple language and without equivocation. If you have any further questions concerning our position relating to this subject, I shall be very glad to answer them.

Sincerely yours,

OSCAR L. CHAPMAN,
Secretary of the Interior.

Good Advice From Mr. Farley

EXTENSION OF REMARKS

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 16, 1951

Mr. HAYS of Arkansas. Mr. Speaker, many Members of the House know and admire Jim Farley. His comments always command respect. Recently he addressed the graduates of Ithaca College and gave the young people some fine advice. In commenting on his address the Salem (Mo.) News endorsed his reference to good manners, and under leave to extend my remarks in the Appendix I include the News editorial as follows:

GOOD MANNERS, A VALUABLE ASSET

When James A. Farley addressed the graduates of Ithaca College he told them, among other things, that good manners are essential to the man or woman who expects to amount to something.

Mr. Farley said: "A person who is concerned in persuading other people to do something or buy something or just to be friendly and helpful, must have what I call good manners. Now good manners means something more than knowing how to hold your soup spoon or how to dress when you go to a church wedding. It is much more than a capacity to say the pleasant but insincere thing. It is much more than tact. It is to feel, and above all to show, that you have a genuine interest in others. It means caring for people, respecting them, sharing their fears and earthly concerns and their ideals. When these are felt and shown there need be no fear about winning confidence and winning friends, for this attitude will make itself known in a hundred ways."

Jim Farley's advice is good. There are characteristics that are invaluable in whatever business or profession one may engage.

But they must be genuine, and not assumed for the moment. Even a very dull person can see and know when someone is putting on an act to accomplish a purpose or attain an end. It is something that every young man and woman can acquire and use. Good manners are a valuable asset.

A Word for Harry

EXTENSION OF REMARKS
OF

HON. M. G. BURNSIDE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 16, 1951

Mr. BURNSIDE Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Charleston (W. Va.) Gazette.

A. WORD FOR HARRY

We doubt that the old boy needs it, but we think it's about time somebody said something nice about President Truman.

As things stand now, we'd vote for him.

We doubt that any other man, faced with the same problems, would have handled them any better.

He's had it rough. He deserved a kind word.

He's been blamed for corruption in Government, for bad jokes, for drinking whisky, for insulting religious faith, for insulting free thinkers, for writing angry letters, for sending your boy to be killed in Korea, for giving Stalin half the world, for promoting his own daughter's career, for spending fabulous sums on his own living quarters, for being too common, for being too uncommon, for cussing, for encouraging Communists, for turning the Nation over to the labor unions, for stabbing labor in the back, for high prices, for low wages, for taxing us to death, for giving the country to the huge corporations, for socializing industry, for poor taste in clothing.

Now don't jump up and howl. Sit there and think a minute.

Did Truman send all our soldiers home after the last war and leave us defenseless? Or did you?

Didn't you weep and moan about your poor, homesick boy over there? Didn't you write your Congressman about it? Didn't you and thousands like you plead and beg and threaten and bluster until Congress, against the President's wishes, and against the military's wishes, brought your boy home? And left the world unguarded so the Russians could thumb their noses at us? Was it Truman or was it you?

Did Truman bring on this terrible inflation? Or did you?

Didn't your union get you that big raise, and didn't you go out and buy a new car and a new stove and a fur coat for the little woman? Didn't you gently ease up the prices in your store when you saw your customers going on a spending spree? Was it Truman or was it you?

Did Truman shackle business with those burdensome controls? Or did you?

Didn't you scream in anguish when prices went far beyond the reach of your pocket-book? Didn't you demand that somebody do something about it? Didn't you swear that unless you got help from the Government the black marketeers would ruin your business? Was it Truman or was it you?

Did Truman get us into war in Korea?

Didn't you agree that a United Nations would be useless unless it had some teeth to show? When, after a few years of blessed peace, the Communists jumped on the South Koreans with guns and tanks and chased our handful of troops almost out of the country, didn't you feel, like the President, that it was time somebody put a stop to war for all time by punishing aggressors with all the force of the United Nations? Do you think we should quit? Do you think we should say to the Communists, "Okay, you win. You're too tough for us. We surrender?"

And if you had all these things to worry about, wouldn't you get a little sore if somebody said your daughter couldn't sing?

Indiscriminate Smearing of Federal Employees Costing Taxpayers Millions,
Warns Chairman of United States Civil Service Commission

EXTENSION OF REMARKS

OF

HON. ROY W. WIER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday October 16, 1951

Mr. WIER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Robert Ramspeck, Chairman, United States Civil Service Commission, before the Civil Service Assembly of the United States and Canada on Thursday, October 11, 1951.

I am indeed happy to be here and to talk to you today.

Believe me, this is more than the platitudinous opening statement we expect from practically all speakers. I really feel that way about the Civil Service Assembly of the United States and Canada. I feel that way because your organization truly is different from too many groups and individuals who have succumbed to a deadly malady afflicting our country in the trying times through which we are living. It is because you have retained your sense of constructive reasoning and because you have not fallen victim to the disease which seems to impel its victims to indulge in intemperate, and sometimes hateful, criticism, that I find such a high degree of satisfaction in discussing common problems with you.

It's about invidious, indiscriminate criticism, about this disease which I regard as one of the gravest dangers of democracy today, that I want to talk to you. And I'm sure you will concede that, with nearly 2,500,000 Federal employees comprising a primary target for precisely the snide sharpshooting to which I refer, the Chairman of the United States Civil Service Commission is eminently qualified to discuss the subject.

I should like to make it clear at the outset that I do not hold that Government or its employees should be immune to criticism. From the democratic processes which permit differences of opinion and free and open discussions flow the decisions that make our form of government the best that man has yet been able to devise. But criticism must be constructive—like the criticisms and suggestions your own organization has consistently made—not destructive. Criticism should be specific, not general, on an individual basis, not of Government employees as a class, or by association. The sins of the spectacularly guilty few must not be visited upon the many who are innocent if we are to retain the very form of government we are now so deeply engaged in selling the world over. We are spending billions of dollars and shedding immeasurable quantities of blood in the doing of that Herculean job in humanity's name.

The most disturbing factor in the practice of indictment by generalization and conviction by accusation is that it just isn't democracy. Democracy's stake infinitely transcends the question of the well-being of individual Government employees. While I am not a medical man, and I may seem presumptuous in so branding it, I call this practice a disease. I call it that because of its noxious and pernicious characteristics. Like a disease, its effects pervade our whole way of life and, in time, could be a most potent factor in destroying that way of life.

Since this disease carries with it the element of self-destruction, it would appear,

then, to be a disease of the mind, so to speak. Accentuating its viciousness is the fact that the malady seizes and ravages us at a time when we are engaged in an all-out endeavor to influence men's minds all over the world. And what is it we're trying to convince them of? Why, the fact that our way of life is the best way.

It is paradoxical, isn't it? Here we are, on the one hand, upholding with all our might, with our resources, and, in many instances, with our very lives, the efficacies of our form of government, yet, simultaneously, we are indulging in a form of self-destruction that could consume us and permit barbarism's all-enveloping darkness to return unhindered to a world presently lighted only by democracy's torch.

In our democracy, Government depends upon the consent of the governed. If the confidence of the governed in the competent, conscientious, and loyal men and women who staff the Government is destroyed, consent will be withdrawn and Government will fall.

It is obvious to me that we must devote more attention to informing men's minds at home, to telling them fully and frankly all there is to be told about their own Government, even while we conduct similar efforts in other parts of the world. For it will avail us nothing to halt communism's military might abroad, or to condition foreign minds to accepting democracy, if, when they are ready for it, we have no true democracy to offer them.

The field in which you and I operate offers an unexcelled opportunity to perform a much-needed task right here at home, to demonstrate democracy's strength and capabilities, to sharpen the focus of the picture portraying the merit system as an exemplar of democracy at its finest, and to enlist public support for the advancement of the aims of all true believers in a sound civil service.

By so doing—by setting an example—we can do much to clarify issues, which become confused in times as uncertain as those in which we are living, to establish a pattern of straight thinking as a replacement for the fuzziness which seems to creep into ideas put forward in such times, and, most important of all, to reimburse with good, old-fashioned faith those among us who have grown so puzzled and bewildered by events as to entertain doubts as to our own strength and national character.

It is unfortunate, but nonetheless true, that in times of stress there are those who seek to take advantage of the confusion to further their own aims, to secure political advancement, or to obtain personal power. Many times they are unscrupulous in the way they go about it. Increasingly, the tenor and tempo of attacks upon men in public office, leaders in public affairs, and Government personnel generally, have been stepped up. No person seems to be immune to these vague but disturbing charges. A lifetime devoted to patriotic public service can be destroyed by this sort of attack if the people do not voice their disapproval of such underhanded tactics.

I am confident we want no part of the methods of a Hitler or a Stalin. We do not believe in the philosophy of guilt by association, of indictment by implication, or in sentencing without trial. We believe in fair play, and it is certainly not playing fair when our public officials and employees are vilified and their loyalty and devotion to their country questioned on mere hearsay, vague charges, and testimony of disreputable and discredited persons who have time and again proved to be unreliable. We need to return, as a people, to the principle that a man is innocent until he is proved guilty, that a man who comes into court must come with clean hands and, above all else, must not bear false witness against his neighbor.

The relative handful in the Federal service who have been proved disloyal, or whose

loyalty was open to a reasonable doubt, have been eliminated. But we didn't do it by summary dismissal, or by vague, unsubstantiated charges. They had fair and impartial hearings, were given the right to present their side of the case, with witnesses and counsel if they wished, and their rights as citizens have been protected. The approximately 330 found ineligible for Federal employment constitute an infinitesimal proportion, indeed, of the total number of Federal employees, all of whom have been investigated or are under current investigation. The few have been dismissed. The many have not been punished.

That's the fair way, the just way, and we need a return to a more fair and just appraisal of our public servants—not a witch hunt, nor a condemnation proceeding in the press, on the radio, on television, and in denunciatory speeches, including some in the halls of Congress.

When I assumed the office of Chairman of the United States Civil Service Commission some 7 months ago, I placed this problem high on the list of those requiring immediate and intense attention. I said then, and I feel even more strongly about it now:

"It is my purpose to undertake a campaign to bring about better public understanding of Government employees and what they do. That is a public relations problem. It seems to me to be worth trying. The public is essentially fair when they have the facts and I expect to make every effort to acquaint them fully with those facts."

As we all know so well, the ultimate test of our form of government is public approval. Disapproval means an end to our form of government and, in today's global circumstances, an end to democracy.

Therefore, what the public thinks of its form of government takes on a significance that ranges beyond our own shores and directly affects the steadfastness we may expect from our allies.

But before it can intelligently approve or disapprove, the public must be informed. Its opinion should be an informed opinion. It should have all the facts, not merely those cunningly selected and disseminated by some power-hungry and politically ambitious individual or organization motivated by a self-serving purpose which conflicts with the public interest.

So deep-rooted are some of the maladjustments of our times and so contagious is the mania of self-destruction that presentation of only one side of the story is by no means confined to the recognizable realm of politics. What grieves me most is that so many well-meaning and excellently intentioned individuals and organizations today indulge in the practice of hammering away at only the destructive side of the story about Federal employees. Precisely why they participate in this form of self-destruction is impossible to understand. One clue, however, runs through virtually all such presentations. That is the tone depicting the high-mindedness which these detractors of government insist prompts them to compound and magnify the myths about Federal employment.

You know the sort of things: All Federal employees are lumped into one category; they're "bureaucrats"—never workers. All, according to these disciples of destruction, are loafers; all, to hear them tell it, are overpaid; not any, according to these lopsided versions, can be or are fired, and so on and on, ad infinitum, ad nauseum, and entirely without regard for the facts of the matter.

And, as I have said, the tone that runs through all such denunciations is one of pious proclamation. It is inferred broadly, if indeed it isn't claimed outright, that the bright light of civic virtue shines exclusively from the eyes of the individual or organization making these misrepresentations. To hear them tell it, each considers himself or

his organization to be the only brave arrow in flight.

For example: When streamlining of Government and administrative reforms are mentioned, they are almost invariably mentioned in terms of what has not yet been accomplished. Rarely, if ever, is there presented the other side of the story, the side covering the many progressive steps already taken in this direction. When economies are suggested, always this is done with regard to what still remains to be achieved. Never is it brought out that the very carping tone of the recommendations and the accompanying derision of Government employees in themselves result in increased costs that are many, many times as great as the cost of the real or fancied evils these critics so zealously pursue. It probably does not even occur to many people that unjust and personally derogatory criticism drives good men and women out of Government and skyrockets the costs of recruiting and training personnel of lower quality than that which the hasty critics mercilessly drum out of camp.

There is no question in my mind that, in seeking to effect savings, these critics, by persisting in the use of destructive, headline-hunting tactics, rather than the constructive attitude which built up our great country, are costing the taxpayers they so vociferously represent, untold millions in the long run.

Undoubtedly, some of the fault lies in the fact that no effective effort has been made to get the facts over to the public. True, the facts have been available to any sufficiently interested in seeking them out. But, in the court of public opinion, we are not guaranteed our day, as we are in our other courts. We must make our own day in this particular court. We must militantly sell public service to the public.

And when I say "we" I mean all of us interested in good government. That, of course, places the Civil Service Assembly of the United States and Canada right in the thick of this matter. For that is where you have always been. Your most praiseworthy record of support of the merit system points clearly to the fact that you can, and should, undertake the job now of quickening the public conscience regarding the woeful lack of fair play inherent in too many of the destructive criticisms which are undermining our very form of government.

It has been because of you and your continuing and undiminished interest in good government that the civil service has made many of the forward strides which have characterized its growth over the 68 years of its existence. You know the facts. You know that the history of civil service is the story of a bitter battle to overpower the spoils system which plagued our country for more than the first century of its sovereignty. You know that while there still are many improvements that can and should be made, the important thing is that our progress away from the spoils system has been a steady one. You know these things because you have been instrumental in bringing them about. Most important of all, you have restrained your approach to the constructive characteristics which breed freedom and enhance the stature of freemen.

That's what places you in such an excellent position to accept the increased responsibility which I think present conditions impose on all those interested in good government. I think it is the duty of the Civil Service Commission to assume a place of leadership in this undertaking to sell the public on public service. I think the employees under civil service have an obligation in this endeavor, and I envision the job as a vast area of agreement between management and labor in which both can be effective in a joint and mutually beneficial effort. Further, I think your organization, and many others like it, in the same and

similar fields—and even those in areas not primarily nor avowedly dedicated to improved government—must assume the leadership which your experience and objectives impose upon you.

In my opinion, there's a mighty interesting story to be told on the constructive side of how our Government functions under the democracy we are all striving to preserve. The facts about government, without distortions or embellishments can be presented in an animated manner designed to capture the attention and fire the imagination of the public so vitally affected by it. The tools and techniques of public relations are available to us. All we need do is apply them and reject, once and for all, the concept of public reporting which has made of Government presentations the drab, colorless, statistical documents they too frequently are.

Here are but a few examples of what I have in mind:

When Government employment is portrayed—for any reason, political or otherwise—as Utopian, we can and must come back with the following facts, which are all on our side:

So far removed from Utopia did Federal employees consider their employment that 321,291 of them quit their jobs in the year ending last June 30.

When that old wheeze is trotted out, about how it is impossible to fire a Federal employee, our factual, but effective, answer can truthfully be:

In the same last fiscal year, 17,250 were discharged.

When the destructive story is circulated—as it regularly is—that nobody ever is allowed to run out of work in a Federal agency or department, our facts can speak for themselves once again:

Seventeen thousand and thirty-nine did run out of work and were removed from the payroll through reduction in force because projects on which they were working were completed.

There are many other solid facts that can be similarly used. The point is we must not, and do not intend to, use them only defensively, as illustrated in the foregoing examples. We must diligently and energetically make opportunities for presentation of these facts in less statistical style. It is essential that the people of the United States—and of the world, if you please—be alerted to the fact that while we are engaged in a recruitment program of considerable magnitude, to man the thousands of essential defense positions created by the current threat to our way of life, the rate at which Federal employees have been quitting their jobs has jumped from .9 in June 1950 to 2.1 in June of this year, that the monthly turnover rate for Federal employees in the same period increased from 2.3 to 3.2.

More emphatically stated, the turnover rate of Federal employees is approaching 36 percent right now. For this audience, I need not spell out the fact that it is a costly thing to recruit and train workers only to have them leave Government employ for positions in private industry where salaries, especially the upper management levels, are clearly higher and where opportunity for advancement, money-wise at least, is infinitely better.

That is a point which Senator PAUL DOUGLAS, of Illinois, stresses with great vigor in an extremely forthright article in the October issue of the *American* magazine. He goes so far as to intimate the Federal Government would be more than adequately compensated in better management if it decided to pay the additional \$28,000,000 it would take to double the salaries of the some 2,500 employees on civil-service rolls receiving \$10,000 and up per year. Incidentally, Senator DOUGLAS' article, which offers

ample proof there are able and broad-visioned persons in the country ready and willing to take up the cudgels in behalf of fair play, listed as the number one item in a six-point analysis of why it is difficult to attract good men to Government, the following reason: "There has been too much indiscriminate smearing and hounding of men who were just trying to do a good job." Similarly, his very first recommendation to cure this situation is that steps be taken to end indiscriminate smearing. In the article, he likens the problem to one he encounters at his summer place in trying to rid the premises of poison ivy without damaging the wild roses among which it grows. Says Senator DOUGLAS:

"The same kind of patient thoroughness is required in uprooting our cunning home-grown Communists without injuring public servants who happened at one time to have innocently crossed their paths. You can't approach the problem of poison ivy by running over the dunes swinging a meat cleaver. And you can't cope with Communists by that methods, either, without injuring innocent bystanders."

While the Senator mentions only those Federal employees indiscriminately and irresponsibly smeared in connection with communism, his warning against a meat cleaver approach is sound with respect to all types of smears and all loose accusations which are made in terms of glittering generalities. The effects of these tactics, as the Senator points out, are being felt keenly, not only by the employees but by the Government as well. Not only do sensitive individuals suffer undeserved indignities and, as the Senator states, develop "hangdog expressions in some cases and consider themselves as second-class citizen," but the Government loses the services of many of them because, as the Senator says, they "have been hounded, harassed, heckled, and scorned."

As I see it, our job is twin-hinged. In addition to giving the public the facts, we must inculcate a revitalized pride in their work in Government employees. Unless we do, the trend will continue in the wrong direction and present figures, disturbing as they are, will become even more appalling.

Our work is cut out for us in our efforts to produce better government through better management. We must exert increasingly greater efforts to instill in men and women with leadership qualities the crusading spirit to undertake to improve government by giving it their personal attention, by helping to operate it. In the Civil Service Commission, we are everlastingly stressing our concept that management is a philosophy, and must not be sacrificed by mistaking mechanics for management. We continuously endeavor to sharpen the tool that we hold management to be, so it can work more effectively toward our ultimate goal, which is, of course, better government.

You and I and all people interested in better government have the same objectives. We should join hands in utilizing the same weapon, one which has made our country great—truth. We can, and should, undertake jointly the work of bringing home to the public—forcefully, forthrightly, and in the interests of a better country—that good management is a good investment; that it is shortsighted to regard it as an expense, and that we can have good management and, through it, good government, only by attracting and holding as Government employees the highest type of people. If we do not check this disease of indiscriminate smearing which, as I have stated, really is a form of self-destruction, we cannot hope to retain good employees in the Federal Government, much less attract new ones of high caliber.

In the words of President Truman, who uttered them recently in addressing a group of Federal employees:

"It is time we made it perfectly plain that we feel it is an honor to work for our fellow citizens through public service."

That's the spirit in which good people must accept service in Government. To restore that spirit is our job—the job of all of us interested in good government. There's a tremendous job to be done. Let's get together and do it.

Time To Watch Out

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 16, 1951

MR. VAN ZANDT. Mr. Speaker, with the interest in the 1952 election mounting daily, the following timely editorial in the October 10, 1951, issue of the Altoona (Pa.) Tribune contains much food for thought:

TIME TO WATCH OUT

As Presidential election nears, we might as well brace ourselves for a heavy dose of come-on ideas designed solely for the purpose of bringing in the votes.

Most of these plans in the past have been aimed at the vote. Any benefits that might of recent years would be purely coincidental, accrue to the Nation through most of them.

The Brannan farm plan of 1949, for example, didn't make much progress, although the Department of Agriculture pushed it with all the propaganda machinery of the Government.

But, now Secretary Brannan has another idea. It's closely related to the first one, but is a little more shrewdly presented.

Perhaps Mr. Brannan's mistake in the first one was that he made it too easily understood.

This one he sticks in with a report of the "family farm policy review committee."

It provides two rather seductive thoughts. One, guarantees prosperity for the farmer by providing for direct Government payments to him. The other plan includes the purchase by the Government of certain farm lands, and the resale of it to small farmers who want more land.

A Government spokesman qualifies this by saying that where some farmers do not have enough land to make a living, the Government may buy this land and resell it to others, who, their property thus enlarged, presumably would be able to make a living.

What happens if nobody wants to sell might become a problem. Then, again, since it's the Government, there might be no problem at all, so far as the Government's concerned.

There's a good possibility of the national health insurance or socialized medicine plan popping up in a new guise, too.

We might find the President harking back to his message to the Eighty-first Congress, in which he said: "Our Government must see that every American has a chance to obtain his fair share of abundance * * * our Government has undertaken to meet these responsibilities."

It's worth remembering, too, that in undertaking to meet those responsibilities, Congress was asked to fix the pay for labor, fix prices, decide what credit terms the citizen should have, what merchandise he could get on certain credit terms, decide what materials should be used by industry, and for

what purpose, and what goods the citizen ought to have.

Besides, there was the matter of rent controls, socialized medicine, or health insurance, pensions, and a large catalog of others.

It's pretty tough for the average Mr. American to have to earn his living, pay his taxes, bear his usual worries, then have somebody come around and hand him out a "load of stuff" every election time, giving him the choice of voting for the "right party" and getting "all this free * * *" whatever "this" may be depending upon the wants of the citizen at the time.

It might be safer for Mr. American to put all this hand-out theory in one package, and to handle each such dazzling proposition the same way.

Just ask yourself, how is the Government to pay for these things? What methods will be used by the Government?

If we do that, it must become perfectly plain that the Government alone can't do a thing. It can't give us a dime's worth that it doesn't take from us and someone else.

And so, unless, of course, we like to be fooled, we come inevitably to the conclusion that what the Government really means is that it will divide up the wealth of the country and hand it out to those it deems worthy on the basis of mass segregation.

Of course, the redistribution of wealth is not a new idea. But, it's amazing the different forms in which it can be presented.

Two methods characterized the redistribution of wealth, as practiced by numerous governments in the past, and present; One method is the totalitarian method, force.

The other, red tape, regulations, and penalties for failure to conform to the red tape, or the regulations.

We are now in the outer circle of the red-tape phase of socialistic experimentation.

Let's not get any deeper into it. As election time approaches, as free Americans, we should make our desire for our continued freedom clear to both major parties.

And vote for the party and the candidate which offers the best platform for reducing the red tape, the regulations, the socialism, and the strings of bureaucracy which are throttling our America.

The United States Can Now Take the Offensive in the Cold War.

EXTENSION OF REMARKS

OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 16, 1951

MR. KERSTEN of Wisconsin. Mr. Speaker, the Mutual Security Act, recently passed by Congress and signed by the President, sounds for the first time a new note in our foreign policy. Under the provisions of an amendment which I offered and which was accepted the United States will be able to render assistance to escapees from behind the iron curtain and also to underground units working for the liberation of their people in the Communist-dominated countries.

Specifically this amendment provides \$100,000,000 "for any selected persons who are residing in or escapees from the Soviet Union, Poland, Czechoslovakia, Hungary, Rumania, Bulgaria, Albania,

Lithuania, Latvia, and Estonia, or the Communist-dominated or Communist-occupied areas of Germany and Austria, and any other countries absorbed by the Soviet Union either to form such persons into elements of the military forces supporting the North Atlantic Treaty Organization or for other purposes, when it is similarly determined by the President that such assistance will contribute to the defense of the North Atlantic area and to the security of the United States."

To date all of our actions in the cold war have been at best merely reactions to an initial action by the Communists. The Berlin airlift was only a response to the Berlin blockade. The aid to Greece was only in response to a Communist offensive there, and our present long drawn-out conflict in Korea is merely a reaction to the Communist invasion.

Now, however, under the provisions of the amendment set forth above, we will be able to take positive action against the Communists. We will be able to harass them instead of merely responding to their harassment of us. We can begin to infiltrate their regimes instead of letting them infiltrate our governments. We will be able to instill fear in the Communist leaders of Eastern Europe instead of having our Western European friends tremble in fear of the Communists. Freedom can come in the world only when peace and justice are restored and we must take positive action to restore this peace and justice.

I include herewith an editorial which appeared in the October 1951 issue of the Sign magazine:

TIME FOR AN OFFENSIVE

From the founding of the U. N. at San Francisco in 1945 to the recent peace conference in the same city, we have been playing a purely defensive role toward Soviet Russia. We have initiated practically no major action in the international sphere which was not a retreat, a surrender, an appeasement, or a defensive reaction to Russian aggression.

We don't advocate dropping bombs on Russian cities tomorrow, but we certainly do advocate a strongly aggressive policy in the fields of propaganda and subversion.

When the U. N. was founded, the Russians made sure that it could never be a restraint on their aggressive intentions but at the same time would serve them well as an international propaganda forum. Right up to the present they have used it for no other purpose.

The best way to stop them is to take over the U. N. for our own propaganda. Instead of answering Russian accusations, we should be the accusers. The Reds have so many skeletons in the closet that we could drag out one a day for months to come.

We don't even have to accuse; we can simply ask questions. Here are a few general ones that come to mind which we would like to see put insistently and repeatedly to the Soviet delegates: What about the treatment of minorities in the Soviet Union? What about freedom of religion, the press, and assembly? Where are the hundreds of thousands of unaccounted for war prisoners who surrendered to the Reds? What of the rearmament of East European satellite states in spite of the peace treaties? Why the vast military program of the U. S. S. R. if only peace is sought? Why cannot a treaty be concluded with Austria and Germany?

What about slave labor and inhuman conditions in the labor camps of Siberia and the Arctic? What about the mass deportations of whole populations from Eastern Europe, specifically from Latvia, Estonia, Lithuania, and Hungary?

We wouldn't get an answer to these questions, but that isn't the point. We would be furthering our own cause and countering Red propaganda, which is highly effective in some parts of the world. It is just possible too that the bright light of publicity might prevent or mitigate some of the horrors which the Reds are perpetrating while posing as the great protagonists of peace and of the people.

At the same time, we should direct a barrage of propaganda to our friends behind the iron curtain. It is little short of a miracle that these people have kept faith in us in view of our spineless attitude toward the Russians and especially in view of the little hope we have given them of ever throwing off the yoke of their Red masters.

We can be sure that most of the people of the satellite states are on our side, that they hate the Reds and would actively cooperate with us if given the opportunity. Even in Russia there are millions who hate the Soviet regime and would welcome an opportunity to destroy it. In these people we have a fifth column behind the iron curtain 10 times as numerous and devoted as the Communist fifth columns in the west.

It would be senseless to advocate open rebellion in the presence of the Red Army. At the present stage, that would lead only to a bloody repression of the entire population. On the other hand, we shouldn't sit back and leave these people without direction, help, and encouragement. They can do a work similar to that of the underground movements in Nazi-occupied territories in World War II—initiate slow-downs in agriculture and industry, sabotage military production, ammunition depots, transportation, and communications, organize groups that would create disruption behind Red lines in case of war.

The more the Reds are occupied in defending themselves, the less time they will have to plan aggressions. Furthermore, it would be very encouraging to see our leaders do something more than wait apprehensively for the next Russian blow. No war—hot or cold, on the battlefield or of the air waves—is ever won by defense alone. A little showing of the offensive spirit would be a warning to our foes and an assurance to our friends that we can do more than run for cover when attacked.

Father RALPH GORMAN, C. P.

With So Many People Saying So Many Things on the Subject of Atomic Energy, It Is Hard to Determine Where We Stand

EXTENSION OF REMARKS OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 16, 1951

Mr. VAN ZANDT. Mr. Speaker, during the past several weeks the American people have been listening to persons in high places voice their opinions regarding the development of atomic power for military purposes.

The following article by John Gerrity appeared in the October 14, 1951, issue

of the Washington (D. C.) Sunday Star and reveals the divergent views on the availability of atomic-tactical weapons and long-range guided missiles.

The article follows:

ATOMIC BOMBAST—WITH SO MANY PEOPLE SAYING SO MANY THINGS IT'S HARD TO DETERMINE WHERE WE STAND

(By John Gerrity)

Vast clouds of rumor and cross-rumor billowed over Washington last week, confusing public understanding of American strength in the field of atomic warfare.

Nearly every official whose name has ever been linked with the atom, and who could find a convenient sounding board, had something to say about atomic weapons. Each statement seemed to conflict with the others.

No Johnny-come-lately, the bewilderment, indeed, had its beginning a little more than a month ago in a presidential speech at San Francisco. Then, speaking to a get-together of Democratic Party faithful, Mr. Truman had talked bravely of the national suicide in store for any enemies who tampered further with the peace of the world.

"It is fantastic what can happen with the use of the new weapons that are now under construction in this country," the President said, "not only the one which we all fear the most, but there are some weapons which are fantastic in their operation."

Apparently taking his cue from the President's statement—" * * * now under construction * * *"—Democratic Senator BRIEN McMAHON, who heads the Joint Congressional Atomic Energy Committee, pressed for an immediate step-up in atomic warfare development. His demands, expressed on the Senate floor, were interpreted by many to mean a drastic revision in defense plans, with heavy emphasis on atomic weapons which McMAHON had stated were "relatively" cheaper to produce than conventional weapons.

ENTER MR. LOVETT

Hardly had Messrs. Truman and McMAHON planted the motion of a new kind of warfare than Secretary of Defense Robert A. Lovett uprooted it. A few days after Senator McMAHON's speech, Mr. Lovett scoffed at the flurry of reports of sensational weapons and said that no magic way of winning wars was yet at hand. Bluntly, Mr. Lovett said, in effect, "We can't win today's wars with tomorrow's weapons."

Then this week, the idea that the day of 'Buck Rogers warfare has already dawned received new impetus. Despite Mr. Lovett's attempt to deflate false hopes, Atomic Energy Commission Chairman Gordon Dean said that the United States now possessed tactical atomic weapons that "could cancel out on the battlefield any numerical advantage of an enemy," and that it need not hesitate or fear to use them.

Thus within the narrow confines of the administration—and aided by the announcement on October 4 that Russia had had its second atomic explosion—a national perplexity had been developed. The divergent opinions of those officials who should be in complete harmony on the progress of atomic warfare, had raised, but not answered, several vital questions.

QUESTIONS IN PUBLIC MIND

Does the United States actually have now sufficient atomic weapons of a tactical nature to use in Korea or elsewhere? Does Russia's explosion of its second bomb mean that the United States is in danger of losing its superiority in atomic weapons? What is the relative strength of the two nations, as far as future atomic weapons are concerned?

In contrast to the roseate views expressed by the President, Mr. McMAHON, and Mr.

Dean, Secretary Lovett appears to be the one who is striking closest to the real truth. While he admits there has been enough progress to encourage a very optimistic outlook for improved American armament, the idea of quick, easy and inexpensive security is exaggerated. Although we have literally dozens of tactical atomic weapons under study, it will be at least 3 years before existing and planned atomic plants can produce those weapons in sufficient quantities for troops to use them in the field, tactically.

Mr. Lovett is strongly supported by General Bradley, head of the Joint Chiefs of Staff. A few days before he left for the Middle East, General Bradley told the Senate Armed Services Committee that such weapons were about 4 or 5 years away, at least in terms of practical use by troops in the field.

And perhaps the most convincing fact to support Mr. Lovett is that United States troops would not know how to use atomic weapons, even if they were available. In the forthcoming atomic tests at Frenchman's Flats, Nev., tactical atomic weapons (or models of the same) will be tested for the first time. And for the first time some 5,000 troops will engage in training exercises under actual atomic warfare conditions—using the experimental weapons and deployed defensively and offensively in whatever new ways such weapons will demand.

As for the superiority of the United States over Russia in so-called strategic atomic bombs, these are the facts. It is no secret that when the United States dropped its third bomb on Nagasaki on August 11, 1945, its then existing supply was exhausted. It was planned at the time to use three atom bombs for each of three amphibious landings on the Japanese mainland the following November. That would put our rate of production, at that time, at three bombs a month. If that same rate had remained constant, we would have today about 210 bombs, allowing for the 12 to 16 we have exploded since for experimental purposes. However, the rate of production has more than trebled since 1945 and it is a fair estimate that the United States has stockpiled today between 750 and 1,000 bombs, each about five times more powerful than the first.

If the same rate of production were applied to Russia—a far-fetched theory in light of its vastly inferior industrial capacity—she could have produced since her first burst in the summer of 1949 somewhere between 60 and 75 bombs. However, American atomic scientists insist that Russia would have been foolhardy to have devoted her limited producing capacity and very limited supply of uranium to the manufacture of a Nagasaki-type bomb, which is known to be far less powerful than the bomb the United States is making today. For that reason, they maintain, Russia probably stopped production after making about 30 of such bombs and began experimenting on new ones. That the experiments have been completed and she is ready to produce greater bombs is evidenced by the explosion of October 4.

ONE HUNDRED IN RED ARSENAL

For military purposes, however, Defense Department planners are figuring that Russia has stockpiled 100 bombs. It is admittedly an extravagant estimate, but even so it establishes a comfortable ratio in favor of the United States of nearly 10 to 1.

Although Russia's second burst was disquieting proof that she is stepping up her atomic-bomb production, several physical factors guarantee that the United States' favorable ratio of 10 to 1 will hold, or perhaps even improve.

An atom bomb is made of either of two fissionable elements, uranium 235, a rare

element found in tiny amounts in nature, and plutonium, an artificial element produced in huge plants called nuclear reactors. Plutonium is produced from nonfissionable uranium 238, which is abundant in nature. To produce uranium 235 bombs requires a gaseous diffusion plant (to separate fissionable uranium from nonfissionable) such as the one at Oak Ridge, Tenn., which cost the Government \$500,000,000. To make plutonium bombs requires a plant costing about one-fifth as much to build and using about one-half the electrical energy to operate. For this reason, it is known that Russia's bombs are of the plutonium type, since she is at least 20 years behind in the technical know-how necessary to build an Oak Ridge type of plant.

POWER SHORTAGE

Moreover there is a marked limit on the number of cheaper, nuclear reactor plants which Russia can build. To operate just one such plant, a 250,000-kilowatt power station is needed. Russia has only one big power station, the Dnieper hydroelectric plant, with a capacity of 500,000 kilowatts. If she were to build two nuclear reactors, it would take the entire output of Dnieper, leaving no power for the operation of supporting and collateral industries, to say nothing of civilian goods industries.

Apart from lacking vital electrical power plants Russia is known to be short of uranium. Captive mines in Czechoslovakia are almost exhausted. For some time she has been trying to get uranium from old worked-out mines in Saxony. On the other hand, the United States is the sole recipient of the output of the world's three largest fields, one in the Belgian Congo, one in the western United States, and one in the Great Bear Lake region of northern Canada. All these produce an ore about 15 times as rich as the ore available to Russia.

Therefore, on these two counts alone—electrical energy and uranium supply—the United States is assured of long continuing superiority. Added to these, the fact that the United States is building or contemplating building three new reactor plants gives a margin of safety upon which Russia could not infringe for at least a quarter of a century.

Pro America Speaker Says Women Must Save America

EXTENSION OF REMARKS

OF

HON. WILLIAM K. VAN PELT

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 16, 1951

Mr. VAN PELT. Mr. Speaker, the following news item appeared in the Oshkosh Daily Northwestern newspaper October 11, 1951. It outlines in detail just what is motivating not only the members of Pro America but also many other women's groups to organize and fight against the schemes which have been promoted by the socialistic planners within our present national administration.

Just last week we celebrated National Newspaper Week and I want to compliment the reporter who covered this meeting so thoroughly, as well as the Oshkosh Daily Northwestern, so that all citizens will become alerted to the issues which confront our Republic. Many of us have accepted the freedom that we enjoy un-

der the Constitution of this Republic as a heritage free from any obligation on our part, except to coast along and enjoy all the benefits. It has taken the low moral standards of our present administration to awaken us to the fact that we can have freedom only so long as we fight and speak out for the cardinal principles embodied in our Constitution. Whatever our walk in life may be, we must constantly be reminded of the devotion we owe to God and to our country if we are to maintain this freedom. In conclusion, Mr. Speaker, I believe this Pro America women's organization is supporting these cardinal principles and I congratulate it on the great job it is doing.

The above-mentioned news item follows:

PRO AMERICA SPEAKER SAYS "WOMEN MUST SAVE AMERICA"

"It is up to the women of this country to save America from socialism and bankruptcy," declared Mrs. R. S. Knappen, Tulsa, Okla., national president of Pro America, speaking before members of that organization Wednesday afternoon at the Oshkosh Country Club.

Members of Pro America are dedicated to Americanism and are disquieted and disturbed about the Government of this country, and its foreign policies, Mrs. Knappen said. They are not averse to lending and giving aid to other countries, she said, but they object to the way the job has been handled.

Women of America are influential and powerful, and they have time to ferret out facts which the hurried business and working man does not have time for, the speaker stated. The task of saving this country is big enough and important enough for women to sacrifice lesser interests and devote their energy to a crusade to save America and the constitutional form of government. Freedom can no longer be taken for granted, but must be fought for, Mrs. Knappen believes.

Corruption in Washington must be voted out at the next election as part of the crusade, the speaker said, and, in order to do this, women will have to crusade through their social groups, their church groups, their schools, the grocery store, the taxi, and over the back fence. There can be no personal glory or reward, she warned, only a consecration to the job of alerting all women to the importance of their vote in restoring this country to morally conscious leadership.

This country thrives on adversity, Mrs. Knappen said. Early American history proves it. The Constitution came into being under adversity. With competent moral leadership, this country's finest hour is probably just ahead, the speaker stated, in spite of the threat of socialism and communism.

Mrs. Knappen gave a brief history of Pro America which originated 18 years ago among five women dedicated to a cause inspired by a truck strike at Christmas time in Seattle, Wash. An aroused citizenry made attempts to deliver Christmas gifts to orphanages, but the men were injured so the women took over with success. An appeal for help to the authorities went unheeded because of a corrupt city government, she said. Volunteer workers broke the strike after 18 months, but the women had already determined to improve conditions, and, beginning in the precincts, they eventually elected an honest city government. Women in other parts of the country became interested in the accomplishment of these Seattle women and so little by little, Pro America, the name suggested by Mrs. Theodore Roosevelt, has grown.

Pro America has no headquarters staff, not wanting strong centralization where control would stem from the top and secretaries determine its policies such as might emanate from bureaucratic Washington. It is a small organization, but its effectiveness in helping elect moral leadership is outstanding, Mrs Knappen said.

Mrs Dietler, also of Tulsa, national vice president, concluded the program with a brief talk on the functions of this bipartisan organization. She explained that Pro America believes that as long as the Government of this Republic is carried on through the two-party system, it is necessary that it function through one of the two major parties. Consequently, since its inception it has worked through the Republican Party, as the vehicle, which has best expressed the principles of Pro America as embodied in the Constitution of the United States.

A 1 o'clock luncheon preceded the program and the president, Mrs. A. P. Nonweiler, turned the meeting over to the program chairman, Mrs. Byron D. Ising, who introduced the guest speakers.

The Case of the Tactical Atom

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 10, 1951

Mr. FEIGHAN. Mr. Speaker, under leave to extend my remarks in the Record, I wish to include the following article written by Rev. Edward A. Conway, appearing in the October 20 issue of America, national Catholic weekly, entitled "The Case of the Tactical Atom":

THE CASE OF THE TACTICAL ATOM

(By Edward A. Conway)

(Senator BRIEN McMAHON, chairman of the Joint Congressional Committee on Atomic Energy, seems to have coined the term "tactical atom" in a September 25 address in Washington. It means atomic weapons for use in the field, as contrasted with city-destroying atom bombs. Father Conway here pictures some of the confusion that surrounded the beginning of the age of the tactical atom.)

This is an analysis, somewhat critical, I must confess, of some news stories which circulated widely during the first 5 days following President Truman's laconic announcement on October 3 that another atomic bomb has recently been exploded within the Soviet Union.

THURSDAY, OCTOBER 4, 1951

Joseph C. Harsch, star Washington correspondent of the Christian Science Monitor, reported:

"Best guessing here is that after the 1949 explosion the Russians concentrated on a stockpile of the Hiroshima-type big bombs and have accumulated between 40 and 200 by this time. * * * It is being hinted around Washington that the new Russian explosion was of the smaller tactical type of bomb. * * * Having balanced off our stockpile of big bombs with a retaliatory stockpile of their own, they are starting now to try to catch up in tactical atomic weapons."

After making the obvious observation that our military would like to have a monopoly of tactical atomic weapons now that the United States has lost its monopoly of strategic atomic weapons, Mr. Harsch continued:

"However, both Army and Navy are conducting autumn maneuvers based on the assumption that their enemy would possess tactical atomic weapons. These maneuvers were announced in early September, which probably dates the second Russian explosion."

An AP dispatch dated October 3 detailed secret testimony given last week to a House appropriations subcommittee by Gordon Dean, chairman of the United States Atomic Energy Commission:

"Mr. Dean did say that the United States now has tactical atomic weapons, and made a cautious disclosure that new atomic weapons are being produced. * * * Atomic weapons now can be used for tactical warfare purposes and bombed areas can be occupied by troops 'in a reasonably short time,' he said."

President Truman fell or was pushed into admitting that he had learned of the Soviet explosion within 10 days before he announced it. Asked at his press conference if his September 24 ban on security information was connected with the explosion, he claimed he had signed the security order before he had heard anything about it. Does that explode Mr. Harsch's theory that the Russians tested their second atom bomb in early September?

FRIDAY, OCTOBER 5, 1951

Hanson W. Baldwin, New York Times military expert, disagreed with Mr. Harsch about the type of bombs the Soviets are stockpiling. "These very probably are roughly comparable to the United States Nagasaki bombs," Mr. Baldwin seemed to accept "some estimates in Washington—subject now to revision in the light of the second blast—which indicate that Russia may now have a stockpile of somewhere between 30 and 80 atomic bombs." His next two paragraphs I set down as the Times printed them, though I am convinced someone excised some of his argumentation:

"Moreover, the rate of stockpiling undoubtedly is increasing. All this means that within 4 months to a year from now Russia probably will have a 'strategically significant' stockpile, probably numbered in three figures or a large two—enough, in other words, to cause very material damage here."

"Thus there is no doubt that Russia's atomic power is increasing."

Mr. Baldwin added this unqualified assertion:

"The United States has a whole 'family' of atomic bombs, ranging in destructive power from bombs five or six times more powerful than those used against Japan to so-called tactical bombs of 5 kilo-tons power (equivalent to 5,000 tons of TNT) useful against armies in the field."

Mary Hornaday, the Christian Science Monitor's New York correspondent, revealed that Bernard Baruch, whom she identified as "father of the United Nations majority plan for atomic control," had been invited to Washington "to give his views on United States-Soviet relations to 75 leading intelligence officers in an off-the-record session in the next few days." According to Mrs. Hornaday, "the adviser to Presidents said his plan was not outmoded, since it would make no difference whether 'one country or twenty' has the bomb when it is invoked."

SATURDAY, OCTOBER 6, 1951

Joseph Stalin, in a Pravda interview, confirmed President Truman's October 3 announcement by saying: "Indeed a test was recently made by us on a type of atomic bomb. Tests on atomic bombs of various calibers will be made in the future."

Associated Press and United Press reported from Los Angeles that Atomic Energy Commission Chairman Gordon Dean disclosed on October 5 that AEC had begun the mass production of tactical atomic bombs. Never, to

my knowledge, have those trusted news services so massacred a major story. Associated Press carried eight full paragraphs or condensations of paragraphs, United Press 13. Only three paragraphs or condensations of paragraphs were common to both dispatches. The United Press dispatch, far and away superior to the Associated Press, though still quite inadequate, reported that Mr. Dean had explained that the new tactical weapons would make it possible "to smash an enemy's armies on the field of battle instead of being faced with the morally repugnant necessity of raining atomic bombs on noncombatants in enemy cities." United Press quoted six paragraphs in which Mr. Dean replied to his own question: "Where does this leave us in terms of our moral position?" Associated Press completely ignored what seems to have been a most important part of the Dean address.

The paragraphs United Press cited give evidence that Mr. Dean sees the moral significance of the possibility of using small tactical bombs against the aggressor himself, at the place of his aggression. Both dispatches, on the other hand, testify to the fact that Mr. Dean went far beyond what might be supposed to be the province of the director of a Government operating agency like AEC. He urged, for example, that we should give serious consideration to the use of an atomic weapon in any battlefield situation where it can be used effectively from the military standpoint. To those who would object that our use of the tactical atomic bomb against enemy troops in the field might provoke Russian retaliation with strategic bombs against American cities, he replied that there is no more chance of that than there is now. The Russians, he argued, would still be restrained by fear of our counter-punch.

After studying the two dispatches, my net impression was that Mr. Dean had delivered himself of a speech that was nothing short of sensational, an impression that grew as I recalled that his record for reticence in press conferences had been equaled only by the Sphinx. Someone had removed the gag. Had Mr. Dean's address been prepared after the Government had learned about the Soviet explosion? An inkling of the answer came the next day.

SUNDAY, OCTOBER 7, 1951

Under the caption: "Dean idea to wage atomic war in field is held significant," the New York Times front-paged a special article by its Washington correspondent, Anthony Leviero. It looked like a clumsy attempt, obviously inspired, to pump fresh air into Mr. Dean's trial balloon, which the wire services had grounded in Los Angeles. Mr. Leviero, it may be recalled, was the correspondent chosen to break the circumstantial story of President Truman's conference with General MacArthur on Wake Island. Mr. Leviero solemnly declared:

"Since all major pronouncements of United States policy are cleared at the highest levels, it was assumed that Mr. Dean, who verged into questions of military policy, had spoken with the highest sanction. He went so far as to say that use of the tactical atomic weapons involved no greater risk of widening the war than existed at the present."

Mr. Leviero quoted in full Mr. Dean's remarks on moral considerations, which Associated Press had not considered worth quoting in the dispatch carried in the Times the day before, and then added:

"In other words, Mr. Dean suggested there was no reason beyond simple military expediency why we should not use the tactical atomic weapons in Korea or anywhere else where aggression against the free world breaks out. Thus, he apparently put the issue squarely up to President Truman, who alone has the authority to direct their use."

If Mr. Dean spoke with the highest sanction, we have the picture of the President approving his text and saying, "Very well, Gordon, now go out to the Founder's Day of your alma mater, the University of Southern California at Los Angeles, and put the issue squarely up to me. We'll watch for public reactions."

Also on this Sunday, Marcus Duffield, in his weekly news review in the New York Herald Tribune, revealed that

"Information had previously been received by our Central Intelligence Agency that the Russians had developed more powerful bombs than the Nagasaki type, which was about the force of their first explosion. The number of bombs they had on hand was said [by CIA?] to be higher than current American estimates, which put the Russian stockpile at 'less than 100'."

Thus Duffield supports Baldwin against Harsch, while improving on the former regarding the type of bomb the Russians are stockpiling. But where does he leave the Times atomic expert, William L. Lawrence, who on the same day devoted a lengthy and closely reasoned feature article to proving that while "some estimates in Washington place the [Soviet] atomic stockpile as somewhere between 30 and 80 bombs of the Nagasaki type . . . we would arrive at a figure of about 12 to 16 bombs per year, or about a total of 25 to 32 since September 1949?"

The Sunday New York Herald Tribune published an article by its Washington correspondent, James E. Warner, on testimony by Mr. Gordon Dean before the Senate Appropriations Committee on September 21, released by coincidence today on the heels of Premier Stalin's Moscow announcement. Mr. Warner called this passage "the most significant authoritative statement on tactical atomic weapons yet made public":

"We have today a tactical capability which is very impressive, and when I say 'tactical' I am not talking about the type of weapons; I am talking about the use of the weapon. It can be used against men in the field and against military targets. Now you must know that we have this capability today, and we do, and we could use it any place in the world, assuming you can deliver it. We can use it against military troops in the field."

Begging Mr. Warner's pardon, that paragraph strikes me as almost unintelligible. What kind of bomb is he talking about? It must be a big bomb which can be used tactically. Mr. Dean, as of September 21, seemed not to have yet discovered that we have tactical atomic bombs in mass production.

The AP dispatch based on the same Senate committee release remarked: "The hearing transcript brought out many of the points Mr. Dean made in a speech October 5 at Los Angeles." When I read that, the suspicion stirred within me that the new Psychological Warfare Coordinating Board might be behind the Dean releases. It might be attempting, with, to be sure, the awkwardness of a major-league recruit, to pull off a triple play. It might be trying: (1) to distract the American public from thinking about the truly grave implications of the latest Soviet achievement; (2) to pressure the Communists in Korea into an early armistice; and (3) to reassure our anxious allies in Europe. If the Board is involved, by the way, it should be rebuked for allowing this Dean quotation to appear in the AP dispatch:

"Everything in the way of fissionable (explosive) material which is produced in our whole program today goes into bombs."

That is just what Stalin contends, but never before have I heard of a United States official admitting it. Now Mr. Stalin can quote Mr. Dean.

MONDAY, OCTOBER 8, 1951

AP, UP, and the New York Times carried stories on AEC Chairman Gordon Dean's September 27 testimony before the House Appropriations Subcommittee, the same testimony that was treated in the AP dispatch of October 3. All three sources said that the testimony was made public by the subcommittee on October 7. The earlier AP dispatch, as carried in the October 4 Washington Post, had said: "The testimony was made available yesterday."

Why this apparent repetition, coupled with deception? By comparing the October 3 and October 7 dispatches, I found that the first had omitted two Dean statements which might be considered as important propaganda in the present altered atomic situation. All three October 7 stories included Mr. Dean's assertion that the United States is working toward the possession of a complete variety of atomic weapons, "which would include artillery shells, guided missiles, rockets, and bombs for ground-support aircraft among others, and it would include big ones for big situations and little ones—and this is important—for little situations." All the later stories also quoted this passage.

"Given the right situation, and a target of opportunity, we could use an atomic bomb today in a tactical way against enemy troops in the field, military concentrations near combat areas, and other vital military targets without risk to our own troops."

COMMENTARY

Where to begin one's comments? One could point a dozen morals, ask a dozen questions, voice a dozen warnings, challenge a dozen authorities. But that might only compound the confusion. Let me limit myself, therefore, to these suggestions.

1. That whoever is handling the psychological side of our atomic policy think up less obvious ways of softening bad news—which is bound to break often as the atomic race progresses—than the old trick of trying to distract the public by shouting: "Look what we're doing ourselves."

2. That Government atomic policy-makers drop the ancient and discredited device of inspiring news reports as a means of testing public reaction to their tentative courses of action. "Henceforth," says Hanson Baldwin, "we live with danger." All of us together. Let's together search out a quicker, surer, simpler way of deciding how to meet it.

3. That the wire services and the newspapers treat every atomic item with the most cautious care, exercise voluntary censorship when Government officials let slip information that might aid the enemy, and base their atomic speculations, if they must indulge in them, on the best available authority.

4. That everyone stop calling Bernard Baruch the father of the majority plan for atomic control and stop calling the original American proposals for control the Baruch plan. As Mr. Baruch himself would testify, he had resigned as United States representative long before the majority plan was finally elaborated. He would also admit that he had nothing to do with the original American proposal except to add the no-veto clauses over the opposition of many American experts. The Soviets have been taking advantage of our using Baruch plan for brevity's sake, in order to prove that the plan is a Wall Street trap.

5. That, despite Mr. Baruch's optimism, the U. N. majority plan for international atomic control be thoroughly restudied. Most of the experts I have talked to of late agree that recent developments may well make radical revision necessary.

6. That Mr. Truman most carefully consider the argument that the United States could use the tactical atom against the nibbling aggression of Soviet satellites without risking Russia's atomic retaliation. Who can

be sure that, once she has her military significant stockpile, she may not seize the first plausible excuse for using it against us? Who would hear our protests that we were using only a small tactical atomic bomb, or a big bomb in a tactical way, above the Russian roar that we had used the A-bomb first?

7. That, in view of the current confusion in our atomic policy, President Truman finally fall in line with a recommendation made editorially by America some 2 years ago (America, July 30, 1949, p. 476) that he appoint a Citizens Commission on Atomic Policy. It is painfully apparent that the President is getting precious little help at present in his heart-straining struggle with atomic problems. He should welcome the assistance of a commission somewhat like the one we have suggested.

Community Chest Fund Campaign

EXTENSION OF REMARKS

OF

HON. JOHN W. MCCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 16, 1951

Mr. MCCORMACK. Mr. Speaker, under my right and privilege to extend my remarks in the CONGRESSIONAL RECORD, I enclose a splendid appeal made by the Honorable J. Howard McGrath, the Attorney General of the United States, to his associates and employees of the Department of Justice on Tuesday, October 16, at a mass meeting held in the great hall of the Department of Justice, in connection with the Community Chest fund campaign of this year. The remarks of Attorney General McGrath can well be heeded by each and every person throughout the United States. It is a stirring appeal in the cause of Godlike charity.

His remarks follow:

I am greatly encouraged by the evidence of your feeling of obligation to the community where you live, as shown by your attendance here this morning.

I am equally pleased to have the opportunity to see so many members of the Department of Justice family face to face. Unfortunately, I have not been able to see you as often as I would like, but I shall hope to avail myself of every opportunity to see more of you.

The Community Chest campaign for the Greater Capital area extends an opportunity for each of us, who work in Government and live in the Greater Capital area, to respond to the obligation to provide, through our own voluntary contributions, the funds necessary to care for the needs of those in our community who are less fortunate than ourselves. If any of you have taken the opportunity to visit any of the 100 social welfare and health agencies who participate in the Community Chest, then you will know, as I do, what an indispensable instrument it is for the stability of our community. The Community Chest fund meets the needs of approximately 250,000 persons of all ages, classes, and races. This great number, amounting to a quarter of a million, is a forceful reminder to us of the warning of the Divine Master, "The poor and the needy you will always have with you." If we should let these essential agencies languish for lack of interest in our support, the community in which we live would suffer irreparably.

We, in the Department, do not propose to tell you how much you should contribute

or how you should contribute—that is a very personal matter and will evoke, according to circumstances, a different answer from each individual. I only ask you to remember that charity and the acceptance of the obligation to help our fellowman is the highest act of Christian manhood and womanhood.

Each Division and Bureau of the Department of Justice has responded magnificently to my request that the Community Chest message be personally brought to each and every one of you. The keymen and women in every branch of the Department of Justice are unselfishly assuming the additional burden of the solicitation while carrying on their heavy responsibilities, and I know that you will not shun their solicitation but will be eager to talk with them and to make a pledge or a contribution in accordance with your abilities. At this point, let me emphasize that we do not expect all the members of the Department of Justice family to make their contributions in one sum, rather we encourage the use of the pledge card so that you may, by installments over a 12-month period, make a contribution that you can carry without too much burden. Your pledge will be welcome just as much as an immediate and single contribution.

In closing, I want to tell you of my affection and high regard for each and every one of you, and my feeling that we are a family of people joined together by a bond of public service. I am confident that the Department of Justice's quota of \$51,000 will be subscribed within the 1-week period of our drive.

Mr. Morison tells me that Mr. Gilks of the Community Chest Federation is here to answer any questions that you may have about the Community Chest. I do not think that the question and answer period should be over 15 minutes, but if you have questions after that you are free to remain and Mr. Gilks will answer them for you. I now invite questions from any of you, and I urge you to ask them.

Our Little Dictator

EXTENSION OF REMARKS

OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 16, 1951

Mr. PATTERSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bridgeport Post of October 15, 1951:

OUR LITTLE DICTATOR

On June 27 an amendment to the Defense Production Act intending to confer on the President power to disperse industry was defeated in the Senate by a vote of 56 to 25. On July 11, a similar amendment failed in the House by 134 to 79.

Thus in a matter of 2 weeks' time both Houses of Congress had emphatically refused to give President Truman power to scatter war industry all over the Nation, wherever the whim of the moment dictated. Yet only a few weeks later the President assumed to do by roundabout methods the very thing that Congress had rejected.

He issued a directive ordering the office of Defense Mobilization to undertake a general policy of dispersal of industry to be enforced by granting or withholding certificates of necessity, by allocating or refusing critical materials for construction purposes and by making or declining emergency loans growing out of defense production.

In other words, a manufacturer who is ordered to make rifle cartridges in Truman's home town in Missouri where no cartridges have ever been made before and where nobody knows anything about making them, must either do so or risk having his certificate of necessity denied, his allocation of raw materials cut down, and any necessary loans refused.

The sum and substance of this is that the present occupant of the White House is setting up a miniature dictatorship. That is, it is miniature at the moment, but tends to grow larger because hardly a day goes by without some further evidence of the same tendency.

The President, by using these roundabout methods, has plainly defied the vote of Congress. But for that matter, Congress itself does not come out very well in the matter. Having voted as it did, it lacked the gumption to make the President adhere to the policy thus laid down and meekly submitted to his evasion. It is hard for anyone to have much respect for that kind of Congress.

Private Enterprise Cannot Be Held Wholly Responsible for the Housing Shortage Which Faces America Today, Nor Does the Only Solution Rest in Federal Housing Projects—The Solution Must Be Found by Intelligent Action on the Part of an Enlightened and Responsible Public

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 16, 1951

Mrs. BOLTON. Mr. Speaker, under leave to extend my remarks, I include a copy of an address I delivered on housing last week to the National Association of Housing Officials, conferring here in Washington. I believe no greater problem faces us at this time than the very real need for providing decent environment in which to rear the coming generation of this Nation:

ADDRESS BY HON. FRANCES P. BOLTON BEFORE THE LUNCHEON CONFERENCE OF THE NATIONAL ASSOCIATION OF HOUSING OFFICIALS, WASHINGTON, D. C., OCTOBER 10, 1951

Mr. Chairman, members of the National Association of Housing Officials, and distinguished guests. It is a pleasure to be with you today and to divide the honor of being here with my distinguished colleague from Alabama, Mr. RAINS, as well as to share with you for a few short minutes some of my thoughts on what, for lack of a better word, we all call housing.

I am no housing expert with facts and figures at my finger ends; that you know. For 12 years I have had the great privilege of representing in the House one of the greatest districts of the country—a district made up of every conceivable point of view, consisting of people from all parts of the world and of many religious and political faiths. It has been a most challenging experience and a most illuminating one.

During the years previous to my election to the Congress, I was the wife of an eminent member of the Ohio Legislature and of the United States House of Representatives, and the mother of three sons, the

oldest of whom, through a swimming accident at a camp where he was a counselor, has been my key to an understanding of men's hearts and minds which only such an experience could give.

But it was many years before that that housing made a direct attack upon me.

As one of a small group of girls—we had been the Brownie Club since we were 5 or 6—I found myself at 18 head of the supply committee of the newly established Visiting Nurse Association of Cleveland. Being of curious minds, we asked to be allowed to go with the nurses into the districts to carry the extra supplies and assist them in every way. My childhood has been a sheltered one. This leap into what the stark realities of life are for the unsheltered was dramatic in the extreme. It is one I have never regretted; indeed, it deeply affected my adult development.

The crowded conditions, the unbelievable filth, the lack of even the most primitive decencies in certain areas, imbedded themselves in my heart and mind. The degradation, the sickness, and the crime bred in our slums has laid heavily upon me down the years.
